Pietism.

WATT (HENRY J.), M.A. (Aberd.), Ph.D. (Würz.), D.Phil. (Aberd.).
Lecturer on Psychology in the University of Glasgow; author of Psychology (1913), The Psychology of Sound (1917).

Psychology.

WAY (GREGORY LEWIS ALBERT), M.A. (Oxford).
One of the Librarians of the Pusey Memorial Library, Oxford.
Pusey.
WEBSTER (HUTTON), Ph.D.
Professor of Social Anthropology in the University of Nebraska; author of *Primitive Secret Societies, Rest Days, Ancient History, Medieval and Modern History.

Sabbath (Primitive).

WEIR (THOMAS HUNTER), B.D., M.R.A.S.
Lecturer in Arabic in the University of Glasgow; formerly Examiner in Hebrew and Aramaic in the University of London.

Repentance (Muhammadan).

WELSFORD (ENID ELDER HANCOCK).
Fellow of Newnham College, Cambridge.

Prayer (Teutonic).

WERNER (ALICE), L.L.A. (St. And.).
University Reader in Swahili and Bantu Languages, School of Oriental Studies, London; Goldsmiths' Scholar, Newnham College, Cambridge, 1878-80; Mary Ewart Travelling Scholar, 1911-13; formerly Associates' Fellow, Newnham College, Cambridge; author of *The Language Families of Africa; The Native Races of British Central Africa*; translator of *An Introduction to the Study of African Languages*.

Pokomo.

WHITLOCK (WILLIAM THOMAS), M.A., LL.D., F.R.Hist.S., F.T.S.
Honorary Secretary and editor of the Baptist Historical Society; member of the American Historical Association; author of *Roman Catholic and Protestant Bibles, Missionary Achievement*; editor of *A Baptist Bibliography, The Works of John Smyth*.

Rynsburgers (or Collegiants).

WHITAKER (THOMAS), B.A. (Oxon.).
Author of *The Neo-Platonists: A Study in the History of Hellenism*.

Reason.

WILDE (NORMAN), Ph.D.
Professor of Philosophy in the University of Minnesota.

Pleasure.

WILLIAMSON (ROBERT WOOD), M.Sc.
Treasurer to the Anthropological Institute.

Polynesia.

WOODEHOUSE (HELEN MARION), M.A., D.Phil.
Principal of the Bingley Training College, Yorkshire; formerly Lecturer in Philosophy in the University of Birmingham.

Rationalism.

WOOD (HERBERT G.), M.A.
Warden of Woodbrooke Settlement, Birmingham; formerly Fellow, and Lecturer in History, of Jesus College, Cambridge.

Puritanism.

WOODBIDGE (FREDERICK J. E.), A.M., LL.D.
Johnsonian Professor of Philosophy, and Dean of the Faculties of Political Science, Philosophy, and Pure Science, in Columbia University, New York.

Pluralism.

WOODBIDGE (WILLIAM J.), M.A.
Professor of Greek in the University of Sydney, New South Wales.

Priest, Priesthood (Greek), Prostitution (Greek, Roman).

WOOLLEY (REGINALD MAXWELL), D.D. (Camb.).
Rector and Vicar of Minting; Prebendary of Lincoln, and Examining Chaplain to the Bishop of Lincoln.

Prayer (Christian, Liturgical), Sacerdotalism.

III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = Beiträge zur sem. Religionsgesch., 1888.
Baldwin = Dict. of Philosophy and Psychology, 3 vols. 1901-05.
Benzing = Heb. Archäologie, 1894.
Bruns - Sachau = Syl.-Dün. Rechtbuch aus dem fünften Jahrhundert, 1890.
Darenberg-Saglio = Dict. des ant. grec. et rom., 1856-90.
De la Sausaye = Lehrbuch der Religionsgesch. 2, 1905.
Denzinger = Enchiridion Symbolorum 1, Freiburg im Br., 1911.
Doughty = Arabia Deserta, 2 vols. 1888.
Hamburger = Realencyclopädie für Bibel u. Talmud. 1, 1870 (1892), 2, 1883, suppl. 1886, 1891 ff., 1897.
Holder = Alttestl. Sprachschätzung, 1891 ff.
Howitt = Native Tribes of S.E. Australia, 1904.
Jaubinville = Cours de Litt. celtique, i-xii., 1883 ff.
Lagrange = Etudes sur les religions sémittiques, 1904.
Lane = An Arabic-English Dictionary, 1863 ff.
Lepsius = Denkmaler aus Aegypten u. Äthiopien, 1849-60.
Liebentheuer = Euge. des sciences religieuses, 1876.
Liddlerski = Handbuch der nordsem. Epigraphik, 1898.
Muir = Orig. Sanskrit Texts, 1858-72.
Muse-Arnold = A Concise Dict. of the Assyrian Language, 1894 ff.
Pauly-Wissowa = Realencyc. der klassischen Altertumswissenschaft, 1894 ff.
Perrot-Chipiez = Hist. de l'art dans l'antiquité, 1881 ff.
Preller = Eömihe Mythologie, 1858.
Réville = Religion des peuples non-civilisés, 1883.
Riehm = Handworterbuch d. bibl. Altertums 2, 1893-94.
Robinson = Biblical Researches in Palestine 2, 1856.
Roscher = Lex. d. gr. u. röm. Mythologie, 1884 ff.
Schenkel = Bibel-Lexicon, 5 vols. 1899-75.
Schrader = GJV 3, 3 vols. 1898-1901 (HJP, 5 vols. 1890 ff.).
Schwally = Derken nach dem Tode, 1892.
Siegfried-Stade = Heb. Worterbuch zum AT, 1893.
Smith (G. A.) = Historical Geography of the Holy Land, 1-8, 1897.
Smith (W. R.) = Religion of the Semites 2, 1894.
Spencer (H.) = Principles of Sociology 3, 1885-96.
Spencer-Gillen = Native Tribes of Central Australia, 1899.
Spencer-Gillen = Native Tribes of Central Australia, 1904.
Swete = The OT in Greek, 3 vols. 1895 ff.
Tylor (E. B.) = Primitive Culture 4, 1891 [1903].
Weber = Judische Theologie auf Grund des Talmud u. verwandten Schriften 2, 1897.
Wiedemann = Die Religion der alten Aegypter, 1890 [Eng. tr., revised, Religion of the Anc. Egyptians, 1897].
Wilkinson = Manners and Customs of the Ancient Egyptians, 3 vols. 1878.
Zunz = Die gottesdienstlichen Vorträge der Juden 2, 1892.

2. Periodicals, Dictionaries, Encyclopedias, and other standard works frequently cited.

A.A = Archiv für Anthropologie.
A.E. = Archiv für Ethnographie.
A.G.H. = Archiv für Geschichte der Philosophie.
A.H.H. = American Historical Review.
A.H.T. = Ancient Hebrew Tradition (Hommel).
A.J.P. = American Journal of Psychology.
A.J.P.E.S. = American Journal of Religious Psychology and Education.
A.J.S.L. = American Journal of Semitic Languages and Literature.
A.M. = Annales du Musée Guimet.
A.P.E.S. = American Palestine Exploration Society.
A.P.F. = Archiv für Papyrologie.
A.R.A. = Anthropological Review.
A.R.I. = Archiv für Religionswissenschaft.
A.S. = Acta Sanctorum (Bollandus).
A.S.G. = Abhandlungen der Sächsischen Gesellschaft der Wissenschaften.
A.Soc. = L'Année Sociologique.
A.S.W.T. = Archæological Survey of W. India.
A.Z. = Allgemeine Zeitung.
B.A.G. = Beiträge zur alttest. Geschichte.
B.E. = Bureau of Ethnology.
B.G. = Bombay Gazetteer.
B.L. = Bellum Judaicum (Josephus).
B.L. = Baptist Lectures.
B.L.E. = Bulletin de Littérature Ecclésiastique.
B.O.R. = Bibl. and Oriental Record.
B.S. = Bibliotheca Sacra.
B.S.A. = Annual of the British School at Athens.
B.S.A.A. = Bulletin de la Soc. archéologique à Alexandrie.
B.S.G. = Bulletin de la Soc. de Géographie.
B.T.S. = Buddhist Text Society.
B.W. = Biblical World.
B.Z. = Biblische Zeitschrift.

ZW = Zeitschrift für wissenschaftliche Theo- logie.

[A small superior number designates the particular edition of the work referred to, as KAT³, LOT⁴, etc.]
PICTS.—The Picts and all connected with them—name, race, customs, and language—have long constituted a problem upon which the most contrary views have been held, and which cannot yet be said to be completely solved.

1. Name.—The word 'Picts' has been commonly derived from Lat. picti, 'painted men,' but it is now generally admitted that the Latin word is the form of a native name which may or may not have referred to the Pictish (and Celtic) custom of painting and tatting the skin. The Romans used a word which resembled the native name, and which described this custom of theirs.

The native name is connected with that of the Pictones, or Pictavi, of Gaul, whose town was Pictavi (Poictiers), and the name Pictones is sometimes applied to the Picts of Scotland in Irish and Scottish Chronicles. The Latin name must have been commonly used in Roman Britain, and became, in Anglo-Saxon, Pechtas. As the diphthong in Pechta corresponds to an earlier e, found in Ptolemy'sὙπερανατολικά Λαμπρών on the coast of Poitou, Rhys conjectured that the name was Pectones rather than Pictones. The Welsh forms Peithwyr, 'Pict men,' and Patheinn must be derived from Pect (cf. Scots Pecht, A.S. Pechtis, Norse Petta). An Irish (Goidelic) equivalent, with the usual transmutation of p and c, may be cecti, which may give the numerous place-names with keith' in Scotland. What the native name meant is uncertain, but an equivalent is thought to exist in Irish cecti, 'engraver,' or 'carver' (or, according to Rhys, 'slaughterer' or 'mighty warrior'), this meaning perhaps being influenced by the Pictish tatting custom. Nicholson derives Picti from an Indo-European stem pekti, 'tata.'

Another native name has the Goidelic form Cruithni, from Qretani, the name of Picts in Ireland and Scotland, and derived from the corc, 'form,' 'figure'; an Irish writer, Daud MacFirbis, explains it as meaning the people who painted the horns (corcatha) of beasts, birds, and fishes on faces and bodies. Rhys and Stokes refer it to cruith-neathd, 'whet,' or 'that which is reaped or cut.' Hence it would still suggest the supposed meaning of Picti. The corresponding Brythonic name was Pretani, in old Welsh Prytian, later Prydian (prdyl, 'form'). Prydian means Scotland, the Pictland of the north, while Ynys Prydian, 'Isle of the Picts,' was the name for the whole of Britain, and thus must have originated at a time when the whole island belonged to the Prydyn, or Picts.

This, then, accounts for the early Greek name Ἰπερανατολικά Νησών, 'the Pictish Isles.'

Rhys considers that Goidelic invaders of Britain called it by some such name as Inis Cruithine (from Qretani), 'Island of the Picts'—a non-Celtic race to whom the whole island had once belonged, according to him. On the arrival of the Brythons they changed this to Ynys Prydain. Macchoin, on the other hand, maintains that the Cruithni, Prydy, or Picts were themselves the Celtic inhabitants of Britain, about 500 B.C., and gave their name to it.

2. Classical notices.—Cæsar writes that the interior of Britain is inhabited by those said traditionally to have been born in the island itself, and the sea-coast by those who had crossed over from the Belge. The latter cultivated the land; most of the interior tribes did not, but lived on flesh and milk and were clad in skins. All the Britons dyed themselves with woad. Ten and even twelve of them had wives in common, brothers with brothers, fathers with sons; the children were held to be offspring of him who first espoused the virgin.

Does the last statement refer to all the Britons or only to the interior tribes? Zimmern holds that the reference to 'all the Britons' is a parenthesis, and that the account of the interior tribes is resumed with this statement as to marriage. The interior tribes were presumably Picts, possibly Goidels; Cæsar's account of their promiscuity is probably worthless (1 s 5)."}

Cæsar knew nothing of the tribes to the north, who were certainly Pictish. His 'interior tribes' may have been Picts or Goidels, though the Goidels are thought by some to have first come to Britain from Ireland from the 2nd cent. onwards. If the Picts were a Celtic people, there must also have been aboriginal tribes separate from or mingled with them.

The northern tribes first came into notice during the time of Agricola's invasion. Tacitus calls them collectively Caledoni, and in his opinion their red hair and large limbs pointed to a Germanic origin. Some of their tribes fought from

4 v. 12, 14.
PICTS

chariots, like the southern Britons. They had tribal assemblies, ratified with sacred rites. Cf. Chronicles, p. 387. Tacitus speaks of their harvests—which points to cultivated lands; and of their wives and children, without any reference to promiscuity. Tacitus makes no reference to the custom of painting their bodies.1 On the whole, Comp. Claudianus, p. 387. The Picts recall little from the southern tribes akin to the Gauls. Ptolemy2 next describes the various inhabitants of Britain according to tribal groups.

South of the Forth and the Clyde were the Oadini and Caledoni on the east, and on the west the Selgovae, Novantae, and Damnonii, the last extending to near the Tay. On the east coast, north of the Tay, were the Vencones and Taxalli; west of these were the Vaccaei, then the Caledonii and Epidii. Along the west coast were the Cerones, Crenones, Caronaca, and Carini, separated from the Caledonii by the Dunctae. To the north were the Ligii, Snaeris, and Cornavi.

Ptolemy's trices to the north of the Forth and the Tay correspond to Tacitus's Caledonii, the name of the largest group with whom the Romans came in contact having been given to all the tribes. These may be regarded as Picts, since their position corresponds to that of the Picts described by Bede.3 Possibly some of the tribes south of the estuaries (Selgovae, Novantae) may also have been Pictsish. By c. 208 the tribes had apparently united into two groups, the Caledonii and the nations of the Caledonii and Maitai into which the names of the others were merged.4 The Maitai lived in the flatter region north of the northern Roman wall, and perhaps derived their name from mel, a plain. They dwelt in that part of Scotland which, according to Ptolemy, had been occupied by the northern portion of the Damnonii. Dio says that these tribes neglected agriculture, but had cattle, and lived on milk, the produce of the chase, and fruits, but never ate fish. They were naked and covered with a shield, sword, spear, and dagger ('a tart'). They had community of women, and their progeny were reared as the joint offspring of each small community. They had a certain food a small piece of which suffered a man for several days. They would also run into morasses up to the neck and live there several days without eating.5 According to Herodotus, they punctured (tattied) their bodies in the forms of animals, and were naked, the better to show the ornamentation.6

Eumenius, who first mentions the Picts by name, says that Constantius Chlorus in A.D. 296 defeated the Caledonii and other Picts.7 The tribes are again mentioned by St. Cyril in connection with the invasion of the Roman Britons, which, as in the notices of the invasion of Roman Britain by the walls by them and the Scoti from Ireland or Wales in A.D. 360, and in 364 when Picts, Scots, Saxons, and Atelocetri invaded Roman Britain from different directions. When the Caledonii came to the rescue, the Picts are described as consisting of two divisions, Dicaledonius and Verturiones, doubtless the equivalents of the Caledonii and Maitai.8

Rhyys shows that Verturiones is the Latin form of a Celtic word which appears later as the name of the Pictish district of the 'men of Fortrenn' (Strathmore and Menteith). Fortrenn is probably the gen. of Fortin or Fortrin, which again is found in Fortwhe (Kinross and Clackmannan). On the whole, this corresponds to the region of the Maitai. Dicaledonius suggests the people of the two Caledoniai—the regions divided by the loch from Inverness to Fort William.9 Cf. Ptolemy's name for the ocean to the west of Scotland, Jovis Apollonis.

Claudian says that Theodosius drove the Picts into the north of Scotland. Thus the Scots regarded to Ireland, the Saxons to the Orkneys, while he4

1 Agric II, 27, 31. 2 Geog. II, 8. 3 Die III, 4. 4 Ib. lvii, 5. 5 Ib. lvii, 6. 6 Ib. lvii, 7. 7 Ammianus Marcellinus, xx, 1, xxvii, 6, 8. 8 Claudianus, Brit., pp. 95, 102, 222, 224, Welsh People, pp. 12, 102, 9 drafted the Atecotti into the Roman army. Picts and Scots returned to the attack in A.D. 387 and in later years. Cf. Forth and the Tay, Ammianus Marcellinus, xx, 1. The Picts, however, did not continue to hold the land south of the Forth and the Tay, except partially in the district known as Manaw or Mannarn, where, Inter, Picts, Scots, Saxons, and Brythonic peoples, lived together, as in the Orkneys, Galloway, where they may have been indigenous. Mannaw or Manann included the western part of Strathclyde, Liddington, part of Stirlingshire (where the name survives in Strathclyde, which is identical with Newcairn), on to Kinross and Clackmannan, which preserves the name. The part south of the Forth was known to the Romans as the British or the Caledonii and Epidii, traces of which may be clearly distinguished from the island of Man or Mann. Rhys regards the invading Scoti from Ireland who joined the Picts in A.D. 360 onwards as themselves Pictish, mixed with Celtic Goeldas. They were the Cirtunali of Uther or Dian Aradu. Their name is cognate with Welsh geigr, a cutting, writing, or sculpture—hence the man who were scarred or tattooed. This name may have been given them by the Brythonic Celts, and Latinized as Scoti. The later Scots who settled in Ayrshire came from another Irish Pictish district, Dalriada, which name they gave to their new habitat.9 Zimmerman also regards the Scoti and Attocetti as non-Aryan people of Ireland, conquered by the Irish Celtic. Macalpin regards the Scoti as Goeldics, and their name as Goldicel'i tattooed men, Gael, spath, spad, sword. It was their own name for themselves.10 Skene also regards them as distinct from the Picts, and regards them as one of the first settlements among the.Uther Picts.11 The Attocetti were a non-Celtic folk, the Picts of Galloway, the 'people of the Blonde,' the 'people of the Newcarne,' and the 'people of the Salt. Their name means the old or ancient race. This is Rhys's opinion.12 Skene regarded them as a people from Ireland settled in Dalriada, who were considered as inhabiting the district between the Roman walls.13

After the settlement of the Scots in Dalriada, which they took from the Picts early in the 6th century,14 the Picts seem to have divided into two sections, the Picts, who settled in the north of Scotland from the Orkneys, and the Goeldas, who settled in the south. The Goeldas occupied all Scotland north of the Firths of Forth and Tay, except the region of Ayrshire and, later, the W. Isles. They partially occupied the district of Manaw, and were perhaps also found in Galloway. The Picts were regarded or the Gwyddyl Fichti (=Goeldic Picts), who now through these women speak Ireland's speech.15

The Irish tradition is found in three forms. In one of these the children of Gleolin (Gelone), son of Ereol (Hereules), took possession of the Orkneys. Thence they were dispersed, but Cranitis settled the north of Britain, and his seven sons—Caith, Ce, Cirig, Fidh, Fidach, Fots, and Fortrenn divided the land into as many parts. Five others—vi., 29; cf. Jerome, adv. Jordan. ii, 7, for the Attocetti in Galloway.16

of the Cruithenach went to France, and there founded Pietavus. Thence they came to Erin, but were driven forth. In the second form of the tradition the Cruithenach, children of Glecin, came from Thrace. After colonizing Pietavus, the company to land and expelled Crimthann, king of Leinster, to expel the Tuatha Ddiadh. Drostan, their Druid, ordered that the wounded should bathe in the milk of seven score white cows, and the poison of the weapons would not hurt them. They now gained power in Ireland, but Heremon drove them out, giving them as wives the widows of the men drowned when the Milesians came to Ireland. They now acquired Alban (Scotland). Some, however, remained in Ireland. Scots, classed as Corn, and others are attributed to them. The metrical version of this legend says that they acquired their name ‘Pict’ from tainting their fair skins, and that on being given wives they swore that from the mother should descend the right to the sovereignty. A third account says that Cruithenach went over from the sons of Miles (in Ireland) to the Britons of Fortrenn to fight the Saxons, and remained there. Wives were obtained from Ireland, Cruithenach swearing by heaven, earth, sun, and moon that the royal succession should always be on the mother's side.3

The preference to the 10th cent. Pictish Chronicle says that the Picts are so called from picto corpore, because they are marked with various figures made by points with pigments. The Scots are so called because they come from Scotia, or because they are descended from Scotta, queen of the Scots, Pharaoh's daughter. They came to Ireland in the fourth age of the world, the Britons having come to Britain in the third age. The people of Scotia have 'Celtic' hair—hence they are called Albanians—and from them the Picts and Scots originate. Crudine, father of the Picts dwelling in this island, reigned 100 years, and had seven sons—Fib, Fidach, Floclaed, Fortrenn, Got, Cc, and Circcn.4

Gildas, who appears to regard the region north of the Fort and the Tay as an island, mentions the Picts as a transmarine people who, with the Scots, invaded Roman Britain. They came from the ocean and the east. The Scots from the west-north-west (‘a circo’). When they were ultimately driven from the region between the walls, they settled in the north of the island.5 Nennius brings the Picts from the Orkneys, whence they went over to the Britons of Britain in the fifth age.6 Bede brings them from Scotia to Ireland, whence the Scots directed them to Britain (where they inhabited the northern part, the Britons being in possession of the southern), giving them wives on condition that, when any difficulty should arise, they should choose a king from the female royal race rather than the male—a custom observed among the Picts ‘to this day.’7

The origin of the Picts from Scotia or Thrace is purely hypothetical, and the stories of how they obtained wives may be regarded as equally so—an etiological myth to account for the Pictish succession. The Goeldie name for the Picts being Cruithene, an eponymous Cruithene was regarded as their ancestor, while the seven districts to which Scotia and Pictia or Cruithenith was divided supplied names to most if not all of his mythical sons—Fib; Fife and Fothere; Fortrenn; Fortrenn (Strathern and Mentor); Fodla; Atholl (Athfoile) and Gowrie; Circenn; Maghecirein=8

5 LIE ii, 7.
6 Meurs and Angus; Catt: Caithness (Cathnessia). Fidach and Ce have no nominal equivalents.
7 The regions unaccounted for are Mar and Buchan, and Moray, Atholl being included in Cattnessia. They have therefore arisen after the occupation of Dalriada by the Scots.
8 The fact that there were Cruithni, or Picts, both in Ireland and in Scotland may account for the varying traditions of their coming first to Ireland or first to Scotland. One tradition says that both Irish and Scottish Cruithni were governed by the same kings to the seventh century.
9 Why were the Picts?—Rhys regards the Picts as the non-Aryan (Ivernian) aborigines, dispossessed by the incoming Goeldies, whose language they adopted, although they greatly outnumbered them. The Goeldies were, however, profoundly modified by them in language, race, and customs. Having driven the Iverniens before them, they later made common cause with them against the invading Brythons. Hence there was an amalgamation of the Goeldie and Ivernian elements, and the term Goeldie should strictly be confined to the mixed population of Aryan and non-Aryan language in possession of the country when the Brythons arrived. Before Pictish, or Ivernian, died out, it was 'loaded with words' and continued as the Pictish. It also modified Celtic vocabulary and continued the syntax of its own speech.9 Zimmer also regards the northern Celts as having become Goeldic in speech at an early period, while the southern Picts adopted Brythonic speech.
10 The traces of alleged Pictish (non-Celtic) speech are scanty, but Rhys professed to find them in the Ogam inscriptions of Scotland, a notion which he himself considered an opinion afterwards abandoned. But he still adhered to the theory of its non-Aryan character, and continued to challenge the upholders of the Pictish Celtic to prove that the questioned Ogam inscription at Camsting in Shetland is Celtic: 'Tochbhauch-abhimhn-an-bhreithiuinn.' The challenge seems a safe one, for, as Lang says, it is 'not merely non-Aryan, but non-human, or not correctly deciphered.'
11 Rhys also finds non-Aryan traces in Celtic nomenclature, and, assuming totemism to be non-Aryan, argues as to its existence from names like MacCon, 'Honnd's son'—the name of a legendary prince whose rule extended from Ireland to Britain. Hence 'MacCon may, perhaps, be regarded as representing a non-Celtic race in Ireland.' Totemism, however, may have been Aryan, and a personal name is not evidence of clan totemism. He also argues for the non-Aryan character of the Picts from their custom of succession through the male line, and from the absence of Irish names and names of Irish and Welsh mythology. Zimmer accepts the Pictish succession through the female line, as well as the classical references to promiscuity in the Celtic region, and incest incidents in Irish saga, as pointing to non-Aryan marriage relations. In the case of the sagas, the Celtic invaders of Ireland being in a minority, the aboriginal customs would not be changed at once, and have left their impress in legends.
12 Skene's whole theory of the history of the Picts is connected with his opinion that there were two divisions of them, eventually distinguished as northern and southern Picts. This is based on Bede's statement that the northern Picts were separated from those of the south by 'steep and
rugged mountains, but such a distinction as Skene asserted is probably fallacious. His 'northern Picts' were Gaelic in race and language; the 'southern Picts' were also Gaelic, but, the Damnonii between the Forth and the Tay, who became | [Image 0x0 to 427x707] the Cornish variety of the British race, having been incorporated with them, they introduced a British (Cornisli) element into their language. The Damnonii are the Britons of Fortrenn.  

Skene's arguments for the Picts as Gaelic in race and language may be summarized as follows. (a) The Welsh design, 3 Pictland, is Gaelic. (b) The Picts were Celts, since the Goidels were called Gwydyr by the Welsh, the Picts were thus assigned to that race. The term, however, is not an early one, not occurring in the regular rendering used by the Welsh. (c) St. Columba's occasional but not constant use of an interpreter while preaching to Picts was necessary because the difference between Pictish and Irish enabled that between Breton or Cornish and Welsh, which are not always mutually intelligible. The difference may no longer have resembled that between Irish and Welsh. (d) Gaelic was spoken in Galloway at a late date, and in the 12th cent. Richard of Heslington and Bagdan of Dormin called the Gallowegians Picts. As to this it should be noted that there was an early Brythonic element in Galloway, but the district was overrun by Goidels, which explains its predominance of Gaelic there. The name Picts may have been given to them by those English writers who describe the region in the post-Roman period in terms of the pseudo-Brythonic language. (e) Many Pictish personal names in the lists of kings are of Irish form; others show a mixture of Brythonic and Pictish elements. (f) Pictland is positioned for the east coast of the Angles over the Picts in certain districts; the Brythonic element came from the north-east. (g) Some of the Pictish place-names are Goidelic, not Irish. (h) The place-names are usually named for the god or goddess mentioned in the name, and are not purely Pictish, but, though they are, it may be they are not all purely Pictish, but is it surely significant that the Picts once spoke some other language, or perhaps some other Celtic dialect? There is also the opinion that Pictish was a language virtually identical with Irish. He holds, however, that the loss of Indo-European p was comparatively late in Gaelic dialects—Pictavonian, Sequanian, Belgic, Manapian, proto-Irish, and proto-Scottish. But that p was lost in literacy or old Irish. P in Celtic speech is therefore not always a mutated qu or b, but may be original and a sign of Gaelic occupation. Insular Pictish, like Pictavonian in Gaul, was a Gaelic dialect with p preserved to historic time, whereas the Gaelic Picts, who were not Pictish, not from the Irish speech of the Dalriadic Scots, who did not conquer the Picts. The word 'Pict' is derived from a root *pel*-, 'tata,' with I E p preserved. He also holds that the Belgs were not celticized until much later than the Picts, who were already celticized in Britain, but also in Ireland. They are the Fir Bolgs of Irish legend, and, with the Fir Donann (the Damnonii) and Fir Culain (Picts), were Gaelicized p. The Kynny or Brythons of other writers—Gaulish, Welsh, Cornish, and Breton—were the first Celtic arrivals in Britain. Then came the Goidels, who drove the Kynny into the interior in pre–Roman times, where later Cesar found them. If, however, this order of occupation—the opposite to that advanced by Macnicol—is less reliable, it may be an account for the presence of Goidelic Piects in Scotland, where presumably the Kynny would have retired before them. Whatever may be said of these views, it is certain that neither Skene nor Nicholson sufficiently faces the fact that, rightly or wrongly, the early notices of the Picts regard them as differing from the Scots in origin, language (dialect), and the matter of the kingship.

Some writers are of opinion that no Gaelic occupied British soil except from Ireland. Macn assumes the Picts, the Caledonii of Tacitus, the Pretani of Ptolemy, as the first Celtic incursions into Britain, c. 600 B.C. They were *a* Celtic-speaking people, whose language differed both from Brittonic and Gaelic, but at the same time only differed dialectically from the Gaulish and Brittonic tongues. Their language, unlike that of the p class of Celtic speech, and they were driven west and north by the incoming Belg. They were thus Cesar's aborigines of the interior.

Mackin's philological arguments for Pictish =Gaelic are defective. Bede speaks of the various dialects or languages spoken in Britain—those of the Angles, Britons, Picts, Scots, and Latins. Pictish was thus different from both Brythonic and Gaelic. Again, the Cruithin of Ulster were Pictish inc.imners from Scotland; the Picts were the Manx, names on Gaelic ground—Ireland and Dalriada. The prefixed *abers* and *pet*, unknown to Gaelic, are found from Sutherland to the Tay. The form Cymric is derived by Gaelic *inner*, the latter by boile. Skene regarded aiber, inner, and crimson as originally common to all the Celtic dialects, obsolete in others; but it is surely significant that aber does not occur in Arry. Other Celtic scholars, Windisch, and Stokes, also regard Pictish as Brythonic rather than Gaelic. Stokes, after collecting and examining all the known Pictish words down to the period of the Irish annalists, comes to the following conclusion:  

'The foregoing list of names and words contains much that is still obscure; but on the whole it shows that Pictish, so far as regards its demography, is an Indo-European and especially Celtic speech. Its phonetics, so far as we can ascertain them, resemble those of Welsh rather than of Irish.'

D'Arochs de Jacthneville identifies the Cruithin of Irish legend, who fought against the Fir Fidga, with the Brigantes, a British tribe located by Ptolemy also in the south-east of Ireland. Their Druid Trosan has a name akin to that of Arthurbastian. The Fir Fidga or Fidgus are the Manx, names on Goidelic ground—Ptyd and Dalriada. The Brigantes, inhabitants of Britain (Prydwen), were called Cruithin =Pritanicos, by the Irish.

Where philological experts are so much divided on the question of language in the Picts, it cannot be settled. If, however, the Picts were a non-Celtic race, they could not have remained so unmixed with their Celtic conquerors as Irish theory demands. And, again, granting that they were Celtic—Gaelic or Brythonic—such incoming Celts must have been numerically small compared with existing aboriginal tribes, which would again imply a mixture of races. Whatever the Picts were, it appears certain that they either adopted or retained Celtic speech.

5. Picts and Britons (a) Difficulties of dating and valuation.

Cesar says that all the Britons dyed themselves with woad; it and Herodian says of the northern tribes (the Picts) that they tattooed themselves with coloured designs and figures of animals of all kinds, instead of wearing the first Celtic dyers in these might be seen.' The custom is also ascribed to them by Duidal MacFarb as an explanation of Macn, in Skene's Highlands, p. 299 ff., Trans. of the Gaelic Society of London, xxvi. (1894–95) 267 ff.

Celtic Scotland, i. 232.

2 Celtic Scotland, i. 231.

3 Skene, in Skene's Highlanders, p. 401; Rix's, Celtic Britain, p. 242.

4 Skene states that the language of Gildas shows that Picts remained in the region between the walls after the last incursion, and that Bede's S翕tian Picts—Picts of Galloway—were Pictorians, p. 394 ff.; Celtic Scotland, i. 198 ff.

8 Heero, and Latins.
family, brought to it strength, and the nephew, brought to it the blood of the grandfather, in some sort his son. 1 1 In Ireland by special favour right of inheritance was given to a daughter's or sister's son born of a stranger. Accordingly, d'Arbois de Jubainville explains Bede's statement of the astonishment caused to Anglo-Saxons by the law of inheritance allowed by Celtic custom in the case of sons of daughters in concurrence with their cousins, sons of sons. The Celts had not a law of inheritance differing from that of the Irish or Welsh, and the facts do not require to be explained by the matriarchate. 4 Already, too, the importance of the sister's son is seen in ancient Celtic history, where, in 400 B.C., King Ambricetus placed each of his sister's sons at the head of an army, the one conquering Bohemia, the other Ninevi. 5 D'Arbois de Jubainville's explanation, however, hardly covers the anomalies of the list of Pictish kings, if that is to be regarded as in any way authentic. In Irish and Welsh sagas, where divine groups are called after the mother, or whose gods and heroes have often a matronymic, while the father's name is omitted, we may have something analogous to the Pictish succession — some custom perhaps akin to the matriarchate. 6 But this is so deeply embedded in Celti myths that we can hardly imagine that it is all borrowed from hypothetical non-Celtic custom, as Rhys maintained. 7

6. Religion of the Picts.—Neither the classical observers nor the biographers of saints who labour among the tribes in the Ionians, labour among the Picts. Among the Picts, as among the aborigines of Gaul and Britain, the one religion was the native religion. As far as the latter are concerned, Ailred in his Life of St. Ninian speaks of the southern Picts worshipping deaf and dumb idols 8 —a vague statement. Adamnan speaks of the northern Picts as possessing Druids who, according to his own account, possessed more power than the God of the Christians. 7 Their magical acts resemble those ascribed to Irish Druids, and Adamnan does not appear to know any difference between Pictish and Celtic Druids. He refers to the fountain which St. Columba found in Pictland, 'famous among this heathen people and worshipped as a god.' The saint blessed it and caused 'the demons' to depart from it for ever. 8 The cult of wells was common among the Celts and is almost universal. If the Picts were as familiar with the water gods as is estimated from what is known of Celtic religion elsewhere (see art. CELTS). Bede says that the southern Picts, i.e. those tribes dwelling in the region immediately north of the Forth, were converted to Christianity by St. Ninian. 9 This seems to have been about the beginning of the 5th century. The tribes beyond these, the so-called northern Picts, were converted by St. Columba and his followers. Columba encountered the Druids of King Brake at Inverness, and preached to and baptized the king and many of his people in the latter half of the 6th century. 10

7. Later History of the Picts.—The history of the Picts from the 7th to the time of Kenneth MacAlpin is one of interminable feuds, strife with the Sabians, Dalriadic Scots, and Angles. The usual view has been that eventually Kenneth MacAlpin, king of the Dalriadic Scots, overcame 1 D'Arbois de Jubainville, La Famille celtique, Paris, 1865, 72. 2 Ib. p. 69; cf. art. ISRAEL (Celtic), vol. vii. p. 299. 3 Ibid. 4 J. A. MacCallum, The Religion of the Ancient Celts, Edin- 5 rh. 1911, p. 222. 6 Rhys, Men of renown-Joans, Welsh People, pp. 15, 151. 7 Ailred, Life of St. Ninian ('Historians of Scotland,' series v.), Edinburgh, 1874, p. 19. 8 Adamnan, p. 47. 9 'Celtica,' vol. 1. 10 'Columba (Historians of Scotland' series, vi.), Edinburgh, 1874, bk. i. ch. 27, bk. ii. chs. 33, 55. 11 Ib. bk. i. ch. 27. 12 Bede, HE, ii. 4; cf. Ailred, loc. cit. 13 Bede, HE, ii. 4; Adamnan, passim.
PIETISM

the Picts, and ruled over them as king of the Scots, or, according to the 10th cent. Pictish Chron., as rex Pictorum. This was an obviously absurd statement. But Skene, following Pinkerton to some extent, maintained that Aengus MacFergus, the Pictish king from 731 to 761, defeated the Scots and took Dalriada, which now became a Pictish province. In 828 Alpin, of Scottish race by paternal descent, but, as his name shows, a Pict by maternal descent, as king of the Scots fought the Picts and was defeated. His son Kenneth eventually obtained the throne of the Pictish kings. This was not long after the first foreign invasion. The events are rather to be regarded as a war of succession; Alpin and Kenneth had a claim through maternal descent to the throne and were supported in that by a party among the Picts and by the remains of the Scots of Dalriada. The Picts, a Gaelic-speaking people like the Scots, were not conquered, and suffered no change of language. There was a more or less silent revolution, a mere matter of succession according to Pictish law, and the modern Highlanders represent the older Picts.1

Nicholson urges similar views, and points to the unsatisfactory nature of the evidence for a Scottish conquest of the Picts (the fact that Alpin and Kenneth are named brothers in one account for the Dalriadic, kings), to the improbability of the Pictish nation being conquered by their Scottish subjects, as well as to the fact that the Annals still describe Kenneth and his successors as 'rex Pictorum.' The position is similar to analogous to the change which set James VL, a Scottish king, on the English throne. There was no conquest of the English in this case or of the Picts in the other case.2 These views have been strongly contested by Maclean, who insists that the documents are not rightly handled, and that a wrong value is put upon some of them. He shows, e.g., that, though Aengus conquered Dalriada, the Annals insert this significant note, 'wane of Aengus's kingdom.' Yet the conquest of the Picts cannot be clearly explained from our present materials. There had been dynastic wars— attempts to break the Pictish rule of succession. The Scots were aggressive, and superior in culture, and had already been using their Gaelic speech both in Pictland and in Strathclyde 'wiped out the original Pictish and British.'3

The problem involved here is entirely one of evidence drawn from obscure documents and of proof. In Campbell's view, the location of the original Pictish tongue, Brythonic or Goldic, must necessarily affect the results. Whatever theory is followed, it is certain that there must be a large Pictish admixture among the Scottish people in the region north of the Forth.

8. The Picts in folk-tradition.—With the diusise of their name in connexion with actual peoples, the 'Picts' or 'Pechts' came to be associated in folk-tradition with megalithic remains and large buildings and myths of their origin. From being a historic folk, they became a mysterious people, more or less supernatural, and usually considered as of small stature.

1 Pecht in Shetland is synonymous with 'dwarf.' 4 in Aberdeenshie 'pecht' means a 'small person.' In the south of the Picts are regarded as dwarfs, and hence were bodies, but terrible strong—their immense strength being necessary for the support of their lives and to enable them to crush the easily the large stones of archeological remains, etc., attributed to them. Hence D. MacNicol regards the Picts as a former dwarf race, the equivalent of the dwarf popular.

1 Celtic Scotland, i. 275 ff.
2 Nicholson, p. 80 ff.
5 See an amusing instance of this in Lockhart's Life of Sir Walter Scott, ch. 25, and Scott's Pilot, note 1.

Belief (see art. FAIRY, 16). That the Picts were not a small race approved by what Skene says of the Caedlon, nor is there the slightest scrap of historical evidence for the theory. The so-called 'Pict.getClassName | 'pict' is not an exception. There are no passages terminating in one or more chambers—need not indicate that they were constructed or used by people of small stature. If they were constructed by a very large race they were probably store-houses or hiding-places like those described by Tacitus (Germ. 16) among the Germans of his day, and very much more impressive buildings associated with remains of surface dwellings. Scattered over the whole length of Scotland, and even in England on some date, they may quite likely have been constructed by the Picts, in which case the tradition of their origin would be authentic.

Generally speaking, however, the tradition which ascribes all mysterious or large structures to the Picts (e.g. Glasgow Cathedral) is analogous to wide-spread traditions elsewhere in which the origin of megaliths and colossal remains is ascribed to fairies, dwarfs, giants, the devil, Cyclops, etc.

J. A. MACCULLOCH.

PIETISM.—Use of the term.—(1) Pietism is used in a general sense to indicate a certain spirit or attitude of devotional feeling: (2) By Hepe, Ritsel, and others, the term is extended to cover all similar tendencies during the past three centuries; (3) The Roman Catholic 'pietists' are the brethren of the sixteenth and persons named Roman Catholic and Christian schools founded by Nicholas Barre, in 1578, for the instruction of girls and boys.

As a proper name, however, the term belongs to the movement which arose under Spener towards the close of the 17th century. Like the term 'Methodist,' it was originally bestowed in contempt.

2. The religious life of Germany at the rise of the movement.—The close of the Thirty Years' War in 1648 left German Protestantism in an impoverished condition. The empire, which was ruled from without by the civil governments of the various States, and from within by theologians as autocrats as the papacy. Both civil and theological rule tended more to vigilance over doctrine than to the development of the spirit. The result was that, whilst orthodoxy was never more outwardly alive, it was never more inwardly lifeless. The clergy had not entirely forgotten their functions, it is true, but they were obsessed with the belief that they were therefore of less importance. Hence necessary consequence all else would be right. Luther had placed the seat of faith in the heart, but emphasis had now shifted to the intellect.

1 The Testimony of Tradition, London, 1890.
PIETISM

It was held, accordingly, that if intellectual knowledge (illuminatio) were correctly imparted, it would assuredly direct the will aright. Luther had placed the Bible above dogma. The order was now reversed, and a creed-bound Church neglected the Bible in home, school, university, and society. Tractated, therefore, Christendom had grown frequent and acrimonious. Lay rights were subordinated to pastoral prerogatives. Matters were somewhat better in the Reformed Church, and its presbyterian form of government gave a better sense to the Bible, but only here the talented, legalism and the spirit of self-righteousness were only too often in evidence.

Upon this clouded sky Pietism arose, bringing a clearer and purer light. Beginning modestly in an attempt to improve the care of the afflicted in the parishes of Frankfort, it spread rapidly through Middle and North Germany. Among the forerunners of the spirit rather than the system of Pietism may be numbered Jakob Boehme (1575-1624) the mystic, Johann Arndt, and Theophilus Grossebauer, but the headquarters of Pietism is usually accepted to be Berlin. Here Jakob Boehme (1608-1682), who had left the theological faculty of Tübingen (Brunswick, 1606-09),Whilst a student at Strasbourg, he found his ‘father in Christ’ in Johann Schmid. Taking his master’s degree by a dissertation against Hobbes’s philosophy, he continued his studies at Basel, Geneva, Stuttgart, and Tübingen. At Geneva the influence of A. Leger and Jean de Labadie, the ex-Jesuit, combined with the pious, mystic, and strict discipline of the place to shape his character. At Tübingen he read Grossebauer’s Wächterstimme aus dem ver- x.undigen Würden der religiösen Reformation (1627), and was there called to the pastorate at Strasbourg, and lectured on psychology and history. In 1666 he removed to Frankfort as chief Lutheran pastor. Here in 1670, developing an idea which he had previously tried at Strasbourg, Spener instituted his famous ‘Collegia Pietatis’, first in his own house, and subsequently in the church. His aim was to promote fellowship and Bible study; his means were catechizing, lecturing, and discussion. The name, and, according to Ritschl, the idea of such gatherings originated in Holland, where the ‘Collegians’ met in ‘collegia’ for worship; but this has scarcely been proved. The attempt, inspired by good motives, was imitated, however, and in less capable hands, of course. In the above words, the students of the Collegia gained a name for promoting heresies, fanaticism, and even graver abuses. Spener finally suppressed the meetings. Some were continued despite this, and mostly became separatist communities which seriously injured the good name of Pietism.

In 1675 Spener’s Pia Desideria appeared in Frankfurt. In it he advocated (1) earnest Bible study conducted in ‘ecclesiae in ecclesia’; (2) a lessened share of Council, government, as the proper con-sequence of the Church’s duty to return the will of believers; (3) that knowledge of Christianity is practical, not theoretical, and shown in charity, forgiveness, and devotion; (4) that, rather than denouncing their errors, sympathetic treatment should be given to those who would win them, if possible, to truth; (5) that theological training should be reorganized, and emphasis laid on devo- tion rather than on doctrine; and (6) that preaching should be more practical and less rhetorical. A disciple of Hugo Crotius and Samuel Pufendorf, he had been professor of Natural Law at Leipzig. His views were provocative. He attacked traditional methods in law and theology alike, advocated tolerance for all, even witches and atheists, and advised mixed marriages between Lutheran and Calvinist. Denounced from the pulpit and forbidden to write or lecture, Thomasius had to flee to Berlin to escape arrest. Here he received welcome, and, taking part in the formation of Halle University, became its rector and professor of Law. In regard to ecclesi- astical matters, Thomasius contended that a sharp distinction must be made between that which is possible and that which is not. Questions of piety and of doctrine are inward. The State should therefore leave them alone. In the external matters of worship and Church life, however, the State may rightly interfere, if necessary, to promote the general wellbeing of the country and to maintain peace and order. Thus rendering to Caesar and to God the things which were respectively theirs, Thomasius reconciled his own broad sympathies with his position as a State servant. Personally he was in the main orthodox, holding, for example, that the possession of one’s salvation. Though never a Pietist, and indeed not of the Pietist temperament, Thomasius is interesting as an example of the broader tendencies of his age. He maintained cordial relations with Spener, though in later life he parted from him.

Meanwhile Spener’s influence was creating jealousy. The theological faculties of Witten- berg and Leipzig attacked him bitterly, the former censuring in 1685 no fewer than 264 errors laid to his charge. This thunderbolt fell harmlessly, however, and Spener reiterated his position in his Theologische Bedenken (Halle, 1700-02). His influence maintained itself, and the Pietistic movement continued to flourish. In 1705 Spener died in Berlin.

Spener’s was a quiet, well-balanced mind. Himself a profound Bible student and a charitable practical man of devotion, he united Luther’s stress upon Scripture with the insistence which the Reformed Church laid upon toleration, and the Lutheranism of his own time was neither overzealous nor quietistic. He was not a separatist, nor did he desire that Pietism should become a separatist movement. Ritschl indeed declares that he was not truly a Pietist,
because he did not share in the more pronounced developments of Pietism, such as insinuance upon a conscious crisis as necessary in the process of salvation, and a complete breach with the world. If this is an extreme statement, it is none the less true that Spener's Pietism sprang up in a period of extraordinary renewal before a man should teach theology, and a belief that the restoration of the Jews and the fall of the papacy would precede the final victory of Christianity, there was little to distinguish Spener's views from the orthodox Lutheran creed of his day.

(b) August Hermann Francke, the second great leader of Pietism, was born at Lübeck in 1663. Losing his father at an early age, Francke owed his religious training to a sturdy mother. He studied at Erfurt and Kiel, where he first met Pietistic influences in the person of Christian Kortholt. He proceeded to Leipzig, where he became an accomplished Hebrew and Greek scholar, graduating in 1688. Here, with Paul Anton and Johann Caspar Schade, he founded the Collegium Philobiblicum to enable graduates to study the Scriptures together, both philologically and practically—a venture of which Spener expressed approval. Francke's first great work was a controversy with the Rationalists and, ultimately, returning to Leipzig, lectured to crowded audiences. Opposition, however, soon arose, and Francke's Bible College was suppressed and his lectures forbidden. He thereupon wandered to a pastorate at Erfurt, but a similar outburst of opposition caused the civil authorities to expel him at forty-eight hours' notice on the charge of forming a new sect. Three months later, at the end of 1691, Spener secured for him the pastorate of the Teachers' College and Oriental Languages at Halle (where his colleagues were Anton, Joachim Lange, and Joachim Justus Breithaupt) and a pastorate at Glanau. Here Francke remained for thirty-six years until his death in 1727, exchanging, in 1698, his former position for the chair of Theology.

Francke was a man of real gifts, eloquent, learned, saintly, and industrious (for his remarkable philanthropic work see below). It is said that, as a token of the respect which his character evoked, a great statue of him was raised over his graveside. As a writer Francke was less able than Spener, but, besides controversial pamphlets, he left several works for students and some books of devotion. At the death of Francke the activities of Pietism waned. Its main power was wielded in N. and Middle Germany, but it exercised some influence throughout Europe, and especially in Switzerland. Frederick I. supported the movement, decreeing in 1729 that all who desired appointments in Prussia must study two years at Halle. Frederick II. was unsympathetic, however, and Valentin Ernst Löscher of Dresden headed an opposing movement. While Pietism withstood this in the main successfully, by the middle of the 18th cent. its force was largely spent, although the violence of the opposition weakened contempo- raneously with the decline of Pietism. During the period of rationalism which followed Pietism was quiescent, but its spirit, at least, subsequently revived, and, in better fellowship with orthodoxy, is not yet dead in German evangelical Church life.

A more moderate form of Pietism, centring in Württemberg, flourished longer. Its leader was the famous Johann Albrecht Bengel (1687-1752), together with Friedrich Christoph Oetinger (1702-82) and others. Schaff compares the Württemberg Pietists in their relation to Lutheranism with the early Methodists and Anglicans. They aspired to be a movement within the Church, holding prayer-meetings, conducted by lay leaders (Stundenhalter), but attending church service and the sacraments. Unlike the Methodists, however, they did not entirely break away, the main body tending to become more churchly without being strict Lutherans. Among the Pietists of Kornthol and Wilhelmsdorf, seceded, following the tendency of so many Pietistic centres to become separatists.

The reaction against rationalism under Baroness von Krudener was inspired by Pietistic influences, as was the party led by Ernst Wilhelm Hengstenberg which flourished at the close of the Napoleonic wars. It was mainly distinguished by its opposition to the scientific study of theology. But these were after-effects. The direct influence of Pietism ceased by the middle of the 18th century.

4. General principles of Pietism; its strength and weakness.—Spener's basis was experience. Without attacking doctrine, he relegated it to a minor place, emphasizing the will rather than knowledge, and insisting that justification by faith must be by a faith supported by works, such as repentance, conversion, and a changed life. A certain Puritan strain was manifested in the Pietist's demand of a revival of the outward observances, and, in the insistence that the regenerate alone were fitted to teach theology—a point which, somewhat strangely, gave great offence. Some Pietists indulged in millennial还不是 evidence of a change in spirit in Pietism; but, in the main, Pietism is justly to be called a movement of revaluation, which tried to attach to regeneration and sanctification as accompanied facts a higher value than to justification by faith as an approved theory. Pietism has been described as the last fruit of the heart-religious originated in the Franciscan movement; and also as the last great surge of the waves of the Reformation, and the final form of its Protestantism. Neither description is strictly accurate. 'Heart-religion' did not start with the Franciscans or end with Pietism; nor are the waves of the Reformation spent. Pietism was the reaction of the spirit against the letter. It sprang up in protest against the formalism of its day. But it represents a permanent feature of the religion, just as the mysticism of the Greeks, and true piety and holiness is to be found in every religion. The Pietist stress upon the will offended the orthodoxy, who regarded the work of the Holy Spirit in conversion to be primarily in the illumination of the understanding, whereas the Pietists regarded it as consisting rather in the stimulation of the will. The later critics, however, chiefly bring charges of another character, mainly of fanaticism, though others see in the movement a retrograde tendency to Catholicism. It is suggested that the subsequent development of Pietism was an abandonment of its own principles. Its insinuance upon new birth, separation from the world, and acute repentance is alleged to have led to exaggeration and frequent fanaticism. It is said to have indulged in wild prophecies, mysteries, bloody swaths, the formation
PIETISM

of independent communities, some fanatical like the millenarians, others criminal. A long list of martyrs, including such as Halle's poor B. Halle, the Friedman Arnold (1660-1714), who began as Pietists and ended as fanatical mystics are quoted as examples. It is said that registers were kept for souls, and idle people supported themselves by uttering the shibboleth of Pietism, whilst others committed suicide in religious mania. Such criticism, however, defeats its own ends. It represents the Pietism of Spener and Francke as little as gluttony and drunkenness represent the philosophy of Epicurus. Wilhelm von Humboldt was a most impartial judge in which it was presented by the actual leaders of the movement, not in the excesses to which it degenerated apart from their control. In this statement, however, the main weakness of Pietism is revealed. It was the lack of central control. Unlike Wesley, Spener allowed the movement that he initiated to develop unorganized and largely undisciplined. He let liberty become licence, and it led to degeneration. Spener judged that organization had killed spirituality in the Lutheran Church, but among the Pietists the lack of organization led to the same result. There were other causes. Pietism proclaimed a gospel of individual rather than universal salvation. It tended to leave the Church and its discipline, and even to seek parity in isolation. There was also opposition, and subsequently the undermining influence of the rationalistic movement. But the chief cause of the decay of Pietism was none the less the false individualism which left every Pietist community free to direct its own destinies in its own way. The decay of Pietism came when it had worn down opposition; and the influence of rationalism, though hostile, is least potent of all against spiritual movements. One can but conclude that the prime cause of the ultimate failure of Pietism to maintain itself lay in the fatal error of believing that spirituality needs no organization.

5. The results of Pietism.——(a) In the Church.——

Though the critics of Pietism allege that the ecclesial is ecclesia weakened Church organization and led to separatism, there is little doubt that Pietism tended in the main to restore vitality to the Church. It showed afresh the importance of religious experience; it revealed the religious value of hymnody, and vindicated right lay activities. It led to some improvement in the conduct of worship and a better liturgy. It gave a fresh impetus to hymnology and religious poetry. Paul Gerhardt's hymns proved an inspiration to the Pietists, and stimulated their own production. Spener and Francke both wrote hymns, though Spener's are poor and Francke's few. Better known are those of J. A. Freylinghausen; whilst among the hymn-writers influenced more or less by Pietism may be counted W. C. Dassler, B. Schmolek, J. J. Schütz, and G. Freytag. Although the Pietistic movement died out without effecting the thorough renewal of the life of the Church which it aimed at securing, its indirect influence tended to restore a truer conception of the Church as the body of Christ, and to lay a foundation for the organization of worship, and the legacy which it left became the joint property of many subsequent forms of evangelical revival.

(b) Philanthropy.——Perhaps the most enduring results of Pietism was the first impulse it gave to philanthropic work. Francke established the famous Halle schools in 1705, and the foundation still exists. The work began modestly with a ragged school in his own house. Two years later another house was opened, and soon, with the time of Francke's death to a large institution, supporting nearly 150 orphans, and educating between 2000 and 3000 poor children, for the most part gratuitously. The system of education was both religious and technical. It embraced natural science, physics, chemistry, and, with these, the German tongue. One by one were established a printing press, hospital, library, farm, brewery, and laboratory. A teachers' training college was also added and a Bible Society under Karl Hildebrand von Canstein. The last side of Pietism is revealed in the Halle orphanage—a work which gained for it the support of those to whom its purely religious propaganda did not appeal.

Pietism was also a pioneer in foreign missionary activities. Frederick IV of Denmark, acting under the influence of Julius Lütkens, the court preacher, who was a friend of Spener and Francke, sent men to Halle for training, and asked Francke to find missionaries to Danish E. Indian possessions. In 1704 a mission was thus established at Tranquebar, and the Danish-Halle mission received the congratulations of George I. of England. The Moravian missionary movement also owes much of its strength to the Pietist strain in its ancestry.

(c) Other movements.——The Moravians (q.v.) may be regarded as indirectly an offshoot of Pietism. Zinzendorf was Spener's godson and a pupil in the Halle school. From Pietism he learned not only the missionary service which characterized the Moravian community, but the emphasis on vital religion also. Through the Moravians the Pietist influence came down to Schleiermacher (q.v.), and is found in the insistence which his philosophy lays upon feeling. The Lutheran stress upon knowledge, changed by Spener to emphasis upon will, becomes in Schleiermacher a doctrine of feeling, and in this sense also, despite Ritschl's anti-Pietistic strictures, the Ritschian theology has its Pietistic strain. Indirectly linked with Pietism by means of Moravism is the Methodist revival under John Wesley (see art. METHODISM).

By a strange contradiction, the Aufklärung, which represented the antithesis of Pietism's religious views, was in some part prepared by the Pietistic movement. In the first place, the individualism of Pietism, which attracted the robust common sense of Thomasius, prepared for the individualism of 'the Enlightenment' (q.v.), and, in addition, the Pietistic strain of the Aufklärung provided an atmosphere of greater freedom. It is noteworthy that Johann Salomon Senler, who was one of the forerunners of theological rationalism, came from Halle, where he was professor in 1762.

Through these channels the stream of Pietism ran down to the sec and lost itself. If now the course of Pietism is dry, at least it may be said that the flow was not in vain. Outwardly the record of Pietism is that of a movement which spent itself, but those who take a wider view will see that it was not lost as an influence when it ceased to have an independent course as a movement. The spirit of Pietism survived its body, and still lives in every form of intensive and devotional religious life.

E. S. WATERHOUSE.
PILGRIMAGE.

Arabian and Muhammadan (T. W. JUNYDOLL), p. 10.

PILGRIMAGE (Arabian and Muhammadan).

1. Pilgrimages in early Arabia.—A religious feast like that annually celebrated by the heathen Arabs in the neighbourhood of Meccah was called hajj. This word (like Heb. מִלְחָמָה; see, e.g., Ex 16:12, Dt 16:12) designated a periodical feast at any sacred place, to which the worshippers on that occasion made a pilgrimage. Probably there were various holy places in Arabia, where such a hajj took place. Epiphanius, e.g., mentions the word ἀρχαῖα ἱερατεύματα (i.e., the hajj to the holy temple) as being the Arabic name of a month in N. Arabia. We may suppose that the 'holy temple to which this pilgrimage was made was a local sanctuary in that country, and not the distant Ka'bah at Meccah (cf. J. WELLHANSEN, Reise arab. Heidentum, p. 83).

Only the great hajj, celebrated annually by various Arabian tribes at the holy mountains of 'Arafah and at adjacent places, in the sacred month of Dhul-Hijjah, has survived the ancient paganism, since Muhammad incorporated these ceremonies in a somewhat modified form into his own religion. The feast took place at the end of the year (see Wellhausen, p. 94 ff.) and had originally, we may suppose, a magical character. Its purpose in early times must have been to get a lucky new year, with plenty of rain, and a prosperous and abundant of cattle and corn. Great fires were lit at 'Arafah and Muzdalifah, probably to induce the sun to shine in the new year. Water was poured on the ground as a charm against drought (hence, probably, the 8th of Dhul-Hijjah was called 'the day of tarwiyah,' i.e., 'the day of moistening [the ground]'). Perhaps the throwing of stones at certain places at Minâ, a relic of the primitive heathenism, was originally a throwing away the sins of the past year, and in this way a sort of charm against punishment and misfortune. Other theories, however, are defended by V. Chauvin ('Le Jet des pierres au pèlerinage de la Meccâ'), A. de l'Acad. royale d'archéologie et des belles lettres, iv. iv. [1902] 272-300; cf. M. T. Hostema, 'Het skoelisme en het senenweten te Minâ,' Vortragen en Mededelingen der Kon. Acad. van Wetenschappen, vi. vi. [1894] 194-217 and many others. The excessive hurry and noise which characterized the run from 'Arafah to Muzdalifah and from Muzdalifah to Minâ seem originally to have had some magical meaning. The three days at Minâ (11th-13th of Dhul-Hijjah) were 'days of eating, drinking, and sensual enjoyments,' according to Muslim tradition; fasting during that time was even forbidden—evidently as a symbol of the abundance that was hoped for in the following year.

Every pilgrim entered upon a special state of sacredness (ihram) during the hajj. In this state certain things, allowable at other times, were forbidden. The mukhrim (i.e., he who was in the state of ihram) was not allowed, e.g., to cut his hair or nails or to shave his head. His whole body had to be left uncovered, though he might wear two pieces of white cloth (the so-called riqâ and šīqâ). We can hardly doubt that the real purpose of the various obligations of abstinence imposed on the mukhrim (cf. the Hebrew Nazirite) was originally to bring the pilgrim into a state of magical power and to strengthen the magical influence of the hajj ritual.

It must be observed, however, that in the time of Muhammad the original meaning of the old ceremonies was long forgotten. Indeed, the feast had no longer much religious, but rather a commercial, importance for the contemporaries of the Prophet, since during the hajj Meccah and the neighbouring market-places were visited by the Arabic tribes, even from distant countries. Every one could travel and trade then without fear, on account of the general truce between the tribes during the sacred months.

Pilgrimages were also made in early Arabia to the Ka'bah, the old heathen temple at Meccah. The most sacred spot of this sanctuary was the eastern crescent in which the venerated Black Stone was fixed, opposite the holy well of Zamzam. It was especially in the sacred month of Rajab (the 7th month of the year) that the Ka'bah was visited by pilgrims, who made circuits round the building and sacrificed first-born camels and sheep. Meccah was surrounded by a haram (sacred territory), the boundary of which was marked by stones. He who entered this sacred territory assumed the state of ihram, and would then pay a religious visit to the Ka'bah. The worshiping of the Meccan sanctuary was called 'umrah (i.e., cultus, cultivation of the sacred building) and, as it seems, was not connected with the annual hajj of 'Arafah.

2. Incorporation of hajj and 'umrah into Islam by Muhammad.—Muhammad had seen the hajj since his youth. When he began to preach, he had no reason for enjoining the old Arabian rites as a religious duty on his followers. For in the revealed books of the Jews and Christians no divine prescripts were given as to the hajj feast. After the hajj, however, as Muhammad had persuaded himself that the Jews and Christians had changed the true sense of their sacred books, he concluded that the Ka'bah and the ritual connected with this 'house of God' had belonged originally to the true religion, and were founded accordingly by Abraham, the great prophet of the Jews and Christians as well as of the Arabs. As a consequence of this theory, the pilgrimage to Meccah now became a religious duty for the Muslims at Medinah, in the second year after the hûjrah. Several verses of the Qur'an, all relating to the Ka'bah and the ceremonies which must be performed there, were now revealed (see, e.g., ii. 185-189, iii. 89 ff., xxii. 25 ff.).

But the unbelieving inhabitants of Meccah refused to admit the Muslims into the sacred city, and it was not till A.H. 6 that Muhammad tried to go with his followers to Meccah. The first attempt failed. As soon as the Meccans heard that the Muslims were approaching, they prepared themselves for stern resistance. The two parties met at Hudaybiyah, on the frontier of the sacred territory. Negotiations were opened there, and it was settled that the Muslims should return to Medinah, but should be allowed to celebrate the hajj of the year in Meccah the next year. According to this treaty, the Prophet came in A.H. 7 with many of his followers to Meccah, and made the so-called 'umrah al-qudhâ (i.e., 'the umrah whereby was performed at last what was neglected till
this time,' or perhaps the 'umrah of the treaty').

The Meccah was conquered by Muhammad in A.H. 8, many Muslims joined in the *hajj*, at first along with the unbelieving Arabs and without the Prophet himself. But, in A.H. 8, Qur'an ix. 1ff. and 28 were revealed. In these verses Allah declared that the best of the Muslims and unbelievers must be revoked, and that nobody who was not a true Muslim might approach Meccah or the *hajj*. All ibn Abi Talib (afterwards the fourth *khatib* or 'preacher') was sent to Meccah by the Prophet to proclaim the message among the pilgrims assembled at the *hajj* of that year.

Thus, in A.H. 10, all unbelievers were excluded from the feast, and now the Prophet came from Meflinah to Meccah in order to partake himself in the *hajj* and to reform the old heathen ceremonies into a good Muslim service. All later Muslims have confirmed to the example set by the Prophet at this pilgrimage—the so-called *hajjat al-wulūd* (i.e. 'the farewell *hajj*', because it took place in the year before his death).

Pilgrimage ceremonies (hajj, 'umrah, and *ziyarah*).—The various ceremonies of the Meccan pilgrimage have often been described, not only by Muslim authors, but also by Europeans who have witnessed them. Moreover, the Muslim law-books contain all that the pilgrim has to do during the days of the *hajj*. The pilgrimage to Meccah is called in Muslim law one of the five 'pillars' of Islam. It is a religious duty for every Muslim who is able to make the journey to Meccah (Qur'an, iii. 91)—for women as well as for men. In a few cases believers are exempted from this duty—e.g., if they have not sufficient means to pay their expenses or to provide for the support of their households till their return, or if the journey to Meccah is peculiarly dangerous on account of war or epidemic; also a woman ought not to go unless accompanied by her husband or a near relative.

At the present day most of the pilgrims arrive in the holy city from Jiddah, where they are landed by the steamers of various countries. Those who travel overland come with one of the caravans to Meccah. The two best known caravans in modern times are the Syrian, which comes from Damascus, and the Egyptian, which starts from Cairo; these two pilgrim caravans, each with a richly-ornamented saddle such as distinguished Arabic women used to ride upon. The *mahmal* was a sort of banner in Arabia. In ancient times several *mahmals* often appeared at the *hajj*, every independent *sultan* or emir sending his own caravan to the *hajj* with a *mahmal* as a visible mark of his high dignity (see C. Snouck Hurgronje, Melkia, i. 29, 83 ff., 105). This custom was held in honour by the Turkish *sultans*, who even continued to send the Egyptian caravans as well as the Syrian caravan with a *mahmal*, though they had become *khatifs* of the whole Muslim territory.

In the holy city the pilgrims usually begin by performing the ceremonies of the *umrah*, the so-called 'little pilgrimage' to the Meccan sanctuaries. Almost every pilgrim requires the assistance and information of a Meccan guide (daili, mutawwif, or *shāhik*) to instruct him in the ritual and teach him the proper recitation of the prescribed formulae. The Muslim *shahāk* consists mainly of the four following ceremonies:

1. Before entering the *haram* of Meccah, the pilgrims must assume the state of *tawaf*, abstaining thereafter from worldly affairs as much as possible.
2. The inhabitants of Meccah, when performing an *umrah*, must go out of the *haram*. They assume the state of *wirah* on the frontier (usually at Zatīn, which is therefore often called *Umrah*).
3. The pilgrim then proceeds to the *tawaf* (the circuit of the Ka'bah), and makes seven complete rounds (al- *umrah*) around the Ka'bah, and walks round the temple seven times. When passing the eastern corner, he must kiss the Black Stone. If the *tawaf* is divided into two portions, the second must be preceded by the first. In the second, he must touch it with his hand or with a stick or must look towards it.
4. The pilgrim goes to the *mānhil* (the running or circuiting) between Safa and Marwah, two small hills in the mediate neighbourhood of the great mosque of Meccah. Safa and Marwah were once hilly, which are held in reverence by the Meccans. In later times the soil of Meccah has risen considerably and at the present day Safa and Marwah hardly show above the surrounding level. Qur'an (Qur'an, ii. 153) has confirmed the sacred character of these two places. At the summit of each, the pilgrim performs the circuit between the two sanctuaries, in a prescribed manner, moving his shoulders.

The *umrah* can be performed at any time and as often as the individual Muslim likes. The inhabitants of Meccah usually do it in the month of *Ramadan* because this is the special month for religious acts.

Before the beginning of the *hajj*, on the 7th of Dhu'l-Hijjah, a *khutbah* ('preacher'), usually the qadi of Meccah, gives an address in the great mosque at Meccah to remind the pilgrims of the ritual of the following days. Next day (8th of Dhu'l-Hijjah) most of the pilgrims enter upon the state of *tawaf* ('preacher'), and are then sent to 'Arafah, which can be reached in about four hours by camel. According to the law-books, it is best to pass the night in Munā (formerly Minā), about half-way between Meccah and 'Arafah, but usually the great majority of the pilgrims go directly to the plain of 'Arafah. There the *wūkaf* takes place on the 9th of Dhu'l-Hijjah. The *wūkaf* is simply the staying or standing in the plain of 'Arafah for the prescribed time (just after mid-day till a little after sunset). This ceremony is also a 'pillar' of the Muslim *hajj*. There are no special rules for the *wūkaf* in the law-books. The pilgrims are only waiting there. Wellhausen thinks that this ceremony was of more importance in pagan times, and was perhaps a general symbol for all the pilgrims.

After sunset the *ifādah* begins (i.e. the running from 'Arafah to Muzdalifah, half-way between 'Arafah and Munā)—according to the old heathen usage, with great hurry and noise. The pilgrims run as fast as they can; and so they are present at the second *wūkaf* there in the early morning. Before sunrise the journey to Munā must be continued.

In Munā the great offering feast is celebrated on the 10th of Dhu'l-Hijjah. This day is therefore called the *yamūn an-nabīr* ('the day of slaughter'). The sacrifice is preceded by the ceremony of throwing seven pebbles to the *jummah al-`Akbah* (i.e. the heap of pebbles close to the mountain-road) at Munā; to-day this place is marked by a sort of buttress of rude masonry about 8 ft. high by 23 ft. broad. The Muslims say that this ceremony has been performed since the time of Ibrahim because the devil (Shaitān) tried to seduce him on this spot. Before throwing each of the seven pebbles, the pilgrim must say: 'In the name of God, Allah is almighty!' The sacrifice at Munā, strictly speaking, concludes the *hajj*, and the pilgrim may then shave his head. But, before returning, he has to receive from the Meccah and make the *tawaf* round the Ka'bah, followed by a *wūkaf* between Safa and Marwah, if he has not already performed this ceremony on his first arrival at Meccah. It is, however, customary as early as the 10th of Dhu-l-Hijjah, though it is a meritorious act. It may be done also on one of the following days.
The remaining days, the 11th, 12th, and 13th of Uhu'il-Bijah, are called the three days of the tawqah. The original sense of this word is uncertain (cf. T. W. Juyboll, "Über die Bedeutung des Wortes Taschriḳ," ZA xxvii. [1912] 1-7). It is commonly stated that any later Middle Assyrian tablets refer to the flesh of the victims in the sun. The pilgrims should spend these days at Mūnā, eating, drinking, and making merry. Moreover, they must again throw seven pebbles each day at each of the three jinns (heroes, or heroes of light) at Mūnā.

The law, however, allows a return from Mūnā to Mecca on the second day, and many pilgrims avail themselves of this privilege. Having finished the hajj, the pilgrim, before leaving Mecca, should give a farewell tawqih (round the Ka'bah).

Other pilgrimages, which are not expressly prescribed by Muslim law (e.g., pilgrimages to the tombs of saints in various countries) are generally called ziy̱ṟah ("visit") by the Muslims. The ziy̱ṟah is regarded as a religious act from which many blessings accrue. Most of the pilgrims visit it before or after the hajj.

PILGRIMAGE (Babylonian).—By this word most people understand a journey to a holy place or shrine, either in the pilgrim's native land or abroad. The object of a pilgrimage is to obtain some benefit, material, moral, or spiritual, which the sanctity of the chosen spot is thought to confer. It is true that pilgrimage may be undertaken as a journey, either for business or for pleasure, but must be regarded in many instances, an opportunity for acquiring the merit or the benefit which a pilgrimage conferred. In such a case the advantages connected therewith would be merely a matter of chance, due to the seizing of the opportunity, for the Babylonians and Assyrians were much addicted to the observance of omens, and those connected with a visit to a place would naturally attract attention and lend themselves to profit thereby. Several fragments of a tablet, or a series of tablets, dealing with the advantages to be gained from tours of this kind exist, and are of some interest in those cases where the lines are complete. The following are examples of the benefits promised:

If he go to the city Nippur, grief of a day, peace of a year' (Nippur was the renowned shrine, first of Enlil, the older Bel, afterwards of the god En-ansu). If he go to Tashbih (Babylon), trouble of a day, peace of a year ... there is no need to mention the importance of Babylon as a holy centre. If he go to Nanna, and bring a drink offering there, he will exercise power, his days will be long' (Nanna [Nannu] is probably another name of the Euphrates, which was apparently a holy river like the Ganges; Nanna, which was one of the names of the river-god, was also the name of a town). 'If he go to Ur, and bring a drink offering there, he will be plundered' (perhaps we have to read Sargul, the modern Zargul, in which case the pun may have been by comparison with the Assyro-Semitic word for plunder).

Omens of this nature were numerous, but so far comparatively few have been found.

2. Stories of visits to holy places.—Records of pilgrimages are, for several reasons, few in Assyro-Babylonian literature. It does not seem probable that pilgrimages, unconnected with other business, were often undertaken. In addition to this, it was the custom among the Babylonians, and probably among the Assyrians as well, to send their deputies from place to place, in order that they might receive the homage of the faithful; and journeys to worship them, or to obtain the advantages which a pilgrimage brought, were not so much needed. The most noteworthy instance of a pilgrimage is the great journey of Gilgames, king of Erech, to the temple of the Assyro-Babylonian Noah, who had been placed by the god whom he worshipped in 'a remote place at the months of the rivers.' Among the benefits sought by the hero was the gift of knowing how he might attain immortality. In this wise, as the Babylonian patriarch could not be brought to Gilgames, Gilgames had to go to him (see ERE ii. 315-316, vi. 643). The descent of Ishtar into Hades for Tammuz, his husband, can hardly be regarded as the pilgrimage in the true sense of the term, as no devotional or spiritual benefit was sought. Different, again, is the legend of Etanna, who tried to visit Ishtar in heaven, mounting thither on the back of an eagle. The aerial journey was undertaken to invoke the goddess's favour on behalf of the hero's expected child, but apparently failed because he feared to mount so high (see ERE ii. 315, vi. 644).
Similar entries follow these. The date is ‘Month of the Festival of Tammuz.’

As there is no reference to viceroy Ama-anunag-šu,2 Babylonian letters may have been coming to Luqas, where the tablet was found. Mašu, on the other hand, required provisions, as he was going to Saba.1

4. Vicarious pilgrimages.—In some cases these tablets record vicarious pilgrimages, made at the request of people who, unable or unwilling to leave their homes, sent others to represent them, and possibly to make offerings on their behalf. In all probability these journeys were in parties or caravans.

Later instances.—One of the most interesting visits to a holy place is that of Shalmaneser V. to Babylon, as recorded on the Bronze Gates of Balawat discovered by Hormuzd Rassam. This king relates that, after leaving Marduk-sum-idinna,2 Babylon, Shalmaneser with his heart,3 and Merodach commanded him to go to Babylon and Cuthah, where the king caused offerings to be made. At E-šagila the temple of Belus in Babylon2 he directed the ceremonies and offerings to be made, and afterwards Shalmaneser "took the road" to Borsippa, and made offerings to Nebo. Entering E-zi-das (the temple of Nebo at Borsippa), he caused the rites to be conducted reverently, and offered plentifully ‘great oxen and fat sheep.’ At both Babylon and Borsippa he made drink-offerings, and there were feasts, with food and wine. The result of all this devotion was that the gods regarded Shalmaneser, though an alien king, with joy, and heard his prayer. This tablet (c. 650 B.C.,2? ?) in which Assu-šu-bani-Âpili went to Arbela to supplicate the goddess of war, Istar of Arbela, for her divine help against the Elamites.

6. Pilgrimages in a private capacity.—These are not always certain—it may have already been virtually ordinary acts of worship. Thus Meissner’s rendering of ʿīki (from ʿālāiku, ‘to go’) as ‘my duty’—‘I am firm in my duty at E-zi-das with regard to my father’—makes the possibility that Bēl-nāšišu (5) went on a pilgrimage to the temple of Nebo to the father very doubtful. Nevertheless he did visit the temple on his father’s behal’

The son of the temple (Nebo, the god worshipped there), when I had paid with regard to thee, set the time for success as being until the 4th day.’ This grace applied not only to his father Kūnā, but also to all his people. In no. 865 of R. F. Harper’s Assyrian and Babylonian Letters (London, 1902) the writers’ statement that ‘he [the king] entered Babylon—he kissed the ground before Merodach and Zer-panitu’ or (i.e. in the temple of Belus) likewise implies at least a turning aside to perform a religious duty. But more to the point, apparently, is the following (from Babylon):

‘Letter from Marduk-din-šu-Sikku, my brother, May Merodach and Zer-panitu praise the name and the service of any brother. Behold, iltà-din-bi has gone up with me to Saram—we made an offering there with Ner-gal-iddina, his brother, and presented our heart’s desire.

Here, again, we have (to all appearance) the combination of business with religious duties.

7. The legend of the ‘Mother of Sin.’—This is a bilingual record in which, after describing the misfortunes of the ‘royal maid’ and the serta of these journeys in connexion with temples, that in which the priests (of Sippar), c. 1850 B.C., give a 1 shekel of silver to buy grain for a journey may, perhaps, be quoted (Ugurad, Hammurabi’s Geset, Leipzig, 1899, no. 485 in vol. iii. p. 13a). The amount was the gift of the chief singer (adru ra’ba).'

mother’ is called, the text, in a fresh paragraph, continues:

‘Come, let us go to him, let us go to him! For as for me, to his city, let us go to him! To the city, to the wonders, let us go to him! To the city, to Babylon’s foundation, At the commandement and with the viceroy (the house of the world’s repose), but she had also to do compliance and submit to Istar’s punishments, performed by her servants and ministers.

The record is unfortunately incomplete, but it is probable that the deity referred to by the pronoun was Tammuz, Istar’s spouse, whom the ‘sinful mother’ had offended in some way.

Though the records are apparently scanty and doubtful, the journeys which pilgrimages imply were far from uncommon in Assyria and Babylon, as the fragments referring to the benefit to be gained from visits to sacred places seem to show.

T. G. PINCHES.

PILGRIMAGE (Buddhist).—In the earliest order and scheme of Buddhism monastic life, if the sacred relics of the Tripitaka may be taken to reflect faithfully and in general the teaching of the Founder, there was no recognition of the duty or privilege of pilgrimage, and no sanction given to the practice. Gautama Buddha neither forbade nor enjoined his followers to imitate that which Hindu example must already have made sufficiently familiar—the journeys to near or distant shrines for spiritual benefit and to render homage. It was impossible that with his views and teaching with regard to the future life he should have allowed an existence or recognized the validity of a habit founded upon the belief in the continuity and permanence of existence after death. The slight evidence available, however, indicates that very soon after the parinirvāṇa, and probably in connexion with the distribution of the relics and the building of memorial stūpas over them, the practice arose among the adherents and friends of the Buddha of visiting the places thus consecrated by the presence of the earthly remains of their honoured teacher and guide. From this it was an easy step to a practice of pilgrimage which endeavoured at one and the same time to secure personal advantage from a visit to the shrine and to honour the saint whose name and fame were there conjoined. In the early stages, the habit of pilgrimage is and for many centuries has been wide-spread in Buddhism, not only in the Mahāyāna school, where it is most prevalent, but also in the Hinayāna of the south.

1. Origin.—It appears probable therefore that Buddhist usage in this respect is, in the first instance at least, imitative of Hindu practice, and grew up independently of any direct command. It is perhaps not without significance also that the Pāli form of the Sanskrit word (pravrajya, Pāli pāppatti, lit. ‘a going forth’, ‘retirement from the world’) should be the technical term for admission or ‘ordination’ to the first grade of the Buddhist monkhood. The pilgrim (pravrajya, pāppajjak, Pāli pāppatti) is described in the Dhammapada as one who has abandoned
PILGRIMAGE (Buddhist)

with the lives of holy men and incalculating the virtue and number of pilgrimages, and pious acts. It is held that one of his first features of his teaching is original. It bears rather the impress of a later practice, introduced into Buddhism in harmonious desire to maintain communion with and do honour to the dead; and is part of the esoteric and mystical traditions. But there is an authentic remark, according to the Mahakāpāla-vatana-vatana and assertion, was formulated by Gautama during the later years of his life. There is no real evidence in support of this; and in regard to the extinction of the life of the Buddha, his ideas, or those which imply the possibilities of relations between the living and the dead and the individual consciousness and capacity for good or evil of the latter, it is unlikely that he disused and limited teaching of his mature life, in which he renounced to be the God and king of life or death, and the continuous concern aught beyond this present world, was later exchanged for positive doctrine and directions based upon entirely different lines. There is no attempt at such an exegesis of the strata of the Buddhist literature that must not be overlooked. The Pali Tripitaka is an important document, to make good in most respects at least its claim to represent most faithfully the convictions and doctrine which Gautama set forth to his disciples.

2. Indian places of pilgrimage. — It is probable that the earliest centres of pilgrimage were the places most closely associated with the life and teaching of the Founder. Four of these, viz. Kapilavastu, Kușanagara, Buddh Gaya, and Benares, were pre-existent, and for centuries continued to be the goal to which the steps of Buddhist pilgrims were turned; two of them are venerated and resorted to by numerous Buddhist worshippers at the present day, who bring offerings from the most distant lands. Testimony to the reverential regard in which these and other holy places held is found especially in the writings of the Chinese pilgrims. In the Lumbini Grove at Kațālava (q. v.) was the birth-place of Gautama Buddha. Buried in the dense torai districts of S. Nepal, the most significant part of the scene was re-discovered in the year 1895, and identified by a pillar and inscription recording the visit of the emperor Aśoka. A centre of pilgrimage it has for a long time been inaccessible and is so at the present time, and thus awoke the universal desire to visit, to pay homage to the Buddha—his birthplace. The exact site, however, has not been identified.

The two remaining places that shared in all probability with the traditional scenes of Gautama's birth and parinirvāna the veneration of the earliest Buddhists, and which have maintained the present day of the ceremonies, is the temple with thousands of Buddhist pilgrims from all parts of the Buddhist world, are Buddh Gaya, six or seven miles south of Gaya (q. v.) in W. Bengal, where, seated under the Dvī-ćāl tree in deep meditation, Gautama attained insight and the bliss of perfect knowledge; and Benares (q. v.), probably the most ancient sacred city in the world, the scene of the first deliverance of his message, when in the Deer-Park (Isipatana), in his first sermon addressed to the five ascetics in whose company he had previously practised fruitless austerities, he \textquoteleft set in motion the wheel of the law,' and founded the \textquoteleft highest kingdom of truth.' These places possess an equal sanctity in the eyes of Hindus, and they are sought out by multitudes of pilgrim worshippers of both religions.
After the death of the Buddha the relics of his body were collected from the funeral pyre, and divided into eight portions. These were distributed to the various claimants for their possession, and over them memorial stupas were erected for their preservation. The places thus made became centres of pilgrimage, which attracted devout worshipers from far and near, and were visited among others by Fa-Hian and his successors for their preservation, and over whom memorial stupas were erected for their preservation. The places thus made became centres of pilgrimage, which attracted devout worshipers from far and near, and were visited among others by Fa-Hian and his successors.

3. Historical visits.—(a) Asoka.—The earliest historical reference to pilgrimage undertaken with a religious motive is contained in the edicts of the Buddhist emperor Asoka (q.v.) in the 3rd cent. before our era. In the midst of his zealous care for the welfare of his subjects he found time and opportunity for extensive journeys to the sacred places of the Buddhist faith within his dominions. Besides confirming and propagating the faith by his edicts and mission he erected at these places numerous stupas containing sacred relics, repairing others which had fallen into neglect or decay. For their maintenance also he provided revenues, and himself, according to the tradition, undertook the expense of erecting each of the limit of his pilgrim travels northward was the ruined site of Kapilavastu; and here, in addition to the erection of a commemorative pillar with inscription, he repaired or rebuilt a stupa in memory of his venerable predecessors. His successors of a byzoon age. This enlargement or repair he is said to have accomplished for the second time. In any case his experience and action are sufficient proof of the existence in his day, and for a considerable period beyond his time, of buildings associated with the life and deeds of holy leaders and teachers of old, which had already become centres or goals of pilgrimage. Certainly the stupa of Kanakamuni was not a solitary instance of a commemorative erection, where offerings were presented and homage paid. There were many others, at least in the sacred country of Buddhist origins, and probably elsewhere. The words and acts of Asoka clearly indicate that in his day merit was considered to attach to visits to these spots, and the names and memory of those whose honour the stāpas had been raised were regarded with veneration. The date and circumstances of his visit therefore and the motives that prompted it justify the conclusion that sacred pilgrimage became a recognized characteristic of the Buddhist faith long not after the death of its Founder.

(b) Fa-Hian.—Both Kapilavastu and the scene of Gantama’s death at Kuśānagara were visited by the Chinese pilgrim Fa-Hian and others in the 5th and following centuries. The former site Fa-Hian describes as already deserted in his day, inhabited only by a few monks and some poor families; and it has remained ever since in the same state of desolation. In the course of his pilgrimage Fa-Hian visited all the important Buddhist shrines and cities in the north of India; thence he travelled to Ceylon, and paid his homage to the sacred relics there, including the tooth of the Buddha preserved in the island. Everywhere in India he has been received with enthusiasm by the learned and pious monks; and at the sacred places there were great companies of Buddhist pilgrims, intent on showing honour to the dead and winning merit by their self-sacrificing exertions.

(c) Hiuen Tsiang.—The most important and celebrated Chinese traveller and pilgrim was Hiuen Tsiang (Yuan Chwang [q.v.], who followed Fa-Hian at an interval of rather more than two centuries. His name and fame still survive in Central Asia, where his memory is revered as that of a wonder-working teacher and saint. His travels extended over sixteen years from A.D. 629 to 645. In these laborsome journeys he covered a considerably wider area than his predecessor, but he did not visit Ceylon. He appears, moreover, to have been more interested in the present condition of Buddhism, in its doctrine, practice, and literature, than in its relics or holy places. He regarded those pilgrimages as more impressed by its vitality and influence, and by the conflicts of the schools, than by the crowds of pilgrims. He visited all the great centres of the Buddhist faith, and makes frequent reference to the revival of the old monuments, which even in Buddh Gaëśa had to a considerable extent supplanted its rival.

At Buddh Gaëśa also Hiuen Tsiang describes the great temple built by Asoka, 160 ft. or more in height, of eleven stories, each of which bore golden statues of the Buddha. Probably this building was erected on the site of a more ancient monument that soon after the death of the Buddha was placed there to commemorate the spot on which he attained emancipation and perfect wisdom. This temple was later reconstructed and restored, and the pyramidal temple with its many images that now occupies the site is rarely without its pilgrim visitors from distant Buddhist countries, who present their prayers and offerings at the feet of the images. It is surrounded by numerous stūpas, ancient and modern, and is as attractive and sacred a spot to Hindu devotees as to those of the Buddhist faith.

The distinctive feature of the enclosure is the ancient temple, whose sacred pipâts (Piliis reliquiae), the trees under the shadow of an ancestor of which in this place the Buddha established his seat. There are several pipât-trees surrounding the temple, most of them not improbably descended from the original Bo-tree. The pilgrims lay their offerings and pour their libations of oil and scents at the foot of the oldest, which they regard as the identical tree of Gantama, and affix gold-leaf to the steu, and to the low stone steps by which it is surrounded.1 It is in his account of the Bo-tree that Hiuen Tsiang records the tradition of the Buddha walking on the water.

Second only to Buddh Gaëśa in its sacred associations is Śrāmath (q.v.), three or four miles north of Benares. It is believed to be the site of the Deer-Park (Krishnapuram), where Gantama delivered his first address to the Hindu ascetics. The ancient stūpa on the site is probably the same as was seen by Hiuen Tsiang in the 7th century. Fa-Hian also found a monument existing there at the time of his visit. Recent excavations at Sarnath, conducted by the Government of India, have resulted in the discovery of numerous stūpas, shrines, and sculptured stones of different epochs, including two pillars erected by the emperor Asoka and many figures of the Buddha. Evidence also has been found of the existence of monumental buildings and settlements of monks at least as early as the 4th and 5th centuries of our era. The pilgrimage history of the site is long and extensive, and if its records could be recovered would be of the greatest interest.

4. Other pilgrimage resorts in N. India.—A mere enumeration of the local centres of pilgrimage in N. India would not be to much profit, and a description of them all is beyond the scope of this narrative. Chinese monks who travelled in India are full of notices of the sacred places where the pilgrims congregated from near and far, to

PILGRIMAGE (Buddhist)

worship the relics of the saints and to pay homage at their shrines. The impression gained is that such holy places have been numerous since the early centuries than at the present day, and they were naturally more densely thronged at a time when India was to so large an extent Buddhist in faith. At or near Pātaliputra (Pātāna [q.v.]), his capital city, Asoka built the first of the 84 stūpas which he is said to have erected over relics of the Buddha, and the town is described as containing monasteries and hospitals with thousands of Buddhist monks and pilgrims. According to the words of the Strava Buddhist, or historical, capital of Oudh, identified with the extensive ruins at Sahēt Māhet in the Gonda District, 1 the first sandal-wood image of Gautama was erected; and there also stood the convent or monastery of Jetavana, an early gift by a rich merchant to the community, sanctified by the frequent presence and preaching of the Master. Later, in the time of Hiuen Tsang, the town and monasteries were deserted and ruined. Some of the most sacred sites and pilgrimage resorts were to be found at Rājagra (see COUNCILS [Buddhist], vol. iv. p. 182), the first metropolis of Buddhism, as it has been called, where monasteries and stūpas were most numerous, and where some of the ashes of Gautama are said to be enshrined. Thomas Cunningham (ib. vol. p. 183), the scene of the second Buddhist Council, Nālandā (q.v.), the famed university town, Ayodhya, most holy ground to Buddhists and Hindus alike, where the Buddha is believed to have preserved for the world his most precious relics and other places were renowned centres of pilgrimage during the period of Buddhist ascendency in India.

Few of these have retained their attraction for Buddhist pilgrims at the present day. In the former capital of the kings of Oudh, ancient Saket, there was aroused among Buddhists a few years ago by the identification of the relic mound raised by the king Kaniska (q.v.) on the spot where four hundred years before the Buddha had stood and prophesied of his coming and reign. A few fragments of bone were discovered within a relic casket, which were generally accepted as authentic remains of Gautama himself. They were transported with much ceremony to Burmah, and have been preserved in a museum there.

5. Pilgrim movement beyond India.—Within the more recent centuries the stream of Buddhist pilgrimage has been to a large extent diverted from India, and the sanctuaries of the country have been visited by pilgrims who have been spared, on account of a continued enemy occupation of the country, or have been unable to be spared from the duties of state in their native lands or fallen into oblivion and ruin. Buddha Gautama has maintained its supremacy and attraction, and is still the centre and most holy place to which the heart and eyes of the Buddhist pilgrim turn with faith and affection. Outside the country of its birth the two great lands of Southern Buddhism, Ceylon and Burmah, compete to draw visitors to their sacred shrines. There is constant movement and interchange between countries so closely united in sympathy and religious belief.

(a) Ceylon. — In Ceylon the Temple of the Buddha's Tooth at Kandy is unique in its claims on the reverence and devotion of the pilgrim. Small and unimposing as the building is, compared with the great temples of Japan, it enshrines a relic of the Buddha, recognized and honoured by all his followers of every land. The Tooth is preserved in an inner chamber of the temple, resting on a golden lotus-flower within nine caskets of gold, and is exhibited by the priests to pilgrims and worshippers at stated times and the annual festival. It is said to have been taken to Kalinga from the funeral pyre of Gautama, and to have been kept in the temple at Puri for a period of about eight hundred years. Later it was transferred to Ceylon, and from Ceylon it was transferred to Kandy, where it is said to have been burnt by the Portuguese in order to divert the people from idolatrous worship. The priests at Kandy maintain that the true relic was concealed, and an imitation substituted given over to the Portuguese rulers and destroyed by them. The existing bone is not a human tooth, and probably not of human origin (see art. KANDY, vol. vii. p. 631 f.).

There are numerous temples and vihāras in Ceylon which for centuries have been centres of monasticism and worship, and also places of pilgrimage for Buddhists, but the most celebrated and frequented place of pilgrimage is Adam's Peak (q.v.), with its sacred foot-print (śrī-pāda) in the rock at the summit. The worship of foot-prints is universal in the East; Mahommedans, Hindus, Jains, and others take part in this veneration, and the practice is certainly of very early date, foot-prints of the Buddha being found on the sculptured stones at Bharhut and Sanchi as well as in various other places in India, and also in Siam, Tibet, Burma, and elsewhere. The hole or mark in the rock on Adam's Peak is the most sacred of all, and is visited by pilgrims of many faiths. Hindus believe it to be the foot-print of Siva, Christians of the impression of Jesus, and Buddhists to the footprint of Avalokiteśvara on his descent to the island, Muhammadans of Adam or, according to others, of Ali. The pilgrims of Buddhist faith, however, greatly predominate in numbers.

(b) Burmah.—Except in these two centres, the spirit and practice of pilgrimage are little effective in Ceylon. It is otherwise in Burmah, the rival home and stronghold of Southern Buddhism. The pilgrim habit plays a much larger part in the country, and the greater part of the Burmese population is Buddhistic by birth and character, is undertaken less seriously, and is more a matter of sociability and holiday-making than of religious obligation or the discharge of religious duty. The custom, however, of more or less formal attendance at sacred shrines and fulfillment of the appropriate rites and engagements of the sacred seasons is universal; and the monks themselves convive at and even take part in the merriment and relaxation which follow upon the accomplishment of their duties.

The most important and celebrated of all is the Shwe Dagon pagoda at Rangoon, where crowds of pilgrims from Japan, China, and Korea jostle with worshippers from Ceylon and Siam and the more numerous natives of the country. On the various platforms round the temple are hundreds of images of the Buddha, gilded or in stone, and the summit of the building rises to the height of St. Paul's Cathedral and is crowned with the ti, the sacred symbol of the Buddhist faith. There are here preserved, according to the traditional belief, eight hairs of Gautama, and various relics also of the three preceding Buddhas, including the staff of Kasayapa and the robe of Kunakamuni.

Burm is full of dāgabos (pagodas), many of them deserted and in ruins, but others centres of attraction to a greater or less distance throughout the surrounding country, and at the festival seasons full of a rich and varied pilgrim life. Perhaps the most renowned next to the Rangoon pagoda are those at Pegu and Prome. Within in the walls of the ancient capital of Pagan are the remains of nearly a thousand such buildings; and at Mandalay itself are many dāgabos and temples unrivalled in their beauty and peren- nial splendour. The temple of Shwezigon at Prome, one of these buildings is a sacred foot-print of the Buddha, which in the case of the more famous and accessible of them is rarely without its offering of fruit or flowers.
(c) China.—Chinese Buddhism in general has been considerably affected and modified by the native Taoist beliefs of the country; and the pilgrimage customs and practice of China are in most instances, as regards both their observances and their sacred centres of pilgrimage, the survivals of early Taoist practices of worship. The hermits also, whose spirit and aspirations are in all lands closely akin to those of the itinerant pilgrims, have in China adopted the haunts and homes of their Taoist forerunners. The most holy and frequented centres of pilgrimage are the four mountain shrines of Omjishan in the west in the province of Szechwan, Putoshan in the east on a sacred island in the Chusan archipelago, Wutaishan in the north in the province of Shansi, and Chinhuashan in Sianfanwei in the centre near the Yangtze river. The most popular Pilgrim centre financially is perhaps the first named, Mount Omii, where the temples on the summit of the mountain are dedicated to Pu-lissen, the bodhisattva Samantabhadra, an ancient bronze image of whom in one of the earliest Buddhist monasteries, seated on an elephant, is believed to date from the 7th century. The monks of Putoshan are a sincere and religious folk who welcome yearly to their island home thousands of pilgrim-worshippers, who cross from the mainland to pay their homage at the shrines dedicated to Kwanyin, the goddess of mercy. The sanctuary on the Yangtze is the least regarded of the four, and in the Taiping rebellion many of its temples were sacked and destroyed. In the temples of Sianfanwei, the principal deity and object of worship is Wenshu, the bodhisattva Manjusri; situated near the Mongol border, the shrines are as much frequented by Mongol worshippers as by Chinese, and Tibetan emblems and practices are numerous.

There are many other centres of pilgrimage throughout China, often of more than local reputation; and the pilgrims journey for long distances, making offerings and burning incense at the shrines by the way, and at the shrines themselves. The most celebrated monasteries are in the province of Chinkiang, the stronghold of Buddhism in China. It is probably true that in every direction the hold of the ancient faith is slowly weakening, and the practice of pilgrimage is likely to fall gradually into desuetude with the extension of modern systems of education and the decay of Buddhist temples and rites. 2

(d) Tibet.—In Tibet the most important centres of pilgrimage, where the sacred temples and shrines are to be found, are at Lhasa, the capital of the country, and at Samtik, the ancient capital of Tibet or Paichen Lhama. The latter bears the higher repute for sanctity, for the office and functions of the Dalai Lama at Lhasa have been to do so great an extent intermingled and contaminated with worldly interests and intrigues that the sacredness of his person as an object of reverence has to a certain extent suffered eclipse. His misfortunes and exile during the last few years can hardly have raised his reputation in the eyes of his countrymen. Pilgrims, however, from all countries where Lamasih holds sway turn their steps to the capital in great numbers to worship the incarnate Buddha, and to pay their devotions at the numerous sacred shrines. The quiet of Tashi-lhunpo, the 'Mount of Glory,' is undisturbed by the movements of politics, and the great temple and surrounding monastery have been to them a place of peace and prayer for those who have finally renounced the world and its cares. The person and character of the present Tashi Lama, who, as an incarnation of the bodhisattva Amithabha, receives the worship of all Tibetans, have made a most favourable impression on all Europeans who have come into contact with him.

Tibet is the most priest-ruled country in the world; and of its 3000 or more monasteries none is without its pilgrim visitors, the number of whom varies according to the reputation and accessibility of the temple-shrine. Itinerating bands of Lamas also of Tibetan and Mongolian race are to be met with outside the country itself, in central Asia and on the borders of India. Urga in N. Mongolia, the residence of the third Grand Lama, known as the Bogdo or 'Saint' Lama, is perhaps the most sacred place in the eyes of the Mongols. The Lama himself, however, bears an evil reputation for worldliness and immorality. The Mongol pilgrims and the Russian tourists who attend the festivals. There are numerous other centres of Lamasih devotion in Mongolia and China, and the Grand Lama at Peking is recognized and revered throughout all the countries where a Buddhism of this type prevails.

(e) Korea and Siam.—Neither Korea nor Siam, the two chief homes of the Buddhist faith other than those to which reference has already been made, adds materially to the history and records of Buddhism. The two countries are the abode of pilgrims in great numbers make their way to the sacred places of Mongolia, N. China, and Tibet; but their native land contains no sanctuary of wide repute which attracts the worshipper from afar. In Siam, although the monasteries and temples are thronged at the many and popular festivals, and reverence is paid by all at the shrines, the festive seasons are occasions for friendly intercourse and conviviality, and there is little, as far as can be judged, of the true pilgrim spirit. The most frequented shrines make their way from the sacred shrines of other lands, although they may be found occasionally at Rangoon, and in the past at least have visited and exerted much influence on the Buddhist thought and observance of Ceylon.

6. Summary.—A brief summary, therefore, of pilgrim usage and wont in Buddhism would describe it as an almost universal practice, held in the highest esteem, which in all probability was adopted soon after the death of Gautama Buddha, the principal motive being reverence for his person and for the places where the relics of his cremated body were believed to have been preserved. To a certain extent also, which it is impossible exactly to estimate, his disciples were influenced by a more or less considerable number of the lines of ancient Hindu custom. With the earlier Hindu practice of pilgrimage they were familiar; and they seem to have wished to break as little as possible with ancestral usage. Whether the Buddha himself on his journeying expeditions fell into the habit the uncertainty as to the dates and history of the written records makes it impracticable to decide. It is hardly probable or quite in harmony with what is known of his character and teaching, that he should have been the author of the contention of the Mahayana school is justified that in his later life he taught a mystical and esoteric doctrine entirely different from that of his earlier years as expounded in the Pali canonical books,
then the injunctions and regulations as to pilgrimage and sacred places also may have a similar origin, and may have been framed and announced by Gautama himself, possibly as a concession to the religious tradition of his native country. This custom was certainly taken up and eagerly followed immediately after his death, and has been ever since a marked feature of popular Buddhism in the East. Nor to any appreciable extent does the practice seem to have lost its hold upon the faith and affection of the Buddhist peoples to the present day.

Saunders, Story of Buddhism, Oxford, 1894; R. S. Copland, Buddhism in Magog and Ceylon, London, 1896; R. Spence Hardy, Manual of Buddhism, do., 1880; S. Pilgrim may be considered in the wide sense, as far as whoever is outside his fatherland is a pilgrim; in the narrow sense none is called a pilgrim save him who is journeying towards the sanctuary of St. James or is returning from it. Chalmians Peregrini in quanto vanno alla casa di Galizia, perché la sepoltura di santo Jacopo fu più lontana dalla sua patria, che d’altrui altro Apostolo—they are called pilgrims because they bring back palm-branches and roes as they journey to Rome. 2. Palestine.—It was natural that men should wish to tread again the paths trodden by the Saviour, though the first generations of Christians did not seem to feel this as strongly as their successors. But when the 3rd century the third generation as numerous sacred places visited the pilgrimages of Firminus, bishop of Cesarea, and a bishop Alexander from Cappadocia are mentioned by Jerome and Origien respectively. When the enthusiasm of the early days and of the Afterward what was supposed to be the true Cross, pilgrimage flocked thither and the stream was ever on the increase. Many records of such journeys and also numerous itineraries have been preserved. The

PILGRIMAGE (Christian).—1. Introductory. —Pilgrimage played a very prominent part in religious life in the the Christian Church, particularly in the Middle Ages. The fact that it has so largely disappeared from the religious life of England to-day is apt to conceal its importance in the past and in the countries where it is still in vogue even in the present. A pilgrimage is a journey undertaken to visit sacred places, such as the scenes of our Lord’s earthly life in Palestine, the ‘threshold of the Apostles’ at Rome, or the shrines of saints and martyrs. There were many motives at work; it might be to fulfil a vow or to secure some special attraction, or to atonement. In some cases it is difficult to say whether a given journey is a pilgrimage or not. The mere use of the word peregrinatio in a medieval source can hardly decide the question. It can be considered better historically and geographically, though the purely religious and psychological sides must always be remembered. The latter are better left over and studied in connexion with the effects of the practice and its place in the history of religion.

Pilgrimage in classical Latin refer simply to wandering, and so peregrinatio was just a stronger term. In ecclesiastical terminology a ‘pilgrim’ was one who went to visit sacred places while his ordinary occupation, whether he was clerical or not. Sometimes the term ‘pilgrimage’ or ‘palmer’ was one who spent his whole life in this journeying from place to place. Dante gives a rather fanciful explanation of the terms:

2. Palestine.—It was natural that men should wish to tread again the paths trodden by the Saviour, though the first generations of Christians did not seem to feel this as strongly as their successors. But when the 3rd century the third generation as numerous sacred places visited the pilgrimages of Firminus, bishop of Cesarea, and a bishop Alexander from Cappadocia are mentioned by Jerome and Origien respectively. When the enthusiasm of the early days and of the Afterward what was supposed to be the true Cross, pilgrimage flocked thither and the stream was ever on the increase. Many records of such journeys and also numerous itineraries have been preserved. The

Bordeaux pilgrim visited Jerusalem in 333. The record of this man is the earliest now extant of a Christian pilgrimage, and is very important as showing the condition of the holy places and the movement towards the Cross, which roof of his

On his way thither he travelled from Bordeaux, south of the Garonne, through Toulouse, Narbonne, Arles, up the valley of the Rhone to Valence, then by way of Milan, Verona, Aquileia, Mitrovizza, Constanza, and Constantinople, through Bithynia, to Tarso, Alexandretta, Antioch, Tripoli, Beirut, Sidon, Tyre, Acre, Ptolemais, Cesarea Palestina, then by Jezreel, Bethshan, and Shechem to Jerusalem. He did not, however, visit Galilee, for many Christians had felt far greater attraction to the scene of our Lord’s passion and resurrection than to those of His earthly ministry.

Paula, a friend of St. Jerome, went on pilgrimage to Jerusalem, and she corresponded with him about it. The teaching of St. Jerome much increased the popularity of the movement. Another famous pilgrim in early times was Eutheria (Egeria or Echiera), the author of the Peregrinatio Silicie, Peregrinatio Echericen, put into Latin verse for the 4th or the 5th century. From the 5th century onward the number of pilgrims steadily grew, and, though the journey was a long and arduous one, many thousands were willing to undertake it. Pilgrimage came from all parts, and not least numerous were those from the British Isles—representatives alike of Roman, Celtic, and Anglo-Saxon Christianity in Britain, such as St. Cadwalas (bishop of Taranto, about 810), and Willibald (bishop of Eichstatt, 741). The pilgrims of the Crusades, who were doubtless motivated by the desire to see Jerusalem and the hardships which they were sometimes obliged to suffer are of the greatest importance for secular as well as ecclesiastical history, for they were among the causes which contributed to the Crusades. When Saracen rulers were tolerant, Christians had little to fear, but in times of persecution the difficulties of the journey were further increased, and thus eventually the crusading spirit was generated (see art. CRUSADES). It seems that the most important pilgrimage of the Crusaders was that of the Templars protected them on the way from Antioch thither (a hospital which had first been founded by Charles the Great was destroyed in 1010 and another was built).

St. Jerome, though he believed strongly in pilgrimage, nevertheless wrote:

PILGRIMAGE (Christian)

From the 13th cent. pilgrimages to the Holy Land, though of frequent, were less numerous than to Rome. Despite the difficulties of the journey, William Wyke, Fellow of Eton, visited Compostella (see below, 11) in 1456 and travelled thence to Palestine in 1458 and again in 1462. From his MSS Wyke, with Wyke, the disciple of Caxton, compiled his Information for Pilgrims into the Holy Land (printed in 1498, 1515, and 1524). The pilgrimages from England to the Holy Land went on continuously to Reformation times. Sir Richard de Grey, who visited Jerusalem in 1594, while in Constantinople, went to Palestine, embarking at Rye, in 1596; and in 1517 Sir Richard Torkington, rector of Mulberton, Norfolk, visited Jerusalem. 1

From all the countries of Europe pilgrims travelled to the Holy City. It was natural that most should come from those countries which had taken part in the Crusades, but they came also from elsewhere. Russian pilgrimages commenced soon after the country was converted, about A.D. 1000. 2

The earliest extant record is that of Daniel, an abbot whose identity is not certain. He spent Easter of 1107 in Jerusalem. His work shows deeply feeling to the Holy Land, and visited the Virgin's tomb—the traditional scene of the Assumption. Though Italy had so many places sacred to the Christian, particularly the Eternal City, Italian pilgrims came in large numbers to visit Palestine. Venice was the starting point of their journey, and the citizens of Lombaria visited Venice on the way. Among the earliest Italian pilgrims to Palestine was St. Antonio Pieri, who went to Jerusalem in 570 and wrote de Locis sanctis que perambulavit Antonius sanctus. He died at a large house in Palestine about 1095, and a pilgrimage hostel was established by him in Jerusalem. In 1291 St. Francis of Assisi went on pilgrimage. In the 14th and 15th centuries pilgrimages became far more numerous. Robert de Torigni, a priest of Canterbury, went to Milan in 1458. In 1484 Fra Girolamo Castiglione (or de Castellione), a native of Milan, went to Palestine and thence to Arabia and Egypt. The Cavalier Santo Bracca went to Jerusalem in 1490. He wrote an account of his journey, and his information may have stimulated Canon Pietro Casola, a member of a noble Milanese family, who undertook a pilgrimage in 1494. Casola travelled via Milan, Brescia, Verona, Vicenza, Padua, Venice, Ruggia, Corin, Navarino, Caml, Rhodes, and Constantinople, a journey of 20,000 miles, to Jerusalem in 1495. His account is quite interesting reading and has recently been made accessible to English readers. 3

The pilgrim traffic was so great that it had to be officially regulated, and, considering the discomforts of travelling at that time, it is remarkable that so large a number were willing to face the risks.

1 Hans von Merzbenthal, who accompanied Duke Albert of Saxony to the Holy Land in 1496, records that the sleeping place allotted to each pilgrim was so narrow that the passengers almost lay one on the other, tormented by the great heat, by swarms of insects, and even by great rats which raced over their bodies in the dark. If a luckless pilgrim succeeded in reaching the site of the sacred tomb he was soon awakened by the stamping of the animals penned up on deck, or by the barking, singing and shouting of his neighbours, most of those who thus died. 4

In the 14th cent. the number of Italian pilgrimages continued to fall off, though they never entirely ceased.

3. Rome.—Next after Jerusalem, Rome was the city which drew the largest number of pilgrims. The causes which contributed to the rise of the papacy made Rome a pilgrim resort; more especially the tombs of St. Peter and St. Paul excited it into the goal whither Roman Catholics flocked. The centre of interest was the catacombs. At first used as burial-places, they afterwards became sacred places, hallowed by the bones of martyrs and visited by thousands of pilgrims (see art. CATACOMBS). These came from Britain both before and after the English conquest. (King Lewes of Wessex founded an English school for Saxon pilgrims and scholars in Rome in 727), and Irish and Welsh saints were among the most indefatigable in their pilgrimages. 5 Archbishop Usher once counted 200,000ish pilgrims on the occasion of Pope Damasus (366-384), who had given all Christian pilgrims access to the catacombs. As time went on the intercourse between Britain and the Continent became more intimate, so that there was a continual stream of pilgrims to Rome, especially after the failure of the Crusades; the difficulties of travelling, pestilence, and other causes had checked the number of those who went to the Holy Land. The papal jubilee proclaimed by Boniface VIII. in 1300 with its special indulgences drew more than 20,000 pilgrims to Rome. Again at the jubilee of 1450 under Nicholas V. and a crowd of thousands of pilgrims assembled. In the English College at Rome from 100 to 200 pilgrims were provided with hospitality every year in post-Reformation times. Pilgrims have never ceased to visit Rome: the large number of churches and relics have been classified by Leaburn. 6

4. England.—The pilgrimages, however, which left the deepest mark on Britain as elsewhere in Europe were, perhaps, not those to distant lands, however holy, but those to sacred spots nearer home. There were several famous shrines in England not only of national but of world-wide fame, and many others which were prominent in religious life, although not often visited by strangers from a distance. Earliest among British shrines was Glastonbury. When first it became famous it is unknown. There is a plausible reason in Celtic tradition, and it had certainly become sacred before the advent of Christianity in England, and probably even before the time of Christ. It was very likely on the site of a Celtic temple. Perhaps the particularly powerful health cure to which legend alluded was the cult of the dead (see art. BLES, ARODE OF THE [Celtic] and GRAL, THE HOLY). There was a Celtic settlement of pre-Roman date

1 Casola's Pilgrimages, Intro. p. 91.
2 But how many of these early pilgrimages are historical is not certain: see F. E. Warren, in Cambridge Medieval History, ii. Cambridge, 1913, ch. xvi., 'Conversion of the Kelt.' p. 496.
4 Hartwell Jones, p. 115.
5 See Sivry-Grandperron, Dictionnaire des Pèlerinages, ii. 519-531.
neat by, which has recently been excavated. Various legends grew up to account for its fame. In the Glastonbury Chronicle under 1259 there was this entry:

'Anno ab Incarnatione LXIII. disipulum sanctorum Philippi et sancti Vincentii in Britanniam; a quibus primum Oratorium in Inclita Avaloniana.'

King Ina of Wessex founded a monastery at Glastonbury, then went to Rome on pilgrimage and died there. Dunstan was abbot of Glastonbury; he grew in fame and importance, and became associated with many saints and heroes—St. Joseph of Arimathea and St. Patrick, King Arthur and Guinevere; and its monks gathered together a wonderful collection of relics—portions of the Crowns of Thorns, the True Cross, the Holy Sepulchre, and bones of St. John the Baptist, St. Peter, and St. Paul. Its fame ousted the Middle Ages, and a miracle was believed to have been performed there in 1751.

After Glastonbury in historical sequence, though in the later Middle Ages of even greater fame as a pilgrimage resort, was the shrine of St. Thomas à Becket at Canterbury. His murder in 1170 profoundly shocked the whole of Europe, and crowds of pilgrims soon began to flock to Canterbury and meditate over the spot of his death. His shrine became ever more splendid, and boasted many famous jewels, including the 'Regale' of France. The Jubilee of 1470 brought 100,000 pilgrims to Canterbury. Many of these would be from foreign countries, for the pilgrims went first to the transept of the martyrdom in the Cathedral.

'Before the wooden altar the pilgrims knelt, and its guardian priest exhibited to them the various relics confided to his especial charge. Becket's own ring, which surmounted all others, was the rusty fragment of Le Bret's sword, which was presented to each in turn to be kissed. The foreign pilgrims, by a natural mistake, lifted from the shrine the sword that the martyr had suffered death by beheading.'

Then the pilgrims went to the choir and saw the general relics, about 400 in number, then to St. Andrew's Tower, and, last of all, to the shrine itself. It had a wooden covering which, till lifted, concealed the gold, silver, and jewels with which it was encrusted. Among foreign pilgrims Leo von Rotzmili was sent on an embassy to England in 1446. Two accounts of his adventures were written, one in Latin, the other in German. He went and saw the sights usually shown to pilgrims. He and his companions visited the shrine.

Pilgrimages et caputio. Sepulturam ex pure auro consolatam et gemmis adornatum, tamque magnificis dominis ditatum, ut par e regulam. Inter alia res preciosissima spectat sor se et carunculus gemmorum quos mox splendere solut, dimidi oii gallinacei magnitudinem.4

The German account relates:

'Da zeigte man uns das schwert, mit dem man den kopf abgeschlagen hat. Da wies man auch ein merklich stück des heiligen kreuzes, auch der nägel einen und den rechten arm des lebend hern Ritter statt Gegen und ellich dorn in einer monstern von der durnen kron.'5

The Canterbury pilgrimage is remembered among those who take little interest in ecclesiastical history because of Chaucer's Canterbury Tales. The journey from the Tabard Inn at Southwark was one of the three ways by which Canterbury was regularly approached by pilgrims. In 1513 a visit was paid to it by Colet and Erasmus; the wealth displayed and the superintendence encouraged the feeling in Colet which was soon to breed opposition to the Protestant Reformation. Erasmus was more reserved and quiet in his strictures, less prone to depart from Catholic practice and tradition.6 The last Jubilee at the shrine was that of 1520. The reverence shown to the memory of St. Thomas à Becket was annoying to Henry VIII., and in 1538 the shrine was destroyed by royal command. Next in importance in medieval England was the shrine of Our Lady at Walsingham in Norfolk. The special relic that attracted pilgrims here was a small phial reputed to contain a few drops of her milk. This shrine was likewise destroyed at the Reformation. A poem written in 1595 (of uncertain authorship) laments the desolation which had overtaken the scene of the piety of former ages. It concludes:

'Sim in which Our Lady sits,
Satan sits where Our Lord did sway,
Walsingham, oh! farewell.'7

Other famous places of pilgrimage in medieval England were Durham (for the shrine of St. Cuthbert), Lichfield, Bury St. Edmunds, and Peterborough. A special feature of English pilgrimage was its anti-royalist character—to revere as a saint one who had been condemned as a traitor.

5. Wayfaring to the Celtic parts of Britain was specially rich in shrines, just as their inhabitants went as diligently as any to Rome and the Holy Land. The chief Welsh shrine was the Holy Well of St. Winifred in Flintshire.

It is at least as important a circumstance that the only road through England from north to south started at Holywell and ended at St. David's, both conspicuous pilgrimage resorts in the Ages of Faith.8 A monastery was founded at Holywell in 1119, which was destroyed at the Dissolution. The history of the shrine is important as showing the connexion of pilgrimage with sacred wells. When any well became famous, and its waters were reported to have either medicinal or miraculous qualities, it soon became known as a place of pilgrimage. This has been so not in Catholic Christianity alone but in the whole history of religion.

6. Scotland.—The earliest Scottish shrine to which pilgrims resorted was Whithorn (' Candida Casa '). The church there was built by St. Ninian in memory of St. Martin of Tours about 397. Ninian himself was buried there in 432, and the place was renowned among the Irish and among the Welsh of Strathclyde. Like Walsingham, it was popular as a place for Scottish pilgrimage. Another was that of St. Mary of the Rock at St. Andrews. This has now been swept away by the sea. It was on the rock at the foot of which on the cliff on which the Cathedral now stands. Other Scottish places were Dunblane (for the relics of St. Morrice), Dunfermline (for the shrine of St. Margaret), St. Margaret's Chapel at Edinburgh Castle, St. Nicholas' Chapel, Leith, St. Kentigern's Chapel on Loch Lomond, and St. Mungo's Chapel at Culross.

7. Ireland.—Pilgrimage has been for centuries a dominant feature of Irish religious life, for among the Celtic peoples every hill and well and stream has its own tutelary god or spirit or fairy. Christianity only reconsecrated many places sacred already in Celtic usage, but it also created others during the monastic times; and, despite spasmodic efforts made by Protestant governments to repress them, Irish pilgrimage has gone on with no real interruption from the Reformation until the present day.

Most famous of Irish shrines was St. Patrick's Purgatory near Derg in Donegal. In the lake there is an island round which various legends grew. It was said that a knight, Owain, 9

1. See Erasmus, Pilgrimages to S. Mary of Walsingham and St. Michael, in vol. ii of Works, tr. Walter B. Arrowsmith.
2. This poem is quoted in Erasmus, Appendix.
This pilgrimage has been ascribed to insatiable greed and wilful deception on the part of monks, who fostered it with an eye to their own advantage; but the existence of some of the customs and procedures depicted is likely, doubtless, in the deep-rooted beliefs of the pre-historic period, and is a reflex of the old Druidic cult. Therefore, considering Christianity and pilgrimage must be therefore sought, partly in the geological features of the island (suggestive to the druids in Ireland, as in other Celtic regions, of an antecedentising, of an ancient Mythology Regions) and partly in a native pre-Christian mythology, the implicit beliefs in the existence of a spirit world and its afterlife, and the enclosed communication carried on between them and mortals.

The connexion with St. Patrick is probably legendary, but it enhanced the glory of the place. Abuses and superstitions grew apace, and in 1497 the pilgrimage was 'abolished' by Pope Alexander vi. The Privy Council ordered its suppression in 1632, and in the second year of Queen Anne it was again prohibited.

And whereas the superstitions of Popery are greatly increased and upheld, by the pretended sanctity of places, especially of a Place called St. Patrick's Purgatory in the County of Clare, (a Well in which, according to superstitious St. Patrick made, by vast numbers at certain seasons,. . .) be it further enacted that all such meetings and assemblies shall be deemed and declared by the said Assembly of the Lord Bishops and by the Parliament of this Kingdom absolutely illegal.

A fine of ten shillings was to be imposed if the offender refused to be publicly whipped. But suppression was of little avail, and the pilgrimage has continued under ecclesiastical supervision until our own day. Pilgrimage thither is now observed in the Roman Catholic Church as a penitential exercise, and 'it seems the only pilgrimage of modern times conducted like those of the Middle Ages' (CE xii. 95). Other places of pilgrimage in Ireland were Downpatrick in Co. Down (sacred to St. Patrick), and Fahan and John's Well in Meath, and Cranfield in the parish of Drumman, Co. Antrim.

8. France.—Among famous French medieval shrines was Chartres.

'Avant que le christianisme éteit précéché dans les Gaules, les Druides étaient dans Passage de s'assembler tous les ans aux environs de Chartres. On prétend qu'ils avoit en ce lieu un sanctuaire révéré. C'était, dis-on, une grande, où ils honoroient une statue qui représentait une femme assise, tenant sur elle un enfant, et dont il portait cette inscription Virginis parture. L'artiste a donné à cette statue un teint qui ressemble à celui d'une grande église, vers le milieu du 11e siècle, au plus tard.'

Chartres therefore, like Glastonbury and St. Patrick's Purgatory, seems to have been the scene of an ancient Celtic cult. The wooden statue of the Virgin is preserved in the Cathedral Church of that city.

Among modern French shrines the chief is Lourdes (q.v.). Others are La Salette in Dauphiny and Lépiane.

9. Switzerland.—Of Swiss shrines the most important is Einsiedeln. There was a monastic community there in the 9th century. It is in the canton of Schwyz, became famous as a centre of pilgrimage in the 10th cent., and has continued to be so until the present time, despite the preaching of Zwingli in the 16th cent. and the destruction of the monasteries in the 17th cent. The yearly pilgrims are now more than 150,000.

10. Italy.—Besides Rome itself numerous other Italian cities were pilgrimage resorts, though none attained special pre-eminence except perhaps Ascoli, because of its connexion with St. Benedict. The lesser degree with St. Clare. Sienna was associated with St. Catharine; and Venice, with its splendid basilica of St. Mark, was often visited on the way to the Holy Land. See also art. LORETO.

11. Spain.—Foremost of the shrines of Spain was that of St. James, or Santiago de Compostella, which attained a fame in the Middle Ages greater than any other. It is said that on the 23rd of July many pilgrims appeared there in a vision of St. James, and that his remains were discovered there. The shrine became associated in legend with Charles the Great, but it was not till the 12th cent. that the 23rd of July became a fixed date. The Way of St. James was largely travelled by George Borrow. The pilgrimage flourished till the 14th, but considerably diminished from the 18th century.

12. Germany.—Chief among German places of pilgrimage was Aix-la-Chapelle. The medieval capital of Germany, which possessed numerous relics. The most important were the white robe in which the Virgin was clothed in the stable at Bethlehem, the swaddling clothes of the infant Christ, the handkerchief of Joseph of Arimathea — the body of the Baptist was wrapped after his execution, and that in which our Lord was crucified; there were many lesser relics besides. The pilgrimage to Aix has continued till the present time. In 1881 there were 152,865 pilgrims.

Another medieval city renowned for its pilgrimage was Trier (Trévès), which possessed the seamless holy coat worn by our Lord before His crucifixion. Cologne was famous as containing relics of the three kings, traditionally called Gaspard, Melchior, and Balthasar.

13. The Syrian Church.—The pilgrimages so far considered have all been either of the West of Europe or else in Palestine itself. But beyond the Roman Empire the Syrian Church grew and flourished, and, though lines in some ways different from those of the Graeco-Roman world. Pilgrimage was made by Syrian Christians at a date earlier than that by those of the West. Noh, bishop of Adiabene (163-179), had been taken as a child by his parents in what seemingly only is called a pilgrimage. Pilgrims continued to visit Jerusalem; the subject, however, is still involved in some obscurity.

In SBS a Nestorian synod considered the subject: 'Cacson ix, 1, 814, 1124, 1128, 1133 states that no new mission was sent without the knowledge of the bishop of the diocese; if one were built and the bishop knew, he would give it a revenue sufficient for its upkeep, and for the holy relics of its founding to the place where they live, and not wander far afield. Why should they go to distant places? It is a puerile habit which gives satisfaction to the senses but not to the soul. Many of the faithful, after having visited the churches and convenes of their own country, desire to visit those that are further away, not with the idea that God will thereby favour them more, but to give one part of their goods to the head of the convent, they are not to be hindered. But, if they wander about as people who have lost their way, or who are wandering aimlessly, who can say with what purpose God will visit them? They are sick souls in need of health and should be led to the shrine of perfection. This shows that the abuses of pilgrimage were quite obvious at this time, and they must have been widely spread to have called down ecclesiastical censure in these terms. Gregory Bar-Hebrueus, bishop of Gula (probably Bear Omush, north-east of the town of Aqaba), not far from the Red Sea to the East (+ 1260), quotes from a letter of one John Bar-Finchoje to a monastic friend describing the
Pilgrimage to the Holy City and what was to be seen and done there.\(^1\)

14. The Reformation.—Chances so wide in the religious life of Europe as those which came to pass in the 16th century, were bound to leave their mark not only on the Protestant countries, but within the bounds of Catholicism as well. Much purging of abuses took place at the Counter-Reformation; and, while in some countries Protestantism lost its first conquest, the advance of Catholicism, though not everything that had been destroyed was built up. Under Mary Tudor, e.g., no attempt was made to restore the shrine of Becket in Canterbury Cathedral. The Continental Reformation brought with it the abolition of pilgrimage. Thus, in the programme of reforms of the bishop of Pomesania in 1525, art. 4 declares:

Henceforward there shall be no pilgrimage nor wanderings to holy places, since they do no man's salvation.

In Sweden the Lutheran Synod of Örero in 1529 decreed:

1 Peregrinationes ad loca sancta quanti fieri possit moderates reservare.
2 showing that, as in other things, Lutheranism dealt more gently with Catholicism than did Calvinism.\(^2\) Calvin in the prelatory letter to Francis I. (23rd Aug. 1536) of his Christian Religion, wrote: "The very means of fruit in your peregrinationibus, et id unum nugis bellerigenter, ut sine eorum observance um canas non potest et effectu esse. fide sumere non possis, can tam nihil eorum a voce Dei esse profert\("\(^3\))

The Edict of Reformation of Bern for the Pays de Vaud (24th Dec. 1536) declared in art. 17:

Beauties.—Nous avons aussi ordonné que des biens dépendant des choses sacrées soient proscrits, comme l'huile, le vin, l'eau, le sel, etc., l'orf fe d'or, l'argent, le cuivre, l'alum, de même les œufs, la fromage de chèvres, etc.\(^4\)

The council of Trent (1563; sess. xxv.) condemned those who affirmed that 'places dedicated to the memories of saints are vainly visited.'

15. Royal pilgrimage.—Throughout the Middle Ages pilgrimage was a constant observance among kings and princes; to show honour to their country was a natural thing, and sometimes a king went in penitence, as did Henry II. to the shrine of Becket, after the murder of the archbishop. The Scottish kings continually went to Whithorn. Margaret, daughter of Christian I. of Denmark, wife of James II. of Scotland, and James IV. of Scotland, went thither after the birth of her son in 1473, though her journey has been described as a 'pleasant outing rather than a penitential exercise.' James IV. himself went twice in several times, as also did James V., and not so often as his father. James IV. visited also Whitekirk in F. Lothian, where in 1430 James I. had built a house for the reception of pilgrims.

Some interest attaches to the pilgrimage of one who later became a king: Henry, Earl of Derby (afterwards Henry IV.), visited Prussia and then went on to the Holy Land. He travelled by way of Danzig, Frankfort-on-Oder, Prague, Vienna, Treviso, Venice, Corfu, Rhodes, Jaffa, Jerusalem, returning through Rhodes, Corfu, Ragusa, Venice, Treviso, Pavia, Vicenza, Verona, and Milan.\(^5\)

16. The effects of pilgrimage.—It is quite clear that a custom so wide-spread must have left its effect not simply on the religion but on the entire life of the world. It helped, as has been seen to, produce the Crusades; it drew far afield men who would otherwise have been content to stay in their own country, and gave them a knowledge of distant lands. The countries of Europe had, by means of the pilgrimages, far more contact with each other in the Middle Ages, not only in religion, but also in commerce, literature, and art. The economic effect of pilgrimage was also considerable. Though many cities already famous became pilgrimage resorts, in some cases towns or villages hitherto obscure became, by virtue of a shrine or the relics of a saint, places of national, perhaps even of world-wide, fame. These facts, however, must never obscure the essential religious importation of pilgrimage. It was the chief 'effects' of the custom the fame of the Canterbury Tales; that the pilgrimage to Canterbury afforded the occasion for some of the most famous English poetry is after all only incidental.

In post-Reformation times in Catholic countries pilgrimage has often been undertaken for the sake of cures such as those (some of which are genuine) wrought at Lourdes.

17. The place of pilgrimage in the history of religion has already been noted that pilgrimage is not confined to Catholic Christianity, and also that pre-Christian shrines were consecrated to Christ and to his Saints. This fact is of importance for the comparative study of religions, and, like other facts in that science, need no further comment.

Some observances of Christian pilgrimage have close analogies elsewhere—one, the miracle of the sacred fire at Jerusalem.\(^6\) Glastonbury, St. Patrick's Purgatory, and Chartres (see above, 4, 7, 8) are instances of pagan holy places being consecrated to Christian pilgrimage.

The pilgrim with his staff, his broad flat-crowned hat, and his muskell or other badge, has now disappeared, but thousands still go every year on pilgrimage. Since its disuse, it has something more than, although it is akin to, the sentiment that has made it the supreme desire of many whose relatives have fallen in action to visit their graves when the war is over. The underlying idea, the pilgrimage, is so closely attached to certain places because of what has happened there, as though some of the personal magnetism of the person who had lived or died there still survived and could communicate itself to the visitor. A similar idea would explain a so-called 'ghost,' not as the actual spirit of a dead person surviving after his bodily death in a given spot associated with him in lifetime, but rather as an impress or influence left by him still capable of affecting those who come to the place. Thus the study of pilgrimage leads us into psychic and psychological problems the solution of which is still beyond our range.

PILGRIMAGE (Hebrew and Jewish).—The origin of the Hebrew pilgrimage is to be sought in the early Semitic life. To the primitive religions conceptions the deity was not ubiquitous, but was localized—by the nomads within the confines of a sacred district, frequently an oasis, by agriculturalists in the sanctuary of a village or town. The performance of certain religious duties, therefore, normally involved a journey of greater or less length, which in time increased as the renown of particular sacred places, and the advantages for trading offered by a large concentration of people, led to the further centralization of worship. Economy of time and effort, also, reduced the visits to a limited number at regularly recurriing periods, to which was postponed the payment of vows replacing the sacrifice of the time that was dedicated to the visits of the annual family or clan pilgrimage, as pictured in I S 11. At times a longer pilgrimage into strange territory resulted in a protracted stay as a ger or, even in permanent settlement; Abraham is the archetypal instance. The command in Dt 26:11-13 (AV 'ready to perish') contains the ideas of the Arabic root 'abadu, 'strange,' 'long from home,' 'permanent dweller.' Moreover, every traveller into strange territory was in a sense a pilgrim, a prospective visitor to the local shrine; hence, apparently, the right of sanctuary, of protection, was extended to cover the entire journey within the tribal territory—a supposition which may in part explain the sacred character of the primitive Semitic institutions intervening religious duties. The pilgrimage journey itself became an essential part of the religious celebration, assuming a quasi-sacred character—in itself a meritorious act.

The development of the pilgrimage of the clan into one of larger groups was due in part to the advantages of combination when the journey was long and led into strange territory; and this development was hastened when the period of pilgrimage was made to coincide with that of nomadic or agricultural festivity. The Hebrew term hagah denotes both the pilgrimage journey and the festival ceremonies at the shrine; but which of these two ideas is the original denotation is uncertain. The concept 'entire,' which seems common to various trilingual extensions of the Hittite root h- gi, may be seen both in the dance and in the circumambulation which concludes the pilgrim journey; nevertheless, if in Arabic hejāj originally did not denote the circumambulation of the Meccan shrine but only the visit to the shrine itself, it may be that the term is a corruption of the Aram. hej. The pilgrimage of pilgrims to Mecca is commemorated in the Koran 2:127 and in the Hadith. This hajj, together with the hijrah, or migration from Mecca to Medina, advanced in the 7th century, was a religious movement of the entire Arabian community, and the pilgrimage proper was a visit to Mecca, a shrine associated with the past history of the tribe of Quraish. A visit from the standpoint of Meccans, to a strange shrine under protection from the tribal adherents of that shrine—an original meaning—pilgrimage, in the sense of a pious journey, should be preferred (cf. the roots hejāj and hijjū). The origin of the Hebrew hagg as involving a nomadic journey seems discernible in some of the regulations for the Hebrew festival celebrations, especially the festival of Passover (though it later became associated in the Pentateuch with an agricultural epoch and with traditions of a definite historic departure from Egypt). A three days' journey into the desert is made antecedent to the first Passover celebration; and the extension of the celebration of the festivals in general over an entire week is in part a reminiscence of the journey period (cf. the pilgrimage month of the Arabs). But especially the eating of unleavened bread (the matzot) may be regarded as a whole ritual, with the symbolic participation of the entire community in the sacrifice (cf. the pilgrimage as a national celebration). The Passover, and the WALRHED festival, may be seen as the development of the pilgrimage of the community into a pilgrimage of the people (L. D. AGATE).

The pilgrimage of Tabernacles is a similar religious-dramatic ritual of tent-life (Hos 12:1 reads 'tents' for the 'booths' of Lv 23:42 and cf. also 2 Ch 7:5, if the phrase 'booths of their tents' is to be understood literally here). The pilgrimage had also a political importance. The close association in a common purpose of large numbers of people from different tribes and communities afforded the basis for the development of a more permanent national unity, and played a part no less in ancient pan-Hebraism than in modern pan-Islamism. In the Pentateuchal legislation which purported the centralization of worship in Jerusalem the attempt is clear to increase the spirit of unity by bringing all males together in pilgrimage to one shrine at three different periods of the year (the festivals of Passover, Weeks, and Booths). That this legislation, however, remained a national convention, and the inhabitants of Palestine simultaneously left their homes three times every year to make what for some would have been an extended journey—seems improbable; and the special emphasis laid upon the Passover in certain passages (Nu 28 or 29) and upon the Feast of Tabernacles in others (1 K 8), shows perhaps that one or the other was in reality the pilgrimage period at different epochs in the national life, or (more likely) for different clans or families at the same epoch. Jeroboam testified to the popular veneration of the pilgrimage journey and its attempt to counteract its unifying force by changing the place and time of it (1 K 13), with which cf. the reported action of Walid ibn 'Abd al-Malik in promoting the pilgrimage to a certain mosque in Jerusalem as an agricultural aid in diverting the pilgrim and papa monachy to Jerusalem. After the building of the Second Temple in Jerusalem the Holy City was without rival as the religious center of the Jewish people. Their pilgrimages to Mecca were forgotten; the qiblah thither from Mesopotamia, and the journey itself became an even more important factor than before, often involving considerable hardship and danger; the old laws of hospitality to the pilgrim became correspondingly stricter, and the commercial interests of Jerusalem took special measures to accommodate
visitors in the city as well as along the roads leading there.

As the destruction of the Second Temple conditions changed; though there was still an annual celebration of the Feast of Tabernacles (on the Mount of Olives), with the cessation of sacrifice the pilgrim, too, ceased to be an obligatory act. It assumed in general a pious or devotional character and lost much of its former joyousness. Pilgrims to the site of the Temple now came principally to mourn and to pray for the restoration of Zion, and they were not always welcomed by the nominal Jews with whom the pilgrims land was, indeed, a continually disputed and proved under Muhammadan rule; and in the 9th cent. many Karaites in particular made the pilgrimage. During the Crusades the pilgrimage seems to have ceased again; but with Saladin it was resumed, and recovered something of its ancient joyous character. In many cases the desire to visit Jerusalem was coupled with the purpose of living and being buried on holy ground, and the pilgrimage thus became a pious immigration; as early as the 11th cent., indeed, a fully organized Jewish community existed at Ramiah; and there was a marked influx of Jews from Spain somewhat later, and from other parts of Europe in the 15th and 16th centuries. Earlier than this impulse from personal motives is to be regarded as a tourist pilgrimage the general purpose of travel (as in the case of Judah Halevi and Ibn Ezra), the frequency of which is evidenced by a special travellers' prayer in the Jewish ritual.

The idea of Jerusalem again had its rivals as the object of pilgrimage. In Egypt there was a famous sanctuary at Dummah (modern Tammah), near Cairo, to which Jewish families journeyed to celebrate the Feast of Weeks. But in Muhammadan countries the multiplication of shrines was due to the development especially of another type of pilgrimage—that to the tombs of pious men, of saints and reputed miracle-workers. Though evidence of the belief in the supernatural power of shrines may perhaps be found in 2 K. 13:21, and such a belief among certain classes of Jews may have persisted along with other beliefs in miracles, the custom of visiting graves in order to pray and ask for divine intervention seems to have been borrowed by Jews from their Oriental neighbours; at any rate, visit ẓiyārat (lit. 'visit') is sometimes made by Muhammadans and Jews to the graves of the same Biblical heroes. By the Oriental Jews themselves no distinction in reverence is made between the supposed tombs of Biblical characters and those of later saints. Palestine has many tombs of local, and several of more than local, veneration. To the supposed tomb of Zebedee at Sidon, e.g., pilgrims come from all parts of Palestine, and also to that of Rabbi Meir (q.v.) at Tiberias. That of Simon ben Yohai at Meron near Safed has long been visited by Jews even from Persia and Africa; indeed, in the 16th cent. Saed rivalled Jerusalem, especially as a place for permanent settlement, for it offered hospitality such as neither the Muhammadans nor the Jews of the Holy City any longer extended. Outside of Palestine pilgrimages are made to several tombs in Kurdistan (e.g., that of Nahum near Mosul), in Mesopotamia (e.g., that of Ezra near M兹zab, an ancient town near the Euphrates), and in Persia (that of Mordecai and Esther at Hamadan). In Algeria and Morocco are several tombs of Jewish worthies of local renown, and these, too, are sometimes visited by Muhammadans and Christians. In Spain, Portugal, Russia, and Poland have their pilgrimages, though the travelling instinct as such has sometimes found expression in a sort of pilgrimage to various famous synagogues, such as at Prague, for purposes of prayer; and the wandering student, journeying far to sit at the feet of renowned rabbis, was a familiar figure until the 19th cent. in Germany and still later in Poland and Hungary.

In some cases the tomb-pilgrimages take place at fixed annual dates which, especially in Palestine, often coincide with the various festivals of the Jewish calendar; in other cases they take place at the pleasure of the individual. In Muhammadan countries, especially in Persia, the pilgrimage is seen in the joyous festival character which the celebration assumes, even beside the tomb.

PILGRIMAGE (Indian).—1. Origin. —Pilgrimage in India is the result of the animistic basis of the popular beliefs, reflected in the higher forms of Hinduism and even in the local developments of Islam. Nothing strikes a new-comer to the country more than the crowds of pilgrims travelling by road or rail towards some holy river, the local abode of some god or godling; the tomb of some saint or martyr.

It seems not unlikely that the virtue of a pilgrimage arises mainly from its results, the spiritual and moral improvement which is often brought about by it and not so much from the desire to honour the deity whose tomb it is. In the case of a well-recognized pilgrimage the taking of the journey is not a very great advance on the primitive reverence for certain places as the abodes of spirits (R. V. Russell, Cause of India, 1911, vol. ii., Central Provinces Report, pt. i. p. 91). To this may be added the fact that water, by the analogy of the removal of physical impurities, is a potent agent in the removal of sin. Thus, in many parts of India, the shrine and the abode of a god may be the same; and not only the abode of Indra is considered the abode of the god Rama, which take his name, not because he is worshipped there, but because he bathed in this place when he wished to free himself from the sin of having killed the demon Ravan, who is held to be the father of the demon. The result of pilgrimage is found in the words of Indra to Harishchandra:

"There is no happiness for him who does not travel; living in the society of those who disregard the pilgrimage means for Indra is the friend of the traveller. Therefore wander" (Atharva Brahmana, vi. 10).

But, though in the Rigveda the animistic worship of rivers appears, pilgrimage, in its modern sense, is not referred to, and even in the Brahmana, while a particular sanctity attaches to river fords (tirtha) and certain privileged regions, like the banks of the Sarasvati, there is no knowledge either of pilgrimages or of holy places (A. Barth, Religionen der Indier, Eng. tr., London, 1882, p. 62). Even Mann (Laus, viii. 92) regards visits to the Ganges or to Kurnik-ghera as comparatively unimportant.

Gautama, however, declares that "all mountains, all rivers, holy lakes, pilgrimage, the dwelling places of the gods, and the tombs and temples of the gods are places which destroy sin" (v. 14, SBE, 6(1890) 265).

The origin of the modern practice may be traced to the revival of Brahmanism and its absorption of local cults. Every place where a local spirit was propitiated or worshipped soon came under the control of a body of local priests, interested in attracting visitors, whose offerings formed their means of livelihood.

2. Places of Hindu pilgrimage. —The number of places to which pilgrims resort is enormous. In
the following list the more important holy places are understood according to their geographical position
1. The temples

(a) Places.—Punjab: Barahur, Gay, Doopur, Kallighat, Ban

(b) Places.—Punjab: Barahur, Gay, Doopur, Kallighat, Ban

(c) Places.—Punjab: Barahur, Gay, Doopur, Kallighat, Ban

(d) Places.—Punjab: Barahur, Gay, Doopur, Kallighat, Ban

2. Pilgrimage among the Buddhists.—The great monasteries, stâtes, and dagbhas erected over the relics of Buddha, many of which had disappeared, have been unearthed by the Archeological Survey, both Gay, where Buddha gained his title, and where the bodhi-tree beneath which he sat became an object of veneration, are still revered among Buddhist pilgrims from Burma and farther east. In 1905 the Tashi Lâma of Tibet visited the ruins at Sarath, near Benares burnt vast quantities of butter and incense, and scattered flowers. At present a large number of agencies carry on the worship of the Tashi Lâma was transfigured and the other Lômas worshipped him (The Times, 20th Dec. 1905). Next to the Tree of Wisdom at Bodh Gay, the sites regarded as most holy are the scene of Buddha’s death at Kusinâra (A. G.), the seven great choldas which enshrined his relics, Mt. Pota in S. India, Stilambala in the north, and the gâran’s Fairy-land in Udyanâ to the west. The Indian sites are seldom visited by Lômas and Tibetans on account of the expense of the journey. Probably for the sake of convenience and economy, they have transferred the site of Buddha’s death from Kusinâra to a place known as Sâlakus in Assam (L. A. Waddell, The Buddhism of Tibet, London, 1904, p. 36). The holy places shared by different religions.

25

both visit the ledge below the Takht-i-Sulaiman, from which King Solomon is said to have taken his last view of this land. He then carried off his dusky bride (T. H. Holdich, The Herodotean Wanderland, London, 1901, p. 73f.; cf. ERE ii. 769). 6. Pilgrimages by the ascetic orders.—Some of the most extant pilgrimages are those performed by Bôsús, Samnyâsîs, and other ascetics. Jonathan Haslewood (Ars Asiae, 1911, p. 172 f.) gives an interesting narrative of the pilgrimage performed by Pram- puri Samnyâsi, an Ursulân, i.e. one whose arms had become inflexible by being thrown into a lake by his father, and described in Eléphant (Reisen und Reiß), London, 1897, p. 36). He journeyed to all the chief Indian shrines, Íshâ, Bûdîn, Daku, Kusinâra, Dvaraka, the Patala, the Ganges and the Bay of Bengal, and to the Himalayas, and thence across the Himalaya to the source of the Ganges at Gahtari. Then he went to Nepal and the sacred lake Môsanarâ and Dâkum, whence he returned to India bearing dispatches to Warren Hastings, who gave him a free-train estate. When this account was written, he was still in the habit of making excursions to Nepal and to other parts of India. Asetics often wear symbols of such journeys, a white conch-shell denoting a journey to Rameswâr in the south, iron, brass, or copper armlets indicating pilgrimages to Paçupatînath, Kedârâ, and Dwarkâ in the Himalaya. 7. River pilgrimages.—The favourite form of Indian pilgrimage is to shrines on the banks of the great rivers, like the Ganges, Jumna, Narâbâ, or Godâvâri. The Ínts and the Brahmapûtra are too far from the sea for Holy Land pilgrims to have acquired special sanctity. If the river, though on their banks have been occupied by the votaries of special deities, are unsectarian, and any Hindu, whatever his rank may be, bathed, provided he avoids causing pollution to high-caste worshippers. The places at which these rivers rise, like Gaâgotri, Jumnotri, or Amârankant, and sites on their upper waters, like Nâsk or Hardwâr, are sacred. Even more highly regarded are the places where junctions of two or more rivers occur, like the meeting of the Ganges, Jumna, and the mythical Sarasvati at Allahâbâd, known to Hindus as Prâyâga, ‘the place of sacrifices’ per excellence; Bâgheswar, Deoprâyâg, and other junctions higher up the stream; and Sâgar Island, where the river joins the sea. Such places are often dedicated to the worship of Siva, a god of fertility. Bathing in these holy places cleanses both body and soul, and brings the pilgrim into communion with the benign water-spirits and with the honoured dead whose souls have reached the world of heaven. 8. Rules of pilgrimage.—The dates and hours at which bathing is auspicious are fixed by the local priests, and depend on various considerations connected with the local cultus. Thus, at Allahâbâd the chief bathing fair is held on the new moon of the month Magh (Jan.-Feb.), at Hardwâr at the beginning of the Hindu solar year. At both these places specially important assemblies occur every twelfth year when the planet Jupiter enters the sign of Aries (Kubhí), such being fairs known as the Kumbh Mela (for the importance of the side-revolution of Jupiter, which is completed in 11 years, 314-92 days, as affecting religious observances, see GEP, pt. ii., The Dying God, London, 1911, p. 49.) From the ancient Mithraic and Sarmatian eclipses has been a means of expelling the evil spirits which are abroad at this time. According to tradition, the Íyavas bathed at Somnâth during an eclipse.

An important rite performed at sacred places is the circumambulation of the sacred object in the course of the sun, keeping the right shoulder towards it (pradakshina). Sometimes, as at Benares (ERE ii. 467), there is a holy road surrounding the sacred area along which the pilgrims walk. Sometimes, as at Hardwâr, where, with sites associated with the life of Krya are spread over a considerable space, they are visited in rotation under
the direction of a Brahman, who usually recites at each holy place the local religious guide-book (mukhāt-yog), which embodies the religious lore. These Brahman guides form a special class, often notorious for roguery and rapacity, like those known as nangpūtīs, in the case of the Chathur Spees, the Kaygawal of Aanahābad (Crooke, TO, Calcutta, 1836, ii. 387 ff.; BG ix. pt. i. [1901]; Kalhaga, introd. p. 20). These men usually keep lodging-houses for entertainment of guests, and of course, pilgrims, and which record for many years the arrival of persons of particular castes or families. There is an elaborate system of touting for pilgrims to Jagannath (W. W. Hunter, Orissa, London, 1872).

When the holy place is, like Hardwar, Benares, Gayā, or Siddhpur, associated with the cult of the dead, the ashes of relatives, which have been preserved until this opportunity, are consigned to the water, and the mind fixed on the prayers, one of the Mysteries (pachānta) is performed. It is an interesting development that since the introduction of the Government parcel-post the ashes are often sent by it to a Brahman competent to perform the rites, without the attendance of the relatives being required.

In the case of special rites a special rite of atonement (pachānta-chitra) is performed during the pilgrimage. The hair of the person to be cleansed is shaved, and the only fatt' left being on the crown of the head. He bathes in ten different ways, each with the use of an appropriate text, dresses in clean clothes, worships the deity, and, while the Brahman performs the fire sacrifice (homa), presents ten kinds of gifts, the last being the "shadow's gift", a cup of melted butter in which he has beheld the reflection of his own face. He then says to the priest: "This penance of mine must be rendered valid by the Brahman and kept inviolate as it is the duty of his successor to perform it; if it be neglected, father and descendants shall be cut off. (A. K. Fores, Ria'at Māli, London, 1878, p. 831 f.)."

9. Austerities practised by pilgrims.—Besides the suffering caused by long journeys on ox-carts over ill-kept roads, the crowding in railway carriages, the inconveniences of camping on the river bank, and the bad accommodation in the pilgrim lodging-houses, special austerities are undergone. One form of penance for grievous sin is the measuring out, not with the palm of the hand, but with the pilgrim's bosom, of his prostrations on the ground as he journeys to the sacred place. Waddell notes this as a Buddhist practice at Lāhā, where some zealots traverse the Circular Road in this way—a distance of about 6 miles, the circumference of the pilgrim's bosom, 3,000,000 to 40,000; in some cases the bands of the pilgrims are protected by padded wooden clogs, the soles of which are studded with hob-nails (Jha's and its Mysteries), London, 1906, pp. 364, 375.

According to the historian Rābhās-dīn (H. M. Ellin, Hist. of India, London, 1867-77, i. 67), at Somnāth "many of the more debased devotees, in performance of their vows, pass the last stage crawling along on the ground upon their sides; some approach walking upon their ankles, and never touch the ground with the soles of their feet, others go before the light upon their heads" (for similar customs at Banharpur see BG xx. [1884] 470). On several occasions the emperor Akbar, in imitation of the Hindu practice, walked on foot from Aggra to Ajmer to visit the shrine of the saint Mu'in-d-din Chishti (Elliot, v. 328).

The original custom of branding the pilgrim with the "mark of the god as a proof that he had performed the pilgrimage" (Pliny, xi. 44) was superseded by a mark made with moistened clay. But in S. India, among the Sri-Vaishnavas and Mudhavas, the visitor to the monastery (mukhāti) is branded on both shoulders (E. Thurston, Ethno- graphic Notes on South India, Madras, 1906, p. 403 f.). The practice of piercing the cheeks and tongue with a silver needle when going on pilgrimage is more common in S. than in N. India (ib. p. 402 f.; Costes and Tribes of S. India, Madras, 1909, p. 639). Occasionally in S. India pilgrims keep a handkerchief tied over their mouths to show that they are subject to a vow of silence during the pilgrimage, or they wear a mouth-lock, a silver band over the mouth, with a skewer piercing both cheeks (Thurston, Costes and Tribes of S. India, 599). Ahi al-Fadhil says of Nāgarkot in the Punjab—"Pilgrims from distant parts visit it and obtain their desires. Strange is it that in order that their prayers may be favourably heard, they make the pilgrims wear these bands on their heads, with others after one or two days. Although the medical faculty allow the possibility of growth in the tongue, yet in so short a time it is not sufficiently amazing" (Al-i.isher, ii. S. Jarrett, ii. 313).

On the sacrifice of joints of the fingers at certain Indian shrines see OP, pt. iii., The Dying God, p. 219 ff. At the pilgrimage to the temple of Sambhu at Travancore the Aiayaps (for these pilgrimages the worshippers call themselves by the name of the god) have to undergo a preliminary course of 41 days' sanyasi diet and sexual abstinence (Census of India, 1901, vol. xxvi., Travancore Report, pt. i. p. 98).

10. Muhammadan pilgrimages.—It does not fall within the scope of this article to describe the pilgrimage (hajj) to Mecca, Medina, or Kerbelah, right to which some degree of success is highly prized in the spring feast (W. R. Smith, Lectures and Essays, London, 1912, p. 546). In India the number of tombs of saints (pir, ayinya) or martyrs of the faith (shahid) is legion, and they attract large bodies of pilgrims.

Such monuments abound in the vicinity of Muhammadan cities, like Delhi, Agra, Lahore, or Lucknow, and they are visited by low-class Hindus as well as by Muhammadans. Some shrines, like those of Mu'in-d-din Chishti at Ajmer, the martyr Ghází Miya'n at Bahraich and Gorakh- pur, and Shāh Madār of Makampon, vie with Hindu holy places in attracting both Hindu and Muhammadan pilgrims. But the erection of tombs, and still more, the proliferation of sanctuaries and mosques in opposition to the laws of orthodox Islam, and Wahhabis—the puritans of Islam—prohibit visits to them. The practice now so common among Muhammadans of visiting such places is clearly derived from a theory of preservation of the relics and the rites performed differ littl' from Hindu and Buddhist custom. The pilgrims circumnavigate the building in the course of the sun, crush into the tomb chamber to imbibe the breath of the saint which is supposed to sur vive round his remains, or, as a special privilege to be gained by payment of a fee, they are allowed to observe or even to touch clothes which are supposed to have been worn by the saint or martyr—his turban in particular, or some other article which may have belonged to him. Many of these shrines are potent in the cure of disease, and at some—e.g., at the tomb of Hanwant Naik at Sānganer in the Ahmādān District—wooden legs or arms are offered to cure some relief (BD xvii. [1884] 757). Many of the Panjāb shrines are efficacious in the cure of leprosy and other diseases (Census of India, 1911, vol. xiv., Panjab Report, pt. i. p. 383 f.).

11. Opposition to tomb-worship among some Hindu sects.—Some modern sects which aim at the permanent restoration and perpetuation of Hinduism have protested against the worship of tombs and relics, and even against pilgrimage.

The Arya Samaj (q.v.) discourages the practice of bathing in holy rivers, of pilgrimage, of the use of beads and sectarian marks, of gifts to worthless
PILGRIMAGE (Japanese)—The practice of religious pilgrimage in Japan may be traced back to the 5th century, when the Buddhist missions opened mountain passes and consecrated some of the peaks to be places of worship (see art. Missions [Buddhist], vol. viii. p. 704). In the course of the 9th and 10th centuries groups of mountaineering priests were established, following their own pilgrim itineraries. Legend has it that an emperor (reigned 984–953), in the distress occasioned by the death of his consort, left his palace and paid a visit, wearing monastic robes, to the thirty-three shrines of Kannon (or Avalokiteśvara) in the central provinces. However this may be, we know that at the end of the 10th and the beginning of the 11th century frequent pilgrimages were made by the court nobles to Buddhistshinto temples (or Shinto sanctuaries), and that the pilgrimage to the thirty-three sanctuaries of Kannon was, from the 15th century, one of the most popular. In the former case the pilgrimage was combined with pleasure, and rhythmic meetings were often held in front of the sanctuaries.

In the latter case the pilgrimage was undertaken as an act of penance and accomplished by stiff climbing, for the majority of the thirty-three sanctuaries stood, and still stand, on hills or precipices, and were therefore dedicated to the conception that the deity Kannon looks down with compassion on the lower world.

The pilgrim hands to the thirty-three Kannon sanctuaries consisted usually of a few persons, often a family, priests, and a few out-caste people. To which they received stamps of the various sanctuaries, and, while marching, they chanted hymns supposed to have been revealed by the respective deities of the places. At the places of pilgrimage acts of penance were performed, such as fasting, bathing in water-falls, and sleepless prayer. On the way the pilgrims subsisted on alms, and, when they died, they were tenderly buried by the villagers, these acts of protection to the pilgrims being considered of similar merit with the pilgrimage itself. The same may be said of all other religious pilgrimages, and that was the reason why, even in the ages of warfare and disturbance in the 15th and 16th centuries, the practice of pilgrimage came more and more into vogue, stimulated as it was by the sense of misery and by many distressing experiences. In these centuries, and more decidedly after the restoration of peace and order at the beginning of the 17th, the places of pilgrimage were multiplied enormously, being arranged in lines of thirty-three annual pilgrimages. Most of these were Buddhist sanctuaries dedicated to certain deities or connected with the life incidents of Buddhist saints. The distribution of the places in one group was various—sometimes limited to a certain locality, sometimes scattered over a wide area. Besides the places arranged in series there were several isolated ones, to which the pilgrims, in company or individually, paid a visit after long tiresome journeys.

A noteworthy feature in some of these pilgrimages was that they were practised as a kind of initiatory ceremony introducing young people to religious mysteries when they were entering adult life. Most pilgrimages of this kind were mountaineering trips over dales and precipices, paying homage to the sacred mountains visited, and finally worshipping the chief deity enshrined on the summit. The pilgrims were guided by trained leaders, who were mostly regular mountaineering priests, and who directed the ceremonies. The pilgrimage of the mountains visited were Kimpū-sen in Yamato, Ontaké in Shimanō,1 a group of three peaks in the north-east, the well-known Fuji, etc. Besides these and other Bud-

1 Percival Lowell, Occult Japan, Boston, 1895, a book chiefly based on the author's observations on Ontaké.

MENDICANTS, and of all the many rites of modern Hinduism (H. A. Rose, A Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province, vol. ii. pp. 95–14, ii. 291). The Sikh guru Namāk (v. r.) said:

'Religion consists not in toiling or places of a pilgrimage, or in sitting at attitudes of contemplation' (M. A. Macauliffe, The Principles of Hinduism, Oxford, 1905).

Guru Aran Dās endeavoured to prevent Sikhs from visiting Hardwar, Benares, and other places of Hindu pilgrimage (ib. ii. 87). But this rule is now generally disregarded, and Hardwar in partic-

ular is visited by crowds of Sikh pilgrims. Guru Amardīsāh declared that visits to shrines like Gugga and Sakhi Sarwar, as well as visits to Muhammadan cemeteries and places of cremation (ib. v. 158). But Namāk visited the tomb of Shāh Farid at Aj̄alān, and modern Sikhs frequent Ambela and Kartarpur (ib. i. 84, iii. 280). Veneration of the Sikh saints, or bhagats, prevails widely (ib. vi. 1 ff.). One of the leading principles of the Linggāyat sect in S. India is that between God and His worshippers no mediator is required, and that the pilgrimages, penances, pilgrimages, and fasts are unnecessary (BG xxii. [1884] p. 105: Census of India, 1901, vol. xxiv., Mysore Report, pt. i. p. 533).

12. Social aspect of pilgrimages.—The desire for change, the relief of the dull everyday life of the Indian people, inhibitive to them, is stronger than religious enthusiasm. Hence women, who see little of the outer world, lose no oppor-
tunity of making these journeys. Trade is carried on at all the great religious fairs, where cattle, goods, and wares are sold, and where women purchase their annual stock of necessaries and trilles. This movement of the people on pilgrimage has done something to relieve the parochialism of village life; the possibility of meeting an out-stationed crowd at the railway carriage makes caste restrictions, while the need of food from uncertain sources diminishes some of the precautions which the Hindu by the rules of his caste is compelled to adopt. The improvement of communication by road and rail has certainly increased the number of pilgrims. But Brahmins and other managers of sacred places assert that their profits have not increased with the larger crowds. The tendency now is naturally to visit the most sacred places, while those of less religious importance are neglected. It makes a shorter visit, and the reaction against the influence of Brahmins tends to reduce the amount of his benedictions. The chief danger from pilgrimag-

es is the risk of the spread of epidemic disease, and on some occasions in recent years cholera seems to have spread into Central Asia and even into E. Europe and the Mediterranean area by contagion from pilgrims visiting Hardwar and other sacred places in S. India. The burden imposed on the executive and sanitary officials in managing crowds of excited peasants, ignorant of the elementary rules of sanitation, has become increasingly arduous.

LITERATURE.—There is no monograph on the subject of Hindu and Muhammadan pilgrimage. A full list of places of pilgrimag-

W. Crooke.
PILGRIM FATHERS.

The most prominent of these movements is Pilgrim, which is one of the most cherished memories of British and American Christianity. It is the movement of the 17th century, dedicated to the Christian life of England. The experiment then made of relying solely on the constructive and regulative power of the gospel in building a Church has been of great value. It has had an influence far beyond the limits of the Church which inherited directly the Pilgrim tradition. The political importance of the movement lay in the fact that it was a conspicuous experiment in democracy conditioned by religious motives and restraints, so that democracy is seen at its best.

This was the movement of the Pilgrims, of which we have the account of the first determination on the part of the members of the Church of England, and the establishment of the Church of England in America. The Pilgrim Fathers were the first to break away from the established Church, and to form a new Church on the principles of the Reformation. The Pilgrims were a people of the 17th century, and they were the first to establish a Church in America. They were the first to establish a Church in America on the principles of the Reformation. The Pilgrims were a people of the 17th century, and they were the first to establish a Church in America on the principles of the Reformation.
see Mather, Magnalia, i. 18, quoted in Brown, Pilgrim Fathers of New England, p. 260). Their aim was to constitute a Church on the principles of the NT, and they separated from the Church by law established, because (1) ‘the profane and ungodly multitude’ was admitted to communion; (2) the ‘various ecclesiastical offices and callings, courts and synods’ had no warrant in the Word of God; and (3) the Church was ‘in subjection unto an antichristian and ungodly government, civil contrary to the institution of our Saviour Christ’ (Harl. MSS 360, fol. 70, quoted in Brown, p. 83).

About 1600 from 1600 there was one church formed on these principles worshiping in Gainsborough. When its numbers increased and the members from the surrounding district found the distance too great, a second church was formed at Screellow, meeting in the house of William Brewster, an ancient manor-house which had once belonged to the archbishops of York. The pastor was Richard Clyfton, formerly a Puritan rector of Balworth in Lincolnshire, a ‘grave and reverend preacher, of good learning and of great good’. He had done much good, and under God had been a means of ye conversion of many’ (Bradford, p. 10).

3. Leading personalities.—Robert Browne (1550–1633).—See art. BROWNE.

Henry Barrow and Henry Browne.—In 1592–93 Henry Barrows (Clare Hall, Cambridge, 1570, Gray’s Inn, 1576), a converted barrister, John Greenwood, a Cambridge graduate (Corpus, 1581), and John Peny (b. 1559, executed 1593), a Welshman and Cambridge graduate (Peterhouse, 1580), were put to death for refusing to abjure Brownist principles at the bidding of Archbishop Whitgift. The Conventicle Act of 1593 provided that persons above the age of sixteen who refused to repair to church by law established, or attended a conventicle, should be imprisoned, and, if they failed to conform in three months, should be banished from the realm. If they returned, they should be hanged. That act led to the migration to Amsterdam and Leyden, and eventually to Massachusetts. Barrow left his property to the church in 1600. It had been a member, and with the help of his legacy most of the members were able to emigrate to Holland in 1633. They settled first at Kampen and then at Naarden on the Zuyderzee, where they lived in comfort. It must be remembered that the magistrates voted a small sum of money for their relief. In 1625 they were settled at Amsterdam.

Francis Johnson (1562–1618).—The pastor of the ‘Ancient Church’ in London—by ‘ancient’ the Brownists meant ‘primitive’—was Francis Johnson, formerly a Fellow of Christ’s College, Cambridge (1584, M.A. 1585), and a popular Puritan preacher. He was expelled from the university, and imprisoned, for a sermon preached at St. Mary’s, maintaining Presbyterianism to be of divine right, delivered on the petition of 68 members of the university, and allowed to emigrate to Middelburg (1589–92), where he became pastor of a Puritan church. His conversion to Separatist principles was due to a book by Barrow and Greenwood that was presented to him by a Quaker, namely, A Plaine Refutation of M. Giffard’s Book, intituled A short Treatise against the Donatistes of England. Johnson was authorized by the magistrates of Dort, where the book was printed, to confute the pamphlet. It was burned all but two copies. Taking up one of these ‘to see their errors’, he was convinced by its argument, gave up his pastorate, and visited Barrow in prison. He then joined the Separatist Church in Amsterdam and became its pastor. When his flock emigrated, he was left behind in prison, and it was not until 1597 that he rejoined them and resumed the pastorate. He had meanwhile made a voyage in the Hopewell to the Gulf of St. Lawrence, but was obliged to return to Amsterdam owing to the misfortunes that overtook his ship.

Johnson’s antecarian temper led to some unfortunate disputes in the church of which he was pastor, the more discreditably that they were largely concerned with his wife’s family, the criticisms of his brother George. Johnson aimed at intra-congregational Presbyterianism, maintaining that ‘a body of simple church members, aggregated without Elders, had no power except to elect Elders. It could not even ordain them. On the contrary it was a prominent member’ (H. M. Dexter, Congrega
tionalism of the last Three Hundred Years, p. 320).

Henry Ainsworth (1571–1625) became a scholar of Caius College, Cambridge, in 1587. In 1593 we find him serving as a bookseller’s porter in Amsterdam and a professor Brownist. He was a man of sensitive, scholarly temperament, and played an important part in the history of the church at Amsterdam, where for a time he held the office of teacher under Francis Johnson. No fewer than 316 treatises came from his pen between 1589 and 1641 (see Dexter, p. 346), of which perhaps the best known are the Counterpyzon and the Apologie or Defence of such true Christians as are commonly called Antichristians, and some Observations as are laid upon them by the Heads and Doctors of the University of Oxford, which he, jointly with Francis Johnson, prepared for presentation to James I. and afterwards published in 1604 (ib. pp. 306–309). He was a man of wide and interesting reading, and was an especially eminent Cambridge Orientalist and commentator on the OT. Beginning in 1616, he published annually a book of annotations on the live books of the OT, the Song of Solomon, which were greatly admired by the Hebrew scholars in the universities of Leyden:

‘They thought he had not his better for the Hebrew tongue in the University, nor scarce in Europe’ (quoted in Mackenz., English Scholars, p. 210).

He gave up the allegorizing method of exegesis which was then general, in favour of the more modern method. His commentaries were thought worthy of republication in Edinburgh as late as 1845.

He was a notable story-teller. His Ainsworth in Amsterdam, illustrating his poverty, piety, learning, and Christian conviction. He was chosen pastor of the church at Amsterdam during the absence of Francis Johnson in Newfoundland, and later, when Johnson’s antecarian rule had made unity impossible, Ainsworth withdrew. The dispute began with a discussion on the power of excommunication, in which Ainsworth maintained, against Johnson, that the power belonged to the congregation as a whole and was not to be used by the elders alone. In 1610 Ainsworth and thirty others who shared his views formed a third Congregational church in Amsterdam.

D. Neal’s story of Ainsworth’s death is as follows:

‘It is reported, that having found a diamond of very great value in the streets of Amsterdam, he advertised it in print, and when the owner, who was a Jew, came to demand it, he offered to return it for a sum of money which he would desire; but Ainsworth, though poor, would accept of nothing but a conference with some of his colleagues upon the prophecies of the V1Ith Testament respecting the Messiah, which the Jew proposed; but not having interest enough to obtain it, and Ainsworth being absolute in the demand, he was denounced as a malefactor, and he was prosecuted’ (ibid. p. 421).

John Robinson (1568–1625) entered Corpus Christi College, Cambridge, in 1582 and became Fellow in 1599. For four following years he appears to have been a lecturer in Norwich, where he was ‘worthily revered of all the city for the God of him in him’ (Ainsworth,
PILGRIM FATHERS

Counterpoint). He records his own unwillingness to break with the Puritan ministry:

'Had not the truth been in my heart as a burning fire shot up in my bones, Jer. xx. 9, I had never broken those bonds of discipline that had long confined me. I had not the strength to resist them, for I was not a man of stamps, but of a strong and tender spirit; and it was but a thing of little moment in my eyes, that my integrity should be broken by a single assault of the public.'

In 1603 or 1604 he was suspended for his disregard of conformity, and united himself to the church at Gainsborough. He accompanied the members of the Scrooby church to Amsterdam, to join with the church already established there. They found that church troubled by discussions about its own discipline, and decided to go on to Leyden. In the Amsterdam discussion Robinson sided with Ainsworth against John Smith, Thomas Helwys, and Francis Johnson, who were Presbyterianizing the internal government of the church. Robinson published a moderate and able statement of the Congregational position, rejecting all sectarian names and maintaining simply its justification as an original Christian type. In Leyden Robinson was admitted to the university in Sept. 1615, where he attended lectures by Episcopius and Polyander. An attempt has been made on very slight grounds to discredit the account of a debate between Robinson and Episcopius, in which Robinson defended Calvinism against the famous Arminian. Bradford's account of the debate (p. 21) is partisan, but obviously reliable, and the debate accounts for the position which Robinson holds in the Dutch records of the Pilgrim church. From this time onward, in the records of Leyden, he was known as 'Robinsonian.' A debate with Episcopius on a theological subject had all the ardours of a political contest, for the Remonstrants, who were Arminians, followed John of Barneveldt, who wanted an Erastian National Church. Robinson sided with the Lutheran true Spaniards. The Contra-Remonstrants, who were Calvinists, were on the side of Prince Maurice—in favour of a free Church in a free State, and bent on continuing war against Spain.

Robinson's published writings are the most authoritative, balanced, scholarly, and positive statement of Separatist principles that we have. They combine the claim for liberty of worship with catholicity of feeling and belief. He debates constantly in the English language, explaining the Separation, discussing reasons against it, confutes errors alleged to be held by Separatists, and deals with the nature of Christian fellowship. His teachings may be said to have leavened all Church relations with the Mayflower and the basis of Christian fellowship. In 1617 he joined with Brewster, who was associated with him as elder of the church in Leyden, in presenting 'seven articles' to the Privy Council, detailing the ecclesiastical position of the Pilgrims, in order to satisfy the Lords of the Council that they were proper persons to settle in Virginia. From that time till the actual migration in the Mayflower (1620) he was a leader in the correspondence with Sir Edwin Sandys and the negotiations with the Merchant Adventurers. It was in Robinson's clear mind that the reasons against settlement in Holland first took definite form. The Pilgrims cherished loyal attachment to the British crown and wished to live under it; their children were being drawn into service in the colonies under the Dutch government; the difficulty of earning a respectable living in Holland prevented other Englishmen from joining them, and they had a 'great hope and inward zeal of laying some good foundations in these parts of the world.' They sailed for ye propagating and advancing the gospel of the Kingdom of Christ in those remote parts of earth; yea, though they should be but even as stepping-stones unto others for ye performing of so great a work' (Bradford, p. 24).

The facts as to Robinson's famous address to the departing Pilgrims are as follows:

That address appears first in a brief narrative attached to Edward Winslow's 'History of Plymouth Plantation,' makes no quotation from this address, nor does Morton mention it in his New England's Memorial, published in 1669. Cotton Mathew, writing in 1695 (Magnalia Christi Americana), turns the address into the first person, and changes 'very long into' to 'very long, and') which Mr. Robinson, it embodies the substance of a sermon preached on Ezra xii, mentioned by Bradford as following a day of solemn humiliation. Bradford says that the sermon was printed and in a book of the 'Covenant Word,' refer to polity, and not to doctrine. He defends this interpretation on the ground that this alone explains Winslow's quotation in a pamphlet defending the Plymouth settlers from Separatist exclusiveness. The attempt to discredit the address being made by Sir Robert Saye and Robinson was classed as a 'separatist sentiment, or, for that matter, a presbyterian, because he approved of communion with the Church of England, in the hearing of the word and prayer (though not in sacraments and discipline)' (John Shaw's MS Advice to his Son, 1664, p. 335). Robinson was well known for his approval of 'private communion' with godly members of the Church of England, and he preached the lawfulness of attending Anglican services as early as July 1617. He left a MS on the Lawfulness of Hearing of the Ministers in the Church of England, which was found in his study after his death and published in 1634. Robert Ballie (1599-1662), the Presbyterian, writes that Robinson was 'the most learned, polished, and modest spirit that ever that sect [Indians] enjoyed' (A Dissuasion from the Errors of the Time, London, 1645, p. 17). The English government prevented Robinson from joining the Pilgrims in the Mayflower owing to his authoritative influence with them, and, before the embargo was withdrawn, Robinson died 1st March 1621, after the Mayflower sailed for eight days. In 1691 the National Council of Congregational Churches of the United States affixed a memorial on the outside wall of the Pieterskerk in the Klostegi opposite the site of Robinson's house in Leyden.

William Bradford (1505-1657) is the historian of the Pilgrim colony. He was born at Austerfield, in Yorkshire, and became a friend of William Brewster, who was 23 years his senior. He joined the Brownists in 1608, followed the Scrooby exiles to Amsterdam in 1607, and accompanied them to Leyden in 1609. He is entered in the books there as a 'fastian-weaver.' He was one of the signatories of the letter from Leyden to Carver and Cushman in England in 1620. In the same year he sailed in the Mayflower, and fortunately, when he was on an exploring expedition, he lost his first wife, Dorothy May (of Wisbech, Cambridgeshire), by drowning, while the ship lay in Cape Cod harbour. Chosen governor of New Plymouth in 1621, he was re-elected every year till he lost his life (at his own request) for twelve years till he 'by importunity got off' (Hist. of Plymouth Plantation, p. 367). He had literary and methodical habits which make his record of the doings of the Pilgrims of the 'Wilderness,' and later of the passengers in the Mayflower, with personal notes, is priceless to the American genealogist. He left in MS a full History of Plymouth Plantation, which lay unidentified for many years in Lambeth Palace library, till it was recognized by Joseph Hunter,
and published by the Massachusetts Historical Society. Bradford began his history, which he modestly calls ‘these scribbled writings,’ in 1630, and so pieced up at times of leisure afterward. (p. 6). The last sentence was written in 1630, when the narrative stops abruptly without any formal end to the book.

Miles (or Myles) Standish (1584—1656) was the soldier of the Pilgrim movement. He came of a Lancashire family, the Standishes of Standish, and had served in the Netherlands before 1602. Longfellow, who has portrayed him in song, in his courtship of his courtship, says that he could trace his pedigree plainly back to Hugh Standish of Duxbury Hall in Lancashire, England, and that he was heir to vast estates, of which he was basely defrauded. Duxbury Hall is between Wigan and Chorley, lying off the highway, and it is true that a page in the registers of the parish church for 1584, the supposed year of Myles Standish’s birth, shows signs of having been tampered with. He became friendly with the exiles in Leyden, and, though probably not a member of the church, he went with the Pilgrims as a military protector. He was chosen military captain of the colony, and did much to secure its safety by his rapid and skilful measures of defense. The estates of Duxbury, New England, where he died in 1656, are still the property of his descendants. His force of character and romantic career have made him a favourite with poets and novelists.

Edward Winslow (1595—1655) or Dotywitch was, according to Hutchinson, ‘of a very reptilian family and of a very active genius’ (quoted in Chronicles of the Pilgrim Fathers, p. 269). He happened to pass through Leyden on his travels, and was so impressed with what he saw of the life of the Puritan exiles that he decided to identify himself with them, and eventually went with the migrants in 1620. Twenty-five years later he wrote:

‘I persuade myself never people upon earth lived more lovingly together and parted more sweetly than we the Church at Leyden did; parting not rashly in a distracted humour, but upon joint and serious deliberation, often seeking the mind of God by fasting and prayer, whose gracious presence was not only found with us, but his blessing upon us from that time until, as we think, now this day. (Experiences of the Pilgrims, p. 147). His name stands third among the signers of the compact on board the Mayflower. He was in England as agent for the colony in 1623—24, and for Plymouth and the Massachusetts settlement in 1635. In 1646 he was chosen to rebid in England the charges against the colonists of religious intolerance and persecution. He died at sea on an expedition against the Spaniards in the W. Indies.

Other eminent men among the Pilgrims were: John Carver (1575—1621), an English Puritan, who, having been chosen deacon in the church at Leyden, sailed in the Mayflower, and was made first governor of New Plymouth. Thomas Brewer, a wealthy Puritan from Kent, who established himself as a printer in Leyden. Persuasion followed him thither, and drove him to join the Pilgrims, where he was associated with William Brewster in printing and publishing several important documents. Robert Cushman, who was closely associated with Carver in the early arrangements of the new colony. He accompanied the Pilgrims as far as Plymouth, England, but remained in England to act as their agent. In 1621 he was in the new colony.

The Pilgrim company in Leyden.—The piety of New England descendants of the Pilgrim Fathers has moved them to investigate every record of the sojourn of the exiled Pilgrim colony in Holland. A list of the Pilgrim company in Leyden, compiled by H. M. and M. Dexter and published in their England and Holland of the Pilgrims, contains 584 names, including children. The majority of these were men and women in the common walks of life. Between 7th Nov. 1598 and 4th Jan. 1617, the names of 118 Englishmen occur in the marriage records of Leyden.

Of these 102 have recorded their occupations: 38 are fools, their work is of no account; six are tailors, four are grocers, three are masons, and two are clerks in each of the following capacities: court officials, button-makers, cutlers, cunning-men, embroiderers, hucksters, schoolmasters, smiths, turners. This group is characterized by the fact that all of them are defrauded by the same printer, sailors’ barber, seaman, sheathmaker, silk-cloth weaver, smith’s journeyman, Spanish chair-maker, sword-cutter, tobacco-pipe-maker, turner in ivory, and wood-sawyer.

These are typical of the whole company, apart from the leaders. They were people of good sense, native intelligence, solid habits of industry, frugality, and self-reliance, and with some education in the primary sense. They were not trained by the experience of high commerce to take large risks, nor by the owning of land to the duties of rule and government. The eminent qualities needed to explain their great venture are a regnant conscience, which makes an intense, religious, and idealistic spirit, and will of God, making everything else second to the supreme endeavour to get God’s will done on earth as in heaven; and these are the qualities which came out in their later history in New England. With the increasing complexity of social life, they found it difficult to agree on methods of determining the will of God in their circumstances, and this led to an increasing reliance on democratic methods and measures.

5. The Pilgrim migration. The Separatist church existed for eight or nine years in Leyden, marked chiefly by the sustaining and conciliatory ministry of John Robinson. But it was not possible for its members to remain there. Their children began to drift into the habits and customs of the young Hollanders, and the elders realized that the next generation would probably have lost distinctive character. They had no identity of interest with the country in which they were living; and, above all, they realized that there was no security for the public officials to provide. They believed that it was their lot to lay the foundations of a Church and to advance the Kingdom of God in some remote part of the world. It was not enough to have ‘freedom to worship God.’ Their principle was that ‘by working they would have a fair field for their exercise.’ Robinson and Brewster privately discussed the idea of removal to America. New England or Virginia. It was then made public, and, after much discussion between enthusiastic optimists and fearful pessimists, the enthusiasts carried the day. The period of negotiations for starting a colony in New England was protracted and dreary, extending from 1617 to the sailing of the Mayflower in 1620. The usual method of obtaining a colony was to secure a patent—or charter—from the king. The Pilgrims applied to the London Virginia Company, which numbered among its councillors Brewster’s friend, Sir Edwin Sandys. But the company was soon torn by dissensions; and the Pilgrims’ hopes were dimmed. John Carver and Robert Cushman, found it almost impossible to get their business through. More than once negotiations were on the point of being dropped. The church had hoped to have the right of liberty of conscience and to send them at once to the land under the king’s seal; but the king refused this, although he promised not to molest them if they were peaceable. When, on 19th June 1619, a patent was at last granted by the London Virginia Company and confirmed under
the company's seal, it was found that no financial help was forthcoming, for the company was penniless. At one point the problem of securing help seemed so hopeless that it was proposed to make a treaty with some Dutch merchants who were willing to transport them to the Hudson river and to provide them with cattle if they came under the Dutch government. In this extremity help came from one Thomas Weston, a London merchant, who visited the church in Leyden. He and some Merchant Adventurers, who were his friends, had taken out a patent from the Virginia Company in the name of John Pierce, and offered to advance money, and to make a voyage of discovery and adventure, to supply them with shipping. Articles of agreement were drawn up in London, but afterwards altered in favour of the Adventurers—much to the confusion of Cushman, who had to accept what he could get lest he should lose their help altogether.

At last, as the summer of 1620 threatened to pass with nothing done, a great effort was made to speed preparations, and two ships were got ready—the Speedwell, a pinnace of 60 tons, bought and fitted in Holland, and the Mayflower, a vessel of 150 tons, hired and fitted in London.

The departure from Leyden, which is immortalized in poetic and pictorial art, is the departure of the Speedwell from Delfshaven. A day of humiliation and tears, of farewell addresses and words with church. John Robinson gave the farewell address in the text Ezr 8 : 12: 'Then I proclaimed a fast there by the river Ahab, that we might afflict ourselves before our God, to seek of him a right way for us, and for our children for ever and for all our substance. It was on this occasion that he used the words afterwards recorded by Winslow. A small majority of the church had decided to stay behind, and by agreement the pastor was to stay with the majority. They accompanied the rest to Delfshaven, and committed them affectionately to the care of Almighty God. The Speedwell arrived at Southampton on 5th August, and was there met by the Mayflower, which had sailed from London with the rest of the company.

Difficulties still awaited them. There were financial difficulties with Weston, as the body of Pilgrims refused to sign the altered articles, and he refused to give them money that they had expected. They had to part with their stock of London goods, and enter Society. A week after the two ships at last got away, it was found that the Speedwell was leaky. She had been over-mastered and had strained her timbers. The ships put back to Plymouth, where the Barbican quay which they used is still pointed out. The Mayflower took on board the most effective part of the Speedwell's company and the latter ship was then dismissed. Among those who remained (about eighteen in all) was Cushman, who despaired of the voyage, but later recovered courage and joined the colony, where he did good service. After a voyage of nine weeks in a crowded vessel, which encountered the usual autumn storms of the Atlantic, the Pilgrims were overjoyed to sight land on 10th November. They recognized the headland as Cape Cod. Passengers and seamen got together and decided to sail southward towards the Hudson river in the direction of the land secured by their patent. But the ship was entangled in dangerous shoals and currents, the wind failed them, and they had to make for Cape Cod, where they changed in their destination brought with it some dangers. The Virginia Company had no rights in New England. Their patent, therefore, had no authority or could confer none. To avoid the risks of war under these altered circumstances, the adult males were called into the cabin of the Mayflower and all signed the memorable compact which became the basis of the constitution of the colony:

In ye name of God, Amen. We whose names are underwritten, the loyal subjects of our dread sovereign Lord King James, by ye grace of God, of Great Britain, France and Ireland King, Defender of ye Faith, etc., have undertaken, for ye glory of God and advancement of ye Christian faith and honour of our King and country, a voyage to plant ye first colonie in ye northern parts of Virginia. John Carver, governor, and 101 men, and mutually in ye presence of God, and of one another, covenant and combine our selves together into a civil body politic, for our better ordering and preservation and increase of ye ends aforesaid; and by virtue heard to erect, constitute and frame ye good and Builder of all lawes, ordinances, and justs, in ye most convenient way and order for ye general good, we promise and chune this person, Massasoit, for the head of the tribe, or person to take the lead amongst all the savages living there, as seems good to himself and to us. Witness whereof we have hereunder subscribed our names at Cape Cod ye 11 of November, in ye year of ye raigne of our sovereign lord, King James of England, France and Ireland, the fiftye-fourth, Ano. D. M. 1620.’ (Brown, p. 20.)

Then follow forty-one names—the most notable list of names in the history of New England.

The landing of the Pilgrims by Plymouth Rock, as they called the solitary rock which marks the sandy shore, ended one series of troubles. The problems that they had now to face were those of a new settlement, wresting at first a bare living from nature in a severe climate and surrounded by watchful enemies. That the faith and courage of the little community were sufficient to meet and overcome this new adversity was largely due to the severe school of experience through which they had already passed successfully.

6. The Plymouth colony, Massachusetts.—As with most communities starting on a religious basis, the methods of the Pilgrim colony were at first communistic. The capital that had been advanced by the Merchant Adventurers—a commercial undertaking, whose profits were to be derived from the sale of beaver-skins, amber, etc.—was expected and sent over by the colonists. The Plymouth settlers agreed that all the profits of trade and labour were to be held in common till the end of seven years, and no individual enterprise could be started by the planters for their own benefit. The land-system was completely communistic, all the land being the property of the community and all the labour expended on it being for the common good. The people were conscientions and public-spirited, full of sympathy and mutual helpfulness, but, in spite of this, their life was full of perils and misfortunes. Men disliked the fact that their wives had to work for other men, and complained that, as they could not command the labour of their own servants, the servants that they brought with them were a burden without corresponding compensation. In the spring of the third year each man was given a small plot of corn-growing land for himself. The allotment was only for present use, not for inheritance; but the value of the additional incentive was at once felt. The men worked harder, and women and children went willingly to work on their own piece of land.

The following summary of the economic system of Plymouth Plantation is supplied by C. W. Elliot:

The Pilgrims were plain, labouring people who all worked with their hands and expected to get their living as "planters." They made their living by farming, fishing, hunting, and practicing the elementary arts of a prosperous community. They came from England under articles of agreement which were to govern the proceedings of the colonists, the conditions of which were fixed by two classes of persons, one called 'adventurers' and the other 'planters.' The adventurers merely put capital at the disposal of the outgoing of the expedition. The planters, on the other hand, who crossed the ocean and were to bear the hardships and risks of the expedition. The planters might or might not put capital into their own care. Some of the more venturesome made their venture in the joint-stock company as adventurers by putting in money and the others by putting in labour. It is a common error to suppose that the joint-stock company were adventurers by putting in money and the other planters by putting in property. Every planter aged sixteen years and upwards received on going a single share in the capital company rated at ten pounds. A planter who carried
33

PILGRIM FATHERS

with him his wife and children or servants was allowed a share in the common stock or the person sixteenth and upward and for every two children between ten and sixteen years old. Every freeman was expected to work for the maintenance of the city and the ultimate division of the holdings of the company fifty acres of unmannered land. All the planters were to be fed and clothed out of the salt and good of the land. Each planter was to work four days in each week for the company, and two for himself and family. At the end of seven years each planter was expected to show that he had turned his five acres of garden land occupied by him and his. The undertaking entered into on these terms was a strong case of co-operation and co-operative management for a short term of years, with acquisition by every head of a family, at the end of that short term, of a hundred acres of land to be his for ever.

For the protection of the colony, every able-bodied citizen was expected to bear arms. Every youth learnt the use of the small arms before he was taken off to sea and then available for the chase and war. The Pilgrims started the New England muster and military system, prototype of the admirable organization of republican Switzerland (ib. p. 174).

In the fourth year the communal system was still further abandoned. A piece of land was granted in perpetuity to each family in the proportion of one acre to every person, as near to the town as might be. Gradually room had to be made for the establishment of enterprising men in the collection of furs. In 1626 the Merchant Adventurers sold their rights in the plantation to Isaac Allerton and some associates for £1800. All heads of families and able young men of the colony then became partners. The land and cash were divided among the partners, and each was required by lot twenty acres of land. Bradford, Allerton, Standish, Winslow, Brewster, and three others accepted responsibility for the debts of the colony, and hired the trade of the whole community for a term of years to enable them to discharge the debts. The community then definitely broke with its communitarian tradition and entered on that capitalistic phase of social organization which is still an outstanding feature of American life.

In 1634 a charge most frequently levelled against the Pilgrim colony is that of illiberality. It is urged that they adopted the very methods which had driven them out of England. John Lyford, who had been sent out by the London Merchants as a clergyman, was sent home for trying to set up the ritual of the Church of England, though his offence was confined to occasional use of the Prayer Book. They persecuted Roger Williams and drove him out to become the founder of Rhode Island. They persecuted the Quakers, and were guilty of the confusion of Church and State functions against which they had protested in England.

The reply to this charge is twofold. (1) In the early days of the colony it existed in the midst of enemies. Its Brownist reputation exposed it to constant criticism both from England and from other colonies on the Atlantic seaboard. Its very existence depended on maintaining the purity of its own communion and its solidarity in the face of hostility. Bradford's conduct towards Roger Williams was personally useful and considerate. He regarded him as a man 'godly and zealous...but very unsettled in judgement' (p. 310), and this was true. Williams was allowed to go to Rhode Island, which was within the Plymouth patent. In each case of so-called persecution other elements were involved besides those of religious opinion. Action was taken on the ground of civil order rather than religion. The colony could not afford to be hospitable to divergences of conduct which were illiberal, or which were considered to be undesirable even carried to the point of excess were preferable, in the interests of public policy, to taking risks which might jeopardize the main will and even the existence of the colony.

(2) The reality is that Plymouth, in virtue of its democratic method, contained the remedy for its own mistakes. The argument for democratic liberalism is not that it will always be right, but that, when it goes wrong, it can right itself. In the Pilgrim case it was a fundamental principle that the government is necessarily dogmatic, and, having gone wrong in a matter of judgment or policy, generally makes the wrong worse by using force to make the wrong appear right. Thus it goes from bad to worse and makes matters worse. Democratic government may make as many mistakes as an autocratic government, but the mistake, once discovered, is easily repudiated and remedied by a change of leaders and of policy. The appeal in democracy is always to the better principle of the whole body of the people, and the democratic method is the surest way of allowing that principle to assert itself. The Plymouth colony was responsible for acts that in the modern judgment, though not in its own, were illiberal, but it was never illiberal in principle. It worked out in its own way a distinction between civil and religious policy, and ultimately established a much greater freedom of individual opinion than England has yet achieved. It led the way towards the discovery that in order to live peaceably and helpfully beside each other it is only necessary that men should cherish the same ideals of public liberty, public justice, and co-operative management.

The Pilgrim colony existed as a separate State only from 1620 to 1691, when it was incorporated with Massachusetts. By far the most important part of its history is included in the years before 1660. During the years 1620-69 it was under the leadership of such men as Bradford, Standish, and Brewster, and its influence was due to the precedents laid down by these outstanding personalities. For more than thirty years Plymouth was fortunate in enjoying the benefits of democracy without its drawbacks. The disadvantages of popular rule are well known: it tends to be unstable; it lacks authority; it encourages place-seeking and popularity-hunting, and sets a premium on self-advertisement. From all these Plymouth was saved by the massive character of its first leader, Bradford. He held office without salary, and so stimulated public spirit. He promoted unity in the colonial government by maintaining the pre-eminence of Plymouth and by supervising the growing towns. He gave stability to the government by preventing it from breaking up into a multitude of small, jealous, and avaricious cities. He introduced social and philanthropic reforms so far in advance of the general custom in England that many have attributed them to his sojourn in Leyden, when he may have reaped the benefits of centuries of Dutch experience. So consistently was Bradford elected to the post of governor that the colony is perhaps best pictured as a large family over which this wise leader presided with paternal authority. With the exception of about five years, when at his request Winslow or Prince held office, Bradford was governor from 1621 till his death in 1657.

During his long period of office the characteristic features of the Pilgrim spirit in public affairs had time to get well established, such as local self-government, dependence on the people for their meeting, elective unpaid officials, State registration of births, deaths, and marriages, the registration of land transfers, State schools and pensions. The foundation of Harvard University was begun in 1636 by John Harvard, a citizen of the Pilgrim colony, and the monument which he erected for students who gave one half of his estate, it being in all about one thousand seven hundred pounds, towards the erection of a college, and all his library (Chron. of the Pilgrim Fathers, p. 142). The colony was made efficient for New England towns which gave them a voice in the administration of its affairs. The public hand of the State added
the rest (Hunter, Collections, i. 242). The importance of those methods lies not in their local value, but in their having created a type that was imitated far and wide as settlements multiplied and colonization spread over the hinterland behind Plymouth rock.

7. Survivals of Pilgrim influence. — Heroic figures in the dawn of a nation's history constitute one of its most precious assets. Such figures are the Pilgrim settlers as they stand out against the background of battle with nature and unsympathetic governments, inspired only by great principles and a great religion. Americans have learned to treasure the memory of the men of the Pilgrim migration, and both directly and indirectly the influence is distributed to lay beacons on the national ideals. At Plymouth in Massachusetts an obelisk commemorates the landing of the Pilgrims. The original rock on which they landed is enclosed to prevent curio-hunters from carrying away mementos. Articles of furniture belonging to the Pilgrims are preserved in a special museum. The names and genealogies of the Mayflower families are carefully preserved. A society of Americans in England is known as the 'Pilgrims,' and the Pilgrim club relays on the pleasant memories of old, beautiful marble at Southampton marking the spot from which the Pilgrims sailed. In the Pilgrim clubs, such as that of Philadelphia, which hold an annual dinner, diminutive models of the Mayflower are presented and the identity of its beauteous virtu of the Pilgrims is still chanted in post-prandial perorations. The religious significance of the Pilgrim migration gives way on such occasions to their importance as national founders and philosophers.

More significant are such institutions as Thanksgiving Day — 26th Nov. — which commemorates a turning-point in the experience of the first settlers. In October of each year the President of the United States issues a proclamation recalling occasions for special thanksgiving and recognizing providential guidance in the events of the year. The governor of each State issues a proclamation for his own State with the same general object. The people are invited to spend a day of thanksgiving on the day set apart, and the church services, the dinner, the religious observance, and the general observance is the more notable as there is no Established Church in any State. It is an adequate illustration of the observance of national religion without an Established Church. Some days are marked in each State, and there is a novel feature in that often it is said that the Pilgrims landed on the 26th November, and the day is kept by the inhabitants with whom their first landing is known, and their contacts, Boston, New York, and New England conscience is a synonym for an exact puritan rectitude that produces a high level of personal character. It would be fanciful to trace all these characteristics to one origin, but undoubtedly they have flourished in America owing to the fact that Separatism Puritanism was hospitable to those features of human progress and hostile to the opposing influences. Democracy in America is not quite so triumphant over all the evils of the Old World as some of its advocates have claimed, but it has faced the economic and political course with success that it has reasonable confidence that it will be found adequate in meeting the remainder.

PILLARS.—See POLES AND POSTS, STONES.

PINDAR.—I. Life.—Pindar, the greatest lyric poet of Greece, was born at the village of Kynos-kephalai, near Boeotia, in 522 B.C. (see 408 B.C.). The date of his death is not certainly known, but Pyth. viii. is assigned to the year 446 B.C. As his earliest poem, Pyth. x., belongs to 496 B.C., his poetical activity covers a period of more than half a century of the most stirring epoch of Greek history.

The ancient lives of Pindar, which are full of the usual type of legend attaching to the youth of genius, have little or no independent value. His father, as is generally supposed, was a descendant of the Aigeidai (Pyth. v. 75 f.; ἡθοποίον ὄνομα Αἰγείδαι, Ἰάκωβι πατέρας); his father's name is variously given in the ancient lives as Dalphantos, Pagonidas, Skopolinos, his mother as Kleodike or Myrto. In the course of his poetic career he was brought into close relations with the ruling families of Greece proper, as well as of Macedonia, Sicily, and Kyrene in Egypt. He appears to have had a specially close connexion with Delphi, where in the temple of Apollo, according to Pausanias, ἔστω τῇ ἴθας ταῖς Πολύμνιος ἡ σπηλαῖα ἕνεκεν ἐπὶ κατοικεῖαι τῇ τε Ἡμέρᾳ καὶ ἔφεσα ἀπὸ τῶν ψυχῶν ἐπὶ ἐκλεκτικής (x. xxiv. 2).

He is said to have died in Argos. His tomb in the hippodrome at Thebes is mentioned by Pausanias (IX. xxi. 2).

Arrian (Annab. 1. 10) and Plutarch (Alex. 11) record the pleasing story that, when Alexander the Great came to the ground, he spared the house of Pindar as well as the descendants of the poet 'out of reverence for Pindar.' The ruins of this house were still shown in the time of Pausanias, and beside it a 'temple of the Dindymene Mother (Kybele), dedicated by Pindar, the image being the work of Aristocrates and Socrates, (in which he placed an image of this temple on one day in the year and no more. I had the good fortune to visit it on that day and saw the image of Pericle marble, as well as the throne' (Paus. 1. xxi. 3). To this temple Pindar himself seems to refer in Pyth. iii. 77 f.: 'But I will pray to the Muses now; and with Pan beside me do the maidens sing oftentimes by night.'

2. Works.—Pindar's lyric production covered a wide variety of subject and form. His poems were distributed by Aristophanes of Byzantium in 17 books; and others, by the Empedokles, Anaximander, Empedocles (2); ἄφθονα (3); ὑποχώρησα (2); ἐγκόμα, ἄρχην, ἐπικία (4). Fragments of the various types survive, but only the epinikian odes are extant in any completeness.

The epinikia are classified—not always quite accurately—as Olympian, Pythian, Nemean, and Isthmian, according to the games at which the particular victory celebrated was won. It might seem surprising at first sight that Pindar should have been able to weave poetry of enduring interest and charm. But, indeed, the details of the victory are, as a rule, only lightly touched upon. The central theme of the poems is a myth—connected with the history of the victor's family or city, which Pindar introduces with surprising propriety and skill. This myth, and the moral reflections which it suggests and illustrates, constitute the real substance of the Pindaric poetry.

But, further, there seems to be no doubt that the great games for which Pindar wrote were more much than mere athletic gatherings such as we are familiar with in modern times. Part of the regular ritual at the funeral of a dead chieftain was an athletic contest—an ἀγων τεχνών—such as that described in Iliad xxiii., embracing competitions in feats of physical strength and skill as well as in music and poetry.

Hesiod (Works and Days, 654 f.) tells us that at the funeral of Amphimedes, king of Chalkis in Euboea, 'his great-hearted sons advertised many prizes; and there I say that I was victorious in the battle of fifty men—so an early history of the Pindaric poetry. Celebrations of this sort held annually in honour of a local hero and accompanied by the due performance of offerings (ἐπανελευθέρωμα) to the dead are attested all over Greece. It was an amalgamation of such local festivities, the worship of Zeus, Apollo, and Poseidon that gave rise to the great national games of Olympia, Delphi, and the Isthmus.

Thus these meetings were essentially in the nature of religious festivals, of national and not merely local meaning and importance. And as national festivals they conferred on the victor and his city a glory to which it is difficult to suggest a modern parallel. Politically, too, they were of immense value for the realization of Hellenic unity, none but competitors of acknowledged Greek blood being admitted to participation in them. In the brilliant period at which Pindar wrote the Greeks had everywhere repelled the barbarians—Persian, Etruscan, Carthaginian. They had righted their 'place in the sun,' and had entered into full possession of their heritage of intellectual freedom, champions of civilization and consciences of their power. The games celebrated at the hallowed sanctuaries of Greece were not only for the Greeks, but were for the whole race. 'An opportunity for distant colonies beyond the seas an opportunity of meeting together to worship the gods of their ancestors and to realize amid the splendor of the festival their common pride and glory of Hellenic blood. Small wonder that the victor at Olympia or at Delphi seemed to have attained the pinnacle of earthly success.'

'The victor for the rest of his life had a honeyed calm, so far as tastes games' (Ov. l. 97 f.)

This is the feeling which the sculptor of the famous statue of the charioteer discovered at Delphi in 1856 has sought to realize.

Le conducteur du char est beau, paisible, heureux d'avoir dégagé le pays; il s'en contente' (E. Bourget, Les Ruines de Delphes, Paris, 1914, p. 257).

3. Leading thoughts.—(a) The fruirti of man.— We are told that at a Roman triumph it was customary for a slave to ride behind the general in the triumphal car, whose duty it was to remind him of his mortality: 'Respice post te, hominem memento te.'

*et, sibi consil

Nel placeto, curru servus portatur Codyem' (Juv. v. 411).

So in Pindar over against the brilliance of festal joy and splendor looms always the shadow of mortality. Thus in Nœm, 11.—a poem which is, however, not an etvlicem—be says:

'Now if a man hath wealth and in beauty surpass other,
On no other condition can human prosperity attain such relative stability and permanence as are attainable by mortality than that it be made up both of 'these and those' (τά καί τά), of good and evil.

Yet quench the boast in silence: Zeus giveth both these and those, Zeus the lord of all' (Isth. iv. 51 ff.). 'They say that just so a man's possessions, if he knows them on earth, must take both these and those' (Isth. vii. 166 ff.). 'Everyone who stays at home and there is uncertainty of Fortune till they reach the very end. For she giveth both of these things and of those' (Isth. iii. 152 ff.).

(b) The strength of the gods.—Over against the frailty and mutability of mortality Pindar emphasizes the strength and stability of the gods:

Time (alone) with the rolling days brings ever other changes; but the gods, their strength cannot be exhausted by time.' (Isth. i. 40)

'In a little while the pleasure of men grows up, and even so it falls to the earth and is shaken by the breath of death.' (Isth. i. 34)

'I am the dream of a shadow' (Isth. vii. 162 ff.).

The background of Pindar's theology lies in his own universe, with its anthropomorphic representation of the gods as a race of beings superior, indeed, to men but of like passions with them. But the reasoned beliefs of the worshipper are inevitably framed in a setting of traditional mythology, in which he translates his inward quest of his intellect and to his moral sense. It is quite evident that Pindar, like Ἀσκληπιός, felt strongly that the orthodox theology held much that was inconsistent with a worthy conception of the gods.

He was the apotheosized hero of his ancient home towns, men's characters in his eyes. He, and not the gods, attributed to the heroes all those things that are a shame and a reproach among men, and he would have agreed with the famous line of Euripides (Ap. Pyl. vi. 21 A): οὐ δέχάσεται ἀδόκιμον, αἰσχρόν οὐκ ἐπιθυμεῖ. 'Meest is it,' says Pindar, 'that a man should speak noble things of the gods: the blame is less.' (Ol. i. 35).

This feeling is well illustrated by the manner in which Pindar on occasion redesigns the grosser elements of the traditional mythology.

Thus in Ol. ix. he deals with the story of Pelops, son of Tantalos.

Legend told how Tantalus invited the gods to a banquet at which he served up to them his son Pelops. The gods did not partake of the flesh, save only Demeter, who ate a portion of his shoulder, which was afterwards replaced by a piece of ivory. This story was enhanced, and Pelops became a model for mortals by his method of dealing with his enemies to account for the supernatural carrying off of Pelops by Poseidon; the ivory shoulder (referring probably to some eden-like hereafter) being the enduring reminder of a past sin which took him from the domain of purification' (I. 20)—the λέοντας την ἀρκουνδιά, the lion who thresheth, and which, in the symbolism in which, Pellas-like, the membra disjecta of the boy were cooked into a new life.

Again, in the treatment of the story of Neoptolemos, son of Achilles, in Ne. vii. There was a persistent tradition that Neoptolemos was slain at Delphi. According to one version, he had come to offer the sacrifice of a bullock (Παῦλος, x. vii. 32): Ἰλίῳ ἄλλου, Ἀλκυόνων ἐπετεργίσεις αὐτός ἦν καὶ σαλτούσα τῆς Πελοπίδος τοὺς Πελοπίδους τῷ Πελοπίδῳ, εἰς ὀνομασίαν τοῦ Ἀλκυόνων (οἱ Λαγές τῆς Κρήτης). In Pindar's version all the untoward elements of the myth disappear. Neoptolemos came, not as an enemy, but to offer to Apollo the firstfruits of the spoils of Troy. His death was the result of a chance quarrel that he might fulfill his destiny which men saw in him. He was one of the heroes of the poet's thought who dwelt within the grove of Apollo and the presiding genius at the hero-columbations; so far from the Delphians causing his death, the Delphians were accounted his, for his death brought treasure of firstfruits from Troy; and there a quarrel over necks a man slew him with a knife (κεφαλήν). The acceptable sacrifice bestowed his name upon the land of the Laconians, and he fulfilled his destiny: it was decreed that within that most ancient grove there should be in time to come, beside this well-shaded abode of the god, some one of the lords Askaliad, and that he should dwell there to keep of judgments for the sacrificial heroines and to keep the ancient feast of the Isthmian (Isthm. vii. 40).'

Yet again, Homer tells us in Isth. vi. 565 ff. how Hekules wounded Hades at Pylos (Iliam): 'And giant Hades thereon suffered a swiftest arrow, when this same man, the son of Zeus, on the hill of the gods, spake him cruel words in his heart. Then, however, O Hieron, cannot understand the sum of words, thou knowest by hearsay from men of old—for one good thing the immortals do not change—how that this son of Hades, this foolish are not able to hear in orderly wise (καὶ τοιαῦτα άληθεία), but only good men who turn the fair things out' (Ol. ii. 52).
seem to reflect upon a god, Pindar, employing the figure of sacrifice, breaks off suddenly and says nothing of the wound- ing of Hades; 'By favour of God (διός) are men good and wise. For how else could Herakles have blazoned in his heart the strength to ride the chariot of the sun and to stand and pressed him hard; pressed him, too, Phoebus warring with his silver bow, nor did Hades keep impure the wand, whereas his brightness dreads the holiest of all days, is more sweetly than the mortal bodies? Fling from thee, O my mouth, this tale! To speak evil of the gods is hateful task, and infinitely vainer strikes a note of malice. Prate not, then, of such things; leave war and battle altogether (κωπεῖτε) from the immortals' (Pyth. x. 18, 19). The words, which perhaps have almost technical in this special sense; cf. Aesch. Ag. 696 f."

The same tendency is seen in his treatment of the story of the Danaids in Pyth. ix. 111 ff. and in the epithet μῶδος in Pyth. i. 391 (ἀρσεν μῶδος δέντιν τετελεῖ τίττει θεόν), which reappears in passing in the graceful sally which represented Achilles as the sole survivor of seven children (Lycurg. 170; schol. H. i. xvii. 37, etc.). Pindar's position in, in fact, precisely that of Euripides, Iph. in Taur. 386 ff., where Iphigenia rejects the idea of human sacrifice being pleasing to Artemis:

"Si Dieu a fait l'homme a son image, l'homme lui a bien rendu."

The gods, according to Pindar's view, though their life, like men, are deathless and ageless, free from disease and pain (frag. 143, ap. Pint. de Superstit. 6), omniscient (Ol. i. 64), and all-powerful:

"God accomplishes every purpose according to his hopes; God, the winged men and outstripsthe dolphin in the sea, and brings low many a proud man, but to others gives all good fortune. But some things, he says, are too short when men are slow (ib. 67 f.). For me no marvel is better belief when it is wrought by gods (ib. 10, x. 18 f.). God is able to raise undoubted lightfrom black night and to hide the clear radiance of day in cloudy darkness (frag. 142, ap. Clem. Alex. Strom. v. 795)."

The inexactitude of the authors of all human success and achievement:

"From the gods are all means (μέσα) for mortal excellence (όμορφος); from them are men wise and mighty of hand and eloquent of tongue (Pyth. i. 411; cf. Ol. x. (19) 10). Only such success as the gods give is to be desired: 'May I desire glory from God (θεός)' (Pyth. i. 50). Only such success can be enduring: 'The prosperity that is begotten by the grace of God is more enduring for men (Apoll. vii. 17). Man propesces, God directs; and God, but the deities have no choice, but the man lies with God' (Ol. xii. 104). What is done without god is better left unsung: 'Each thing that is without God is not worse hushed in silence' (ib. 108)."

The inexactitude of fate or destiny is strongly affirmed in Pindar, but it is not an uncompromising fatalism and is in no way inconsistent with an overall sense of purpose, of the inevitability of the intuitive and effort of men. A man should cherish good hope (Isth. vii. (viii. 15)—not the κεφαλή Θεών whose issue is vanity (Nem. vii. 45, Pyth. i. 23); not the desire of the moth for the star; that way lies madness (Nem. xi. 48). A man's duty is to aim at a reasonable ambition (ib. xi. 47); in the perplexities of life to look to the immediate duty (Isth. vii. (viii. 13 f.). In pursuit of his aim he must spend and be spent, though the issue is uncertainty (ib. xi. 45. He cannot foresee the future, and fortune now bestows and now withholds:

"The black fields do not give their fruit continuously nor with the same growth for all the same habitation is not with equal wealth, but only alternately. Even so Fate (μορφή) guides the race of men. There is given to Zeus no certain mark for the effect of his will. He works, but not his will, the will of his eye (οὖς ἐπιθετόν) for our limbs are chained by hope unbalanced; but the river of Foreknowledge is set star (Nem. xi. 30)."

What the god, however, in store for us—not an anstere impersonal fate, but the will of God: "τὸ μορφής ζωῆς Δῶσις τετελεῖ (Nem. iv. 61; cf. Pyth. xii. 28 f.)."

"The gods choose Zeus to reign (οὐχ θεοί) the destiny (μορφής) of men whom he loves" (Pyth. v. 1291 f.)."

In this conviction Pindar says:

"To me whatever excellence sovereign Destiny (Θηριοη) has assigned, I know well that Time in his course shall bring it to its fated fulfilment! (Nem. iv. 418)—which words might almost seem to have been in the poet's mouth when he wrote:

'Yet, be it less or more, or soon or slow, It shall be still in strictest measure even here to Time which leads me, the will of Heaven (Somn. ii. 9 ff.)."

The cruder form of the doctrine of the envy of the gods was of course familiar to his contemporaries, and it is clear that Pindar, who calls envy 'the companion of fools' (φόνιοι κεφαλήθρων ἔταιροι (frag. 123)), would not seriously attribute envy to the gods. When he alludes to it, it will be seen that it is merely pressed, and either as a mere expression (σεπτὸν, that a man should not seem to encroach on the prerogatives of the gods,

'Or pass beyond the goal of ordinance Where all should pass, we must meet for all' (Tennayon, Tithouno, 301.)"

That this is so becomes clear upon an examination of Pindar's references to the doctrine. In Pyth. x. 10 ff. the train of thought is evident. The Aeolean have had great success; may they not now, with envious reversals (φόνιοι μεταφοράς) from the gods; a god may have perfect and unbroken felicity, man must expect alternatives of weal and woe; he cannot climb the brazen heaven. In the second passage, Ol. xiii. 25, it is little more than a form of aeolius, Ol. i. viii. (vii.) 30 ff., rightly interpreted, is an admirable commentary on the ethical content of the doctrine of the φόνιοι θεῶν:

'Let not the envy of the immortals disturb whatsoever pleasant thing of the day I pursue quietly into old age and for my destined life. For all alike we die, but destiny differs. But if I look for things far, his stature is too short to reach the brazen abode of the gods: the winged Pegases throw his master Bellerophon when he would have come to the habitations of the gods and the company of Zeus. That is but to say: I recognize my mortality; I will not seek the things afar; being the creature of a day, I will pursue quietly (κελίον, not with violence) in the same way as I aspired to (cp. Pyth. x. 54 ff.; φόνιοι θεῶν ἄνωθεν άπείρον εἶναι τὰ δύο ἀνέρρητα τοίχων ἐνεπιτεινόν μεσάν ἐνεπιτεινόν, not the far things, but the good of this day which is ever the highest for a mere mortal (φόνιοι θεῶν, ἀπείρον εἶναι τοίχων ἐνεπιτεινόν ἐνεπιτεινόν ἐνεπιτεινόν, ἀπείρον εἶναι τοίχων ἐνεπιτεινόν)."

So shall I not be liable to the envy of the gods."

Pindar's attitude may be summed up in three words—εὐγένεια, κόρος, ἄρη. The precise meaning of these terms is somewhat fluctuating and the relation of the first two is sometimes reversed. ἀρη is 'insolence,' 'wantonness,' 'pride' (Pyth. i. 25, 12, 190) and Ol. i. 30, 36, 41, 56; or 'violence' (Nem. i. 50, Pyth. iv. 112). κόρος is 'satiety' (Ol. i. 55, Pyth. i. 82, viii. 32, Nem. vii. 52, x. 20) or the resulting 'insolence,' 'pride' (Ol. i. 36, Nem. i. 65). Hence Pindar (Ol. xii. 10) vaunts "καθαρία μηδενὸς, καθαρέα μηδενὸς"(Ov. i. 985) elsewhere (Theognis, 153; Solon. frag. 8) κόρος is father of ἄρη. 'My κόρος is in Pindar' win. (Ol. i. 57, x. (x.) 27, Pyth. x. 55, Nem. ix. 21, and frag. 42 (171) 4, but ἀρη is 'infatuation' (Pyth. ii. 28, iii. 24). The dogma of sin implied in these terms is illustrated by the following passages:

'He [Tantalos] could not digest his great prosperity, but for his insolence (φόνιοι) won no good deeds; he was the same as he was wont to be' (Pyth. iv. 1.)

The sequence is success (δηλον) pride (φόνιοι), insatiation, or moral blindness (ἄρη)—'quem deus vultedere, dementat primum.' "Escrilyses, rejecting, a-Pindar does, the crude conception of the envy of the gods and the idea of the secondary side of the god (Nem. iv. 33) and supports his views by "Τάρα βέβηλος μεγάλης ἀρηδίων θεῶν, which are dark Aras for the house. In other words, success leads to pride, whence springs sin; one sin leads to another, and with repeated sin comes greater boldness (Ib. 221). θάνατος βραχίους τοιχών ἄρη."

precisely so in the OT 'Jeshurun waxed fat, and kicked: . . .
then he forsook God which made him, and lightly esteemed the Rock of his salvation. They moved him to Jealousy with strange gods, with abominations provoked they him to anger (Dt 32:29).

(e) Man's relation to the gods and to fellow-men.

--Pindar's position is expressed in Pyth. ix. 131 ff.

"Therefore a citizen be he friend or be he foe, let him not hide that which is well done for the common weal, nor make void the saying of the sea of the son that said that one should praise even a foe who doth good deeds."

Among the primary duties is honour to parents and patriotism:

"In that thou keepst thy father at thy right hand, thou maintainest the precept which of old among the hills they say that Philyra's son gave to his fatherless son of Pelasgus to honour above all the son of Kronos----but never to rob of like honour the destined life of his parents. Of old Antilechos (ὁλοκάυτων Ἐν Κύπρῳ Πίνδαρος) had this mind, who died for his father's sake."

Although the poet occupied a worthy position in the great struggle against the barbarians, Pindar speaks with real feeling of the glory of the victory which removed the 'Tantalos-stone' which hung over the head of Hellas (Isthm. vii. (viii.) 10; cf. Isth. ix. 56 ff.). Pindar recognizes, too, the duty of kindness to the stranger within the gates (Isthm. ii. 6, Isthm. iii. 39 f., and passim). It is noteworthy that the μοισαί in the Κανές of Aristophanes base their claim to bliss on the two grounds that ἐργάτης εἰς χεῖρας τῶν ἱερῶν περὶ τῶν ἱερῶν και τραχύς (456 ff.).

Pindar, as an aristocrat, insists much on the virtues of heredity:

"That which is by nature is always best (Isthm. i. 100; cf. ii. 55 ff., etc.);

and he is much impressed with the splendour of a tyrant such as he witnessed in Sicily:

"On a tyrant, leader of a people, looks the high Fortune if on any man (cf. Isthm. ii. 56); 'Diver are the kinds of greatness, but the crown of greatness is for kings' (Isthm. i. 113 f.)."

But his personal predilection is for a modern aristocracy in which the government is in the hands of the ἀριστοκρατία (Pyth. iii. 45 ff., Isthm. i. 48 ff.). Pindar recognizes, too, the duty of kindness to the stranger within the gates (Isthm. ii. 6, Isthm. iii. 39 f., and passim). It is noteworthy that the μοισαί in the Κανές of Aristophanes base their claim to bliss on the two grounds that ἐργάτης εἰς χεῖρας τῶν ἱερῶν περὶ τῶν ἱερῶν και τραχύς (456 ff.)."

Pindar, as an aristocrat, insists much on the virtues of heredity:

PINDAR

Wealth and Disease. 

Then we have the miraculous carrying off of Pelops and Gymnedo to Olympia (Ol. i. 40 ff.); the swelling up of Amphiaraos by the earth (Nem. ix. 24); Ino (Lenkothena) lives an immortal life with the Nereids (Ol. ii. 28 ff.); even after death Seule is raised to Olympia (ib. ii. 25 ff.). Polydeukes is on the verge of a life with his brothers — half the time beneath the earth and half in the golden halls of Heaven (Nem. x. 87 ff.); and so on.

But of far more importance is the Hesiodic passage. The conception of the 'heroes' — the great men of the heroic past — as being after death exalted to perpetual felicity had become part of the orthodox Greek belief. And the word 'hero' (heros) was no longer confined to the great figures who had fought at Thebes and Troy. Great men of a less remote past who had deserved well of their fellow-men were conceived as enjoying an exalted state after death and received the honours and offerings of hero-worship. The founder (kouros) of a city, especially, was worshipped as a hero in the city which he had founded.

The full content of this hero-conception cannot be discussed here. The offerings made to them were in the main those which were made to the gods (see Nemes. vii. 95 ff.). As compared with the gods, their range for good or evil is restricted, their worship and their influence being local and attached to the place of their grave. Hence we hear constantly of the bones of a 'hero' being brought home from a foreign land, where he had died, that they might find sepulture there, and there form the centre of his worship. But, like the gods, the heroes could take on bodily shape, human or otherwise, to aid their worshippers in a crisis, and such phantom appearances (phantasma) are often referred to — e.g., Echecus or Echelaios (the man of the plough-stil), who appeared at Marathon and, like Hy of Luncardy, dealt havoc with his plough (Plau. i. xxxii. 5; cf. i. x. 5), Neoptolemos and others, who helped to repel the Gauls at Delphi (τα των ἱππων παράκατα σφόνες, εἰρων, ἡμέρα) or 'Τέτρακος' and ὁ Δαυδήλατος και Πόστερ (Plau. x. xxxii. 2; cf. i. iv. 4). Hero-worship is closely akin to the cult of the chthonian deities and the veneration of the dead, and found an especially congenial soil in Boeotia, and hence interests prominently the Boeotian poets Hesiod and Pindar. Pindar knows of the heroic cult of Pelops at Olympia where 'in his grave by the stream of Alpheos he lies apart in splendid beauty' (Ol. i. 90 ff.) and of the offerings of others at Delphi (Neum. vii. 31 ff.; cf. Neoptolemos . . . τάφος καὶ οἱ κατὰ ζῶς ἑαυτῶν οἱ Δελφοί (Plau. x. xxiv. 6), and, besides others, most significantly of all, Battos (Aristotes), founder of Kyrene (16: 250 C.).

'Aristotles ... built a greater grove of the god and laid down a straight-cut horse-trodden way across the plain for the processions of Apollo; where at the end of the marketplace he lies apart in splendid beauty' (Ol. ii. 25 ff.; cf. Smith. ii. 298 B.; cf. also the Excursus, 'The Recent Discoveries at Olympia, 1860-63', London, 1864).

Pindar's deep interest in the state after death is unmistakable. He likes to imagine the dead still touched by the fortunes of their living descendants: Apollodorus, who once fought at Marathon and later in the war with the Titans, and thereafter a hero worshipped by the people (πολισμένοις) (Ol. i. 99 ff.): the dedication of Neoptolemos of Ithaca (Sadlers), who has never the less the doom — or Would it not be an epithet
of Artemis; cf. the sacrifice offered by the polemarch (Pollux, viii. 91; Phutarch, de Malign. Herod. 20), and so on. Also we do not know how far the passages represent one consistent doctrine.

But in general outline the essentials are as follows. The soul and the soul alone 'comes from the body' (nafs),† but, in the sense of ancient philosophy, suffering which is sin—the soul is imprisoned in the body. Then it passes through a period of trial 'three times on either side.' Some commentators take this to mean three times in all—once in the body, once in the body of the dead, and, more naturally means once here and then below; then here and again below; then once more here and once more below. Having passed these six alternating periods successfully, in the ninth year—the sacral izarayf—or Periphrase accepting atone-ment, the soul enters its final life in the body of a king, a mighty athlete, a poet, or a philo-sopher, alter which it passes in the guise of a hero to the Isles of the Blessed.

It is much Pindar in these speculations owed to the mysteries of Eleusis (to which frag. 137 especially seems to refer), how much to the rise of Orphic and Pythagorean doctrines in the latter part of the 6th cent. B.C., we need not here in-quire. There is a natural and mystical sense in which, through Pindar, these doctrines exercised on Plato and later thinkers. What is important is that Pindar expounds, with all the earnestness of personal conviction, the doctrine that the soul is immortal, that it is a living being that the exercises in the body can cause to expand, the seed of emanation from the flesh—an emanation to be attained, not by some peculiar dispensation of the gods, but by her own effort towards purity.

A. W. MAB.

PIR. 1. The term and its synonyms. — Pīr is a term denoting a spiritual director or guide among the Sufis, or mystics of Islam. The functionary described by the title is known also under other names: shaikh, mursih, ustadh. Pīr is a Persian word, and is believed to be derived from a name commonly in India and Turkey than in its native home; shaikh in our special sense is in general use throughout Islam; mursih is also wide-spread, but in Turkish or Arabic-speaking countries rather than in Persia, and is found.

2. The authority of the spiritual guide. — Theoretically speaking, any one who has advanced sufficiently in the mystical experience of divine reality may undertake to give spiritual guidance to others. But, as a matter of fact, the pīr, or mursih, nearly always holds his right to direct souls on the authorization of some teacher who has directed him in the mystic way (tariqh). This authority is valid only in so far as the teacher traces his claim to teach through a succession of teachers, who have traced their claim to the founder of the numerous Dāwīrī orders. The mursih

1 Shaikh is used also of the khālīyah, or deputies, of a pīr, or mursih. These men may have their own disciples, usually of the poorer classes or such as are at a distance from their own pīr. The authority of the khālīyah is limited to the area who seek it, and may even confer the rank of shaikh upon such and such a disciple. The khālīyah is usually the official head of a dawriy community rather than the same man as the spiritual director of a narrower group of disciples (mursih). Pīr is employed to the title that both the founder of a Dāwīrī order, and still more generally of a sect, or saint. In Persia, India, and Turkey the term in current among non-Muslims the Hennecke, and it is used of all the saints, and in Persia and Turkey it designates an inferior priest among the less commercially minded. Pīr bears just the ordinary gifts of knowledge and management are employed as the Muslims ascribe to their pīrs.

follows the tradition of the order to which he belongs. He is under the grand shaikh of his order, who resides at the place where the tomb of the founder of the confraternity is found. The grand shaikh, for his part also, proves an authority lineally derived from the founder. He makes little or no control over the local or provincial shaikhs under him. It is in his power to summon a general council of shaikhs, whose action would be binding on each of them and on the Dāwīrīs subjects to them; but such councils are and always have been of exceedingly rare occurrence. In reality there is little official restraint on the independence of the Dāwīrī shaikhs. Even in their relation to the civil power they occupy a position of special privilege, and shaikhs of pre-eminent sanctity or strong character make a large place for themselves in public life. The local influence of many shaikhs is very significant; their word is felt to have the force of law, and the demands which they may make on the community are granted without dis pute. But, if one line be the responsibility of a member of a group, it will be paid, Government officials pay them respect in various ways. On the whole, the pīrs played by the dawriy in the communities of the Muslim world has been in favor of order and public welfare. They have taught by example and precept the principle of loyalty to authority, and they have been devoted to the interests of Islam, which they recognize to be inseparable from the interests of the sovereign State.

3. The pīr and the mystical life.— In order to act as a spiritual guide in the life of the mystic (tasawwuf), 'to live the life of a Sūfī' the pīr, or mursih, must hold a sānawād from his teacher. This is a certificate given by his spiritual leader that he has the right to pass on to others the tariqh, or mystical discipline, as he has learned it, and also conferring upon him the authority to perform healing miracles and to work signs. The validity of the sānawād depends upon the claim of guides whose names connect the name of the issuing shaikh with that of the founder of the tariquh, or order. The shaikh may hold the ijtāzh of more than one teacher if he has followed more than one

1 The grand shaikh is described as occupying the sānajad, or head-carrier, of the order.

2 The shaikh al-Bakr, who is supposed to be descended from Abu Bakr, the first khalifah, is appointed by the Egyptian Government to maintain order in the countries of Persia, Turkey, and Egypt, and within the borders of Syri; country exercises a real official authority. The office which he holds finds an analogy in other Muslim countries, and in Egypt it is possible to dictate but to prevent excesses.

(a) Occasionally a specially forced pīr may be accorded a controlling influence over several local Dāwīrī fraternities, and the recognition may even be given to his son after him. This does not necessarily imply the right to modify the spiritual discipline of these fraternities or the direction of novices. The influence may not be the same and affects the general well-being of the sect. The authority of the spiritual director of the latter is in the hands of the pīr, or mursah (shaikhs who are spiritual directors). (b) The history of the pīrs in Morocco in the 17th cent. was that of a sect governed by Sūfī shaikhs. In Persia the political power of the shaikhs has been a constant feature of the history of the country, and the poets of Persia in most cases have been Sūfī teachers. In Turkey the highest places of power sometimes have been held by Dāwīrīs. For instance, the Abū Hamid, the great Mulla, was the Sultan Abū-Hamid. The weight of influence exerted by hundreds of powerful Dāwīrī shaikhs throughout the Ottoman empire was admitted by competent observers.

The principles of Sufism, if pressed to a logical conclusion, lead to a form of sectarianism which is either civil or religious authority. Even the Dāwīrī excesses which are promoted by the shaikhs have in them no spirit of antagonism to the public order. The Wahabi, Mahdist, and Sennial movements are, indeed, revolutionary in character, but neither professedly nor really are they part of the Dāwīrī move ment.

The chain of supporting names (khatā) is, of course, carried back from the shaikh to his own teacher, who was, in his turn, under a teacher, and so on. The names of the Moravians, Adam, Abraham, and God Himself. The mursih usually bears the seals of other shaikhs as additional credentials.
The premise is that one who holds a suwaad has attained to that stage of advancement in the mystic path which brings him to an intuitive knowledge of God. He has attained to marifat ('gnosis') and is himself an 'a'wal (guru) of the innermost consciousness of Allah (fanā'ī jāhā) and he is regarded as majdhub ('attracted'). The one who is to guide others in the tariqah must have gone at least thus far himself. He through his teachings and spiritual chain, which ensures that the teachings and spirit (ruhāniyyah) of the founder of his order have come down to him. Spiritual guides possess a trained susceptibility to hypnotic influences, whether mediated through the environment, through other persons, or through autohypnosis. Training also enables them to arrange conditions adapted to produce hypnotic states in others.¹

It may be allowed that a great many of the Sāfi sheikhs meet fairly well the conditions laid down by the great Sāfi al-Ghazzali for the murid. They are orthodox, faithful to the sunnah of the Prophet, and correct in life. They are not unusually well trained in the higher branches of Muslim learning, and are often of the lower orders of the tradition and ritual of their particular order. The greater number hold scientific knowledge in slight esteem, as conveying a false conception of reality and so hindering progress towards an immediate perception of truth. A relatively small number of shāikhs are serious students of theology and law, and some of these have established for themselves a secure reputation as teachers of these sciences.²

4. The shāikhs and learning.—The attitude of the Sufis towards the spiritual guides of Sufism is now not so hostile as it was in the early centuries of the movement. Many are still covertly suspicious or jealous, but nearly all recognize that the shāikhs are meeting a deep craving of the Muslim world for a satisfying experience of communion with God. They infuse a spiritual vitality into Islam which theology and law have never been able to contribute, and the orthodox doctors admit this. The majority of the learned are aware that they put themselves under the direction of spiritual directors and are members of some Darwishi order.³

The Sāfi view of knowledge is that to be true it must be given to the heart by God (ilhām). The task of the Sāfi guide is to prepare the heart that Allah may open it and lodge therein the apprehension of reality. The imparting of ideas and cultivation of logical capacity are not his special task, but rather the development of the power of suggestion and direct emotional impression. If this is secured, the vivid and immediate states of mind which result seem to be unattended and observer to be of the nature of a super-added communication. Highly wrought feelings and ecstasy become themselves the most perfect apprehension of the real. Ineffable emotions, because of the intense pleasure which they afford, are in themselves the highest goal of life. At the same time, they suspend deliberate attention and volition, except in relation to themselves, all knowledge and all being are swallowed up in the immediate consciousness of God, and God becomes the only reality. Every other thing is but phenomenal; the real is He. The discipline of the shāikhs seeks to bring the murid to the point where this inference from an absorbing emotional consciousness becomes a fixed belief furnishing a powerful and consummate motive for life. In the greater number of cases the motive of those who follow the guidance of the murshid is a mixed motive. The emotional satisfactions are made an end in themselves and not merely an index of divine reality. In view of the moral danger involved, the prominence of this lower motive is not without harm. Sufi al-Ghazzali taught that the true Sāfi should be careful to fulfill ethical obligations, and should make his mystical experiences subservive that end. The shāikhs of greatest influence to-day follow this rule.⁴

5. The shāikhs and their circle of influence.—There are certain moral aspects of the Darwishi life which, indeed, are rarely if ever wanting. The disciple chooses his spiritual director without constraint, binds himself to him freely, and holds to him to the end, though the relation between them is under moral sanctions only. The devotion given is complete, spontaneous, and marked by affectation veneration amounting almost to worship. The shāikhs live for duty, and remit on all the duties of brotherliness towards one another and general benevolence towards all. Hence the assistance given to wayfarers and needy persons at the tokiyuhs (or zāviyyahs, Darwishi houses), and the readiness of Darwishes to share even a meager portion with those in want.

The greater shāikhs are men of agreeable and magnetic personality, and show conspicuous gifts of leadership and organization. They are great organizers of the Sufi fraternities, often kindred, or kindred-like, in practical wisdom in the direction of affairs. The success of the Sāfi shāikhs in providing for a real spiritual need has made them effective propagandists in the cause of Islam. They have been more successful in this regard than the wālīs and other orthodox agencies. The mystical fellowship of the Darwishi fraternities has been of itself an attraction to outsiders, but the pir himself, with what he has to promise, has been the indispensable factor.⁵

Among the shāikhs of a lower type are found some men of weak or unbalanced minds. Many of these are looked upon as saints (wālīs) and faqīrs, and are consulted in sickness or other special need. Their influence lies in this respect in the control and guidance of a group of disciples.

The influence of the shāikhs touches women as well as men. Indeed, as far as occasional consultation of the pir goes, women are more frequent than men. There is no prohibition against their being admitted to the tariqah, and there is eminent Sāfi authority for the view that the female mind is more sensitive to mystical discipline and thereby more susceptible than the male. The temper of the Sāfi movement is less that of individual leadership rather than the effective co-operation of leaders.⁶

The shāikhs have in their khālifs or very effective agents to second their influence. The murids also actively recommend their own shāikh to others.
impressions than the male mind; still, the number of women Darwishes is not relatively great. 1

The shahidh's high standing with God is attested by the miracles (karimati) with which God honours him and sends him as a gift back to the disciples. 2 They may be asked to God gives them to him. 2 In all parts of the Muslim world healing miracles are attributed to walis and murshids; they are a mark of their special holiness. The most famous instances of these healings occur in connection with wounds or serpents-laid inflicted in the dhikrs (Darwigh religious exercises) of the Darwigh orders. Shawiks are of the soundest reputation do not favour the extravagant self-mutilations inflicted in the dhikrs of special orders, and in general give their approval only to the miraculous cure of disease or wounds resulting from accident. They are inclined to demand also that those to be cured shall be known to be of good character. There are as striking instances of cure by means of suggestive therapies in the Darwigh circles as are to be found anywhere, and, similarly, the immunity from injury which may be secured through hypnotic suggestion is very strikingly illustrated in the self-inflicted woundings and burnings of the dhikrs. They differ, however, from the latter in the societies of the Rifalyyah order. In hundreds of instances neither pain nor permanent injury follows. 3

The power to reveal the unseen and to predict the future is also ascribed to the shahidh, as Allah honours the holiness of his servants. In certain cases the shahidhs show remarkable powers of mind-reading, telepathy, and clairvoyance, and some quite accurate verifications of their predictions are a matter of record.

The shahidh's circle of influence includes those who are in the habit of consulting him when need arises; those who take part occasionally in the dhikrs which he directs, because they find it either pleasant or helpful to do so; those who have chosen the shahidh as their murshid, or spiritual guide, and either look forward to joining his order or are already members of it; and those who occupy a cell in the zawiyya, or takiyyyah. The first three classes have not separated themselves from the order; the last have done so and are living a celibate life under the constant superintendence of the shahidh. It is possible to have such a class only where there is a zawiyya that is large enough to provide lodging for a group of brothers. In addition to the assembly room of the fraternities.

6. The vocation of the shahidh.—The shahidh may hold his position by nomination on the part of his predecessor, or, if the latter is his father or brother, possibly by right of inheritance, or he may be elected by the vote of the local group of Darwishes. His appointment will be confirmed by the mufti of the place, in rare cases by the Sultan himself, and regularly by the grand shahidh of his order. The celibate life is not binding on him, and in certain cases the rule is that his office is inherited by his son. Where there is no zawiyya with a resident group of disciples, the shahidh, unless he is a mendicant, will follow some secular vocation. If there is a Darwigh hostel, it may have land attached to it, which will be managed by the resident murids. The shahidhs who do not follow any trade are supported by gifts from their disciples and others. The zawiyya over which they preside are provided for by income from local endowment funds, grants from public endowment funds (waqf), or private gifts. The gifts which fall to the shahidh he regularly devotes to the purposes of his order. As the shahidh may arrange, meetings of the local fraternity are held in the assembly room of the zawiyya from time to time. If there is no zawiyya, the group meets regularly in a mosque. The usual meetings are a weekly, or, on an especially important weekly one (often held on the eve of Friday), a monthly observance in honour of the founder of the order, a similar service for the Prophet, and a yearly celebration of the birthday of the Prophet and the holy month of Muharram. The assembly room serves not merely for the performance of the dhikrs, but as a meeting-place for the brothers and those interested in the order. Not all present are permitted to join in the religious exercises, and not all care to do so.

7. The murid and the tarigah.—The life of the disciple (murid) who has chosen for himself a spiritual guide is subject in all respects to the direction of the latter. He submits in him implicitly, and his life is adjusted to his teacher's plans. The disciples resident in the zawiyya take part in the regular dhikrs (religious exercises), and, in addition, are assigned special exercises for their own private observance. In a general way the shahidh instructs each murid how to conduct his life with his teacher, and the disciple attempts to attain a spiritual or artistic goal. He may from time to time visit the murids in their cells. They visit him each week in his cell for the purpose of disclosing to him their religious progress and receiving from him necessary directions. In a majority of cases the murid is one who is practised in noting the signs of spiritual advancement in his disciples.

The nature of the shahidh's relation to the murid in the tarigah is well illustrated by the typical instance of Tawakkul Beg's initiation at the hands of Mulla Shah. 2 Tawakkul Beg chose Mulla Shah as his spiritual director and was accepted by him as a murid. The fakih ('seeker') usually undertakes a long course of penitential discipline prescribed for him by his guide with a view to securing a complete detachment from the world of temporal things and an utter humility which will prepare him to receive the positive blessings of the mystic way. 4 The shahidh then admits him as a shahidh, or traveller on the way. He takes the 'shahidh oath, declaring particularly his devotion to the founder of the order whose tarigah he is following and to the spiritual culture which has been selected for him. This is described by Tawakkul Beg, but in those follow he shows how through private exercises of devotion 5 and the hypnotic influence of his master, and his khutbah the initiate reached the goal of union with God.

The method of guidance is expressed by the term dhikr, 'recollection.' This implies the fixing in the mind of some object of thought. It is accomplished by concentrating the attention upon the conception and its name, or upon some religious idea and its corresponding formula of expression. To assist in fixing the notion the mental effort is accompanied by vocal repetition of the name or formula with varying tone, pitch, and force of voice. In the vocal exercises the breathing is timed and adapted to accord with the strict rhythm and time of the vocal utterance. In the collective dhikrs of the

1 Some zawiyyas have endowments more than adequate to meet their expenses and the maintenance of their order. The greater part is used for the support of the order and the gifts which may be supplemented by grants from the public religious endowments (waqf).
2 The formal name of the shahidh is called takiyyyah.
3 Cf. Macdonald, Religious Attitude and Life in Islam, pp. 120-126. Murid and muridat are the names given to the members of the order of a shahidh. Nowadays it is held to be enormously difficult to do this, and the choice of a murid, or spiritual director, is left to the shahidh for the selection of his disciple.
4 This 'repentance' (tawbah) is for the purpose of eradicating the shahidh's khalq, or evil impulses.
5 The exercise begins with a short recitation of formulas taken from the Qur'an, the recitation of longer sections from the Holy Book, the repetition of thought or expression of one of the sacred names of Allah or of a pronoun referring to Allah. The repetitions may be assisted by means of a rosary of 36, 66, or 99 beads. Such is the usage of the Darwishes to day.
Darwish fraternity the shaikh fixes the programme of exercises and determines the number of repetitions of a given formula and the manner of recitation in each part (dhurb) of the dhikr. He or his khaltifa superfet the ceremonies, exercising constant and close control in order to secure perfect harmony of voice and movement among the adherents, who are instructed to follow the traditions of his own order, but at the same time there is a large element that is common to the dhikrs of the various Darwish orders. It is in the exercises prescribed for the private use of individuals that the shaikh, without loss of spiritual direction to the needs of special cases.

The advancement of the sâlik is in the hands of the spiritual director, who lays down the means by which it is to be realized, and decides when the respective stages of progress have been reached. There are four major objectives which are to be successively attained. The first of these is described by the technical term fana fi-sheikh ('disappearance in the shaikh'). The disciple is directed to fix attention upon the thought and mental image of the spiritual director, who then projects himself into the consciousness of his disciple.¹ By these means and by the help of various external exercises such as have been already referred to hypnosis is at last effected and the sâlik feels that his soul has merged itself with that of the shaikh.² He declares to his instructor, no longer 'I am I,' but 'I am thou.'

When dhikrs have served their purpose in this way, the director introduces into the mystic discipline exercises in meditation (aurad-qa'bah) to fix firmly certain convictions and to intensify spiritual longing. The next major objective is designated fana fi-llah ('disappearance in God'), and the shaikh declares it to have been attained when, through the habitual recurrence of his will exercised upon the murid and through assistance of the prescribed discipline, the murid feels 'I am He' (God). His own identity has become an element in his consciousness of God, and, similarly, his sense of the phenomenal world has ceased to be separately true and has passed over to be an element in his sense of God. The sâlik who has travelled on the way (tariqah) until he has attained to God in the way described is 'united' (attrihed) or 'attracted' (majdhib) and henceforth will travel on in God.³ He will remain united after he has reached his goal, a state which may wear the characteristic garb of his order, and may receive authority to pass on the tariqah to others as a marâsid. Before the last objective shall have been reached he must still seek to reach fana a'd-fana ('disappearance of fana'), in which he loses all sense of 'union,' 'attraction,' or 'absorption,' and the sense of God which results from these processes is all in all. Beyond that is the ultimate goal, baqîn, in which the heart returns to express itself in the relations of the phenomenal world, while never losing the true vision of reality, namely, that there is but one real being and that the world and self are but phenomenal manifestations of the one.⁴

In every order the actions of the participants in the dhikrs are accompanied by music rendered by attendant mawakhid. This accomplishment materially assists the process of hypnosis desired by the director, and by the notation of the rhythm and time of the regulation of the breathing tend in the same direction.

¹ The process is helped forward by the novice fixing his eyes upon the face of his director.

² The mystic objects may be placed before the sâlik (traveller), namely, fana fi-spir ('disappearance of the founder') and fana fu-SnShi ('disappearance in the Prophet'). A synonym for fana fi-shaikh is fana fi-murid (disappearance in his disciple).

³ When one has become majdhib, his soul and its motions are ruled by the will of his shaikh and henceforth he is no longer the sâlik in his own right, but the mystic fulfilment of desire. Such an one has attained a status (wajmah)

⁴ In the sâlik the traveller has reached the qubh, the focal point in which the onward movement of the spiritual life rests. It is obvious that this pantheistic teaching of the Sufi shaikhs is not logically consistent with the theology and tradition of the Sufi shaikhs. Finally, however, the scholars have explicitly said that one who was majdhib, or attracted, was above the law; and the division of the Darwish orders into Ba-Shar³ ('within the law') and Bi-Shar⁴ ('without the law') gives the grounds of the principle that the shaikh is to act according to the dictation of his own conscience. The transition towards the law of the shaikh or the shaikhs is one which the novelist and the poet have frequently traced through the Shaikh to Yousuf and Vedantist influences.

Pişâchas.—In modern India a pişâcha is a kind of ghost, usually the ghost of some one who has died an unnatural death, or for whom the requisite funeral rites have not been performed. He is classed as a bhîta, or ghost, and the term bhâl-piştâcha is more generally used. Pişâchos haunt burial-grounds and places of cremation, and eat human flesh. Their speech is a kind of gibberish, and hence modern English is called piştâcha-bhâsa, or 'goblin language,' by those who cannot understand it. In S. India the small circular storms, called 'devils' by Europeans, are called piştàchis, or 'she-ghouls.' In ancient India pişâchas played a much more prominent part. They are frequently mentioned in the Veda. Here, according to the Vedic kârâvâyâ, a term which, like pişâcha, is said to mean 'an eater of raw flesh.' Most scholars agree that these Vedic piştâchas were malignant demons, but A. Hillebrandt considers it to be quite possible to may be remarked that the discipline imposed by the shaikhs in modern times is quite different from what it was in former times. To the weakening of the power of nerves resistance, a loss of will power, and a general weakening of character. Through self-sacrifice conspicuous and obvious, the social value and their value for work are lessened. 

PIŞÂCHAS. In modern India a pişâcha is a kind of ghost, usually the ghost of someone who has died an unnatural death, or for whom the requisite funeral rites have not been performed. He is classed as a bhîta, or ghost, and the term bhâl-piştâcha is generally used. Pişâchos haunt burial-grounds and places of cremation, and eat human flesh. Their speech is a kind of gibberish, and hence modern English is called piştâcha-bhâsa, or 'goblin language,' by those who cannot understand it. In S. India the small circular storms, called 'devils' by Europeans, are called piştâchis, or 'she-ghouls.' 

In ancient India pişâchas played a much more prominent part. They are frequently mentioned in the Veda. Here, according to the Vedic kârâvâyâ, a term which, like pişâcha, is said to mean 'an eater of raw flesh.' Most scholars agree that these Vedic piştâchas were malignant demons, but A. Hillebrandt considers it to be quite possible to
that they were ancient enemies who subsequently became traditional fiends, while Macdonell and Keith (loc. cit.) admit that in later times the name may have been given in scorn to human tribes. In the Central Asian description of the nágás, the demon and the maḥākārāvatas, while the demon character is most often assigned to them, they also over and over again appear as a race or races of men inhabiting N.W. India, the Himalayas, and Central Asia. They are described as cannibal human sacrificers and eaters of raw flesh. They have a form of marriage which consists in embracing a woman who is asleep or drugged, and are guilty of other abominable practices. Two pīṣakas are specially mentioned as living by the river Vipās, who were progenitors of an impure W. Panjāb tribe known as Bhalikas. On the other hand, individual pīṣakas are here and there referred to as pious ascetics living by holy streams in N.W. India.

In late Sanskrit literature, with important exceptions to be noted below, the human nature of the pīṣakhas has disappeared, and they are merely demons. Sometimes they serve men for a ānīd piro quṇa. Thus, in the Kathāsūrīrīgāra (11th cent.; A.D.), iii. ii. 292 a pīṣaka is possessed of surgical skill, and will cure a wound, provided he is always given a new wound to cure as soon as his present job is finished. Otherwise he kills his patient. With this we may perhaps compare the unknown science called pīṣaka-pīta, or pīṣakha-pīta, mentioned in two works of the late Vedic period.

According to the Purāṇa legends, the valley of Kashmir was once a lake. When the water had been drained off by the god Siva, it was peopled by the Prajasāi Kaṇsya. This Kaṇsya had several wives. Three were Kadr̥, Kridāvāsa, and Khásś. By the first he had as offspring the nágas, or snake-gods, by the second the pīṣakas, and by the third the cognate yaksas and rākṣasas. In Buddhist literature the yaksas and pīṣakas are confounded, and both had cannibal propensities. Similarly, Kalhasa, the non-Buddhist chronicler of Kashmir (12th cent. A.D.), in the Rājatārāvīya (i. 184), uses the word yaksara as equivalent to pīṣaka. As the pīṣakas are also called Kaṇsya and Kaṇsya-gud, and adjoining countries lying south of the Hindu Kush, while the word pīṣaka has fallen out of use, yaksara, under the form of yakh, is still the name given to malignant demons who are cannibal.

This brings us to the work known as the Nīlakāti, a legendary account of Kashmir certainly older than the 11th cent. and perhaps as old as the 6th or 7th. According to it, when the valley of Kashmir was formed, Kaṇsya at first peopled it with his sons, the nágas, who were the former inhabitants; and then, to introduce men (i.e. people from Aryan India) also, the nágas objected, and he thereupon cursed them, so that thereafter the country was peopled for six months of each year by his other sons, the pīṣakas. These came from an island in the sand ocean, i.e. from an oasis in the Central Asian desert, and Keil identifies this with the Mahākārāvatas. Dr. Müller also found similar traditions of yaksas (i.e. pīṣakas) superseding the nágas. In after generations the Kashmir pīṣakas were finally expelled, and the country became inhabited only by nágas and men. For a summary of the whole Dard country north and west of Kashmir, as far as Kāfiristān, there are still told numerous legends, some of them intimately connected with the foundation of a tribe or of its religion, in which cannibalism plays a prominent and important part.

F. Lacoste2 maintains that there is no sufficient reason for assuming that there was ever a tribe or tribes known as Pīṣaka, and this opinion is shared by S. Konow;3 but a consideration of the legends just recounted and of the references to pīṣakas in the Mahākārāvatas entitles us to believe that (1) there were actual people whom the Aryan Indians called Pīṣakas—yaksara; (2) this name and also the latter form were probably appositional epithets, derived from the names of demons; or, as an alternative, they were names of tribes, which hate in later times converted into names of demons; (3) the Mahākārāvata considered these people as inhabiting the north-west of India and the neighbouring mountainous tracts, and Kashmir tradition connected their original home with an oasis in the Central Asian desert.

The question next arises as to the language spoken by these pīṣakas. There are two independent streams of tradition concerning this. In the first place, there is the great encyclopaedia of stories appearing in Sanskrit under various forms, the best known of which is the famous Kathāsūrīrīgāra.4 All these collections come from the Himalaya—one from Népal and two others from Kashmir.5 They purport to be translations into Sanskrit made from an older version, entitled the Bryhatkathā, which is said to have been communi- cated to one Gunnāḍya by a pīṣaka, in "Paśāći."6 Paśāći means the pīṣaka language, and is usually explained as signifying the language believed to have been spoken by these demons or by these people. Lacoste, however, maintains (p. 45) that the language was given this name simply because the original narrator was represented to be a pīṣaka, and points out that the Sanskrit name, later adaptation of the vulgar speech of the tribes of the north-west. As it has been shown above that there were people in the north-west who were called Pīṣāca—a fact denied by Lacoste—the point so far is of little importance. The two streams of tradition is contained in the works of the Indian grammarians. Several of their grammars of the Prākt language contain sections dealing with Paśāći. The oldest of these—Vararuci7 means the pīṣaka-language and is usually, though not quite correctly, taken to mean the Paśāći dialect, but, as time went on, the number of dialects mentioned increased till Markandeya (17th cent.) discusses no fewer than thirteen. With- out doubt the later grammarians included under the name many local dialects spoken in various

2 Gopala Brahmanāla, tr. x. 10; and Aṣṭāvāṇa Srenta Śatra, x. viii. 6, both quoted by Macdonell and Keith, loc. cit.
3 Nāgas and pīṣakas are con- siderably summarized in H. H. Wilson and F. Hall’s tr. of the Vīma Purāṇa, London, 1856, ii. 74. The vihit, of course, was mainly a popular version, but he mentions also the memories of a race of men so called. According to other legends the pīṣakas neither are a tribe nor a race, but some Kapiśa, with which may be compared the name of the neighbourhood Kapiśa at the southern foot of the Hindu Kush (see F. Thomas, in ZDMG, 1899, p. 136), which looks like a metathesis of Kapiśa, the feminine of Kaṇsya.
5 See infra, p. 525.
7 Tr. C. H. Wilson, 1886, p. 525.
8 For full particulars see F. Lacoste, op. cit., and also his ed. of Buddha-vanini’s Bryhatkathā Brahmasūtra, Paris, 1896.
of some Gnostic Christian circles in Egypt (ERE iv. 115). The particular type of Gnosticism is known as Barbelo-Gnosticism, and is the mythological romance of Sophia's redemption; some critics have ascribed it to the Valentinians (q.v.) or even to a disciple of Valentinus himself, 1 others to the Ophites, others, again, to the Barbelothorians. 2 ERE vi. 229, 253. 3 The first point to notice is that Coptic scholars generally agree that the extant MS represents the Sahidic translation of a Greek original. The MS itself, written in double columns on both sides of a parchment, was found to be more than 1,000 years older than the end of the 4th or the opening of the 5th century. How much earlier the original was composed is impossible to say; the fact that the Epistles of the NT are quoted as Scripture seems to fix a terminus a quo not earlier than c. A.D. 140; but the internal evidence is too uncertain to allow any precise inferences to be drawn with regard to the period at which it was compiled. What is certain is that the Pistis Sophia is a product of the later Gnosticism, especially of Gnosticism as it grew upon Egyptian soil; and, as few of the Gnostic documents have survived in their entirety, this invests it with special value for a student of the movement; its contents are often tedious and occasionally tiresome, partly for the comparative criticism of the scattered pieces which in most cases represent all that is extant of the rich Gnostic literature. We have here the morbid craving for an esoteric revelation, as well as the blending of mythology and ritual, which made some of the Gnostic circles more than mere schools of religious philosophy. We have sacramental rites combined with Christology, 2 in a form whose spirit is sometimes not far from Catholicism. We have theurgical elements fused with ceremonialism, 3 and we also find in the Pistis Sophia an illustration of how Gnostic writers could employ the dialogue and the hymn 4 in order to convey their opinions, and of how they personified discourse. The student may also consult variously in the Prometheus Vinctus, and the Hebrews in the Sophia of Proverbs and of the Wisdom-literature more simply.

The affinities of the theosophy reflected in the Pistis Sophia are with that branch of Ophianism which is called Barbelo-Gnosticism (ERE vi. 258); the description of this sect, as given by Irenæus (adv. Her. i. 29) in what seems an extract from the Gnostic ‘Gospel of Mary’ (cf. DAC i. 302), does not exactly tally with the details of the Pistis Sophia, but this is not surprising, as the latter reflects innovations and modifications of any Gnostic scheme. The Barbelo-Gnostics seem to have been originally Syrian, and have passed south-west into Egypt. The characteristic feature of their prophecies (epistles) is the relation to the female principle (ERE v. 827; E.), which led to an exploitation of the term ‘Barbelo.’ This was applied to them by the female deity, either as the supreme Εὐθανος of the invisible God 1 or as the ΠΙΣΤΙΣ ΣΟΦΙΑ

1 Appealing incantuously to Tertullian's language in adv. Valentinianos. See Del sur, "Das u. die Hermetik", p. 296, or quaeendi, at docet ipsa Sophia, non quidem Valentinus, sed Solomonis, i. 287, 56; S. Legge, "Some Heretic Gospels," in the Scottish Review, vol. xii. 153-162.

3 On the development of the hymn in Syriac Christianity see ERE vii. 12.

4 According to Irenaeus, Barbelo was 'an omen, in virgin-state, who never aged,' existing with the 'incommissibüs Pater.' The
lower Sophia, and it gave them their distinctive name. It is this figure, not the serpent of the specific or narrower Ophites, that appears in the cosmology of the Pistis Sophia. The doctrine describes the appearance of the Ophites given by Epiphanius (Har. xxvi.); whether or not the Pistis Sophia in its present form or in the original form of any part is to be identified with the 'Little Questions of Mary' to which Epiphanius refers in his account of the Gnostics, the similarity of physiognomy is unmistakable. The insistence on the virgin-birth of Jesus, the salvation of the spiritual through initiation into the mysteries, and the identification of the Highest Being with Sophia, are in common with those Ophitic documents. But, so, the description of the tyrants who guard the portals of eternity (cf. Origen, e. Cels. vi. 30 f.) but the functions of Ialdabaoth (cf. ERE vi. 238) differ, and the adventures of (Pistis) Sophia are not quite the same as those of Sophia Achenatho in the Valentinian scheme or in the Ophite; in the Pistis Sophia she is not connected with the origin of matter, and she is represented as the object of redemption by Christ, not as a medium or principle of redemption any less as a mother of Christ. The conception of the light-maiden Barbelo, again, is variously defined in the extant notices of the Gnostic theosophies, and her ill-defined characteristics in the Pistis Sophia do not suggest that it was possible for a figure to be set her in the eighth heaven, as the mother of Sabaoth or of Ialdabaoth (蹉蹉蹉蹉, son of Chaos!), who, to her sorrow, usurped the seventh heaven. In the Pistis Sophia she is a great Power of the Real God, but she does not produce Jesus as 'the Light'; she merely confers on Him His creature, and Ialdabaoth is in the chaos of the under world, a torturing fiend instead of a demiurgus. The Barbelo-Gnostics were evidently not homogenes, but the occurrence of Barbelo in the Pistis Sophia assigns that miscellany to some circle more or less allied to the pious theosophists of the 2nd cent. whom we know as the Ophites—collectively, and as the Nicolaitans, Simonians, and Barbelo-Gnostics specifically. For the Ophites, though numerically insignificant, were in the second to the eleventh centuries, and the tenets which they started seem to have been capable of permutation and modification in several directions.

Five etymologies of the term Barbelo (βαρβέλος) have been proposed. The first is from the Hebrew word for 'riddle', probably καθαρός; (2) 'God in the Tetrad,' πάντως, which is probably the most satisfactory explanation; (3) 'the Supreme Light'—the Hebrew Orphan, the Indian veṣṭa, the Christian lumen. It has been made by Julius Grill (Unternehmungen über die Entdeckung des vierten Evangeliums, Tubingen, 1862, pp. 385—387), who connects it with the Egyptian Osis, the Barbelo being called 'the supreme lumi' in relation to the Ἰσραήλ ἑκάστος αὐτοῦ on the one side and to the lower seven on the other; (d) Bouquet (Hauptprobleme der Gnosis, Göttingen, 1897, p. 114) suggests, on the lines of (c), that the word is a mutation of μαθηματός—the intermediate form, βαρβατός, actually occurring in Epiphanius (Har. xxvii. 1) as the name of Noah's wife; (e) finally, Hort's (BCI, 230, 249) conjecture has been chronicled, which regards 'Barbelo' as identical in meaning with its equivalent 'Babel' in the Gnosticism of Justin (Hippol. adv. Har. v. 30) and that of Irenaeus (Adv. haer. iii. 9. 2) and that of Polycarp (Adv. haer. iv. 33). From the catacomb frescoes, the cosmological functions of Barbelo are very different from the celestial position of Barbelo and her Christological significance in Pistis Sophia.

The only quotations are from the OT and the NT, the former including the Odes of Solomon among the canonical Psalms, the latter ranging over the four Gospels and most of the Epistles (1:30). It is possible that this, as well as depreciating the OT, the Pistis Sophia believes in its inspiration; the divine power in Christ is traced in the OT as well as in the NT, and this absence of anti-Semitic bias differentiates the matriculate from the general class of Gnostic (Ophite) speculations. Furthermore, it makes no appeal to outside myths, as did the Ophites and the other Gnostic sects. Whether this was intentional or not, whether the Pistis Sophia documents came from a circle less cultured than the rest or from Gnostics who were shy of syncretism, it is a feature which allies them in their family. It may, though not in the usual kabbalistic expressions, to the main body of the Church. Nor is it the only feature of this kind.

Belief in the absolute efficacy of the sacraments, a certain reserve in exploiting mythology, a real devotion to the Virgin and to 'God for all the world' shimmers through the coloured and wavering mists of theosophy in the Pistis Sophia, and suggest that a genuine faith lay behind the chimeras and amalgamated texture of the Gospel.

2. Contents.—The esoteric mysteries are usually represented as a revelation—in this case, as in many other Gnostic documents which are known or may be of a similar type, by a revelation made by the risen Christ to the inner circle of His disciples. The precedent for this method has been furnished by the accounts of the Patriarchs in the Jewish Scriptures. Thus Justin Martyr (Apol. i. 67) closes his account of the Christian sacraments and teaching by stating that he was initiated by a setting out into the mysteries of the Logos, who, when He appeared on Sunday to His apostles and disciples—an annunciation to the Gnostic Christians that the Logos of Christ is to reveal and institute mysteries, and mysteries of a sacramental order, by which alone redemption from sin is possible. This was the starting point of many later uncanonical gospels which dealt with the Resurrection and passed into apocrypha, viz. the period of forty days which, according to Ac 1:10, Jesus spent with His disciples between the Resurrection and the Ascension. The communications which Christ bestowed was supposed to be a revelation to the disciples. The period of forty days was important for the development of the knowledge of the mysterious Light-world. Since He had not yet ascended, the esoteric meaning of the words and phrases which intervene between the human soul and the supreme Light had still to be revealed, although the disciples completely thought that they had already attained a perfect insight. Hence, after the ascension to the Prime Mystery (or Supreme God) on the 15th day of the month Tybi (cf. ERE iii. 93) at full moon, when the passage of Jesus through the firmaments into the higher world had produced confusion among the powers of heaven and earth, the Logos assumed the form of a great angel to show the extent of the period to the disciples. The period interval was shaped into fantastic revelations of heaven and earth.

The Pistis Sophia (i—6) starts also from the instructions given by the Risen Master to the disciples but to the inner circle. But the remarkable and unique feature is that the writer extends the period to ten years. Even this prolonged period did not enable the disciples to understand the profound mysteries, nor the knowledge of the mysterious Light-world. Since He had not yet ascended, the esoteric meaning of the words and phrases which intervene between the human soul and the supreme Light had still to be revealed, although the disciples completely thought that they had already attained a perfect insight. Hence, after the ascension to the Prime Mystery (or Supreme God) on the 15th day of the month Tybi (cf. ERE iii. 93) at full moon, when the passage of Jesus through the firmaments into the higher world had produced confusion among the powers of heaven and earth, the Logos assumed the form of a great angel to show the extent of the period to the disciples. The period interval was shaped into fantastic revelations of heaven and earth.

The Pistis Sophia (i—6) starts also from the instructions given by the Risen Master to the disciples but to the inner circle. The period interval was shaped into fantastic revelations of heaven and earth.
Power in Mary which issued in the shape of Jesus, while 'Truth' in Elisabeth developed into John the Baptist, the herald of the Truth (62).

Jesus (77) by describing the origin of the twelve apostles not from the rulers of the sons (i.e. the zodiac), as in the Gospel, but from the twelve神圣者 of the Zodiac, grants to Jesus the pleasure of being called 'Ruler of the Arbërosh', that is to say, the body (σώμα) which I had borne in the height, and instead of the soul (ψυχή), the power I had received from the archons of the group composed of the 12 apostles, Mary his mother. He then describes His investiture with three robes of light and His ascension through the various compartments or palaces of the present realm, and how the powers of the twelve sons, who were organized to thwart the redemption of the light, and His discovery, behind the thirteen sons, of poor Pisistrasia (29) seated underneath that son and mourning over her exclusion. The story of this pathetic figure is not true; she was the last and lowest of the twenty-four emanations, and she had incurred the hatred of the twelve sons by desiring the light of the Highest; furthermore, Arrogant (αρσάκη), who sought control of the thirteenth son, did his best to keep her out by issuing a looking Power and other emanations in chaos (including ἀμαθέα τῆς ἀλοκάθαρτος) through the twelve sons until, harried and darkened by her foes, he was compelled to leave the realm of chaos itself. Then, coming to Jesus, she repents of having mistaken the deceptive light of ἀμαθέα τῆς ἀλοκάθαρτος for the True, and cries out with a voice of great length and eloquence, elaborately explained, she expiates the twelve sons, accosted at every stage by her turn (λεγειντα, see § 41) and his allies (κοινή), who having repented for abandoning the thirteenth son, is led from chaos by a Power of Light sent by Jesus to guide her; she then in a final movement, and by radiance and inspires him to praise the Power of Light in a song.

An interpolated paragraph of alphabetical gibberish1 has been inserted between these sections.

The following section (78-143) is entitled 'the second book of Pisistrasia,' but the division is artificial and the name of the original document evidently was not so. This chapter, (akin to § 77) is a portion of the books or texts (ῥήματα τοῦ Σωτήρος) which covers 26 sections of the next section (144) appears to be the conclusion of a different document altogether. Another portion of 'the books of the Saviour' follows (102-135), and the final section (136-143) appears to have been added later (note appended), which includes a section of Mk 10:28-30.

The so-called 'second book of Pisistrasia' continues the heroism of Jesus. She is driven down by a fresh attack of her foes, but Jesus orders Gabriel and Michael to assist her by means of a stream of light against the archons and emanations who still thwart her progress; finally she is set in the centre of the light itself, triumphing over the hostile sons of darkness by the direct aid of Jesus, who paralyzes Arrogant and her enemies. Her songs of praise and the revelations made to her are expounded at length; she accompanies Jesus into the third heaven, and is given to see twelve stars, one, hidden, and suddenly, singing, out of the story. No more is heard of her. The story concludes with a description of a Gnostic survey of hierarchies, sons, and spheres. The drama gives place to exposition, and the theme is the next world, with special reference to the cloudy sphere of fortune there. The literary method is the same as in the first book; Jesus invites His hearers from time to time to guess the meaning of the symbols of the drama, and paves the way for Himself to be questioned. But Mary does nearly all the talking in the second book, though she confesses (73) that

1 An indication of the Gnostic claim to apostolic authority and of the apostolic prestige in their theosophy.

2 This is held to explain Mt 17:11-111. The older Gnostic, dismissed by Irenæus, made John the Baptist and Jesus emanations of Adam and, through him, Paraclete. The view here is simpler. For a more detailed account of these ideas see § 44, and the article Tischendorf.

3 Even in the medley of celestial figures Christ is supreme over all. This is a common feature in the Gnostic thinking, and the only one which can be paralleled in the Pisistrasia, which tallies here with the Orphic system in general, the stars in their courses fight against the saints, and there is no time for them to shorten the times for the sake of the elect.

4 This is held to explain Ps 51:14.

5 After His ascension. Her fall and preliminary rise seem to be prior to the advent of Christ; the completion of her rescue and ascension occurs afterwards. For a more detailed account see § 47.

6 The jargon of foreign syllables and names is the Pisistrasia prompted this scribe to try such composition on his own account. The name of Jesus is corrupted to "a World in Despair" (cf. the effect of the Gnostic teaching in II Bar.)

7 He (Jesus) drew another Power from ἔλευθερον τοῦ Οὐρανοῦ—-who also is one of the three gods of triple power—and bound it to Hermes; and from the Name of Jesus Pisistrasia, son of Barbelo, and bound it to Aphrodite.' Cf. C. Bigg, The Church's Work under the Roman Empire, London, 1906, p. 651.

8 This may reflect a Gnostic claim for women in the prophetic ministry of the Church, as against an attempt on the part of the (Roman) authorities to put them down.

9 He gets the rebuke of Mt 17:17 for wondering how the disembodied soul can escape the archons and powers.

10 It is a free gospel. 'I have called and said to all men, sinners and just persons,' etc., etc. This is held to explain the idea of baptism, of the word, and of the ascension. The idea of baptism is common to Gnosticism and catholicism; the simple gospel of Jesus had to be expanded to meet the speculative problems of the age.

11 Among the grotesque semi-Egyptian colours of this sketch, it must be noticed, the symbol of the spheres, a three-footed animal (ἀστεροειδής) of the moon, which was like a ship steered by a male and a female dragon, and drawn by two white oxen. On the hiss of the serpent (ἀστεροειδής) the moon (ἑκτάριον) heaves the dragons that had seized the light from the archons. At the bow was the face of a cat.

12 At this point the Pisistrasia, instead of placing the women (tract 2) is giving us the story of the women (Mary and Salome) are putting too many questions, and Jesus bids them let the mouth of the woman be shut. It appears that the Gnostic sects are very much alike, and the Gnostics of the Gnostic sects.

13 These denunciations show how the Pisistrasia adopted the libertinism which was rampant in some of the ultra-spiritualistic Gnostic circles. It is noteworthy that the Gnostics of the Gnostic sects. See E. A. Wallis Budge, The Gods of the Egyptians, London, 1904, I. 269 ff.
The problem of *Pistis Sophia* is twofold—literary and religious. The literary problem is to analyze the structure of the miscellany. Even when the first three books are taken by themselves, their original titles cannot have been *Pistis Sophia*. This designation may be retained for the sake of convenience, but it is the addition of a later serio, and is just as appropriate as "The Book of Unas" would be for the *Faerie Queene*; the miscellany is much more complex than such a thing would suggest. Either "The Books of the Saviour" or "Questions of Mary and the Disciples Concerning Repentance and Forgiveness, with the Answers of the Lord" would cover the contents more accurately. Even the *Pistis Sophia* is only a portion of (or a collection of the fragments.) One theory (Schmidt) is that the fourth book, together with the allied books of *Jeh* in the Bruce MS, must reflect an earlier stage of this Gnostic theosophy, at which the "lower" mysteries were still a part of, and not a supplementation of, a baptismal sacramentality (ERE ii. 388). The rival hypothesis (Liechthenn) reconstructs an original document by omitting 64–80 as an interpolation. These theories are complicated by (a) the probability that the book as preserved is based on a now lost original; (b) the treatises of the 2nd cent. which are known to us, as far as they are known at all, mainly by their titles; and (c) by the obvious connexion between the miscellany and the "two books of Jeh," which happen to be preserved in the allied Sahidic MS of Bruce. The *Pistis Sophia* mentions these books (134) as containing the higher mysteries and as "written by Enoch when I spoke with him from the tree of knowledge and from the tree of life." But the books mentioned here can hardly be the same as those referred to in *Jeh* and the latter PROFESS to have been composed by Enoch. Nevertheless, there is a general similarity between the two MSS, which involves literary and religious questions that have not yet been answered definitively by experts. In the extant books of *Jeh* Jesus is also revealing the mysteries of the celestial spheres to His disciples, the sacramentalism is still more emphatic, the ascetic note is loudly strung, and the underlying aim is, as in the Syrian Book of the Dead, to provide a safe passage for the initiated soul through the hostile regions of the other world. The latter aim, more explicitly than in the *Pistis Sophia*, dominates the sacramental interest. It is, however, possible that the Gnostic scheme of both works presents a grotesque, weird elaboration of the sacramental mysteries, compared with which the later Catholic construction may be described as simple and sober (cf. ERE v. 548).

LITERATURE. The problem of the *Pistis Sophia* has successively occupied the attention of Carl Schmidt, von der Mist and others. In *Peyler*, III. 16, 17, 18. The book was recently reprinted and published, and the first ed. of the MS did not appear till 1851, when M. G. Schwartz's Lat. tr. was published posthumously by J. H. Petermann (*Pistis Sophia, opera gnostica Valentinio adiubicatum*, Berlin, 1851), who attributed the document to the Ophites, an opinion shared by K. R. Köstlin in his expository essay on the Gnostic system of the *Pistis Sophia* (Theologische Jahrbiicher, xii. [1854] 1–104, 157–166), and by R. A. Lipiana (OCB vi. 460–465). Portions were translated from Schwartz's version into Eng. by C. W. King, *Gnostics and their Remains*, London, 1857. A Fr. version by E. Amélineau followed (*La Pistis Sophia*; Ouvrage gnostique de Valentin, traduit du copte en français, avec une introduction, Paris, 1864). The first critical work, under the title *Gnostische Schriften, III*., was published by C. Schmidt (*GFA, 1864, p. 601, 1852, p. 201*). An Eng. version, based on Schwartz and Amélineau, was published by G. R. Driver under the title *A Gnostic Gospel…*; in the first time published, London, 1864, with a *Note on the MSS*. The work was translated into Italian by A. Harris (Turin, 1865, 1, 1-254) and may have been preceded by his ed. and study of the allied Gnostic documents in *TU* vii. 1–2 (1896) ("Gnosticisme, Storia, ricerca, spargimenti sul Gnostico"); some work as well as a R. Harnack's monograph, *Über das gnostische Buch Pseudo-Sophia*, in *TU* vii. 2 (1891). Harnack's views are summarized in his *Geschichte der christlichen Literatur* (Berlin, 1911, Suppl. i. Leipzig, 1893) 171 f., ii. (1900) 1934. Schmidt's theory, that the two books of *Jeh* (in the Bruce MS) represent, along with the (so-called) fourth book of the *Pistis Sophia*, an earlier stage, is criticized adversely by E. Frencken (*THE* xiii. 1893 155 ff.) and E. Dussaud (*ET* x. 1894 155 ff.). Harnack tends to think that Schmidt has not proved his thesis at all, and a similar scepticism, accompanied by an individual reconstruction of the text, is rejected by R. Liechthenn in his "Untersuchungen zur kopitischn-gnostischen Literatur" (EWTlx. 1891 209 ff.) and in *PRE* vi. 404 ff. The discovery of the Odes of Solomon, five of which are already preserved in the *Pistis Sophia*, has reopened the problem of the latter book; cf. F. Rendel Harris, *The Odes and Psalms of Solomon*, Cambridge, 1900, pp. 18–23, and W. H. Worrell, *The Odes of Solomon and the Pistis Sophia*, *JPST* viii. (1911) 185 ff.; and more recently, by a still different method, *Pistis Sophia* will be found in W. Bonnet, *Probleme der Gnostiker*, Göttingen, 1913, on which there is much independent illustration. Among the chief sources are *Lettres éternelles*; *E de Paye, Introd. à l'étude du gnosticisme*, Paris, 1905, pp. 199–139, and *Gnostiques et gnosticisme*, do. 1914, p. 128, the latter, however, highly critical of its religious value; P. D. Scott Moncrieff, *Paganism and Christianity in Egypt*, Cambridge, 1914, pp. 148 ff., which also shows the curious character of some of the Pistis Sophia and *F. Legge, Forerunners and Ideals of Christianity*, Cambridge, 1915, iii. 180–181. JAMES MOFFATT.

**PITY.**—See ANCESTOR-WORSHIP (Indian). **PITRYANA.**—See DEVAVYNA.

**PITY.**—Pity is pre-eminent a human emotion; it is either not shared at all or shared in a very inferior degree by the brutes. As a human emotion it is very widely spread, but affects men at different times and in different races in different degrees. Women may show more of it than men, or the men may show more of it than women, but both sexes are moveable among men than savages, and probably the northern more than the southern races. Among the Greeks and Romans pity was less felt than among Christian nations, in the medieval life less than in the modern world, and from the fact that in modern times pity is on the increase of communication between one part of the world and another, and, as a consequence of this, to the growing solidarity of the human race. Hostility and anger are both apt to obliterate pity, or at least curtail it, by the same reason before him, but he is more important as a medium than as a weighty potentate.
quality which prevails to some extent and ought to prevail among both gods and men. Yet no great stress is laid upon it, nor does its absence excite much indignation. In one passage (of doubtful authenticity) of Cicero, it is implied that the object which gives rise to pity is described as a quality ‘which greatly injures and also greatly benefits men’ (II. xxiv. 45). In the tragedians the feeling of pity is more marked and occupies a more prominent place. Indeed, as Aristotle points out, tragedy could not exist and would have no point, did not human misfortune excite pity and were not people capable of being moved by the imaginary misfortunes of their fellow-men. He says that the object of tragedy is ‘by means of pity and terror to effect the purging of such emotions’ (Poetics, 1459o, ed. Bywater, Oxford, 1909). In some ways the most remarkable instance of pity exhibited in Attic tragedy is from Thucydides’s self-sacrifice for the good of mankind, brought about by the pity which he felt for their forlorn condition; with this is contrasted the pitiless inexorability of Zeus. This has in it some touch of the Christian doctrine of God’s pity for man, though in spirit it stands greatly opposed to it. Plato, in the normal treatment of the emotion of pity, though he recognizes it as a natural and proper human sentiment (e.g., Phaedo, 58 E), it is further characteristic of Plato that he thinks the condition of ignorance or mistake more to be pitied than the condition of those who fall into misfortune (Rep. 539 A). In Aristotle the emotion is treated more formally and at greater length. But in the Ethics he describes it along with desire, anger, and fear as a feeling (thauma) (Nic. Eth. ii. 1103)? In the Rhetoric he discusses at some length the different kinds of pity, and shows how it can be used for rhetorical purposes. Of course, as a simple emotion pity defies definition; no one could ever make the feeling of pity intelligible to a man who had never known it, but it is possible to analyze the circumstances in which it will arise and be felt, and this is what Aristotle attempts. He describes it as ‘a painful feeling arising on the sight of evil either destructive or painful, which happens to those who are unworthy of it, an evil of a kind which one might expect to suffer oneself or that one of one’s friends should do so, and this white feeling arising from pity is occasioned by it being necessary that he who should feel pity should be such as to think that he might suffer the evil either in his own person or in that of one of his friends, and that it would not be absurd or very much such, as has been described in the definition’ (Eth. ii. 8).

This definition gives at first sight a somewhat selfish complexion to the feeling of pity; yet there can be no doubt that it lays the conditions down under which pity is most readily felt, and, though there is a pity which transcends this account of it, the definition accurately describes the pity by which the great majority of ordinary men are moved.

2. Roman.—In Latin literature the sentiment of pity occupies no prominent place; the Romans were not a compassionate people, and their literature faithfully reproduces this trait of their character.

The passage where the feeling of pity is most finely touched upon in Latin literature is in Virgil:

1 ‘Hic ...
Sunt lacrymae rerum, et mentem mortalia tangunt’
(En. i. 462).

There is also a striking passage in which Tacitus contrasts the pity felt by some of the Roman officers against the Stoics, who asserted that God could not be moved by pity, that, while the claims of pity must always be subordinated to justice, it is yet an emotion which is not unworthy of God and should be exhibited by man to his fellow-men; in that case, became naturally called out by the sight of distress. The pity of God, of course, must depend on the repentance of man; yet, granted this condition, God’s pity can flow out towards man, and, it would seem, inevitably does so. In that follow-up of the Christian dispensation thus contrasted with the passionless God of the Stoics, just as the compassionate man under the Christian dispensation is opposed to the unfeeling man of the Stoical ideal.

Yet, in spite of what Augustine urges, the idea of a pitiful God is not altogether an easy one

3. Biblical.—In the Bible it is to be observed that the terms ‘pity,’ ‘compassion,’ and ‘mercy’ are used as practically synonymous (being all used in different places as translations of the same Hebrew and Greek words, the former being comparatively little employed, and the latter much more so). Indeed, as a conviction which grew upon the prophets of Israel and the religious leaders of Jewish thought till it culminated in the teaching of our Lord Himself. In the earlier books of the OT the pity and compassion of God, as the condition both of his dealings with the world at large, and of his dealings with his people, were in a comparatively little complexified. The most important passage occurs in the Decalogue in both of the forms in which it has come down to us:

‘Shewing mercy unto thousands of them that love me and keep my commandments’ (Ex. 34; Deut. 5: § (w303 πληκτο «χιλιας των άνθρωπων με και τοις φθάνουσιν τα πρόγονά μου»);

but in the Psalms and in certain of the prophets the thought is very prominent—e.g., Ps. 86: 105—

105, 13

Ps. 50: 13—Jer 3: 17

In the NT the belief in God’s pity or mercy follows as a direct consequence from the doctrine of God’s fatherhood and God’s love (e.g., 1K 6th).

To St. Paul God is a God of mercy. God is the Father of those that are brought (Rom. 8: 29); mercy and pity are inculcated through Jesus Christ (I Tim. 1: 1, 2 Ti 1: 2, 2 Ju 2)

Pity towards men is commended to us in the Bible as synonymous with God’s pity and pity of God, and particularly of His pity and mercy as expressed by and revealed in the sending of Jesus Christ. Pity and mercy towards aliens and strangers were in early days perhaps no more recognized as a duty by the Israelites than they were by the Greeks and Romans; indeed, there is a passage (Dt 1: 13) in which it is expressly forbidden that pity should be felt or shown towards those who try to pervert God’s people from the worship of Jehovah into the worship of any strange god; but throughout the OT mercy and pity is inculcated towards members of the house of Israel, and the failure to have pity on the widow, the fatherless, and the destitute is strongly reproved.

In the NT the command to be pitiful has no such restrictions; the pity of God towards the Samaritan implies that our acts of charity, pity, and mercy are by no means to be limited to those of our own nation, and, as a matter of fact, under the teaching of Christianity pity has been extended so as to embrace sufferers of the whole human race, and in our day embraces the animal world as well.

4. Augustine.—In Augustine’s de Civitate Dei there is an interesting chapter (ix. 5) devoted to the manifestation of pity as exhibited by God toward man. Augustine is against the Stoics, who asserted that God could not be moved by pity, that, while the claims of pity must always be subordinated to justice, it is yet an emotion which is not unworthy of God and should be exhibited by man to his fellow-men; in that case, became naturally called out by the sight of distress. The pity of God, of course, must depend on the repentance of man; yet, granted this condition, God’s pity can flow out towards man, and, it would seem, inevitably does so. In that follow-up of the Christian dispensation thus contrasted with the passionless God of the Stoics, just as the compassionate man under the Christian dispensation is opposed to the unfeeling man of the Stoical ideal.

Yet, in spite of what Augustine urges, the idea of a pitiful God is not altogether an easy one

VOL. X.—4
PLACES

to embrace. It has to be taken in close connexion with the teaching of the NT on repentance. The good will, the love, the fatherhood of God to man, is a permanent attitude which remains, whatever man's conduct. Sin turns man's thoughts and his affections away from God; this possibility is the result of the relation between God and man, which has been there potentielly all the time, but has been interrupted. The changed attitude of God to man consequent on repentance expresses itself in pity. The bearing of this duty is a duty of the Christian, who is the author of the present article (cf. Expiation and Atonement [Christian]).

5. English moralists.—In the English moralists the phenomena of pity and the cognate emotions held a more prominent place. Hobbes started the investigation:

'Grife, for the Calamity of another,' he says, 'is Pity; and ariseth from the imagination that the like calamity may befall himself; and therefore is called also Compassion, and in the phrase of this present time a Fellow-feeling; And therefore for Calamity arising from great wickedness, the inquirers have the least Pity; and for the same Calamity, those have least Pity, that think themselves least obnoxious to the same' (Levita., p. 69).

This selfish doctrine of pity is vehemently opposed by Butler in his two sermons on compassion (Sermons, v. and vi.). Having stated Hobbes's definition of pity as given in his treatise on Human Nature as 'the inducement of future calamity to ourselves, proceeding from the sense (he means sight or knowledge) of another man's calamity,' he proceeds to criticize it in the following way (Sermon v. 'Upon Compassion').

'In this case it appears that there is no act of true pity or compassion at all. The sight of a friend's misfortune may in some minds give rise to the feeling of fear for ourselves which Hobbes would call Pity; but if it gave rise to such a feeling, the feeling would not be one of pity or compassion, but something quite different. Again, there are objects which give rise to a sense of our own danger,—e.g., a sudden sight or sound, or some association of ideas—but no one would say that we compassionated on such an object; it would be ridiculous to do so. Again, fear, pity, and compassion would be on Hobbes's showing the same sentiment and a fearful and compassionate man the same character—which every one immediately sees are totally different. Again, while compassion and pity exhibited towards others, and especially towards our friends, commend us to the favour of all good men, so our own pity on our own account is no doubt equally recommended us. Pity, then, and compassion, Butler concludes, proceed not from the sense of duty, of reason, being grieved at the distresses or misfortunes of others, are a primitive sentiment in human nature, a sentiment implanted in us, as it were, by God, as to relieve the sufferings of others, of which, in Butler's view, life is so full. The emotion does not supplant reason, but fortifies it, reason being often too weak to induce us to alleviate the distresses of others, having the sufferings of our fellow-men unless supported by those feelings, which, as a matter of fact, the better class of men are endowed.

One other question Butler touches upon in the course of these two sermons. Pity and compassion were regarded by many of the Stoics in earlier days and by some of Butler's own contemporaries as a weakness which the 'wise man' will seek to get rid of. To this Butler replies that the gratification of the affection may be, and often is, a source of pleasure to him who indulges it, and certainly makes compliance with the dictates of the sense of duty and reason easier and more possible than without such a sentiment they are likely to prove to the majority of mankind. It was this way of reasoning that produced the objections of Kant, who took up on this point a position even more extreme than most of the Stoics. Kant said: 'The passions that spring from the acting sources of will is so far from having an absolute worth for which they should be desired, that, on the contrary, it must be the universal with all rational being to be wholly free from them' (Grundleg. zur Metaphysik der Sitten [Stimmt, Werke, ed. E. Rosenkranz and F. K. 1835, pt. v. App., p. 252). Hume has a good deal to say about pity and compassion. Pity is defined by him as 'a concern for the misery of others' (Treatise of Human Nature, bk. ii. pt. ii. § 7). He does not accept Hobbes's view that pity springs from the sight of others suffering which makes it an unprejudiced on our own account. It has its source in the imagination, in the power which we have of putting ourselves in the place of others and gaining an impression of the ideas which they actually experience. It is a peculiarity of the passion, he continues, that the communicated passion of sympathy sometimes acquires strength from the weakness of its original feeling.

'A man who is not dejected by misfortunes is the more lamenter and the more Nếutured. This principle of sympathy is largely invoked by Adam Smith to explain some of the phenomena which pity and compassion exhibit. Why is it, he asks, as Hume had also asked, that we feel more compassion for the man who exhibits greater inhumanity in his sufferings than for one who allows himself to be overwhelmed by them? The reason is, he answers, that we can more easily enter into, or sympathize with, the actual feeling which he displays.

'It is with surprise and astonishment at that strength of mind which is capable of so noble and generous an effort.' (Theory of Moral Sentiments, Edinburgh, 1849, pt. 1. sect. iii. ch. 1).

6. Conclusion.—Pity, then, is a universal or almost universal human feeling, of the existence of which as a fact of human nature there can be no doubt, though the explanation of the feeling itself, and still more the phenomena which it exhibits, is far from being settled. We see a double presence of which in men, and still more in women, we approve, the absence of which we blame and deplore, but on condition that it leads to active interposition on behalf of those who are in distress; it is a feeling, moreover, which we readily attribute to God Himself, because we recognize that it is a form which love takes, a proof not of weakness but of strength.

LITERATURE.—The authorities are cited throughout the article.

W. A. SPOONER.

PLACES (Sacred).—In primitive religious conceptions the gods are not exempt from general limitations of space and time. Arguing by analogy, the savage ascribes to all material objects a life similar to that of which he himself is conscious, and he easily confounds the spiritual force with its visible embodiment. Hence in primitive myth we find animate and inanimate things equally capable of feeling and action, while transformations of men into animals or animals into men are perfectly natural. The gods have a physical environment, on and through which they act. Nowhere ubiquitously, they are conceived of as bounded by certain local limits; the god's land is the land of his worshippers, and his immediate sphere of influence is his residence. Among the Semites the sanctuary and temple, the place of divine attributes, came to be associated with the fertility of particular places, whether from rainfall or from springs and watercourses, the local gods, or b'dilim, being recognized and appeased by a tribute of firstfruits, and, by a natural extension of meaning, of firstlings of cattle and men. Thus the idea grew that the gods have their proper homes or haunts where the worshippers lay their gifts on sacred ground, hang them on a sacred tree, or, in the case of Egypt, deposit them in a sacred stone. Later the home or sanctuary of a god was a temple, which could be erected only in a place where a god had manifested his presence. A theophany was held to justify the act of sacrificing on the spot (Gn 12, Ex 17 etc.). Hence came the idea of the sanctity of such places as Bethel, Mamre, Shechem, Beersheba, etc. The theophany in Ex 3 took place on Sinai, because it is holy ground, Jahweh's habitual dwelling-place (W. M. Taylor, Jahweh's Life and Habitation, London, 1894, p. 118). Thus we see that holy places are older than temples, and that places become holy as the natural haunts of a god, these being in their earlier forms a cave, a rock, a fountain, or a tree. These places and things, as
the favourite haunts of divine beings, come naturally to be regarded as holy, as opposed to common, and are reserved for the use of the god and his ministers. In relation to man such sanctuaries were surrounded by prohibitions as to access, especially for such persons as are physically unclean or have shed blood. The right of asylum in the OT was limited to involuntary homicide, and confined to certain old sanctuaries — such as Shechem, Gilgal, and theLike — but not to all. In all parts of the world, as among the Ainus, the Brazilian tribes, the Samoans, etc. The ḥārāḥār develops into the wooden idol, the primitive unhewn monolith into the marble statue of the god, with which the altar still continues to be associated, and from these elements eventually the temple was built. The primitive altar grew out of totemistic ideas, and there is in the earlier stages no need to suppose that the stone or image in front of which the rites of worship are performed actually contained the god. The identification of the god and the abode in which he may be pleased to make his resting-place is, however, an easy transition. Thus among the American Indians the place of national worship was thought of as a mountain or peak from which they claimed descent. The Daktoras and Ojibwas had similar stones, which they called 'grandfather.' The shaping of a likeness to the human face was natural enough, but by no means universal. We may see in the unchanged idol of Astarte at Paphos. It must be clearly understood that the idea of the stone becoming the permanent rather than an occasional dwelling-place of the gods represents a later stage of development. The existence of sacrifice implies an earlier totemistic stage, in which the blood of the totem-animal, and the object is the renewal of the blood-covenant between the totem-clan and the totem-god (K. B. Jevons, Introd. to the Hist. of Religion, London, 1914, p. 141). This superstition lingered long. It was condemned by the Council of Nantes in 895, but it survives to this day in some corners of France and Norway.

In ancient Rome, in the earliest times, there was no temple or image representing a deity. Certain places were regarded as religio, affected by tabu, as distinguished from loca sacra, places made over to the deity by certain formulae, under the authority of the State, by the processes of consecratio. Such a place, in which a deity had taken up his abode, was a fanum, containing a sacrarium, or small room in which the god was served. But the lenia religiosa were the spots where thunderbolts had fallen and burial-grounds. This feeling or seruple (religio) as applied to places finds expression in Virgil's lines describing the visit of Æneas to the site of the future Rome:

"Hinc ad Tarpeianum sedem et Capitolia ducit,
Aurea nunc, olivum stellae horrida dulcis.
Jam loco salutis ternus ac tertius adegit.
Dira loci; jam lau saevum sacrarum trementem."
who together with Vesta represent the material vitality of the family (W. Warde Fowler, The Religious Experience of the Roman People, London, 1911, lect. iv.). The protecting door-spirit was Janus; and in the Janus bifrons in the symbolic gate of the Forum Fowler sees a developed form of the spirit of the house-door. The lar was origin-
ally the presiding spirit, not of the house, but of an allotment, or the whole of the land of a familia, including that on which the house stood. The totonimus was the boundary-mark of the land belonging to the familia, or the externalization of the resignation of farms and homesteads, and its care was marked by detailed religious ceremonies. The lustratio, or purification, of land, city, etc., was carried out by means of a solemn procession accompanied with sacrifices. And, as well as the city-state, its boundary made sacred by a lustratio, so the city had its pomerium, or boundary-line between the sacred and the profane, like that of the farm, within whose limits alone the auspiciis of the city could be taken. See, further, art. LANDMARKS AND BOUNDARIES.

The earliest Teutonic word for temple means also wood, and the primitive shrine of the deity was a holy place untouched by human hand, a grove. A god may inhabit a mountain-top, a cave, or a river, but the general rule was for each deity its own sacred seat, a sacred grove, or a forest sacred to the gods was dedicated to the divine spirit. The earliest prehistoric Germanic people were nature-worshippers, and their worship was descriptive of the nature of the country as one mass of wilderness, the various species of forest and the various branches of forest. The Germanic people were a forest people, and had a forest consecration. Among the Germanic people, the forest was the sacred grove, the sacred grove was a forest consecration, and the sacred grove was the seat of a god. The sacred grove was a place of worship, and the sacred grove was the seat of the god. The sacred grove was a place of worship, and the sacred grove was the seat of the god.

LITERATURE.—See, besides works already mentioned, C. Becker, Der Tempel der Dreiheit im alten Deutschland, Leipzig, 1879; W. Mannhardt, Antike Wald- und Feldpflete, id. 1875-77; J. Grimm, Teutonisch Mythologie, 1. 73 f. tells us of a holy oak near Wurzburg; The American antediluvian was among the hunting-peasants made a solemn procession every year. The earliest temples were built on the sites of the more ancient trees or groves, and, later, Christian churches were erected on the same sites, so that the old sacredness did not depart from the place, but merely passed into a higher relation.

PLAINS INDIANS. — 1. Distribution and history.—The region that gives a geographical name to this group of American Indians is of an irregular oblong shape, some 2500 miles from north to south and 1000 to 1500 miles from east to west. Roughly speaking, the Plains extend from the Rio Grande in S.W. United States to the Saskatchewan River in Canada, and from the base of the Rocky Mountains to Lake Winnipeg in Canada and the Missouri and the Mississippi in the United States.

In the middle of this broad stretch of land flow many streams that take their rise in the Western mountains. Trees border these numerous waterways, but the country is barren of forests. This was formerly the home of over twenty different tribes, belonging to six different linguistic stocks. They were as follows:

(1) Algonquian: Arapaho, Blackfeet (or Siksika), Cheyenne, and Arapaho; (2) Apache; (3) Apache; (4) Pawnee; (5) Kiowa; and (6) Shoshonean :

To and fro over the wide Plains formerly moved vast herds of buffalo, which gave abundant food and furnished the Indians with pelts for clothing as well as covering for their tents. The tribes regarded these animals as specially provided for the sustenance and welfare of the native people, and this gift was gratefully recognized in their religious rites.

The Indian of the Plains had been attracted thither by the buffalo herds. Some of the tribes had come from the woods on the north, east, and west, where the game, although plentiful, was more or less difficult to secure; others had come up from the south, for similar reasons. After the settlement of the white colonists on the Atlantic coast a new force was felt over the land. A gradual displacement of the native tribes formerly dwelling on the eastern littoral and its streams began and went on increasing, until it was felt as a westward pressure up to the eastern border of the Plains. This steady displacement, added to the influence of the white traders, the adventurers, and the ‘opening up of the country,’ brought to the Indians new diseases, intoxicants, and many other evils which greatly reduced their number.

The horse reached the Plains with the expedition of Coronado in 1541. Later, strays multiplied rapidly, and finally formed the herds of wild horses that became the principal source of the Indian warfare and the mainstay of the Plains economy. The Plains and used them for hunting is not known, but they were first met by tribes of the Siouan stock, among the Comanche, who were famous for their horsemanship, and from that tribe knowledge was obtained of the use and care of the horse. Not only did the horse modify hunting methods, but it introduced a new species of property, changed social customs, and led to foraging expeditions and to wars.

Although the Plains were never a peaceful country, the changing conditions increased its turbulence until it became a great battlefield as well as a hunting-ground. The greatest blow that the native life of the Indian ever received came during the first decades of the latter half of the 19th cent., when, in the interest of trade, the buffalo were slaughtered by the thousand, until within a few years they were practically extinct. What that catastrophe meant to the Indian it is difficult for one of our race fully to appreciate. The presence of this animal in its former numbers some thirty years ago, when its meaning was really borne in upon her.

The aged Omaha keeper of the sacred rites that inaugurated the annual buffalo-bust conducted the rite for historic preservation; he stood alone in his little cabin before the graphophone to voice for the last time the words that told of the birth of the buffalo-herds. When he came to the promise given by Waukonda, in answer to man’s appeal, that the herds should come to the people from all directions, the tears rolled down his withered cheeks as he sobbingly mur-

The old man did not long survive this recital.

2. Religious and social ideas.—The social organization and religious ceremonial of the Plains Indians varied in a number of particulars. Those tribes belonging to the Athapascan stock had formerly dwelt under sedentary and agricultural conditions, and many of the habits then formed were lost under the stress of hunting; the binding force of a close social organization also gave way, with tribes that relied on the buffalo, and customs were modified. With the affiliated Arapaho and Cheyenne tribes the ‘Sun-dance’ became the principal ceremony of the people. This composite rite spread to some tribes of the Siouan linguistic stock, and was associated with the worship of the sun, as its name might imply. It is true that the ‘dancer’ turned towards the sun, but it was viewed as a symbol of the unseen Power that had granted the prayer of
the dancer—usually a supplication for the recovery of a sick relative, the sincerity of the request to be proved by the supplicant going through the torture of the Sun-dance. The Sun-dance witnessed by the writer in 1882 was the fulfillment of a vow made that the life of a sister might be spared to her family. There was therefore an amicable teaching in this seemingly barbarous rite.  

Among the Cheyenne there is an ancient ceremonial connected with four sacred arrows that have been preserved time out of mind, which was related to the teaching of the sacred rites of life within the tribe. Little is known of this rite, as no one having any white blood has ever been allowed to witness it. See art. CHEYENNE.

The tribes of the Dakota linguistic stock had long been familiar with the cultivation of the maize which figured in their tribal rites. These were elaborate, and presented phases of anthropomorphism that were not met with elsewhere.

The tribes of the Siouan linguistic stock dwelt on the eastern border of the Plains, along the banks of the Mississippi and its tributaries, and some of the tributaries of the Mississippi. The people lived in villages and cultivated maize, beans, and a few other plants; they went out to hunt buffalo and other game, returning home with the food which supplied their wants. No doubt the life of these early Indians had been essentially the same as that of their more modern descendants.

During the latter half of the 19th cent. the life of the tribes became greatly modified and at its close hardly a tribe was practising its ancient vocations and rites, or was dependent for social order upon its tribal form of government. The entire country was under the control of the white race, railroads stretched from the Atlantic to the Pacific, the mountains were no barriers, and peace and order yielded to modern methods of land cultivation, so that the old life passed for ever out of sight. The native race survived under the new conditions, nor were their ancient beliefs wholly obliterated; these had too long been vital to the race to yield to mere external pressure. Those beliefswere has assumed new importance to the student of the development of the mind and thought of man while under the direct and sole tutelage of nature. The American Indians belong to an observant, thoughtful, out-of-door people who for generations have lived upon intimate relations with an unmodified environment. All animals pursued their own unhampered mode of life, only the dog being domesticated. With few exceptions, the plants were not injured by disease or their roots; there were no highways to break the wide expanse of grass, or bridges to span the streams. There was nothing to suggest any break in the continuity of the natural relation between man and his surroundings, which is the source of the erroneous conception of that once unbroken stretch of country, giving no sign of the master-hand of man or of his permanent occupancy. It was amid such untouched, unforced conditions that the American Indian as a race must have developed his ideas of things, and even of himself and of his environment, and it was only when this environment was changed that he began to reflect upon himself and the world about him, and to ponder upon what he saw.

Everywhere he seemed to discern that dual forces were employed to reproduce and so to perpetuate the living forms. The fructifying power of the sun was needed to make the earth fruitful, and only on the union of the two, sky and earth, was life in its various forms made possible. Upon these two opposites he projected human relations and man made all degrees of social organization over the sky became masculine, the earth feminine. Finally, by thinking along these lines, as his rituals revealed, he was led to conceive of the cosmos as a unit, permeated with the same life force of which he was conscious in himself. This nature that gave to his environment its stable character, to every living thing on land and water the power of growth and of movement, to man not only his physical capacities but the ability to think, to will, to bring to pass. This unseen, undying, unifying force is called by the Omaha and cognate tribes Wakonda. Through Wakonda all things came into being, are ever related, and made more or less interdependent. Consequently, nature stood to the Indian as the manifestation of an order that had been instituted by Wakonda, of which man was an integral part. To this order he turned for guidance when establishing those means, religious and secular, that would ensure to him, individually and socially, safety and continuous life.

Finding himself to be one of a wide-reaching cosmic family, the Omaha (and his cognates) planned the tribal organization upon the type of that family. The people were divided into two great sections, one to the east of the sky, the other to the west. Each section was composed of a number of kinship groups, called by a general term meaning "village." (These are spoken of by our students as 'clans' or 'gentes.') Each village stood for some one of the forms of life seen in Wakonda's institution of order. The sky was the abode of the sun, the stars, the winds, and the storm-cloud with its thunder and lightning, and to each village of that section was committed something regarded as symbolic of one of these manifestations. The earth, with its land and water also, was the abode of the trees, grasses, and the various animals so closely allied to man and his needs, and to each village of that section was committed something typical or symbolic of one of these manifestations of life. This was done by means of a scheme at mirroring man's environment, as ordained by Wakonda, and was primarily religious in character, and secondarily political in its function. The tribal rites were instituted to emphasize that which the tribal organization portrayed, and to provide means by which the people should together acknowledge the order inaugurated by Wakonda, of which man was a part. In these rites all the villages of the two sections had a share, as well as the symbols committed to their keeping, so that the people, standing in the appointed order, with one voice appealed to the invisible Wakonda for help to secure food, safety, and long life.

A few words are necessary regarding the symbolic objects committed to the villages, as there has been a misconceptions of these and the Indian's use of them. Each village, according to the section to which it belonged, had charge of one of these symbols. The term by which it was designated in the Omaha language meant 'that by which the village is recognized.' It is to this object that the term 'totem' has been applied. The symbol, representing, as it did, one of the forms of life in the sky or on the earth, as created by Wakonda, had a sacred character to the people of the village and held the central place in their ceremonies. It bound the people together by a sacred tie, made them

1 For a description of the Sun-dance see art. PHAlLEN, p. 2.
distinctive among the other villages, and was a link between them and the invisible Wakonda. The symbol belonging to a village was always metaphorically referred to in the name of the village and the individual person, and in the given to every child born within the village. The symbol might be an animal (e.g., the buffalo) or a force (e.g., the wind), and the people might be spoken of by the name of the symbol of their village (e.g., a buffalo people, or the wind people). This form of speech never allowed that the people were descended from the buffalo or any other symbolic object. Certain articles were regarded as associated with the different symbols; thus, they were always treated with marked respect, and the people of a village never threw any of the articles associated with their own sacred symbol.

The tribal rites of the Omaha and cognates were composed of dramatic acts, the recitation of rituals, and the singing of ritualistic songs. In these are embodied the myths setting forth the genesis of man and his relation to nature. The stories, symbols, and metaphors are often highly imaginative and not infrequently touched with poetic feeling. These formed a nucleus about the rites that both old and young people looked on with veneration. In the tribal rites can be traced the gropings of the Indian's mind to find that power, greater than man, which was the source of visible nature, to discover a way for man to approach it and receive help from it; always treated with marked respect and the people of a village never throwing any of the activities that were everywhere apparent. The religious and social ideas developed through this search, extending through generations, as evidenced in the rituals, were gradually evolved and formulated in the myths, and the analysis clearly set forth the importance of the perpetuation of human life and the recognition that Wakonda is ever present in all things that surround man.

There were no specially designated persons in the tribe whose duty was to teach religion or ethics, nor were there any succinct, practical commandments as to the beliefs or actions. Religious and ethical teachings were embedded in the tribal and other rites. The duty of explanation and instruction to the various learning the meaning and the proper form of worship was undertaken by the elders of the tribe, who generally belonged to the office of keeper and who formed a kind of hereditary priesthood.

The term "wakonda" is not modern and does not lend itself to analysis, and it is distinct from the word meaning "spirit" and has nothing in common with it. "Wakonda" is not a synonym of "Great Spirit," of nature, or of an objective god, a being apart from nature. It is difficult to formulate the native idea expressed in this word. The European mind demands a kind of intellectual crystallization of conceptions which is not essential to the Indian and which, when attempted, is apt to modify the original meaning. "Wakonda" stands for the mutation of power permeating all natural forms and forces and all phases of man's conscious life. The idea of "wakonda" is therefore fundamental to the Indian's relation to nature and to all living forms, including man. While the conception of "wakonda" may appear vague, certain anthropomorphic attributes were ascribed to it, approximating to a kind of personality. Besides the insistence on truthfulness in word and deed, there were qualities involving pity and compassion, as shown in the examples. All experiences of life were directed by "wakonda"—a belief that led to a kind of fatalism.

to his judges; the Epistles, a collection of letters supposed to have been written by Plato to his friends, are not on philosophical subjects. There has been, and there still is, controversy over the epistles, some thinking that all are genuine, others that some, and in particular vii. and viii., are genuine, and others again (with whom we incline) that many, and perhaps all, are spurious. Doubts have been raised about certain of the 34 dialogues; but no serious critic of the present day questions any of the more considerable of them. It is easy to see why Plato gave to his teachings a conversational form. Socrates had held that the teacher should elicet, and suggest rather than inculcate and dogmatize, and had therefore preferred spoken to written discourse, question and answer to continuous exposition. Plato accepted his master's principle; and accordingly, though he deserts his example so far as to make use of writing, he was careful in so doing to imitate conversation. In most of the dialogues Socrates is the chief speaker; but Plato's Socrates is an idealized Socrates, who has an urbanity foreign to the Socrates of history, and he sometimes propounds physical and metaphysical doctrines which could not have found favour with a philosophical agnostic. In the Parmenides Socrates takes the second place; in the Theaetetus he retires into the background; and in the Laws he does not appear. The dialogues differ in structure, insomuch as the conversation is sometimes written down in the words of the supposed interlocutors; sometimes interlaced by X, who has been silent in the discussion or has been present at it; once is reported by X, who heard the story from Y; and once is reported by X, who heard it from Y, who heard it from Z. They differ also in literary character and treatment. Some are lively and dramatic; some are eloquent and poetical; some are severely dialectical. Though in general the conversational form is studiously maintained, there are upon occasion great stretches of continuous discourse; and in particular there are imaginative interludes called myths (muthos), which, making no pretension to exactitude of statement, claim notwithstanding to be substantially true, and, where experience fails, to fill a gap by provisional hypotheses (Phado, 114 D). Thus, the moral and social life of Greek society, the day of judgment, and the future state are mythically described. In a word, the myth is a profession of faith. The introductions prefixed to some of the last dialogues and the description of the last hours of Socrates in the Phado are the very perfection of continuous narrative. The style is always the best possible for the occasion; for Plato's harp has many strings.

4. The grouping of the dialogues.—Assuming that, when Plato began to write, the fundamentals of his system were already settled, and that accordingly the order of the principal writings was determined by the needs and the conveniences of exposition, Schleiermacher,1 the father of the modern system of philosophical history, grouped the dialogues into four main groups: elementary, transitional, and constructive. The Phaedrus, he thought, was the earliest of the dialogues; the Republic, the Timaeus, the Critias, and the Laws were the latest. Of the six dialogues called by Hermann the philosophical, that the system came into existence full-grown, saw in the several dialogues the results and the evidence of Plato's doctrinal development, and distinguished three periods of his literary activity: (1) the years immediately following the death of Socrates; (2) the residence at Megara; and (3) the years 357-347. Subsequent inquirers, however much they differ in detail from one another, from Bruckmann to Hermann, seem on the whole to agree in accepting his principle of interpretation. It will be convenient to note, first, the principal points in which the critics are agreed; secondly, the principal points in which they differ. The critics are for the most part agreed in recognizing a group of dialogues in which Plato, despite certain differences of nomenclature and method, has not yet advanced beyond the Socratic standpoint; and it is obvious to all that these dialogues are early. Again, tradition ascribes to the Laws the last place; and modern scholarship readily assents, adding that the Timaeus and the Critias come next before it. Further, on internal evidence it is obvious to suppose that certain dialogues which are critical of educational methods—Protagoras, Gorgias, Phaedrus, Euthydemus, Symposium, and Mentor—preceded the Republic, in which Plato propounds his own educational theory. Thus far the agreement is general. There is a much more eager controversy about certain dialogues which have been described as 'dialectical' or 'professorial,' namely, the Parmenides, the Philebus, the Theaetetus, the Sophist, and the Politicus, and about the order of the Timaeus and the Critias. There is a revised and reconstituted system. The present writer, who holds that the five dialogues called dialectical or professorial look back to the Phaedo and the Republic, forward to the Timaeus, and together with the Timaeus represent Plato's philosophical maturity, would arrange the principal dialogues in five groups corresponding to successive stages in Plato's intellectual development, namely: (1) Socratic dialogues, (2) educational dialogues, (3) Republic, Phaedo, Cratylus, (4) professorial dialogues, Parmenides, Philebus, Theaetetus, Sophist, Politicus, together with Timaeus, (5) Laws. An attempt must now be made to characterize these several stages of Plato's intellectual development, and to show how the principal dialogues correspond with them.

1 Platonische Werke, Berlin, 1855-62, t. i. p. 32-36; Geschichte und System der platonischen Philosophie, pt. 1. (do. 1839) p. 334, etc.
theory. He was then ready to receive and assimilate the positivism of Socrates; and for a time he found a refuge in dialectical theory and practice. But, whereas Socrates had seen in the strife of dialectics a means for the realization of his energies and had rested in it, Plato, taking his departure from the logic of consistency, proceeded to build upon it, first, a philosophy, secondly, a science, and, thirdly, a sociology. Moral error, Socrates had thought, is largely due to the misapplication of general terms which, once affixed to a person or an act—possibly in a moment of passion or prejudice—stand in the way of a sober and serious judgment. In order to guard against error of this sort, and to base the individual at any rate consistency of thought, and, in so far, consistency of speech and action, Socrates spent his life in seeking, and helping others to seek, 'the what,' or the definition, of the things which the mind's proper actions are described. This statement of the aim which Socrates had steadily pursued exactly describes the end which Plato proposed to himself in the Platonic dialogues of his first period. But Socrates had talked, and Plato wrote. Consequently, whereas Socrates had thought of himself as the στιχιστή, or cross-examination, had made the hearer aware of his ignorance, might, and did, point the way to a definition, Plato, who wrote, if he was not to sacrifice the advantage which the eclectic stimulus, was obliged to stop short of dogmatic reconstruction.

E.g., in the Euthyphro Socrates invites his interlocutor to define 'piet}' or 'holiness.' At first Euthyphro does not understand what Socrates means by definition. Socrates explains. Then Euthyphro propounds in succession several definitions, and Socrates shows their insufficiency. Again and again Euthyphro yields in most cases, in no wise abashed, and yet urges an engagement, and the dialogue ends. We may perhaps conceive of the definition to define that which, part of justice which is concerned with the service of the gods'; but, in order that the reader may be compelled to think for himself, Plato carefully refrains from formulating his result.

The Platonic dialogue of this period is, then, an exercise in Socratic dialectic; but, whereas the destructive process is set out at length, the constructive process is left to be supplied by the reader. Contrariwise, Xenophon, who, being apologist rather than educator, cares little for the στιχιστή, and is chiefly anxious to justify his master's morality, neglects the destructive process and makes his constructive process the Euthyphro (piety), the Charmides (temperance), the Laches (courage), the Lysis (friendship), and the Hippasus Major (beauty) are characteristic dialogues of the first or Socratic period. In this period Plato uses the terms 'form' (δίδα) and 'idea' (idea) to mean the characteristic or characteristic included in a Socratic definition, i.e. 'the one in the many,' the element common to a plurality of things which we propose to call by the same name. But, inasmuch as the Socratic definition of a term of morality or art rests on the individual, either in or out of nature, any objective unity corresponding to it, the 'form' or 'idea' has no separate existence, it is not καταρτική. In this stage, then, the forms or ideas are moral and aesthetic, accepted fixedly by the individual in the idea that he may be consistent in thought, word, and deed, and that he and his interlocutor may not misunderstand one another.

(2) The educational dialogues.—The dialogues of the second period abound in notable advance upon the dialogues of the first both in their style and in their doctrine: in their style, for they are more complex, more literary, and more dramatic; and in their doctrine, for Socrates, the protagonist, pronouncedly more conservative and immutables. Of Plato's Socratic writings. These dialogues are primarily concerned with the criticism of earlier and contemporaneous theories of education. Thus the Protagoras brings the educational methods of the Protagoras or the Sophists, the Phaedrus and the Socratic methods of Socrates; the Gorgias and the Phaedrus deal respectably with the moral and intellectual aspects of the forensic rhetoric of Gorgias and the political rhetoric of Isocrates; the Meno creates a purely hypothetical dialogue, in which Socrates, who, despising systematic teaching, regarded the practical politician as the true educator; the Euthydemus caricatures the contemporary aristocrat; and all these dialogues, together with the Symposium, in which they demonstrate the superiority of Socratic dialectic to the current sophistries, show a growing consciousness of its limitations and insufficiency. If education is to do what we expect of it, surely it should have for its basis, not personal consistency, but objective truth. Where, then, is truth to be found? Not in objects of sense, which are confessedly imperfect, but in the type or form with which we instinctively compare them. In the words of John Stuart Mill:

1 All the objects of sense are that which they are, in only an imperfect and incomplete manner. They suggest what they are, far more perfect than themselves; a 'something far more majestic than the eye can grasp' which has perished out of which that which can be seen or heard is an imperfect and often very distant resemblance. . . . What, then, could be more natural than that these ideas should become the type of things from sense, but cognizable directly by the mind? . . . The self-beautiful, the self-good, which not only were to all beautiful and good things as the idea is to the actual, but united in themselves the separate perfections of all the various kinds of beauty and goodness—must not be real, but real in a far higher sense than the particulars which are within sensible cognizance? particulars which indeed are not realities: for there is no particular good or beautiful thing, but just thing, which is, in some case that may be supposed, unjust, evil, and unbeautiful.

This paragraph is not indeed what Mill meant it to be, a complete and final summary of Plato's theory of ideas; but it cannot be bettered as a statement of the imaginative speculation out of which that theory was afterwards to grow; i.e. as a description of the process by which Plato arrived at the conception of a sole reality, eternal, immutably perfect, wherever penetrable, mutable, imperfect abstract or concrete, in the language of Goethe, no more than 'likenesses.'

For the exposition of this imaginative speculation in its primitive and poetical form the Phaedrus and the Symposium are all-important. There in the Phaedrus, we are told that the Phaedrus, in the Phaedrus, are the forms of all the different existences (foros forei), such as self-justice, self-temperance, self-knowledge, of whose transcendental perfection, revealed to us in a previous existence, we are reminded by their imperfect earthly counterparts. This rudimentary theory of being becomes a rudimentary theory of knowledge when we are further told in the Symposium (210 A ff.) that the lover of beauty rises from the sight of persons, souls, and institutions, which are imperfectly beautiful, through the corresponding universal or abstract definition, to the knowledge of the eternally existing self-beautiful (abn gr efori xalos). In a word, Plato postulates really existent unities, of which unities phenominal pluralities are imperfect likenesses, and supposes the really existent unities to be the conceptos, through Socratic definitions, by means of reminiscence (aparameis). But he makes no attempt to explain how the imperfectly beautiful particular is related to the perfect self-beautiful; nor does he define the content of the word 'beautiful.' In this book, the forms or ideas are moral and aesthetic unities, eternal, substantial, separately existent; but we are not told how their particulars participate in them, nor what the things which are have ideas corresponding to them.

1 Dissertations and Discussions London, 1907, iii. 345.
The earlier theory of ideas.—And now, in a third period, taking his departure from the rudiments of the Socratic and Parmenidean metaphysics, Plato proceeds to develop a systematic theory which shall afford answers to the three great questions, What is being?, What is knowledge?, What is predication? This systematic theory, the earlier theory of ideas, may be summed up in four propositions: (1) the fundamental proposition and three supplementary articles. The fundamental proposition is the proposition already indicated in the poetical speculation of the second period, and henceforward steadily maintained: beside plurality of phenomena there is a transcendent, mutable, imperfect, which become, and are objects of opinion, there are units, eternal, immutable, perfect, which really exist, and are objects of knowledge.

The supplementary articles which convert the poetry of the Phaedrus and the Symposium into the philosophy of the Republic, the Phaedo, and the Cratylus are: (a) wherever a plurality of particulars are called by the same name, there is a corresponding idea of form (Republic, 586 A; cf. Phaedo, 55 D); thus there can never be a mere idea of good, just, beautiful, but also of bad, unjust, unbeautiful; of chairs and tables; of fever; of hot and cold; in short, of every common term; (b) it is the presence, immanence, communion (συστηματικώς, συστηματική), that which is the idea in it, that which is depicted, in other words, it is the particular's participation (μετέχεις) in the idea—that makes particulars what they are (Phaedo, 100 D; cf. Republic, 476); (c) that to say, a thing is beautiful because the idea of beauty is in it; a thing is ugly because the idea of unbeautiful is present in it; (d) a thing is both beautiful and unbeautiful because both the ideas are present in it; (e) foremost of the ideas is the idea of good.

"For," says Socrates (Republic, 509 B), "just as the sun furnishes to the objects of sight not only their capacity for being seen, but also their generation, growth, and nutrition, even so the objects of knowledge derive from the good not only their capacity for being known, but also their existence and their reality, though the good is not reality, and is on the other side of it, transcending it in majesty and power."

With the help of these supplementary articles, the fundamental proposition becomes a theory of being, a theory of knowledge, and a theory of predication. It is a theory of being inasmuch as the ideas are eternal, immutable units. It is a theory of knowledge inasmuch as in the examination of things (αισθησις) Plato hopes to ascend from observed particulars through Socratic definitions to a definition of the self-good, and thus to convert provisional definitions of things into certified representations of ideas. It is a theory of predication inasmuch as at it affords or seems to afford an answer to certain logical paradoxes which had sorely perplexed Plato's contemporaries and for the moment himself. For, whereas the proposition "likes cannot be unlike, nor unlikes like," which Zeno had regarded as a truth, seemed to his successors to cut at the root of all predication, Plato in this stage conceived that, though the units like and unlike cannot be affirmed the one of the other, a particular can be simultaneously both unlike in the sense that the ideas of like and unlike exist in it, and present in it. That this was the origin of the hypothesis of the particular's participation (μετέχεις) in the idea is plainly affirmed in the Parmenides; and it could seem that, when Plato wrote the Philebus and the Republic, he was driven to this hypothesis by limitations and inconsistencies which were speedily to prove fatal to this, the earlier theory of ideas.

The later theory of ideas.—Plato's fourth period, in which his philosophy reached its culmination as a system, involved, but not limited to, the earlier dialogue, of which three—Parmenides, Philebus, and Timaeus—are chiefly ontologic, and three—Theaetetus, Sophist, and Politics, or Statement—are chiefly logical. In all of these, unmistakable references to the Republic and the Phaedo show that Plato has now finally renounced the earlier articles of the earlier theory of ideas; but the critical or destructive element is especially conspicuous in the Parmenides and the Philebus, which may be placed respectively first and second at the beginning of this period, and followed by the Sophist, and the Politics, which deal with the logical problems of the time and clear the way for the reconstruction of the system, naturally follow; cf. Aristotle's statement (Metaphysics, A, vi.) that Plato's theory of ideas, i.e., the account of the idea, was superimposed upon a logic which was all his own. The series ends with the Timaeus, which, if it does not formulate a dogmatic ontology, at any rate lays the foundations of what K. D. Archer Hind has well called "a thorough-going idealism." Of each of these dialogues something must now be said.

In the Parmenides Plato takes up again the proposition "Like cannot be unlike, nor unlikes like," Socrates, a mere stripping, disputes Zeno's supposed truth, and, by the same token, the being may be at once like and unlike by reason of the immanence in it of the ideas of like and unlike, or, in other words, by reason of the particular's participation in those ideas. That is to say, he attempts to dispel those of the Parmenidean—paradigm of predication by an appeal to the characteristic doctrine of the Republic and the Phaedo. Hereupon Parmenides—not the Parmenides of history, but an anachronistic Parmenides; in fact, Plato himself in the fullness of his powers—intervenes, and shows (a) that, whereas by assumption the idea is a unity (for otherwise the difficulties which beset the particular would beset the idea also), if two or more things are called by the name of the idea in virtue of their common participation in it, the unity of the immanent idea is sacrificed, either by multiplication or by division, in the world of sense (Parmenides, 130 E); (b) that, if without participation in the idea there is no predication, the unity of the idea is sacrificed in the world of ideas; for the particular man and the idea of man are both called man, and by assumption this common predication implies the existence of a secondary idea of man, and so on ad infinitum (131 E, 132 D); (c) that the theory of the Republic and the Phaedo does not destroy the unity of the idea, for the unity can, by assumption, the subject of predication; for by assumption the subject of predication is not a unity, or a complex or bundle of ideas (129 C, E); (d) that the dogma "Every common term has an idea corresponding to it" conflicts with the theory of the idea's perfection (130 C); (e) that, while without ideas there can be no knowledge, the unconditioned idea can no more be apprehended by man than the conditioned phenomenon can be apprehended by God (134 A f.).

That is to say, the theory of immanence, by which Plato in the earlier time had sought to explain the supposed paradox of the one thing and its many predicates, involves another paradox, the paradox of the one idea and its many particulars; and it will be necessary for us, if we are to attempt a reconstructed system of philosophy, to provide a new solution of the paradox of diverse attributions. For this new solution, so far as relations are concerned, we must look to the latter part of the dialogue. Here, at the instance of the other two, the Parmenidean and the Heraclitean, he shows the implications of the existence of the one; but he extends the scope of the inquiry so that it shall take account of the antithesis of the one and the many whether that one or that many is supposed to be or not to be the same, and he extends further this inquiry by himself and by Zeno, but also as it was interpreted by their successors, and in particular by
Plato himself both in his earlier theory and in his later. In the course of the inquiry the antithesis of the one and the others, i.e. of the one thing and its many attributions, is brought before us in eight hypotheses; and in each case we ask ourselves, How are these attributions to be grouped into paradoxa of likeness and unlikeness? Does it recognize that the same thing can be like and unlike, old and young, and so forth, in which case cognition of some sort is possible? Or does it deny these attributions, and the bringing philosophy to naught? The eight hypotheses and their results may be briefly stated as follows:

(i) If the One is, that is to say, in a strict sense a unity, this or that like and unlike, great and small, resting and moving, old and young, etc., cannot be predicated of the One, and there can be neither knowledge nor sensation nor opinion of it.

(ii) If the One participates in existence and, through a finite many (\(\omega\)\(\omega\)\(\omega\)), becomes an infinite many (\(\omega\)\(\omega\)\(\omega\)), diverse predicates such as like and unlike, etc., can be affirmed and denied of the One in its relations to itself and to the others; and the One can be known, opined, perceived.

(iii) If the One is, and, through a finite many, an infinite many can be conjoined in the One, diverse predicates such as like and unlike may be affirmed and denied of themselves and to one another.

(iv) If the One is, and there is no predicate of the One which is not applicable to itself or to another, and, inasmuch as there is no finite plurality to mediate between the others and the One, the others are wholly dissociated from the One, diverse predicates such as like and unlike cannot be affirmed of the One or of anything else, and so there cannot be knowledge or opinion of it.

(v) If the One is not, i.e. if the One is necessarily determined by its ownness from what is, diverse predicates such as like and unlike may be affirmed and denied about the One or about oneself or about one another.

(vi) If the One is not, and there is no semblance of grouping, the others being no more than disconnected particulars, diverse predicates cannot be affirmed of them.

Now of these eight hypotheses four, namely i., iv., vi., viii., give negative results only; that is to say, there can be neither predication nor knowledge, either of the One or of the others as here described. But (a) of the One and the others as conceived in ii. and iii., where the finite many mediates between the infinite and infinite plurality, and (b) of us, of which, negatively determined, there may be predication and knowledge, and (c) vii. permits qualified predication and opinion in the region of sense. Accordingly, we shall find in ii. and iii. and (b) and vii. that the Philebus denies the infinite to the One, and that v. and vii. find a place in the three logical dialogues, Theaetetus, Sophist, and Politicus. In a word, the Parmenides not only rejects the earlier theory of ideas, but also maps out the later. And this is not all. From the eight hypotheses Parmenides draws the enigmatical conclusion:

'Whether One exists or does not exist, both One and the others are, and are not, all things in all ways, and appear to be, and do not appear to be, all things in all ways, both in relation to themselves and in relation to one another."

This summary of the eight hypotheses is Plato's resolution of the paradox of likeness and unlikeness. We ask whether those of the particular instances that, whether we suppose the One to be existent or to be non-existent, and however we conceive it, we can affirm and deny, of it and of them, in its and their relations to itself and one another, diverse predicates such as like and unlike, resting and moving, small and great, etc. Thus, when we affirm diverse predicates of any thing, there is no inconsistency such as Antithenes had supposed; because what is affirmed or denied is always a relative, and predicated of predicates such as like and unlike in one relation and unlike in another. And this resolution of the contemporary difficulty carries with it an important corollary; it is now open to us to expunge relations from the list of the \(\omega\)\(\omega\)\(\omega\), and in this way to escape, so far as relations are concerned, from the paradox of the multiplication or the division of the idea. Or, if we prefer to recognize \(\omega\)\(\omega\)\(\omega\) of relations, distinguishing between \(\omega\)\(\omega\)\(\omega\) which are \(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\) \(\alpha\)\(\alpha\)\(\alpha\) and \(\omega\)\(\omega\)\(\omega\) which are \(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\) \(\alpha\)\(\alpha\)\(\alpha\), we may relegate \(\omega\)\(\omega\)\(\omega\) of relations to a class by itself.

But again, as has been said, the Parmenides affords hints for reconstruction: (1) the second and third hypotheses show that, if exact predication and knowledge are to be possible, a finite plurality of kinds must intervene between the unity of existence and the infinity of particulars; (2) from the fifth hypothesis we learn that what is known at length in the Sophist, that a member or members of the finite plurality can be negatively described; (3) the seventh hypothesis shows that, where there is no finite plurality, there may still be a finity of apparent, artificial groups, by which inexact predication, and opinion, but not knowledge, become possible. It would seem, then, that the Parmenides—which some have regarded as a dialectical exercise preparatory to the Republic, and must have deliberately neglected—not only dispenses of the earlier doctrine, and maps out the later, but also announces the withdrawal of ideas of relation which Aristotle plainly regarded as a notable characteristic of Plato's maturity (Met. A. ix. 990'16).

The work of reconstruction began in the Parmenides and continued in the Philebus. Here Socrates reverts to the question proposed in Republic, vi. 505 A ff. What is the summan bonum? Is it pleasure? Is it intelligence? This ethical question is quickly and summarily disposed of: the chief good of man in a mixed life of intelligence and pure pleasure. But a new question, wider in its scope, arises out of it and takes its place. Is it that which makes the mixed life, or anything else, good? In the Republic the Phaedo Plato had made answer: 'A thing is good because, sile by side with the constitutive idea, the idea of good, the \(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\)\(\alpha\), is present in it.' But in the interval the theory of the immanent idea has been discredited, and now in the Philebus we start anew from the old ground, and we may regard the third hypotheses of the Parmenides: 'All things which are or exist in our universe are combinations of fini\(\eta\)\(\eta\) (\(\tau\)\(\iota\)\(\iota\)\(\iota\)\(\iota\)) and indefiniteness (\(\omega\)\(\omega\)\(\omega\)\(\omega\)\(\omega\)).' We must examine the Philebus, and to do so we may afford to pass from the old to the new, and to the constitutive ideas. Whence would it be safe to say (1) that, inasmuch as the particular is good by reason of its approximation to its formative idea, the intervention of the idea of good is no longer required to account for the particular's excellence, and (2) that, inasmuch as particulars approximate to, and diverge from, their respective ideas, the particular imitates (\(\mu\)\(\iota\)\(\iota\)\(\iota\)\(\iota\)) the idea and no longer participates in it (\(\mu\)\(\iota\)\(\iota\)\(\iota\)\(\iota\)). Incidentally it appears that we no longer need ideas of 'hot' and 'cold,' inasmuch as those of 'good' are survivals from an indifferency point which is neither the one nor the other.

The Theaetetus, the Sophist, and the Statesman are a trilogy, not only in the sense that the conjecture of exact relations between the One and the others is a sequel to this, but also in the other two, but also inasmuch as the Sophist and the Statesman, though ostensibly they discuss a new question, Are sothist, statesman, and philosopher one, two, or three?, assume and discussion of one of the most important, and left unanswered in the Theaetetus, What is knowledge?

According to Aristotle (Met. A. vi. 987-32), Plato, who in early years had been the pupil of the Heraclitean Cratylus, was true in later life to the Heraclitean principle, 'All sensibles are in
PLATO AND PLATONISM

flux and therefore cannot be known, whence he inferred the existence of things other than sensibles, and these he called Ideas. The Theaetetus is Plato's justification of the Heracleitan principle; and, if the corollary is not explicitly formulated, at any rate the way to it is made plain. Knowledge, we find, is not sensation, which has sensibles for its object; nor is it true opinion, opinion being justly called knowledge or true opinion supported by a definition, Socratic or otherwise. Hence, if there is to be any knowledge—and Plato does not despair—there must be things other than sensibles, and such are the ideas, which, in the account as well as in the view of the philosopher and, in the philosopher and, in the Socrates, mediate between the unity of being and the infinity of particulars.

In the Sophist and the Statesman the interlocutors of the Theaetetus together with an Eleatic stranger, who now appears for the first time, discuss the question, 'Are sophist, statesman, and philosopher one, two, or three?', and come to the conclusion that the true statesman is identical with the philosopher, and the mere politician identical with the sophist. The search for the sophist we stumble upon the philosopher (253 C); and it is therefore unnecessary either to suppose that a dialogue about 'the sophist' was planned but remained unwritten, or to find a 'plate of the sophists' of the dialogue Sophist. Incidentally, the definition of the philosopher carries with it a definition of knowledge, and in this way the Sophist, hereafter to be supplemented by the Statesman, resumes the discussion raised and dropped in the Theaetetus, and the unity of the trilogy is assured.

In the search for a definition of 'sophist' the Eleatic finds himself obliged 'in violation of the principle of our father Parmenides' to attribute existence to the non-existent or non-existent. An investigation of the non-existent (μὴ λέγον) thus becomes necessary; and, as in the Parmenides the investigation of the existent unity involves that of unity which is non-existent, so here the study of the non-existent involves that of the entailed. In the investigation of the two taken together the following discoveries are made: (1) beside αὐτὰ καὶ αὐτὰ ἐστὶ, which are incommunicable, incapable of being predicated of one another, there are ἐναὶ ὁμοιοί ἐστὶ, not αὐτὰ καὶ ἐναὶ ἐστὶ, which communicate, some within man and some generally and universally, such as 'rest' (πάστος) and motion (κίνομαι), and others, again, universally, namely ent (ὅς), same (ἴδεος), other (θέατος); (2) there is no αὐτὸ καὶ αὐτοῦ ἐστὶ of sophist; (3) the function of dialectic is classification according to kinds (τὸ κατὰ γένος ἀναθείπτειν), whereby we are preserved from thinking that which is the same different or that which is different the same; and he who can thus classify is the philosopher whom we seek; (4) ent (ὅς) and non-existent (μὴ λέγον) are incommunicable, if by non-existent we mean, not that which is contrary (ἐναῖος) to ent, but that which is different (ἐχθέον) from it, and accordingly μὴ μέγα and μὴ καλὸν may be as truly existent as μέγα and καλὸν (cf. the fifth hypothesis of the Parmenides, and Republic, v. 405 a); (5) the definition of the non-existent is mainly, if not exclusively, employed as a means of expressing in terms of mind the materiality and the externality of things. And these results carry with them an important corollary. If particular men or particular dogs are their respective existences to eternal, immaterial, and supernatural, it is permissible for us—even if we cannot apprehend those ideas—to study by the method of division (διαίρεσις) announced in the Sophist and the Statesman the body resembling and differences of natural kinds. In a word, the entire function of the man of science is the study of the classification of zoology and botany, because in these subjects the use of debatable terms (ἀμφότερα φύσεως) such as just, unjust; in other words, in making artificial groups, we do not give us definite kinds. In the Sophist, when we are conscious of a σκοτεινή και φωτιστική, and even in the Statesman, when the stranger starts upon his inquiry, division has no more ambitious aim than ἀνθρωπολογία. But at 361 D ff., and especially at 366 A ff., we find ourselves engaged in a true discovery of incorporeal αὐτὰ καὶ ἀυτὰ ἐστὶ. That is to say, διαίρεσις is now used, not with a view to the creation of artificial groups in the region of ἀμφότερα φύσεως, but as a means of ascertaining the natural classification of the phenomena of nature's fixities, the αὐτὰ καὶ ἀυτὰ ἐστὶ. In other words, the natural types, or αὐτὰ καὶ ἀυτὰ ἐστὶ, are the proper objects of knowledge, and what can be known about them is their mutual resemblances and differences. And, when it is understood that the end of διαίρεσις is now the determination of the affinities of ἐστὶ, and not a mere definition (περὶ γένους διαίρεσις) of a single ἐστὶ, certain precepts here added and exemplified become for us the irrefragable foundation of the Statesman. The reason is, as such, the better, because we obtain by it fuller information about an ἀνθρωπολογία. We have then here the foundation of the classificatory science which was for a time to play so great a part in the history of our science. The latter part of the dialogue prepares the way for the reconstituted sociology of Plato's fifth period.

The Timaeus is the keystone of the later theory of ideas. Here, in a cosmogonical myth, Plato shows that the universe, as we know it under conditions of time and space, may be conceived as the thoughts of universal mind together with the thoughts of those thoughts. The ideas are the thoughts of God (θεοῦ), or, in other words, the laws of universal mind's thinking. But, whereas universal mind, the subject, thinks a plurality of thoughts, it thinks those thoughts its objects, in space; and, in so far as it thinks them under spatial conditions, it thinks them in terms of certain regular geometrical figures—pyramid, octahedron, icosahedron, cube—these regular geometrical figures are respectively the ideas of fire, air, water, earth, the elements which go to make (a) the body of the universe, (b) the bodies of the stars, which are the first-born thoughts of things, and (c) the plants and vegetables, which creative mind thinks, not directly as it thinks the stars, but indirectly through the minds of the stars, its first-born thoughts; and, whereas God, or mind, the creator, thinks humanity or caninity, as an eternal unity, the stars, His first-born thoughts, when they think humanity or caninity corporealized under spatial conditions, conceive it, not as an eternal unity, but as a transient plurality. Thus particular men or particular dogs are, as it were, reflections of the idea of man or dog, invested with bodily form under conditions of time and space; and in this way, in virtue of the hypothesis that 'that which superior mind conceives as a subjective thought is perceived by inferior mind, however imperfectly, as an objective thing,' Plato is able to show how the mind's thoughts are reconstituted. But this affords an important corollary. If particular men or particular dogs are their respective existences to eternal, immaterial, and supernatural, it is permissible for us—even if we cannot apprehend those ideas—to study by the method of division (διαίρεσις) announced in the Sophist and the Statesman the body resembling and differences of natural kinds. In a word, the concept of the man of science is the study of the classification of zoology and botany, because in these subjects the
ideas of the respective animals and vegetables assure us of the existence of natural kinds. On the other hand, where there are no ideas, and therefore no determinate natural kinds, though we may 'study the subjects as a recreational pastime,' derive from their sensible appearance (69C), there can be no exact science. E.g., mineralogy, inasmuch as the several minerals are irregular, indeterminate, combinations of the four simple bodies, combinations which are not definitely marked off from one another by nature, is not a true science. Nevertheless it would seem that Plato by no means confined his attention to the exact sciences, the sciences founded upon ideas; for in the latter part of the Timæus he has much to say both about exact sciences, such as mineralogy, and about the parts and organs of the body and their several functions. His pronouncements on these subjects are highly speculative; but, as indications of his scientific aims, they are by no means unimportant.

We may now formulate the later theory of ideas with a view to a comparison of its supplementary articles with those of the earlier theory. The fundamental proposition is still—as it has been ever since Plato freed himself from Socratic influences—that mind is the efficient cause of the phenomena, but the reflection or the idea of the mind becomes the efficient cause of the phenomena, and are objects of knowledge.

The ideas are as follows: (a) there are substantive self-existing ideas (abrà et abrà ēty) of the universe; of fire, air, water, earth; of the several stars; and of the several animal and vegetable species; but of nothing else. (b) They are not immediately derived from his the imitation or reflection of the idea in matter—i.e. in space—that brings particulars into existence and makes them what they are. (c) Unity=mind is the cause, the sole cause, of all things; it is the cause of the ideas, of particulars, and even of its own correlative—plurality=space is equal=necessity. (d) The ideas are the thoughts of the soul, namely, unity or mind. (e) Infinite mind develops within itself a complete universe of thoughts, primary and secondary; and the universe of thoughts, as seen from within, is a finite intelligence included in it, is our universe of things. In this stage, then, the forms or ideas are unities from which nature's fixities—the universe, the stars, the animals, and vegetable kinds—are respectively derived; they are substantial and eternal; they are the thoughts of universal mind; they are not immanent in particulars, but are imitated or reflected as particulars in space.

(5) The Laws. We now come to the fifth period of Plato's philosophical and literary activity. Having given to his metaphysics its final shape, and having shown how, through the doctrine of natural kinds, it affords a foundation for the scientific knowledge of animal and vegetable species, Plato leaves to his nephew Speusippus the direction of the biological studies of the school, and himself, reverting to ethics and sociology, revises his earlier conclusions about these subjects from the standpoint of his later metaphysics, and, having written the Republic, he had hoped to attain through the self-good to the knowledge of the ideas, and thus to establish a philosophical morality. If man could know the self-good and the ideal virtues which, if imitated, he would develop, his wisdom, in early years when he had not yet completed his education—require that 'popular and civic virtue' which society artificially builds up by means of rewards and punishments; the knowledge of the self-good would be his one and only end and his exceeding great reward. Such had been Plato's aspiration when in a burst of enthusiasm he wrote the Republic. But since that time he had become aware of the limitations of human nature. Man cannot know as Plato's self-good; and, what is more, inasmuch as man has a bodily nature, the self-good and the human good are not identical. This being so, we cannot dispense with 'popular and civic morality,' and it becomes necessary to do what we can to strengthen and improve it. Hence, when, in the Republic he plans a constitution and provides for its maintenance, but commits to his trained magistrates all the responsibilities of administration, in the Laws recognizing that under existing conditions there is individual liberty, but providing for the guidance of his countrymen a complete code of enactments. In this remarkable treatise Plato leaves metaphysics and science behind him; but there is one metaphysical pronouncement, and at first sight it flagrantly conflicts with the teaching of the Timæus. Whereas in this dialogue Plato claims to have found in universal mind the one and only cause of the infinite variety of things, here, in the Laws (896 E), he confidently affirms that there are two world-souls, the one for moral universals, the other for physical. The truth is that, writing popularly, he steps short of his final analysis. The good world-soul and the bad world-soul of the Laws are the providence (προδύναμα) and the necessity (dævynyn) of the Timæus; and the fact that in the metaphysics which occupy the Laws Plato rests in the penultimate dualism of the great metaphysical dialogue is no reason for supposing that he had abandoned his ultimate hemism.

Never perhaps was any other philosopher as progressively as Plato. In his earlier years, he had studied the two philosophies which were afterwards to be the foundations of his own system—the Heracleitean theory of flux and the Socratic doctrine of ethical universals. In the first period of his independent thought he attempted no more than to carry on by written discourse the oral teaching of his master and thus to secure a greater consistency in the use of those terms of morality which have so great an influence upon actions. In the second, noting that, in moral and aesthetic practice, we act upon our intuitions and the products of a finite intelligence included in it, is our universe of things.

In this stage, then, the forms or ideas are unities from which nature's fixities—the universe, the stars, the animals, and vegetable kinds—are respectively derived; they are substantial and eternal; they are the thoughts of universal mind; they are not immanent in particulars, but are imitated or reflected as particulars in space.

(5) The Laws. We now come to the fifth period of Plato's philosophical and literary activity. Having given to his metaphysics its final shape, and having shown how, through the doctrine of natural kinds, it affords a foundation for the scientific study of animal and vegetable species, Plato leaves to his nephew Speusippus the direction of the biological studies of the school, and himself, reverting to ethics and sociology, revises his earlier conclusions about these subjects from the standpoint of his later metaphysics, and, having written the Republic, he had hoped to attain through the self-good to the knowledge of the ideas, and thus to establish a philosophical morality. If man could know the self-good and the ideal virtues which, if imitated, he would develop, his wisdom, in early years when he had not yet completed his education—require that 'popular and civic virtue' which society artificially builds up by means of rewards and punishments; the knowledge of the self-good would be his one and only end and his exceeding great reward. Such had been Plato's aspiration when in a burst of enthusiasm he wrote the Republic. But since that time he had become aware of the limitations of human nature. Man cannot know as Plato's self-good; and, what is more, inasmuch as man has a bodily nature, the self-good and the human good are not identical. This being so, we cannot dispense with 'popular and civic morality,' and it becomes necessary to do what we can to strengthen and improve it. Hence, when, in the Republic he plans a constitution and provides for its maintenance, but commits to his trained magistrates all the responsibilities of administration, in the Laws recognizing that under existing conditions there is individual liberty, but providing for the guidance of his countrymen a complete code of enactments. In this remarkable treatise Plato leaves metaphysics and science behind him; but there is one metaphysical pronouncement, and at first sight it flagrantly conflicts with the teaching of the Timæus. Whereas in this dialogue Plato claims to have found in universal mind the one and only cause of the infinite variety of things, here, in the Laws (896 E), he confidently affirms that there are two world-souls, the one for moral universals, the other for physical. The truth is that, writing popularly, he steps short of his final analysis. The good world-soul and the bad world-soul of the Laws are the providence (προδύναμα) and the necessity (dævynyn) of the Timæus; and the fact that in the metaphysics which occupy the Laws Plato rests in the penultimate dualism of the great metaphysical dialogue is no reason for supposing that he had abandoned his ultimate hemism.

Never perhaps was any other philosopher as progressively as Plato. In his earlier years, he had studied the two philosophies which were afterwards to be the foundations of his own system—the Heracleitean theory of flux and the Socratic doctrine of ethical universals. In the first period of his independent thought he attempted no more than to carry on by written discourse the oral teaching of his master and thus to secure a greater consistency in the use of those terms of morality which have so great an influence upon actions. In the second, noting that, in moral and aesthetic practice, we act upon our intuitions and the products of a finite intelligence included in it, is our universe of things.
the Republic for a positive morality, we find our- selves disappointed; for while the golden age of Plato is the world of the well-being of the state and the well-being of the individual, mergers ethically in education, and makes the educated man a law to himself and to his inferiors. In the fourth period the Philebus and the Statesman do something to reconcile the earlier morality with the later theory of ideas. Finally, the Laws is written, not from the standpoint of the professional moralist, but from that of the legislator, who, recognizing the importance of political institutions and the value of moral and religious, endeavors to improve the contemporary methods. See, further, art. ETHICS AND MORALITY (Greek), § 12.

6. The school of Plato.—It has been seen that Plato in his maturity was not only philosopher but man of science. That is to say, the metaphysical theory of ideas carried with it the physical theory of natural kinds and thus provided a basis for the classificatory sciences of zoology and botany. But the two theories were not inseparable. B.J. narrows, Spesinippus, who in 344 succeeded him as head of the school, rested his biological researches upon the theory of ideas, while he rejected the theory of ideas as a superfluous hypothesis. Aristotle, while he impatiently and peremptorily rejected the whole of Plato's system, was careful to reconstitute the theory of ideas, taking his departure from the two principles αὐτὸν ἀδιάβροχον ἄνθρωπον γενέσθαι. Xeno- crates, indeed, who succeeded Spesinippus in 339— a moralist rather than a metaphysician—attempted to make a compromise with the idealist tradition; but his arithmetical interpretation of the phrase 'ideal number' shows a strange misconception of his master's teaching. Polemo, who followed Xenoocrates in 314, took definitely the ethical direction. With Goodwin, who succeeded Polemo in 270, the so-called Old Academy ended. Platonism, t.e. the idealism upon which Plato rested the theory of kinds, ceased to be a living force when Polemo died. For the subsequent history of the school see art. ACADEMY.

For Plato's philosophy see E. Zeller, Die Philosophie der Griechen, Leipzig, 1858-61, ii. 1, tr. S. F. Alcott and A. Gomme, Plato and the Later Academy, London, 1876 (not always to be trusted); F. Ueberweg, Grundriss der Geschichte der Philosophie, Berlin, 1894-97 (Eng. tr., II. F. Smith and P. Schaff, London, 1899), contains, together with a useful summary of Plato's teaching, a very valuable bibliography.

The writer of the present article has occasionally used in his sentences and phrases borrowed from a sketch of the history of Greek philosophy down to Aristotle which he contributed to Cambridge Compendium of Modern Philosophy, Cambridge, 1863-68. His present statement of the later Platonism set forth in 'the six dialogues' is largely based upon papers published in J. P. X. (1881-82) 252-258, xl. [1882] 1-25, 257-331, xlii. 1884-85 1-40, 492-972, xiv. (1886) 735-330, xv. (1887) 200-306, xxv. (1897) 40-25, but the views there indicated, while they have in some respect modified themselves, have for the most part become more definite with the lapse of time. For certain recent speculations about Platonism the relation of his teaching to that of Socrates and, again, he recognizes an indefinite number of qualitatively distinct affective elements. This tri-dimensional theory of feeling involves the concept of pleasure mainly so far as it concerns the recognition of these distinct affective states. Each of these, he says, has pleasure, although undoubtedly much of what popular consciousness includes in pleasure would, under this theory, be assignable to excitement or relaxation. In his main contention for the greater number of complex affections, arguments, Wundt agrees with Wundt, though seeing his way as yet to the recognition of only two antagonistic lines of difference—pleasure and unpleasantness, restless-

PLACED.

PLAY.—See Drama, Games, Development (Mental).

PLEASURE.—Both pleasure and pain are too well known to require description and too elemental to admit of analysis. They are experiences which are co-extensive with all other forms of mental life—sensations, images, memories, reasonings, willings, emotions, all being capable of taking on these pleasant or unpleasant character. But it is apparent, except perhaps the last, are able to exist in a neutral phase. Yet in spite of the familiarity and prominence of these states, both in daily life and in ethical controversy, the more distinct and exact characterization of their nature and of the most confused problems in modern psychology. As a problem it was seriously considered by Plato and by Aristotle, but it was not until the intellectual tradition had been questioned by Rousseau, and interest in the more individual phases of mental life had been awakened by evolutionary biology, that the feelings were made objects of exact investigation. Within the last twenty years, however, much has been done, and, while it is impossible to say that conclusions have been established, it is at least true that many facts have been determined and alternative theories defined.

1. The term 'pleasure' itself has been recognized as too ambiguous for technical use, and there has developed a tendency to substitute for it 'agree- ablness' or 'pleasanterness,' and to include both it and its opposite, pain or unpleasantness, under the common term 'affection' as denoting the non-cognitive aspect of mental life. Pleasurability and pain-seekability are recognized as affec- tive phases of mental complexes into which only one of the other elements or phases might enter. For those complexes in which the affective phase is most prominent or characteristic the term 'feeling' has been suggested, as the feelings of sadness or depression. Pleasure, in popular usage, is generally identified with one of these complex processes of feeling and not with the abstract affective phase of pleasantness. It is the whole process of eating a good dinner or of enjoying a reunion that is called a 'pleasure.' Much of the confusion in ethical discussions of the good has arisen from failure to make this distinction between pleasure as affective tone and as complex feeling, the value recognized by common sense in the latter being identified by hedonistic theory with the former.

2. The historic problem of quality of pleasure also has light thrown upon it by this distinction. John Stuart Mill's revival of the Platonist doctrine of differences of kind in pleasures involves the failure to differentiate pleasantness and unpleasantness. An unpleasant object, with the consequent apparent ascription to the one of the moral worth found in the other, the differences in the pleasures of the fool and Socrates lying not in the affective element but in the total feeling. So, too, the common popular classification into higher and lower forms of pleasure is really a distinction between higher and lower forms of experience as a complex whole rather than between kinds of pleasantness as such.

Yet, even on the basis of this analysis, modern psychology is not a unit as to the quality of affection. Wundt insists upon a threefold distinction within affection itself—upon three pairs of opposites: pleasantness and unpleasantness, excitement and depression, and intellectual and emotional relations. Against each of these pairs, again, he recognizes an indefinite number of qualitatively distinct affective elements. This tri-dimensional theory of feeling involves the concept of pleasure mainly so far as it concerns the recognition of these distinct affective states. Each of these, he says, has pleasure, although undoubtedly much of what popular consciousness includes in pleasure would, under this theory, be assignable to excitement or relaxation. In his main contention for the greater number of complex affections, arguments, Wundt agrees with Wundt, though seeing his way as yet to the recognition of only two antagonistic lines of difference—pleasure and unpleasantness, restless-

HENRY JACKSON.
ness and quiescence, with their included minor distinctions.

On the other side are those who recognize only two antagonistic aspects of affection—pleasurableness and unpleasurableness, of which sensations are the other two dimensions into organic and muscular sensations. Certainly, when we have eliminated our sensations of muscular strain, the feeling of tension vanishes, and, equally, excitement seems to have little meaning and to have become something beyond our understanding and consciousness of rapidity in the flow of ideas. On the whole, the dual theory seems to have the weight of testimony, both lay and expert, in its favour.

Consequently, it may be remarked that the unpleasantness recognized in this analysis is not to be identified with the sensation of organic pain, which, while usually existing in an extremely unpleasant complex, may yet, when of slight intensity, have the pleasantness of interest.

The question as to whether pleasantness itself admits of qualitative differences is not to be answered with any positiveness. Introspection gives varying testimony on the point, and whereas, if we assume that the phases of affection correspond to a central process, we are inclined to expect only differences of degree, when we also assume that every element in a complex varies with the changes in the total complex, we tend to look for qualitative differences in unpleasantness according as the total process varies. Certainly the burden of proof seems to rest heavily on those who affirm such differences in quality.

3. As to the psychological status of pleasure—its place among other mental processes—three theories hold the field.

(1) The qualitative theory (Stout, Marshall).—Pleasure and pain are general qualities or attributes of mental process, either of which may be attached to any mental element. The term 'quality' is here explained as used in the same sense as when applied to intensity as a quality of sensation. Pleasantness thus has no substantive standing, but is always pleasantness of something, just as intensity never exists by itself but always as an essential attribute of a feeling and duration. Certainly the problem of proof seems to rest heavily on those who affirm such differences in quality.

(2) The sensational theory (Stumpf).—Pleasure and pain are sensations of the organic type. Pleasure is a diffused sensation of tickling or a weak sensation of lust. If pleasure were a mere attribute of sensation, it would not itself have the same intensity and duration, nor would a sensation persist in the absence of its attributes as is the case relative to pleasure and pain.

(3) The affective element theory (Titchener).—Pleasure and pain are the two phases of a simple affective process which forms one of the two elementary constituents of mental life, if we group sensation and image together as the second. Affection is similar to sensation in possessing quality, intensity, duration, but it lacks clearness, and shows a relation of a different quality. It is not possible to separate its qualities which mark it off from sensation. Tickling has its own sensory quality, which may be either pleasant or unpleasant, but which is not synonymous with pleasantness.

While the no qualitative concept is invoked on the questions involved in these theories, it may be remarked that the point at issue between (1) and (2) and (3) seems to resolve itself into the somewhat profitless logical distinction between subjective and objective concepts, while one may not be satisfied with the form in which the latter theory is usually stated, one cannot but feel that, in its recognition of the distinctness of pleasantness as an elementary aspect of mental life, it has in its favour the almost unanimous testimony of introspection.

4. As to the conditions of pleasure, our knowledge is still more incomplete. From the genetic point of view, it has been suggested that affection is undeveloped sensation or a mode of experience of the fundamental mental act of the organism, and that the free sensory nerve-endings may be its organ (Titchener). We have also the biological generalization that pleasure is the accompaniment of actions useful to the organism (Spencer), but such a generalization needs qualifying in the condition that it is beyond our present power to supply. A widely applicable psychological formula is that pleasure is the accompaniment of uninterrupted activity, of progress towards an end, whatever the end may be (Stout, Andrasik). Pleasure and unpleasantness seem to be life as a whole, and hence the activity may not have survival value, but in so far as it is an actual end the progressive realization of it gives pleasure. Such a formula seems more adequate for the more active type of pleasures than it is for pleasure in its whole extent. From the physiological point of view, there is a general tendency to consider the conditions for affection as central rather than peripheral, but guesses differ as to whether it is a matter of general nutritive condition or of motor preparedness as to which the certain cortical region is involved or the whole cortex.

5. For the place of pleasure in ethical systems see art. Hedonism.

NORMAN WILDE.

Pleroma.—This term has acquired a certain celebrity from its use in the later NT books, in relation to deity and in the making of the later developed systems of Gnosticism, as a designation of what may be called the Gnostic heaven—that supersensible spiritual sphere in which the Godhead was thought to exist and manifest itself above and apart from the material world. There were, of course, many remote and fantastic elements in the Gnostic idea, but every careful student who follows the course of Christian thought in the 2nd cent., at the time when Christianity came face to face with the advanced conclusions of speculative religions philosophy, will see how significant a phenomenon the Gnostic heaven is. This article will deal exclusively with the conception embodied in the term 'Pleroma,' and will endeavour to follow its use from the NT up to the form in which it finally appears in the system of the mystery of Elusus. The various elements of thought which are there united, and which form a fairly well rounded system of God and the world, had grown up out of, and had been gathered from, the great systems of the ancient philosophers, but these appear here fused and blended with the new ideas that Christianity had introduced. It was the first great attempt to exhibit Christianity as a part of the system of the world—and no mean effort either, as we shall readily see, if we are able to trace our way through the tangled maze of grotesque and mystical phraseology in which the Gnostic teachers indulged. In its most fantastic shapes, however, there are usually visible some gleams of rational thought.

1. NT use.—See NT use of the term 'Pleroma,'
in relation to deity, is given in Col 1:19, Eph 1:22, 3:10, 4:1. The word is found in other parts of the NT in the ordinary sense of ‘fulness’ variously applied, but in these passages it stands in a context which seems to require a special theological connotation with which the reader is supposed to be already familiar. The fullness of Godhead and the fullness of deity are conceived as great conceptions are affirmed or implied: (1) that the whole fulness of deity, the entire plenitude of divine excellences, energies, and powers resides in Christ; and (2) that, through union with Him, the believer is united to Christ in all his divine energies and the fulness which dwells in Him. Both these conceptions appear in the subsequent phases of Gnostic thought, but they are placed in new connexions and relations, and in the handling of them the kind of Scripture and the limits within which they are viewed in Scripture are soon lost sight of. In the views which St. Paul combatst Colossse: we recognize some incipient forms of Gnosticism which are easily identified with well-known features of popular Jewish beliefs characteristic of the age. There is given form to the notion that God and the world, and the false authority ascribed to various ascetic practices. The revelation of God which was given in the incarnation and mission of the Son, had been taken for granted by the Gnostics. They were mediators, whether angels or men; and the Father’s contention is that all the energies and powers of deity, all divine functions in the order and government of the world, reside in Him, all things visible and invisible, thrones, dominions, principalities, and powers being subject to Him. The Jewish teachers at Colossse: had doubtless taken their stand upon the common belief that there were many mediators through whom God communicates His will to men, and that the study of the divine dispensations of life or worship might be due. They had not yet discovered that in Christianity was given the final and absolute revelation of God to the world.

The idea that the entire fulness of the Godhead is manifested in Christ is fundamental to Christianity, and is, indeed, a wide-reaching conception, difficult to grasp by the intellect—a mystery profoundly significant and precious to faith. The Christian recognizes in Him the embodiment of all divine fulness, revealed in the later books of the NT we note an important advance upon the Christology of the Acts and earlier Epistles. In the latter the chief aspects of His Messianic dignity and glory are set forth as the ground for faith in Him as the Mediator of the Messianic salvation. The full content of the Messianic idea was not laid open, and was probably not called for in the earlier preaching. But at a later stage, with the advance of thought and a growing faith, the doctrine of the person of the Son became richer and fuller. It was seen that He is the full and complete expression of the Father’s nature and glory, the image of the invisible God, the effulgence of His glory, the very impress of His being. The Fourth Gospel, the book of Christology, embodies this conception in relation to the earthly life of the Redeemer, showing that the Son is the entire and complete manifestation of the Father. It is doubtless the spiritual and ethical perfections of deity that the Gnostics are aiming at when they speak of the Pleroma of the Godhead as ascribed to the Son, since these chiefly will be thought of as constituting the great essentials of the eternal life, which was with the Father, and which the Redeemer has brought to light. The difficulty in believing that all the recesses of deity are open to the knowledge of men, it is manifest that in the NT conception of the Incarnation there is given, besides the ethical perfections of the Godhead, a universal cosmic principle—the energies and powers which produce and sustain the course of the world. It is not easy to separate in thought the cosmic and ethical elements in the idea; in reality the two must meet and blend to form a complete whole. The ethical perfections of the Deity are displayed in the complex life of the material world, in which they must be sustained and vindicated by physical energies and powers. The Pleroma of the Godhead, therefore, contains not merely the totality of all the ethical and religious perfections, but the cosmic energies which the cosmos displays; and, all these being ascribed without limitation to the Son, there arises the necessary inference that He is the final and absolute manifestation of deity to men.

2. The Valentinian system.—From the various contexts in which the term ‘Pleroma’ is used in the NT it is to be gathered that the idea was new in the sphere of religion, and that towards the close of the Apostolic Age it was denied or opposed by many other and contrary hypotheses, viz. that there were many mediating agencies between God and men, and that the whole fulness of deity could not be communicated to any one being or person, however eminent.

The conception that appears in various shapes in all the forms of Gnosticism, and it is usually implied that no entire or perfect revelation of deity is possible in material things, that all perfect manifestations of God are confined to the sphere within which deity is to be found—the sphere to which they apply the term ‘Pleroma’ in a local or topographical sense. In some passages where the word occurs incidentally we see that the idea is of capital importance, and we are prepared for the bold effort which is made in the Valentinian system to maintain a single horizon of divine presence in regard to it. Among the earlier Gnostics the attempt was made to obviate the difficulty involved in the incarnation and passion of the Son, either by assuming that our Lord’s body was not real flesh and blood, but a form assumed for a time, or by saying that Jesus was the son of Joseph and Mary by ordinary generation, and that the Christ who descended upon Him at His baptism, being a spiritual being and, as such, impassible, departed from the human form of His mother. Irenæus describes this party as maintaining that Jesus was ‘merely a receptacle of Christ upon whom the Christ, as a real person, descended and rested, and that when He had declared the unnameable Father He entered into the Pleroma in an incomprehensible and invisible manner’ (Hær. iii. xvi. 1). The same passage as a new approach to the passage, ‘the Father of Christ from above . . . continued Impassible,’ and that, though He had descended upon Jesus the Son of the Demiourgos, He ‘rewent back again into His own Pleroma’ (Hær. iii. xvi. 1).

These two examples serve to show the point at which the Gnostic view diverges from St. Paul and the NT. He teaches that all divine powers and energies reside in Christ in permanent form, while they maintained that only a single power—the Christ from above—had dwelt in Jesus for a time, and afterwards returned to the Pleroma, from which thought it is clear that the Pleroma is viewed as the special sphere or abode of deity, separate from the rest of the world and not homogeneous with it.

Turning now to the system of Valentinus as it is expounded by Irenæus and Hippolytus, we find that the common centre of the elaborate theory of the world—of divine emanations, of creation, and redemption. It is the exclusive sphere of deity within which the evolution of the Aeons is accomplished. It has over against it the horizon of the Pleroma, which includes all that is outward, corporeal, physical, sensible. These two spheres include the totality of being real or conceivable, and there is an absolute difference and antithesis between them,
such that the one is the home of all that is perfect, godlike, eternal, imperishable; while in the other things are corrupt, perishable, shadowy, unreal. The \textit{Eons} which are begotten from the unfathomable abyss of deity are the divine energies, the functions of infinite life which manifest themselves in a definite order and succession; but towards the end of the ages the strength and purity have diminished, the last being far from the centre and source of life, one of them, Sophia, somehow passes out into the void beyond, and out of her tears, sorrows, and distaste the supreme and all-embracing energies of the Pleroma into the lower sphere where, divine seeds being already sown from the tears and labours of Sophia, all that is kindred with the Pleroma, after being redeemed and purified, returns to it at last as its ultimate home.

3. \textit{The Gnostic reconstruction}.—From this outline we are in a position to see how far the Gnostic conception has parted from the NT standpoint, and where it passes over into a region unknown and unapproachable by the soul. It is at the same time an exaltation of the spiritual and ethical quality of the concept of God, characteristic of Scripture, in which omniscience and omnipresence are implied, and sets about establishing bounds between the sphere appropriate to deity and an outer world. In this respect it still keeps to the old contrast of God and the world which dominated all the ancient systems. A parallel to this drift of thought is seen in the strong tendency towards the unknown and the unapproachable in Christian literature which was contemporaneous with the great Gnostic movement. Yet the speculative effort to reach an adequate idea of God, in harmony with the new data which Christianity had established, has much interest and significance. It was really the first great attempt to construct a philosophy of religion with Christianity taken into account. In the 'Valentinian Pleroma' there appear the chief conceptions regarding the nature of deity which speculative thought had then reached, but they are blended with the new view of the world which Christianity had established. In the doctrine of God taught in the Palestinian school the action of God in the material world was thought to be effected by various mediating agencies and angels, while in the Alexandrian school God was an independent, unqualified character, personal and impersonal. God Himself was too highly exalted in majesty and glory to come into immediate contact with man's world. Hence it was thought that the purposes of His will were carried out in the world by various orders of ministering angels. This view had grown out of the earlier OT doctrine of the holiness and exaltation of Jehovah, which at first was preached mainly with reference to sin and the imperfections of man's nature, but when the Pleroma had been received as the actual world, which had practically separated the Godhead from all contact with the world, leaving only the abstract idea of a Being exalted above all human thought, inscrutable and unapproachable.

With Philip, who taught the Alexandrian Pleroma, the result was reached by much the same process, partly also by the help of Platonic conceptions. Here also God in Himself is defined in terms of absolute being, mostly negative, without attributes or qualities. The \textit{Pleroma} is identified and sustained by His \textit{Logos}, or reason, and the vast multitude of inferior \textit{Eios} which determine all particular things. Among the Greeks, since Plato and Aristotle, God was defined as the highest good, or the supreme cause of everything from the actual world, who leaves the care of it to inferior agencies or powers. With Plato (\textit{Timaeus}) the demiourgos, or creator of the world, acts the part of an inferior deity, since he must build the world on the patterns furnished by the eternal ideas and from material already existent.

Now, having such an idea of deity to start from, and with the conviction that Christianity had brought something new in the sphere of religion—that in fact it was revelation from the highest God, as was held in all the Platonists—Christian speculation—Gnosticism set itself to a reconstruction along the whole line of the theistic conception, to provide for the passing of deity from the primal silence of a past eternity into a process of self-manifestation, from the \textit{Pleroma} of God to the spirit-sphere, to constitute an ideal world, from and after which the existing system of material things arose, in such wise that the creative and redeeming agencies which Christianity reveals are found to be solely in accordance with the laws of the higher sphere, but also the immediate revelation of them. The Gnostics all seem to have been greatly troubled with the imperfections of all earlier conceptions of God, Jewish as well as heathen, and, by assigning the various defects of the world and of earthly religions to inferior agencies or beings, they doubtless thought to secure a clear field for the new world which they saw in the new revelation. To be thorough, they began their reconstruction from the beginning, and assumed a movement from within the depths of the Godhead outwards, towards a world different from itself, to arise out of itself, and destined in its purer parts to return to it again, by the process of redemption which Christianity reveals and accomplishes.

4. \textit{The Gnostic reconstruction}.—A fairly clear account of the Pleroma in the system of Valentinus is given by Irenaeus and Hippolytus. Their eagerness to expose the absurdities of the system has often led them off the points of greatest interest for those who want to understand, and are outside the sphere of danger.

First of all, there exists in 'the invisible and inscrutable heights above' a certain perfect pre-existing \textit{Eios} on whom they call \textit{Proarche}. \textit{Propator}, \textit{Bythos}, invisible, incomprehensible, eternal, and unbegotten, remaining throughout innumerable cycles of ages in profound serenity and quiescence. Along with Him there existed \textit{Enmos} ('thought'), called also \textit{Chrus} or \textit{Sigis} ('grace,' 'silence'). At last this \textit{Bythos} determined to produce from Himself the beginning of all things. From the \textit{Chrus} was produced \textit{Zoe} ('life'), from \textit{Sigis} \textit{Elgon} ('wisdom,' 'intelligence'), and from these produced \textit{Nous} ('mind,' 'intelligence'), father and the beginning of all things. Along with \textit{Elgon} was produced \textit{Aletheia} ('truth,' 'knowledge'). These four constitute the first tetrad, and are called the root of things. From \textit{Nos} \textit{Aletheia} arises \textit{Logos} and \textit{Zoe} ('reason,' 'life'), out from this again \textit{Anthropos} and \textit{Eclesia} ('man' and 'church'), ideally conceived. Here, then, we have the first\,—the original, or \textit{first}, or \textit{primal}, or \textit{ultimate}, or \textit{immanent}, or \textit{underlying}, or \textit{efficient}, or \textit{essential}, or \textit{inherent}, or \textit{fundamental}, or \textit{primary}, or \textit{essential}, or \textit{organic}, or \textit{indispensable}—conception of \textit{God} which from the others proceed according to the same principle. The first movements of life within the \textit{Eios} give birth to the \textit{second} forms of all rational life—mind or intelligence, truth or reality, reason, life, man, church. These movements must first evolve into \textit{true} forms and become \textit{real}, \textit{concrete}, \textit{conceived}, \textit{conceived}, \textit{intrinsic}, \textit{inherent}, \textit{essential}, \textit{primary}, or \textit{organizational} consciousness as the essential and primary functions in the inner life of deity, the patterns or models of life also in man's world.

The first godhead, then, must be primary, since all the \textit{Eios}
which follow are contained or given in them by implication. From Logos and Zoé the third ten, from Anthrópoς and Ecclesián twelve. Reckoning Bythos and Sigé as the first in the series of the numberless the composition of the 3. 

numbers as injections sent probable as thei' the Spirit seem, through But, which which arise from Logos and Zoé, represent chiefly cosmical principles or powers which are necessary as a basis of ethical life. The last twelve, produced from Anthrópoς and Ecclesián, are mostly the qualities of the perfected humanity which Christiänity is destined to produce. A scheme for a Pleroma was contained in the earliest system of Basilides, but the term does not seem to have been applied to it. Basilides confimed the evolution of the divine life within deity to the seven powers—mind, reason, thought, wisdom, might, righteousness, and peace. But from this point the evolution continued through numberless grades of excellence in a descending series—a system which abandons the problem raised by Christianity.

5. The Pleroma and the world.—Returning, then, to the Valentine Pleroma, how did the system account for the origin of the world, and what is the relation of the world to the world? The passage from spirit to matter, from the absolute and the perfect to the finite and the imperfect, is the great problem that confronts all philosophies which attempt to explain the origin of the world. The Gnostics attempts on this problem show great constructive spirit and profound conception of what Christianity was expected to effect in the transformation of the world. Considerable difference of view appears, however, as to the manner in which the life of the Pleroma passes over into the region beyond. The myth of Sophia, which generally covers the origin of the world from the Pleroma, is put in various shapes, and it is not easy to gain a definite picture of the process as the Gnostics conceived it, if that was possible even to them. There was an extensive development of the very i.e. the wisdom, or constructive skill, which had laboured to bring about the world—had taken various shapes before speculative thought had attempted the bolier task of picturing the life of deity in itself. We have seen that schools of opposite tendencies were agreed in placing supreme deity at the farthest possible distance from the world. But Jewish thought, while agreeing with the results of Greek speculation on this point, sought to explain the action of God in and upon the world by assuming the agency of various semi-divine mediating beings. Among these high prominence was assigned to wisdom (Sophia) as a world-building and world-ruling power. Closely allied to this conception was that of a demiurgoς, or world-builder, which was intro- 

duced by Plato in his account of creation in the Timaeus, and which became a favorite figure with the Gnostics. These personifications represented agencies more or less inferior to the highest deity, and, by their actions, excused all the defects to these or similar beings; Gnosticism maintained a direct antithesis between God in Himself and all inferior agents who might have sway in the world. Deeply penetrated with the thought of the definite limit of the world, it is not at all surprising that the Jewish dispensation which preceded it was mainly the work of inferior beings, that the mission and work of Christ were a revela-
tion from the highest God, the Gnostics sought for a conception of the Godhead which should stand in closer harmony with Christianity and explain the present anomalies of the world. To some extent, therefore, their speculative construction was the work of the philosophers who had preceded their attempt at the heaven of the Æons, and the myth of Sophia had probably grown into some of its forms before the Æons of the Pleroma were fully established. The problem was, not to bring the world of spirit into a new and familiar world by a process of emanation from the Pleroma, but to form a bridge between two systems of thought which had grown up apart and from the opposite ends of existence. Already in Christianity Christ and the Holy Spirit had been set up as spiritual and cosmic powers. They had come from the great unknown, and place must be found for them in the Pleroma of the Æons. The conception of the Pleroma would not be complete till it was shown how the life of the Godhead, already perfect in itself in the higher sphere, is reproduced in the lower, and draws up into itself all that is susceptible of redemption.

The passage of creative life from the Pleroma over the Æons, ‘limit,’ into the region beyond is represented somewhat thus:

The life of the Æons was not one of perfect rest and quiescence, but a perpetual motion eternal and endless in the beginning; for the desire arose among the Æons to search into the nature of the Father, and of that which was separated from and comprehensible to all except Nous alone. He alone exulted in the greatness of the Father and he sought how he might reveal to the rest of the world what he had discovered. That the Æons also had a wish to behold the author of their being. However, this was not the will of the Father, and Nous was restrained in his desire. Yet the last of the Æons (Sophia), conceiving this passion by contagion from the others, desired to comprehend the Father and his will. But, seeing that it was impossible, she became involved in great agony of mind, and was with difficulty restored to herself, by the power of Æon. By an act of self-sacrifice and larger genial love, she passed through the excess of her desire, gave birth to an amorphous spiritual substance which, being separated by Æon from the circle of the Æons, constituted the beginning of the material world. Thus arose three distinct kinds of existence, the spiritual, the psychical, and the material—distinctions which play an important part in Gnostic teaching.

Now these movements of desire within the circle of the Æons showed how disturbance might arise even in this higher sphere. Accordingly, by the forethought of the Father, Nous or Monogenes gave origin to another pair of Æons—Christ and the Holy Spirit—lost any similar calmness should happen again, and to forfify and strengthen the Pleroma, and to complete the circle by the coming of the Holy Christ. The Æons were instructed as to the knowledge of the Father, since such knowledge was given to Monogenes alone. Being thereby restored to peace and quiet of mind, the Æons grouped together the best of what each possessed of beauty and preciousness, and, uniting the whole, they produced a being of the most beautiful and perfect of all beings. The Being thus produced, they named Nostos, from whom they name Saviour Christ, and everything, because he was framed from the contributions of all.

Returning now to the offspring of Sophia, which was separated from the Pleroma and constituted the beginnings of the world, the myth represents the world as a growth from seed which has fallen from the Pleroma. It describes the effects produced upon it by the action of Christ as one of the heavenly Æons and Jesus the Saviour. The lower world, therefore, is to be of a kind intermediate between the higher. Spiritual men, who are the seed of the Pleroma in greatest perfection, yet share in the benefits secured by the heavenly Logos and the Saviour, and rise to the Pleroma, chiefly in virtue of their spiritual gifts. The material men and a majority of ordinary Christians, stand in special need of the redemption which Christianity provides, while those who yield themselves to the seductions of the material world are subject to the destruction which is to come.

6. Conclusion.—In this brief outline the reader will see much that is fantastic and strange to the Western mind. Yet there are many gleams of profound thinking. The nearest parallels in modern systems may be found in those of Boehme and Schelling. For fuller details see art.

Gnosticism, and the literature mentioned below. A few general remarks may still be added.

The underlying conception of the Valentinian Pleroma implies a modified or weakened form of Dualism—rather a dualism of an ethical and cosmic powers. It is not a world of dead matter which resists and opposes the creative action of spirit. It is rather one of emptiness or defect which is waiting to be filled with the overflowings of divine life, and the process of filling which is the creative act. The future life, as revealed by the Logos, is in the heavens of the Æons, and the Spirit, are in need of redemptive help and ethical trial, while those who are buried in the life of sense are left to destruction.

It should also be noted that the life of deity within the Pleroma was liable to disturbance and had to be restored by the heavenly Logos and the Holy Spirit. The perfect felicity of the Æons lies in each keeping within the assigned limits. The fullness of deity does not belong to them as individuals, but to the whole. Disturbance arises when they desire to pass the limits assigned to each. Individually, therefore, they are beset with limitations, and exhibit the life of the absolute only in their totality. They present the manifold life and energies of the Godhead in a process of self-manifestation. This self-manifestation results in a life of growth in which the life of each is perfected, not in itself, but in the whole. The original part of the conception does not lie in the view of an inscrutable fountain of unknown deity, for that was common to all other speculative systems of the time. The life of growth, in which the life of each is perfected, is not in itself, but in the whole. The original part of the conception does not lie in the view of an inscrutable fountain of unknown deity, for that was common to all other speculative systems of the time. The life of growth, in which the life of each is perfected, is not in itself, but in the whole. The original part of the conception does not lie in the view of an inscrutable fountain of unknown deity, for that was common to all other speculative systems of the time.

PLOTINUS.—See NEO-PLATONISM.

PLURALISM.—Pluralism is currently defined as the metaphysical doctrine that all existence is ultimately reducible to a multiplicity of distinct and independent beings or elements. So defined, it is the obvious antithesis to monism (q.v.), and differs from dualism not only in emphasizing many as distinct from two realities, but also in providing for greater diversity among these distinct attributes. Dualism (q.v.) is primarily a doctrine of two substances, one material and the other spiritual, and

1 See, e.g., Baldwin’s DPP, a.v.; Bull. de la societe francaises de philosophe, xiii. (1901-06) 182; and R. Reitl, Welterkehr der philosophie der dualisten, Berlin, 1917. J. H. Poynting, in Phil. Mag., however, recognizes in a remanique another form of pluralism which will be considered in the last section of this article.
PLURALISM

is commonly stated in terms of the contrast between body and mind. It is apparent, however, that the material and the spiritual substance may each contain conceivable ingredients of two separate elements which, in spite of their likeness in kind, are really independent and self-existent. There may be many independent atoms of matter, and there may be many independent spirits or minds. In one sense, therefore, materialism and spiritualism are identical. Even monism may be similarly pluralistic if it is conceived as only a doctrine of one substance, either material or spiritual, as opposed to more than one. For it is evident that the one substance may be split into two or more indeterminate parts independently existing at length, qualitatively alike. The possible forms which pluralism may take are, therefore, many. It is not important, however, either to attempt to classify them or to discuss them, because only materialistic pluralism and spiritualistic pluralism have had any significant presentation in the history of thought.

1. Materialistic pluralism.—Materialistic pluralism has been represented by the consistent atomists from Democritus to Sir William Ramsay. The atomism and the medium in which the atoms move have, however, been variously conceived. The view usually ascribed to Democritus, and held by many subsequent thinkers, is apparently the simplest statement of the theory. The atoms are very small particles of matter, so small that they resist neither motion nor change. They are qualitatively alike, but differ in size and shape, i.e., in their geometrical properties. They have always existed and are indestructible. They move freely in space by their own natural motion. Space is mere emptiness, the void, and consequently offers no resistance to the movement of the atoms. The motion of each atom, if left to itself, would be rectilinear, but, since the atoms differ in size and shape, they collide with one another, and the motion of the whole mass is, consequently, turbulent. As a result the geometrically similar atoms tend to congregate and form selected and ordered systems, first the 'worlds' in space and then the particular things of each world. But the general instability of the whole mass keeps any particular combination of atoms from persisting indefinitely. There is, consequently, perpetual combining and recombing among the atoms; and, on account of the many geometrical differences between the atoms, the number of such kinds of combinations is practically limitless. With Democritus, as with most of his followers, this view of the atomic structure of all things seems to have resulted from the attempt to generalize, solely in terms of the geometrical properties involved, the empirical fact of the divisibility of concrete masses of matter.

The qualitative diversity which the world obviously presents is usually either disregarded or viewed as a consequence of our way of perceiving. Democritus is reported to have said that, while we commonly speak of colours, sounds, etc., in reality there is nothing but atoms and the void.

The atomic theory (q.v.) admits of many variations, but its pluralistic character is not affected so long as it may be split into two or more indeterminate parts in the medium in which they move is equivalent to empty space. The atoms may be qualitatively different or the ultimate elements of a limited number of different material substances; they may expand or contract, they may move with natural affinities and repugnances; they may be acted on by forces exterior to them or be impelled by forces resident in them; they may be so closely packed as virtually to exclude the necessity of a medium, and yet be conceived in themselves permanent and undeniable. When, however, the medium in which the atoms operate is not conceived as empty space or its equivalent, the pluralistic character of the system is affected. For it is evident that the new medium—the other, e.g.—cannot be atomic in structure, but must be continuous, and cannot break the continuity. The medium must, therefore, penetrate them, but this penetration robs the atoms of their original simple character, and tends to make them appear as modes, rites, involution, aflection, comprehensions, &c., in a medium itself. Such a direction as this recent chemistry and physics have taken, impelled thereto not only by speculative considerations, but also by experiments, like those of Sir William Ramsay, which have at least taught the notion that material substances are convertible. The doctrine of relativity in physics moves in the same direction. Judged, therefore, by contemporaneous tendencies, materialistic pluralism as above defined does not represent any progressive ideas of the sciences which deal with matter. The tendency is rather towards a monistic conception or a complete relativism.

2. Spiritualistic pluralism.—The leading historical representative of spiritualistic pluralism is Democritus' fellowcountryman, Thales. Although thinkers in later times have believed in the existence of many independent minds, few of them have, like him, made this belief the dominant and controlling factor in metaphysics. His philosophy, although among those who to a degree divided the world of being into spiritual and material, was not the result of the generalization of empirical fact such as marked the theory of atoms. It was the result rather of his attempt to avoid the monism of Spinoza, on the one hand, and atomism, on the other. In place of the atom he puts the monad—an ultimate, simple, and self-existent spiritual being. The monads do not have geometrical properties, nor do they exist in space as in a void. Their independence and metaphysical exteriority to one another constitute a kind of quasi-space in which they may be said to exist. Their properties are spiritual or psychical, such as appetite, desire, perception. Each is self-contained, 'windowless,' and neither influenced nor influencing anything else. Their influence, as a result of the generalization of the substance, is the whole range of possible development from its own peculiar position in the series. All things are made up of monads. The highest monad in the body is the soul, and the highest monad in the system is God. But God's relation to the other monads is not always clear. At times He is one of the monads, at times their creator, at times the unity in the system. Among the monads there is no spatial motion, for their life is not that of physical movement, but that of purposeful development. It is their externality to one another combined with their concerted life that gives us the phenomenon of physical movement in physical space.

This doctrine of monads may be taken as representative of spiritualistic pluralism generally. It has never had the influence on scientific procedure which the doctrine to which it is opposed has had. For the atomic theory is an attempt to generalize the empirical fact of the divisible, and to employ the language of mathematics to make this generalization workable. As a result it has been embraced by many who are not materialists, but who have found it a potent instrument in scientific investigation. This is particularly true of the attempts to construct a pluralistic system of spiritual entities—is, as already noticed,
fundamentally a protest against materialism. When it addresses itself to the concrete facts of nature, it amounts to little more than the attempt to make the atoms spiritual—to substitute psy-
cial and personal, and a useful development for external physical motion. That is why it appears to be more an ingenious speculation than a fruitful hypothesis.

3. The new pluralism.—Although philosophical unities has recognized in the theories just considered the two classical forms of pluralism, it should be observed that neither of them denies the funda-
mental unity and wholeness of the universe. There may be many atoms or many nimbles, but in either case there is only one universe, and this universe is a coherent and self-contained whole. The resulting speculative opposition between the one and the many has probably done more to keep philosophical interest in these systems alive than any genuine illumination which they afford. For this opposition has proved itself repeatedly to be a potent stimulus to philosophical reflection. In terms of it a different form of pluralism may be defined which has many supporters among con-
temporaries. This is the doctrine of the 'plurality of worlds' in the sense of Schiller, John Dewey, and a few others. This new pluralism is not a doctrine of many substances opposed to monism conceived as a doctrine of one. It is rather the doctrine that there is no absolute unity in the universe, and it is opposed to the monistic systems of the 19th century. Absolutism in some form had as its supporters nearly all the leading thinkers of the world, and had become almost a settled dogma in philosophy. In the face of evident logical and moral weakness of the philosophy of emergentism, a few philosophers had the courage to deny that the universe is a thoroughly coherent system in which, by virtue of its unity, a place and time and cause are, at any moment, implied for every event that has taken place or can take place. Thinking was constrained by the principle so eloquently set forth, e.g., in Emil du Bois-Reymond's famous essay, *Ueber die Grenzen des Naturwissens* (Leipzig, 1872), that, did we know completely the state of the world at any one moment, we should be unable to calculate its state at any other moment. Oppo-
tion to this dogma was not very effective until towards the close of the century, when the writings principally of William James, John Dewey, F. C. S. Schiller, and others effectively challenged it and put it on the defensive.

James was, doubtless, the protagonist in the movement. He named his philosophy 'radical empiricism,' and occasionally 'pluralism.' In the preface to *The Will to Believe* (1897) he gives this general statement of his position:

"The crudity of experience remains an eternal element there of. There is no possible point of view from which the world can appear an absolutely single fact. Real possibility, indeterminations, real beginnings, real ends, real evil, real crises, catastrophes, and escapes, a real God, and a real moral life, just as complex at any one moment, we should be unable to calculate in empiricism as conceptions which that philosophy gives up the attempt either to "overcome" or to reinterpret in nonistic form." (p. 15)

Dewey's insistence that thinking is a real instru-
ment which brings situations essentially inde-
terminate into determinate form, Schiller's rather individual and peculiar type of pragmatism, and Bergson's insistence that evolution is essentially creative and discontinuous, all point to this new philosophically, while changing the framework, to the same end.

There has not yet, however, so far as the writer is aware, appeared any systematic presentation of the metaphysics underlying this new movement in philosophy. What is here called pluralism represents a reassertion of a belief in the multiplicity of personal and mental states, and it is probable that the general direction of this tendency in various departments of human interest is indicated below, but here an attempt may be made to suggest the basa

The general direction of this tendency in various departments of human interest is indicated below, but here an attempt may be made to suggest the basa
ceeds. Such appears to be the general metaphysical groundwork of the new pluralism.

In psychology the tendencies have been more initiative, and here they have been most effective. During the past thirty years the attempt to construe the mind or consciousness as a substance or as a complex of elementary sensations united by fixed laws of excitation has progressively yielded to the attempt to conceptualize mental life as a system of activity and response. Although many psychologists have independently contributed to this progress, the publication in 1890 of James’s Principles of Psychology may justly be cited as critical. Here was the first effective and growing appreciation of the idea of the humanly characteristic, rather than as a matter beginning with the gods. There is, too, as in the ethical tendencies, the denial of absolutistic ideas. Consequently there is recognized no one religion which can be judged valid as well as against all others. In estimating the worth of any religious moral instead of logical or metaphysical standards are employed.

It is mainly as a new and potent stimulus to fresh philosophy, implying that certain pluralistic tendencies are to be estimated. Under the absolutistic systems of the last century, philosophy had largely lost its vitality. It had become almost exclusively historical, a comparative study of systems, and was not a means of organizing or systematizing experience. This newer conception of the mind has spread beyond psychology and markedly affected anthropology and sociology. Primitive peoples and society are studied more in terms of what they do and less in terms of the supposed ‘consciousness’ that they once credited with possessing.

In logic the new movement has been more equivocal in its success. It has illuminated in a brilliant way the concrete procedure of thinking, especially how distinctions like object or thing and idea arise in its course and are not the constituent elements of thinking itself. It has given us the logic of ‘how we think.’ But the opposition to formal logic which has too frequently accompanied this service has obscured many logical issues and problems. The structure of accomplished thought has been too much neglected. The older logic, especially in the form set forth by Bertrand Russell, is still an active and constructive opponent of the new.

In morals and religion it is premature to attempt to state with conclusiveness the effects which the new movement is likely to produce. Yet, so far as morals are concerned, the general direction is fairly clear, as may be seen from the Ethics of Dewey and Tufts (1908). The tendency is away from fixed, a priori principles, and towards the concrete exigencies of life. Morality is conceived, not as a system of rules which should be obeyed, but as the type of life which characterizes beings who desire and wish, hope and fear. Responsibility is conceived, not in terms of an obligation imposed upon living, but in terms of an increasing sensibility of the value of human relationships. There are no absolutes. Justice, e.g., is not such. It is rather the situation as it progresses, not the ideal, which is progressively effective manner. In brief, morality is not an absolute ideal which, being somehow imposed on man, orders him to be moral. It is the kind of life that man conceives to be most adequate to him with the most expressive of his natural impulses and his ideal hopes.

There is in these considerations a close resemblance to the more refined forms of utilitarianism, but the doctrine is not utilitarian as commonly understood. It is a simple but elaborate computation of pleasures and pains is implied. No attempt is made first to estimate the greatest good of the greatest number, and then to act accordingly. There is rather the attempt to take human relations seriously as they are given—the family, friends, the State, love, property, marriage—to see towards what they point, what desires and hopes they engender, and then to bring the resources of knowledge to bear upon the perfecting of these or the elimination from them of that which makes communal living difficult and unlovely.

In religion the tendencies are not as yet well defined. It is possible, however, to recognize among religious writers influenced by the new movement a growing appreciation of the idea of the humanly characteristic, rather than as a matter beginning with the gods. There is, too, as in the ethical tendencies, the denial of absolutistic ideas. Consequently there is recognized no one religion which can be judged valid as well as against all others. In estimating the worth of any religious moral instead of logical or metaphysical standards are employed.

It is mainly as a new and potent stimulus to fresh philosophy, implying that certain pluralistic tendencies are to be estimated. PLUTARCH

PLUTARCH—1. Life.—Plutarch was born about A.D. 46, as may be inferred from the statement that in 65, the year of Nero's visit to Greece, he was a pupil of the Academic philosopher Ammonius in Athens (de EL apud Delphos, 1, p. 385 B). He was a native of Chaeronea in Boeotia, and showed a constant affection for his birth-place, which he ultimately made his home. Belonging to a wealthy and influential family, he was able to secure his education open to a young man of his time. He was instructed in medicine and natural science by the physician Onesicrates (de Mus. 2, p. 1131 C) and, though there is no direct evidence of his pupilship, it is by the art of whose rhetorical training is manifest in such of his early writings as the de Fortunis Romanorum (pp. 317–336) and the Aqzane an Agnis sit utior (pp. 955–965).

When still a young man, he was sent as an envoy representing his native town on a mission to the proconsul (Proc. ger. Reip. 16, p. 816 D). It seems that political business was also at any rate the ostensible cause of his visits to Rome (Demosth. 2), the earliest of which must have taken place in the reign of Vespasian (de Sollert. Anim. 19, p. 974 A). It is a legitimate assumption that he made several visits (cf. Quest. Conv. viii. 7.1, p. 727 B), and that they occupied a considerable time; for he shows an intimate acquaintance with Roman topography (e.g., Popp. Cat. 1), and the end which was so well known there that he was accustomed to deliver lectures in public (de Curios. 15, p. 522 E). Among the chief of his Roman friends may be reckoned C. Soinius Senecio, who was four times consul, and to whose family Plutarch was still attached when he, with the other masters of Parallel Lives were dedicated, and Mestrius Florus, another consular, in whose company he visited the historical sites of Gallia Cisalpina (Oth. 14). During his residence in Italy he acquired a high reputation as a teacher of moral philosophy, and was rewarded with the devotion of a large band of pupils. It seems evident that in this intercourse the medium of communication was the Greek language; for Plutarch makes the interesting confession that he was well advanced in years before he commenced to study Latin dialectics (p. 464 C), and the end which he makes in his incidental references to the language (e.g., εἰνε πάρμα, οὐκ οὖν πάρμος [Quest. Rom. 103, p. 285 F]) are such as to prove that his acquaintance with it was never more than superficial.

Of the works of Plutarch the only authentic are of Suidas (s.v. Πλούταρχος), he enjoyed the favour of the emperor Trajan, by whom he was elevated to consular rank, while the governor of the province was enjoined to take his advice upon all matters of importance. Plutarch himself may have witnessed the early part of the reign of Hadrian, but died not long after 120; for he speaks of the Olympicium in Athens as unfinished (Solon, 32), whereas we know that it was completed by Hadrian between the years 125 and 130.

In the latter part of his life Plutarch seems to have settled permanently at Chaeronea, where he was interruptedly engaged in literary labour, except during the performance of the duties attached to his municipal offices. As Chaeronea he filled the post of overseer of buildings (Proc. ger. Reip. 15, p. 811 B), as well as that of archon tov kórmavon (Quest. Conv. ii. 10, p. 645 F). He was also an associate of the college of priests to Apollo at Delphi (ib. v. 2, p. 674 D). Notwithstanding these activities, he gave lectures from time to time both on philosophical subjects and on matters of wider interest (cf. de Rect. Rat. Aud. 1, p. 37 C). In his domestic life his relations with his wife and children were strikingly tender and affectionate, and are charmingly illustrated in the letter of consolation addressed to his wife Timoxena on the death of their infant daughter, who was named after her mother. From this letter a single sentence may be quoted:

"As she was herself the dearest object for her parents to fondle, gaze upon, or listen to, so should her memory remain to us as a joy for exceeding its pain" (Counsel ad Uxor. 3, p. 658 E).

From the same source (5, p. 609 D) we learn that two of the four sons born to Plutarch and his wife died at the age of eight months. The maternal aunts of them, who survived, Autobulus and Plutarcho, are recorded in the dedication to them of the treatise de Animae Procreatione in Timno (p. 1030 D); and they are mentioned as taking part in the various discussions which arose around the table (cf. Quest. Conv. viii. 3, p. 735 C). We have also of the marriage of Autobulus (ib. iv. 3, p. 668 D), who appears again as the narrator of the Ama
torius, and as a character in the dialogue de Sollert. Animatum. But it was not merely within the family circle that the kindred interest of Plutarch's character were displayed. There is abundant evidence from his Table Talk (Questiones Convivales) and the other dialogues that to his friends he was an object of affectionate regard no less than of respect for his moderation and sense. His writings have made a similar impression upon posterity. Among many testimonies to his worth we may instance the judgment of Mahaffy, who happily remarks:

"We feel inclined to say Sir Walter Scott, not only the originator of an insensibly instructive form of historiography, but also essentially a gentleman—a man of honour and of kindli

des, the best of the race for the man of his day" (Greek World under Roman sway, p. 393).

2. Works.—The most celebrated of Plutarch's works is his Parallel Lives, intended to exhibit a comparison of the greatest men whom Greece and Rome had produced, by the publication of their biographies side by side in pairs. Forty-six of these lives have come down to modern times, and their world-wide celebrity makes it the less necessary to describe their characteristics, especially as we are more nearly concerned with the other branch of his writings, which is conveniently but inaccurately labelled the Moralia. It is enough to say that the Lives were not so much the fruit of historical research as an endeavour to illustrate the moral writings of their author by depicting the characteristics and dispositions of men who have actually lived.

The collection of the Moralia (Πρακτικά) is so described because most of the treatises which it comprises deal with what may be called 'moral' imprints, although not with the principles of ethics. The writings are actually a miscellany, containing discussions on religion, literature, politics, education, philology, folk-lore, archaeology, and natural history, as well as some of a severely philosophical type. Plutarch is less a philosopher than an essayist, and the most characteristic of
his writings are those which, in dealing with such subjects as garrulosity, false shame, restraint of anger, or flattery and friendship, display, together with a profusion of illustration and anecdote, the good taste, common sense, and genuine humanity of their author. Not the least of their merits for the modern world is that, apart from a wealth of information on literary history, the *Moralia* are a pleasant and instructive record of the lost writings of early poets and philosophers.

3. Leading ideas.— (a) Philosophical and religious.—By his adoption of the dialogue form for most of these treatises Plutarch acknowledged his predecessors. He adopted the literary methods as he was formally an adherent of his teaching (*cf. de Def. Or. 37, p. 431 A*). The latest tendency of the Academy had been in the direction of eclecticism. Philo and Antonius had abandoned the extreme scepticism of Arcesilaus and Carneades, and while laying greater stress upon ethical doctrines, had made an approach towards the positions of the Stoics and Peripatetics by advocating life according to nature, and the plurality of virtue as well as its self-sufficiency. In *De Inconstitutio Chriosttia* he undertook the analysis of a new movement, of which Plutarch was the most distinguished representative, gradually become apparent. Its leading features are two—a closer application to the study of the Platonic writings and of the *Stoics*; of the latter, of mysticism, which ultimately issued in Neo-Platonism. Not that the accretion of alien doctrine was entirely repudiated; for it has even been said of Plutarch that *it would be hard to say whether the number of Stoics and Platonists which he regards exceeds that which he quotes with approval* (Mahaffy, p. 301). At the same time the most important of Pintarch’s strictly philosophical writings are those directed from an Academic standpoint against the Stoics (*de Stoicorum Rerumnantis, de Commnnibus Notitiis*) and against the Epicureans (*adversus Coloten, Non posse suaviter vivi secundum Epicurum*). His positive contributions towards the elucidation of the Platonic text are contained in the *de Animo Procrorations in Timo*, the *Contra Apionem*, the *Ingenium Logi*n, and his *Summation of Philosophy* than the controversial writings previously mentioned. Plutarch adopted Plato as his two ultimate first principles the One and the Indeterminate Dyad (boeis dépejrois). The second is the nature of the One, which Plutarch calls a disorder, is called *Intuity* (*aireia*), whereas the nature of the One, by defining and occupying the Infinity, which is empty, irrational, and indeterminate, endows it with form, and so makes it capable of supporting and containing the determination which is a necessary accomplishment of sensible objects (*de Def. Or 35, p. 428 F ff*.). The combination of these two principles, unity and duality, is seen most clearly in the production from them of numbers (*ib.*). The creation of the world was the result of the concatenation of three factors.—God, matter, and form. Matter is the shapeless underlying substratum; form is the fairest model; and God is the best of causes. God, in His desire to leave nothing indeterminate, but to organize nature with precision, at once took away the chaos, which was the cause of evil, which proceeds from a foul and malignant necessity struggling with and rebelling against God (*de Anim Procr. 6, p. 1016 A, de Is. et Osir. 45, p. 370 F*). The war of these opposing principles is especially to be detected in a man’s chequered existence, and in the region of inequality and change which lies between the earth and the moon (*de Is. et Osir. 45, p. 369 D*). God exists not in time, but in eternity, which for His unity is an everlasting present, without beginning or end, past or future. As being absolute unity, He is incapable of differentiation (*etéygría* [de *Et apud Delph. 20, p. 393 A, B*]). God sees, but cannot be seen (de *Def. Or. 12, p. 385 D). Not only pure and undefined by any form of existence liable to destruction and death; hence our souls, which are encompassed by the body and its attributes, cannot reach God, save only in so far as, by the exercise of the mental powers, which is the true spirit of philosophy, they may attain to an indistinct vision of His image (*ib. 78, p. 382 F*). Life in the body upon earth is an exile of the soul (*de Kzid. 17, p. 607 D*). It has come from the gods and will return thither, so soon as it is discharged from the trammels of the body. It is like a flame which shoots upwards in spite of the misty vapours that cling round it and seek to bind it to the earth. Hence it is not the bodies of good men that go to heaven; but their souls pass into heroes, from heroes into immortal gods. Their bodies however have been mysteriously cleansed and sanctified, so that they are free from any mortal affection, then in no merely conventional sense, but in very truth and by a blessed consummation, they are caught up to the divine nature. When the body is dissolved, the soul lives on. Some souls are not entirely imprisoned within the body, but, by keeping the purest portion in external association with the topmost surface of their owners’ heads, who are thus lifted upwards and saved from all suffering, they purify their immortality free from bodily taints. This part, called the intelligence (*nous*), and generally supposed to be innate, is actually external, and would more properly be known as ‘demon’ (*de Gen. Soc. 22, p. 591 D*). It is unreasonable to disbelieve in the inspiration of certain individuals, if we retain our belief that God is a lover of mankind. The ordinary man learns the commands of God by signs, which the prophetic art interprets, but there are a few who on mysterious occasions are able to divest the body and see the divinity. Further, when souls freed from the body have at length become demons, they still retain their interest in the world which they have left, as Hesiod was aware (*Op. 129*), and are allowed by God to assist men, and make their lives interesting in the most direct way. There are yet in the last period of their incarnation (*de Gen. Soc. 24, p. 593 A F*). There are, however, bad demons as well as the good; and they are elsewhere described as belonging to the borderland which separates gods and men, and as subject to mortal affections and the changes wrought by necessity (*de Def. Or. 12, p. 416 C; *cf. 17, p. 419 A, de Is. et Osir. 28, p. 360 E*). These passages are typical of much in Plutarch, and their Platonic character is unmistakable. At the same time, it should be observed that, in emphasizing his belief in demons, he was echoing the teaching of the Stoics (see art. DEMONS AND SPIRITS [Greek]). The same remark applies to his treatment of mysteries. Divination is the gift of God to man (*de Def. Or. 12, p. 413 C*), but the decay of oracles is not on that account to be attributed to Him, but rather to the failure of matter (*ib. 9, p. 414 D, E*). In a curious passage (*ib. 40, p. 432 D*) he speaks of the loss of the prophetic capacity as resembling a sheet of paper torn away from the warnings of sensation, when the seer is withdrawn (*exetaygría*) from the influences of the present and is filled with the spirit of prophecy (*dehnavmon- pōs*). This inspiration may be exerted, even by the intercession of voices, to either see or hear through water at particular
places in the form of flowing water or breath. Elsewhere (de Pyth. Or. 7, p. 397 D) he says more simply that God does not inspire the voice of the prophetess or the words which she uses, but merely provides the sense-impressions which gods wish to impart, enabling it to look upon the future. Thus, though agreeing with the Stoics in upholding the truth ofjwtvó, Plutarch refused altogether to countenance the Stoic doctrine that the divine spirit permeated the material world of metal in the world (ib. 8, p. 398 C). His whole attitude towards religion is guided by a spirit of conservatism, seeking to uphold each venerable institution, while finding elements of truth in the various devices by which philosophers sought to remove traditional difficulties (ib. 18, p. 402 E. Amat. 13, p. 756 B). Thus he would steer a middle course between superstition and atheism, recognizing that there is not so much difference in the nature of the gods as the various conceptions of them by Greeks and barbarians, and the names given to them, might seem to imply, but that there is only one Reason that sets in order and one Providence that controls the world (de Is. et Osir. 67, p. 377 F F). The elaborate discussion of EGYPT (p. 473 A-B) is a testimony to the money to the progress of these foreign cults in the estimation of his fellow-countrymen, and is so constructed as to show that the ideas which underlay them are essentially the same as those which are recognized by the theologians of Greece. The leading motive of the short essay de Superstitione, which is, however, regarded by some merely as a rhetorical exercise undertaken in defence of a paradox, and not therefore characteristic of its author's real view (Mahaffy, p. 448, E.), shows that a perverted and ignorant belief of respecting the nature of the gods and their attitude to mankind is more harmful to the peace of the soul than an obstinate refusal to believe in their existence. While he had no sympathy with Epicurean rationalism, which destroyed the value of piety (ead. Colot. 37, p. 1123 A), he was not less disinclined to accept the reckless allegorizing of the Stoics, which, by making Ares a mere synonym for combativeness, Aphrodite for desire, and Athena for intelligence, rejected the moral divinity of the Greek gods and plunged their worshippers into a gulf of atheism (Amat. 13, p. 787 B). It was therefore quite consistent with his general attitude towards religion that Plutarch, as we have seen, himself exemplifies the Stoic position with his own wife to take part in the sacrifice offered on the occasion of the festival of Eros at Thebes (ib. 2, p. 749 B). The same moderation may be detected in his attitude towards Orphism. While he wholeheartedly condemns the follies of excess attendant upon the popular celebration of its rites, the modes of cleansing and purifications which were themselves filthy, the wearing of ragged garments, the wallowing in the mud, the ridiculous importance attached to the eating or drinking of peculiar foods (ib. 12, p. 171 B), he was himself the advocate of a reasonable abstention and asceticism (de Tuend. Sant. 19, p. 132 E, de Is. et Osir. 2, p. 352 A), and, by his abstention from eggs for a season in consequence of a disease, led himself on to the adoption of asceticism having adopted Orphic tenets (Querat. Conv. ii. 3, p. 635 A).

We have seen that Plutarch regarded the existence of evil as an outcome of necessity, but he has much more to say that on the one hand the gods permit the existence of moral evil without exacting appropriate punishment. To this subject he has devoted the important dialogue de Sera Numinum Vindicta. The occasion is provided by a supposed lecture of Epicurus, and various answers are given to the objection raised against what is assumed to be the ordinary dealing of Providence, namely, that the delay in punishment encourages the sinner and disappoints the injured. Thus it is said (1) that the gods are not averse to repentance, and thus set an example to others, teaching them to beware of hasty resentment, and (2) that by this delay they are able to distinguish those who are incurable and require extirpation from those who have fallen into ignorance than of deliberate choice, are deserving of remedial treatment (5, p. 550 C F). Again, since it is always possible that a wicked parent may beget a virtuous offspring, it is natural that God should not commit a first-born to stock, without waiting to see whether it will not produce a good fruit (7, p. 553 B). But the best answer of all is that the delay is only apparent, since sin, by the misery which it causes to the sinner, brings its own punishment with it, so that length of life becomes an aggravated unappreciation (9, p. 554 A F). We are then introduced to the topic of punishment in the next world, and the dialogue concludes with a myth concerning the experiences of one Theseus, who, during a trance, was believed to have been seen in the Tartarus of Hades and to have been permitted to return in the appearance of a pauper to the land of the dead (ib. 13, p. 689 B). This is the story of the deceased, who is seen among the dead in Hades, to whom an old man tells him that he, Theseus, is a youth of the time of the Trojan War, and that he must seek for his former wife among the souls of women who had died in the war (ib. 13, p. 690 A). As his is the only name that is presentable in the presence of the judge of souls, he is permitted to return to the land of the living.

(b) Ethical.—The strictly ethical treatises are in the nature of short essays on moral subjects, based upon psychological observation, and designed to effect the moral improvement of their readers. Here we find Plutarch in the character of a physician of the soul, a public preacher who, so far from being inspired with the fervour of a new revelation, sought, by means of copious illustration and apt quotations from the poets, to instil a reasonable exercise of the human virtues. The practical application of his advice is shown in his three treatises belonging to the consolatory type (παντοκοπωνικόν), acknowledged by the schools as a special branch of casuistry (παντοκοπωνικός τότε; see the present writer's notes on Cunct. frag. 92 f. [Proem.] consolatorius, p. 1431 b. Cambridge, 1891). These are the de Exilio and the Consolatio ad Uxorinem, which have already been mentioned, and the more elaborate Consolatio ad Apollonium, which was largely indebted to Crantor's παντοκοπωνικόν. In fact, a considerable number of these writings are open to the suspicion that they are dependent upon an acknowledged, principally Stoic, source.

As an example we may instance the short treatise de Virtute Morti, which contains comparatively little of Plutarch's characteristic manner, but, while designed to support the Platonic psychology by advocating the submission of the emotions to reason rather than their entire eradication, is constricted to serve as a compendium of moral doctrine with material drawn from the severer texts-books of the Peripatetics and Stoics.1

1 M. Polhez, in Hermes, xxxi. [1896] 328, 329, finds the original source of the treatise in a work of Hierocles of Rhodes.
POINTS OF THE COMPASS

after mentioning the advantages of various forms of abstemiousness, he continues:

"I put aside them a distinctly no less acceptable to the gods: I regard as that which is the abstinence a voluntary omission of milk and
honey, to keep myself free from passion first of all for a few days. But I was not afraid to break it, to which I was accustomed to one or two
months, so that I continually made progress in the
tolerance of evil, exercising an unceasing control upon my
temper. I succeeded by constant and repeated endeavors to
restrained consistently from base talk and extravagant action,
and repressed any emotion which provoked violent agitation.
shaming myself of my actions, I was satisfied with my
trifling pleasures. By these means I was contented, and, by the favor
of heaven, time has confirmed the experiment, so that
the spirit of cheerfulness, gentleness, and kindness is to
none of his associates so gracious, welcome, and comforting as to
the mother of men, my father, and myself."

In another passage he deduces a similar moral from the contemplation of the glories of the physical world, which, following ultimately a Peripatetic model (I. Bywater, in J.P.h. vii. [1876] 80), he compares with an august temple, where the most exalted mysteries are being continually celebrated:

"Yet men debate this festival which God has provided for
them by unceasing lamentation and dejection, permitting themselves
ever to be harrowed by weariness and anxiety." (De Trans. An. 26. p. 477 E.)

Just as in religion he endeavoured by compromise to
adjust extreme views, so in ethics he sought to reconcile extremes of the human spirit, by
refusing to accept in their entirety the tendencies
with which he partly sympathized.

"He will not adopt with Plato the equality of the sexes, or
with the Stoics the justice of slavery, or with the Pythagoreans
the rights of the lower animals to justice at the hands of men,
yet he goes a long way with all three—magnifying the position
and the dignity of the householder both by example and
precept, inculcating everywhere kindness and consideration to
slaves, adopting even vegetarian doctrines in some of his earlier
texts, in which he had nothing to hide and with the
superior insight and Intelligence of the animals we patronize or
oppress" (Mahaney, p. 203).

(c) Political.—In regard to politics, Plutarch
reproduced the Epicurean advocacy of abstention (Pyrrh. 20) as expressed in the formula 'Live in retirement' (άδητος ἑορτάσας), against which he directed a short treatise (de Latenter Vivendo, pp. 1125—
1130). But he lived in an age in which the limits of political activity were severely limited, and he was the last man to waste himself in chancing against a restriction which it was neither wise
nor possible to break down. Thus he sincerely believed that monarchy was the most perfect of all forms of government (De Signis et Epp. p. 14), that it is wise to
choose a chief who can be and is careful to
observe a mean between latitude and severity, so
that he may not incur either the hatred or the contempt of his subjects by aiming at despotism or
making concessions in favour of popular government
(Thes. et Bum. Comp. 2). He recognized that
it was idle to rebel against the imperial dominion or
to cast wistful eyes upon the historic battlefields of Marathon and Plataea (Proc. ger. Reip. 17, p. 814 C). The chief political virtues are not pride and
stubbornness, but patience and tolerance,
which are the fruits of a well-trained reason
(Coriol. 15). He has even a good word to say for
Thermenes and his proverbial 'boot which fitted either leg' (Proc. ger. Reip. 32, p. 824 B), and holds that the politician should make it his chief
aim to avoid a crisis. Thus, if the greatest blessings which communities can enjoy are taken into
account, it will be found that, in regard to peace, the Greeks have nothing left to desire, since every
form of warfare, domestic or foreign, has come to an
end. The measure of freedom, to enjoy it as much as their masters allow them, which is
perhaps as much as is good for them (ib. p. 824 C).

What sort of politics other than the petty activities
of municipal government was it possible for
Plutarch to recommend? His own life is now
seen to furnish a near approach to the only ideal
which he regarded as attainable. A public law-
suit or a depiction to the emperor is the chief
opportunity for a courageous and prudent man to
seek his own happiness (ib. p. 823). We
should not always be striving after the highest
offices, such as that of strateugos in Athens, prytanias in
Rhodes, or Bouleutor in Boeotia; but rather we
should endeavour to impart lustre to those of
less account, and preserve a more suitable
sphere of authority assigned to us by the responsible
powers (ib. 17, p. 813 D, E). Such was the temper of the man whose chief title to fame is as
the biographer of the heroes of the ancient world.
Nothing was ever his way, except that of a time
server, or one who would put his private interests
before his country's good (ib. 18, p. 814 D). His
quietism was founded on the reasoned conviction that, as resistance is impossible, a cheerful sub-
mission is wiser than an insupportable struggle
against overwhelming odds (cf. Philop. 17). But,
whereas the folly of ill-judged patriotism may at least
claim the sympathy of a generous heart, the conduct of those who make the welfare of Greece
the no less important as compared with their own comfort
and enjoyment, deserves our profound contempt
(Non posse suavit, 19, p. 1100 D).

LITERATURE.—The chief texts of the Morals are by D.
Wyttenbach's, 5 vols. in 15, with notes and index teratita, Oxford,
1881-90; R. W. Van der Spuy, Plutarchus: Moralia, 2 vols.,
1899-1904; G. N. Bernardakis in the Teubner series, 2 vols.,
1913-14; J. P. Mahaffy, The Greek World under
Roman sway, London, 1896, pp. 201-305; J. Oakesmith, The
Religion of Plutarch, do. 1902; R. Hirzel, 'Plutarch.' Beit iv.
of Das Erle der Alten: Schriften über Wesen und Wirksam
der Antike, ed. O. Cruseius, O. Immisch, and T. Zielinski,
Leipzig, 1912.

POINTS OF THE COMPASS.—I. INTRO-
DUCTORY AND GENERAL.—Owing to the marked
way in which, in several lands, notably in ancient
Greece and in Christendom, sacred buildings have
been placed with their most important front
towards the east, this subject is generally known as
the "Oriental" and is treated in that context in the
present article. As a title it might, however, in some
cases be open to the charge of begging the question,
and the one here chosen is non-committal and
more comprehensive.

The religions of many peoples—perhaps of most
have taken account of the cardinal points of the compass, though the importance attached to them
may have varied. The feelings aroused by sunrise
and sunset must always have been very much the
same all the world over, and they are in some
degree expressed by the terms used for the cardinal
points. Skeat (Etymological Dictionary, Oxford,
1884) traces the word 'east' to the Aryan root "u," 'shine,' 'burn.' Bradley (OED) gives the root
"aus," 'dawn.' Skeat derives west' from the
Aryan root ‘rt,' 'run.' Now, although by ancient
eyes this is to the apparent resting-place or abiding-place of
the sun at night, 'south' seems to mean simply the
'sunned' quarter; the derivation of the word 'north' is unknown (Skeat).

Herodotus imagines himself to be facing east
and describes the west, north, south by the
expressions 'before,' 'behind,' 'left,' 'right.'
This nomenclature, even more than the Aryan
 tongues, suggests ideas about the four quarters of
the horizon that were definite, but not constant, and
it is therefore not surprising to find that the point
of the compass is stated with precision in the story
of the fall and elsewhere. This precision is not really inconsistent with the inaccuracies in Gn 11:12 and other passages. The Indo-European peoples placed themselves, as facing the rising sun, all by hand towards the rising sun the better hand, the dexterous one, and the other (although the Greek veiled it by euphemisms) the sinister. The Etruscans, on the contrary, thought of themselves as facing the setting sun, and their dead were laid on their left hand. Thus it will be seen that the Indo-European peoples really had the same notions about the east as the Semite. Walter Johnson gives useful examples of this habit (Byzantium of British Archaeology).

The subject may be said to have been neglected if not ignored till within the last decade or two. Most books on architecture, even those dealing with countries in which orientation is a marked characteristic of the buildings, make no reference to it; the most comprehensive general encyclopedias have short and perfunctory articles or none at all; works on folklore, which are of necessity much concerned with ritual, seldom record or observe or offer any explanations, while very often neither the word 'orientation' nor the names of the cardinal points are to be found in the index. This neglect, at least, is not the fault of the few who have been reading the Bible and have felt that the custom of orientation has no historical significance, that its significance is in the earliest history of man. It has for a long past been and had comparatively little relation to the beliefs of the age that practised it. Hence many published plans of buildings use compass directions only because they have but a rough indication with nothing to show whether true north or magnetic north is intended. It is still more rare to find in any record of the time or of the nature of the rites that the decrease was constant—which it is not—the variation would be reduced by a degree in about nine years. In works of the highest antiquity, as we find in the Bible, or as the plan of St. Peter's at Rome turned round so as to bring the altar to the east, the variation shows that east instead of west; while a third goes to the opposite extreme, for instance, to London, so far as to give not only the date of the observation but the hour also. Descriptions are often loose; to say that a church 'faces east' may mean either an east door or an east altar; 'burial 'to the east' is equally vague; when Guidorius says, 'Nay, ritual, we must by his head to th' East,' it is the word mean 'to the west' (Shakespeare, Cymbeline, act iv. sc. 2). The only unambiguous descriptions are 'altar to east (or west), face to east (or west).

Lately the architectural side of the subject has been approached in a scholarly book by G. W. B. hitchcock, in England, and some records of the customs of savage races have been made.

In this article we shall deal with the following questions: (1) ritual acts: the direction in which the building is placed while being prayed over, or when entered during baptism, or while performing other ritual acts; (2) the aspect of buildings: the direction of the main axis, or the aspect of the door, altar, or other feature of the temple, using that word in its widest sense; (3) burial: the direction in which the grave is made, or the body of the dead is placed in the tomb, and consequently the planning of the tomb itself; (4) beliefs unclassified (called for brevity 'superstition'): points of the compass from which attacks of evil spirits are most to be feared, and the like.

It is clear that all these, especially the three first, are in a great degree interdependent. They should therefore be discussed together wherever possible. They are, in any case, so interwoven, and so convenient, and it will be necessary to consider separately the orientation of the more important classes of temples.

1. Ritual acts.—The practice of orientation has been generally observed in ritual acts, although from the nature of the case it is not to be supposed that in the past left such a clear record as have temples and burials.

The direction in which the suppliant looks when at prayer or performing ritual acts has had, in all times, a relation to the sun, his beliefs about it and the emotions which it arouses. Those beliefs and those emotions range through every shade from sun-worship and totemism to perhaps mere wonder and the never-fading impressiveness of the phenomenon of sunrise. In the relatively few cases in which ritual is independent of the position or course of the sun it is governed by simple and easily ascertainable facts, such as the Muhammadan's Mecca or the Jew's Jerusalem.

It is probable that some peoples who did not orientate their buildings did face a particular direction when in the act of adoration; some savage races who have not reached or have scarcely reached it have a fixed point in the temple and direct their orientation in their ritual; the Jew and the Muhammadan observe what may be called a 'local' orientation in prayer; the Christian still retains a considerable amount of traditional orientation in his ritual.

2. Temples.—The aspect of buildings must almost inevitably have a close relationship with the direction in which the prayer is uttered or the rite performed, for it is governed by the same ideas as the temple is always to be approached with the same angle of view, and the degree in which the building, in different religions, can be regarded as a house of prayer or as the home of a god. But, whereas a more or less correct general position suffices or suffices for the private person at prayer, the temple is the work and the expression of the religious idea of the people, and for the most part of somewhat elaborate religions, each acknowledging and dedicating its buildings to many different gods, as the ancient Greeks, or in honour of special patron saints, as in the Christian Church. This conception complicates, or has been thought to complicate, the inquiry into this part of the subject. We shall also have to bear in mind that in the case of the building, to a greater extent than in the attitude of prayer, tradition counts for much, as in the Christian Church at the present day, long after the matter has ceased to be thought important or indeed to have any meaning at all.

3. Burial.—The position of the body in relation to the points of the compass varies much, but the underlying idea which dictated it is in the main fairly general. Expressed briefly, it is that a dead person is laid in the grave in that position which will make the journey of the spirit as easy as possible.

The journey is usually to a home of the departed. Commonly the position varies according to the conception of that home.

This idea of facilitating the journey of the dead is, however, sometimes found acting in an opposite direction: it may be desirable to keep the spirit in the grave. Thus the soul of the chief should continue to reside among and to protect the tribe; that of the wicked man should be prevented from returning to the village and disturbing the peace of the surviving relatives. J. G. Frazer sees a survival of the latter feeling in the custom in this country, not long since given up, of burying a suicide with a stake through his body (The Belief in Immortality, London, 1913, i. 164). The further opinion may perhaps be hazarded that the selection of an orientated cross-road for the place was suggested by the thought that, if the spirit did make its escape, it might be puzzled as to which road led home; in the same way it is still believed that the sick are cured by being taken to cross-roads, the original idea probably having been that, when the evil spirit will not be expelled from the patient, it was liable to lose its way.

The journey of the spirit may be made (a) to the land of the forefathers, (b) to an under world, (c) to the isles of the bliss, (d) to the place where the totem of the dead spirit lives. True burial is found in all cases except where to a rule, namely burial towards one
of the cardinal points or in the path of the sun—
don'tful because they may after all prove to be consid-
erable. We shall have to con-
cider these classes more at large. Meanwhile we
must bear in mind Frazer's warning not to expect
uniformity even among people of one tribe; modes
in the disposal of the dead vary according to sex,
rank, moral character, and manner of death.
(a) The land of the forefathers.—The journey
to the land of the forefathers is the hypothesis
of Herbert Spencer. The land of the dead is the
land from which the tribe migrated. The idea
may be summed up in the words, 'I lead many
bodies and pass with the feet in that direction. It is this hypothesis that now
finds favour as the one which best fits the facts,
rather than that of Tylor, to which further refer-
ence is made below. But it will none the more
bear too general an application. It appears to
express the most common conception among savage
tribes at the present time.
(b) The under world.—The most familiar
instance of this conception is that of medieval
Christianity. The belief approached to that
by some primitive peoples of to-day. A. C. Krujij,
whose observations are used by Porr, maintains
(see art. INDONESIANS, vol. vii. p. 245) that an
idea common to all conceptions of the hereafter is
that the road to a crossing of the sun crossed
the sea every day on its way to the land of
souls under the earth; he points out that the
word meaning 'setting of the sun' is used for
dying, and many other signs make it plain
that the land of souls is under the earth.
(c) The isles of the blest.—There are two remark-
able examples of belief in the happy islands. They
are from opposite ends of Europe. The first is
that of the Greeks. Of the second W. Ridgeway
says:
'There is some evidence that the northern cremationists, like
the Acheans, believed that the Spirit-land lay in the West.
Perhaps the ordinance of Odin that the ashes of the dead
should be sent out to sea points in this direction, but it is clear
from Procopius [de Bel. Goth. iv. 20] that in the sixth century
of our era, the peoples of north-west Europe held that the soul
of the departed journeyed westward... into the western part of
Britain. A peninsula opposite Britain was inhabited by a
folk who worshipped the god ofArmorica (Brittany), who
were subject to the Franks, but paid no tribute by virtue of
the island which lay in the way of their journeying to the
Ocean to Britain' (The Early Age of Greece, Cambridge, 1901, i. 517).
The expression 'to go west' for 'to die' is still
in use and has been extended to include anything
that is lost.
(d) Totemism.—Two instances will be noted
below in which a man is buried with his head to
the point of the compass appropriate to his totem;
but these may prove to be cases of class (a), the
journey of the spirit to the land of the forefathers.
Each of the above classes presupposes a journey
to be made by the soul. It remains to notice the
apparent exceptions referred to above. Burials,
chiefly pre-historic, occur which seem to have a
direct relation to the course of the sun and do not
suggest a reference to a journey. Thus the graves
of Teutonic peoples on the Continent and in Eng-
land often, if not generally, have the foot towards
the N. but occasionally to the S.; sometimes they
are E. and W., with the foot sometimes E. and
sometimes W., but with the body laid on its side
and facing S. The idea for this is easy to explain;
and it appears to take the form of a wish to
lie in the path of the sun. It lends some weight
to Tylor's hypothesis, applied by him no doubt too
generally, viz.:
Orientation originates in 'the association in man's minds of the
direction of heat and warmth, life and happiness and glory, of
the west with darkness and chill, death and decay, which
has from remote ages rooted itself in religious belief and
has affected the position alike of temple and of grave (P.C.S. li. 421).

To the ancient Egyptian the west was the land of souls; he complains:
'The west is the land of inflamed and of heavy shadows... Let me be placed by the edge of the water with my face to the

The legend that Christ was buried with His head to the W. is attributed by Tylor to wide-spread solar ideas. We have an instance of Australian tribalism in which 'it is written to His (Joseph's) tomb, to the sun' (Johnson, p. 274). The Tingits, a people of
Alaska, bury with the head to the sunrise (Frazer, Totemism and Exogamy, London, 1910, iii. 274); the reason given, namely, to allow the spirit to return, makes it clear that it is but a secondary point to the general rule that posi-
tion is determined by desire to facilitate a journey. As a doubtful case we may perhaps class with it the instance mentioned below of the Egyptian
tomb in a cramped position in the hope, it is suggested, of facilitating the re-birth of the body.

4. Superstition.—No generalizations can at
present be made on this branch of the subject. Most of the beliefs may presumably have some
connexion, now lost, with ritual and ideas of death. A few cases will be noted elsewhere (table at end of art.). Probably a good deal of
material still remains to be collected.

II. EGYPT.—1. Temples.—The Egyptians
appear to have been indifferent as to the direction in
which their temples should face; a temple was just like any other system, it is by most people considered to be
unknown to us. J. Ferguson expressly states
(Hist. of Architecture, London, 1891-93, ii. 119)
that they did not orientate their buildings; but in his day the best had been claimed for it he accepted the obvious reading of the
evidence. The evidence is that the temples face in all direc-
tions. The silence of other writers on Egyptian
architecture may be assumed to mean that they
take the same view as Ferguson, and students of
the elaborate religion of the Egyptians give us
little help.

Attempts have recently been made, however, to
reduce the apparent confusion to a system. Two
of these attempts—those of Nissen and Lockyer—are
likely to advance us more or less independently
of one another, but they may be considered
together. Nissen discusses eleven examples.
Every temple is directed towards the point on the horizon at which
at a particular time of day a particular star, is dedicated rose or set on the feast-day at the time when the temple was
founded. When the axis of a temple lies nearly E. and W., it necessarily points towards the point on the horizon 12
of the day, or a day later, of the day on which the sun rose or set the other day, and the temple is then called a sun-temple. If,
however, the axis points to a spot on the horizon inside the
limits of sunrise and sunset it is known that the temple is
considered to be a star-temple. The point on the horizon at which
the sun or star rises or sets on any particular day of the year is con-
stantly changing, owing to the movement of the pole of the
earth round the pole of the heavens, and it is pointed out by
Lockyer that in 13,000 years this point for a star may shift 47.
Some star is then looked for which rose or set at that particular
spot at some time during the epoch in which the temple
must be supposed, on archaeological grounds, to have been founded.
A likely star having been found, the exact date, to within a day or two perhaps, is proved if it rose or set at the point in question
is easily calculated. This date is the date of the building. A
likely star is one which can be shown to have some possible
connexion with the temple and great ingenuity is shown in
finding such connexions; e.g., the temple of Seh-ha Ra at Ombos
seems to point towards the setting of Amon, which was
something like the Egyptian crocodile, and the
god Seh-ha Ra was also represented as crocodile-headed (Nissen,
Histoire de l'Astronomie, p. 76). The original inscriptions from anywhere else are quoted by both Nissen and Lockyer
descrying the foundation of temples, a ceremony of the greatest impor-
tance; they describe how the priest observes the position of the sun at
Denderah, and he gives the correct date. But it is admitted that the Denderah inscription is very late; it refers
to the emperor Augustus, who, it is said, was never at Denderah; nor do the inscriptions at Denderah
therefore reproduce an earlier inscription (Lockyer, The Down of
Astronomy, p. 175). An exact orientation of the greatest importance, and Lockyer suggests that the long series of halls
and courts which formed an Egyptian temple would make an
excellent telescope of a sort; the halls, especially those at the face of the pyramid and the directors, were crossed by a central corridor; a priest standing in the dark at the farther end, looking through this long series of doorways, can see little but the light arising a little before sunrise, and would thus be warned that it was time to prepare sacrifice; the airway to the horizon was accidentally kept unobstructed and uninterrupted, and those who lived in the temple were sometimes built right across the fairway, but that was done only with the consent of the priests. Later priests, despite those of the old temple. The sun-temples make admirable observatories for ascertaining the exact time of the summer solstice; the measurement of time was at one time of most importance to the ancient agricultural country; it was a duty monopolised by the priests. The orientation of star-temples is often what we may call incorrect, and yet correct for parallel, and so we look to the rising of the star, as at Denderah and Edfu (Nissen, pp. 30–42). But he thinks that ancient theologians had the habit of building temples at right angles to one another (Lockyer, pp. 168, 316; Niss. p. 86).

These views have been accepted by R. Phéné Spiers (Ebers, p. v, 'Orientation'), E. A. Wallis Budge, and F. C. Penrose. They are strongly controverted by a writer in the Edinburgh Review (cxxx. [1894] 418 ff.). The weak points of the theory, besides those indicated above, are that, owing to the movement of the earth's axis, the same star would not serve for more than 200 or 300 years; Budge argues that there was a short space of time in Egyptian history, so that the fact must have been observed comparatively soon; that the very late inscriptions describing the setting out of the temple with a cord by the king, inscribed in the modern wall, the devices of the mind should not be accepted as plain statements of fact, devoid of poetic or religious fervour. The writer in the Edinburgh Review, indeed, points out that the older inscriptions say nothing about the star, while in the later inscriptions 'The Great Bear simply means 'the north.' Lockyer does not support his views of Egyptian sacerdotal history by reference to authorities. Nissen is less fanciful, but scarcely more convincing.

The sun and stars entered so largely into Egyptian religion and the observation of their movements was so important for making the calendar that the case can at most be said to be not proven. This would seem to be the view of W. N. Flinders Petrie (art. Architecture [Egyptian], vol. i. p. 729 ff.)., who, however, appears to avoid a definite statement of opinion. He does, indeed, give interesting facts about the temple of Abydos (p. 723 ff.), but no explanation of them or even a hint as to whether he thinks an east-west scheme. Only the views of Flinders Petrie and Penrose and Nissen, and holds that these pyramids are oriented to the sun or, according to their respective names the sun; for some to 'Horus on the horizon' or the sun in the act of rising. The sun-god Horus takes several forms, one of which was 'Horus of the two [i.e. E. and W.] horizons.' Horus in one of his qualities is primarily the god of the sunrise, and as such is the counterpart of Hathor, the god of the west, who received the dead. It is this eastward gaze of his that has made the Sphinx so impressive to all who beheld him on the desert. He is almost always called by the name of 'the Watcher.' The work is usually attributed to the XVIIIth dynasty (c. 16th and 17th centuries B.C.), by which time the origin of all forms of religion was sought in sun-worship, and nearly every principal building was associated with the sun-god (A. Wiedemann, Religion of the Ancient Egyptians, Eng. tr., London, 1897, p. 12).

But, though theology may have changed during the course of ancient Egyptian history, we may safely guess that, with which we are here concerned, remained very much the same in that
most conservative land. Egypt was a land of sun-worship in one form or another from the earliest pre-historic times till the dawn of the present era. This was the case even in the time of the Pharaohs (the house of Râ), the Greek Heliopolis. Thither a Pharaoh of the XIIth dynasty went in procession, and on the sandhill sacrificed before the god Râ at his rising and returning, to the great temple of the sun, where he paid the sacred tribute of 200 Oxen to see the god, his father, Râ himself (ib. p. 21).

The mastabas, or private tombs of dynasties III. to X., have generally the entrance to the E., sometimes to the N. or S., never to the W. There was also a sort of blocked-up door facing E.; this was for the use of the dead; the spirit could enter or leave by it. An inscription is recorded inviting the dead 'that burial might be granted to him in Amentit the land of the West' (Maspero, p. 250). At the far end of the building, set back in a recess in the W., is a niche.

Wielemann thus describes a funeral: 'When the tomb had been reached, the coffin was set up on end near the south side of the temple and the sandhill intended to represent the Mountain of the West—the realm of the dead' (p. 236).

III. ASSYRIA, CHALD.EA, PERSIA: TEMPLES AND DETAILS—Our knowledge of these regions in ancient times is still marred by serious lacunae. The old Chaldeans had their theory of a world of the dead—either an under world or one lying E. or N. Of burial places other than those of royal persons nothing seems to be known, and even of those the authorities do not tell us much.

The temple, a succession of terraces about three in number, forming a sort of irregular stepped pyramid, was placed with its corners to the cardinal points—the altar was in the platform of Uru of Chaldea (Maspero, p. 629) and Nimrud at Babylon (T. G. Pinches, art. ARCHITECTURE [Assyro-Babylonian], vol. i. p. 689). This may be chance, but, in describing the precinct of the temple-tower of Belus at Babylon, Pinches says:

'In accordance with the usual Babylonian custom, the angles indicated the cardinal points, and each side had an entrance. Inside the enclosure stood some kind of erection: 300 ft. square, connected with the zigurat, or tower, and having round its base the chapels or temples of the various gods, on all four sides. It was connected to the cardinal points.

The principal buildings, with the couch of the god and the throne, were to the W. (p. 691). Sippappa and Larsa, cities where the sun-god was worshiped, have not been thoroughly investigated. Persepolis was dedicated to the cardinal points. The palace of Sargon in Mesopotamia has its diagonals pointing to them.

IV. GREECE.—1. Temples.—The normal position of a Greek temple is approximately E. and W., and it was an E. aspect that was aimed at. But an E. aspect meant the opposite of what we now mean. A religion like Christianity which has developed an indoor congregational worship considers the position of the altar within the temple, and the altitudes of the worshipper as the essential points; the position of the door is a corollary. But in a religion such as that of the ancient Greeks, where the temple is a mysterious home of the god entered by the few while the people remain outside to see the sacrifice, it is the entrance front and the altar before it that are the first considerations. Greek temples therefore generally have the entrance to the E.; the altar [see art. ALTAR (Greek), vol. i. p. 343] is, if possible, placed in front of it on the axis of E. and so that the person sacrificing faced E. with his back to the temple—e.g., temples of Aphaea at Ágina, of Apollo at Delphi. If this was difficult or impossible, the altar was elsewhere, as that of Zeus at Olympia and of Athené on the Acropolis at Athens.

By far the greater number of temples face towards the E. Nissen's useful list of 113 Greek temples (pt. ii. p. 294) shows that 75 per cent are within an arc of 50', or 25° on either side of true E., while more than half are within an arc of 28° or 10° on either side of E. Of the remainder there are four principal groups with the entrance facing approximately N.E., N., W., and S. There are several large gaps: no temples have the entrance to S.S.W. or N.S.W. Nor is it possible, with the exception of B., that there is a gap of less than 5° from about W.S.W. to nearly due S. containing only two temples. This distribution is partly geographical and partly according to cult, but never directly chronologically.

Geographically all temples on the mainland, with but few exceptions, face between N.E. and S.E., the bulk of them either just N. of E. or about E.S.E.; those in Sicily and Italy are for the most part just S. of E.; the islands and Asia Minor form three nearly equal groups facing E., and W., fairly accurately.

Grouped under cults, the temples of Zeus, Athené, Asklepios, and Hera face fairly uniformly E., except when in some Asia Minor examples the door is in W. or S. The temples of Artemis, Dionysos, and Demeter show rather greater variation. Temples to Apollo point in many directions. Among the temples of unknown dedication there is singular uniformity; they all face nearly due E., except one, which is nearly due S.

Although no general classification according to period can be combined with a classification according to direction, yet dates of buildings cannot be ignored, and these Minor temples of Zeus and Athené facing W. and S. are late, those of Artemis early; we shall have occasion to notice the Delos temples in this connexion. Still less can we neglect the period of the cult in examining the direction, as we shall see in considering the temples of Isis and Serapis. Most important of all will be the original seat of the cult, as in the cases of Apollo and the Ephesian Artemis.

The normal aspect of the entrance to a Greek temple is E., but the E. deviations from it are abnormal and are of varying degrees of importance. The reason of the E. aspect must be sought in sun-worship of some sort; the time and perhaps the place of its origin are obscured by distance. Statues of gods before images of 'deities facing the sun.' In Homer's poems, says L. R. Farnell (art. GREEK RELIGION, vol. vi. p. 401), the sun was anthropomorphized, but it is doubtful if it was so for the average Greek, who merely kissed his hand to it every morning or bowed to it on coming out of his house. The same author points out that the earliest temples—Homeric and pre-Homeric of the Minoan-Mycenaean culture—are, with one exception, domestic chapels in royal palaces and mark the sacred character of the king (p. 397). Of the palaces themselves those that are known to us do not face E.; Tityrus and Phylakopi face due S.; Mycena about W.N.W.; Troy S.E.; Knossos seems to have had several fronts, one about S. by W. and others to the corresponding points. Some of these sites are too cramped to have afforded a choice of aspect.

Some light is obtained from literature, but it is not conclusive.

In the Odyssey the great tent set up by Ion, the son of Apollo, is scrupulously oriented—for it is a leporis, a sacred or tabu place—so that it should not face the mid-shafts of the heavens. The hero's tent is 'the dwelling of the sun,' where embroidered pictures of the sun, moon, and certain stars. There is nothing to connect the tent with sun-worship and the orientation is not so much as facing N. and E. as at avoiding S. and W. Homer (c. 800 B.C.) has some passages in Works and Days referring to the movements of the stars and the time for reap-
POLETS OF THE COMPASS

...ing and other agricultural work, and other ancient authors refer to the means of measuring time by the heavenly bodies.

Deviations from true E., where these are slight, and in the case of one temple, may be explained in two ways: they may be due to indifference as to exactness, or we may, with Nissen and Penrose, see in them deliberate intention in conformity with an elaborate system.

These authors suggest that the axis is directed to the point of sunrise on the feast-day; that the variations among temples having the same dedication are due to the varying customs in different parts of Greece, and that the varying positions of the rising sun, caused by the movements of the earth's axis, that the latter cause incidentally gives us an indication of the date of the temple. Indeed we have the case of a temple being dedicated on the rising of sunrise so that he might prepare the sacrifice; and that this was given to him by the appearance of a star which was known to rise a little before the sun. Both Penrose and Nissen, by calculating from the known motion of the earth's axis (the precession of the equinoxes), have arrived at dates at which the axes of most of the extant temples would point to a heliacal star. They have thus fixed the dates of the foundations of the temples. Penrose points out that the dates thus deduced are in most cases clearly earlier than the existing records to one another, E.E. and S.E.W., and on an old site, and the direction of the old axis has been followed. Lockyer agrees in the general theory, and it is based on many directions that the old axis was directed to the rising "east," which rises a little before the sun; it is the north of the equinoctial March, April, and early May (from the opening of navigation to the beginning of harvest [May]), and August, September, and the beginning of October, interrupted by vintage and ended by the closing of navigation.

Certainly the importance of accurate observation of the movements of the stars for the regulation of the calendar and for timing agricultural operations was fully realized. The terms 'heliacal,' 'acronychal,' and 'cosmical' rising and setting were used for these periods.

After this general indication we may take a closer view. The temples of Zeus and Athene show, as stated above, a general agreement, but there is considerable difference between the two limits—some 30° in the case of Zeus and 21° in the case of Athene, not including the early temple at Miletus, Asia Minor. In Asia Minor Zeus has a temple at Magnesia with the door due W., [220 B.C. (Nissen)]; Athene has two at Miletus at right angles to one another, E.E. and S.W., and at Pergamon due S. With these exceptions, there is no connexion between direction of axis and geographical position. There is a difference of nearly 6° between the early temple of Athene on the Acropolis, Athens, and Poseidon, Delphi, and respectively 260° 55' and 257° 7', given S. 0° and going sunrise (Nissen, Penrose).

Athene, Asklepios, and Demeter keep their E. door at Priene, Asia Minor. The two temples of Apollo have the door approximately to W., and one at Pergamon due S. With these exceptions, there is no connexion between direction of axis and geographical position. There is a difference of nearly 4° between the early temple of Athene on the Acropolis, Athens, and Poseidon, Delphi, and respectively 260° 55' and 257° 7', given S. 0° and going sunrise (Nissen, Penrose).

The temples of Zeus and Athene present a parallel with the Parthenon. The Theosophy is 13° S. of E.; Nissen holds with the view that it has nothing to do with Thesen, but connects it with Iacchus, son of Demeter, and the Eleusinian mysteries (p. 177).

This custom is extended to Demeter. Her temples are mostly not far from parallel with one another and with one of the two Persephone temples, which are only 12° removed from the Theisoun on one side, and 13° from the second Persephone temple on the other side, which was the fire temple; or about E.E. These Demeter temples are widely scattered—Elesius and Sicily. But in Asia Minor there is one temple of Demeter at Priene, and in Arcadia a temple of Despeona, the Arcadian name of Persephone, both facing due E. In Sicily at Selinus there is a temple said to be of Demeter facing almost N.E.; this is remarkable because all the eight other temples at Selinus are exactly parallel with one another and face somewhat S. of E., or not far from the direction of the other Demeter temples.

The temples of Apollo present perhaps the greatest problem in Greek orientation. Even Nissen, who has an explanation for most things, admits that they are difficult. They point in different directions: in Asia Minor is a temple facing due E., which admits of foreign extraction of the god: he has been thought to have come from Asia, from Egypt, from the north. Farnell says (art. GREEK RELIGION, vol. vi, p. 395*) that he was no doubt a cult figure of tribes other than Dorians, and Thessalians, and possibly a borean ritual, which reflects at points the earliest days of Hellenism, we can follow the track of Apollo's invasion from the north. Nissen ingeniously suggests that the simple mountain shepherds of Arcadia and Aetolia accepted with the foreign god his foreign ritual and gave to his temples at Basse, near Phigaleia, and at Thernmone the N.S. axis with the door at the N. end (that at Basse has also a door in the E. side); but advanced city communities, with a popular theology and trusted the axis to suit their own views; thus the temples at Selinus and Syracuse face due E., and that at Corinth nearly so. But on this hypothesis the temple at Delphi facing N.E. and that at Didyma in Argolis & a little S. of N.E. are difficult to place. The temple at Metapontum at the mouth of Italy, with the entrance to the S.E., may be said to conform with the custom of the country; that in the Aegean island of Thera is parallel with it; that at Letoon has its door to the S.S.W. There remain two temples facing due E. and the other due W.; these must be purely political, faced according to the dictates of the times to which they belong, as Athens or Asia Minor was in the ascendent. Besides these there are in Delos two old temples facing W., which, Nissen says, Wilhelm Dörpfeld is inclined to dedicate to Apollo; finally there is the nameless temple at Mycenae with the doorway to the S., which is perhaps more likely to have been dedicated to Apollo than to any other god.

The Delos temples were first built facing W.—the rock-cut, the Leto, which are nameless, and one dedicated to Apollo. The aspect is perhaps due to the influence of Asia Minor—except of course the rock-cut. Then, under the influence of Athens in the 4th cent., the temples of Zeus and Apollo were built with the door to the E., and finally, according to Nissen, when the island passed away from Athens, the temple of the E. was built at Paphos.

A foreign god, as Nissen points out, may retain or may yield his native ritual. We have seen that Apollo illustrates both processes. At Alexandria the parent temple of Serapis faces S.; the daughter at Taormina is turned E., while in Delos she keeps the door to the S. In Greece, Apollo is turned W., at Delos, but keeps its S. door at Priene.
It is probably a mistake to suppose that the aspect of temples was much more than fashion, that it expresses any definite idea in theology. We have an exactly parallel case in the Christian Church; most of our buildings have the door to the W., but in some of the most famous it is to the E. The Etruscans are altogether the latter fact, even when they are attending service, although it sometimes requires a slightly different ritual. Perhaps to the Greek the matter was a little more important, but not much.

The temple with the door to the W. did not face W. to the east. Peter's in Rome faces W.; it only faced E. in a different manner. Nissen thinks that it did face W., and that this aspect symbolizes 'world empire.' So it does, but the symbolism is of the 29th cent. and Teutonic. It is generally thought that on the feast-day the rays of the rising sun were to fall through the open door and light up the statue of the god, and the northward-facing temple at Bassae has indeed the famous side door to the E., opposite the spot where the sun stood. But how could this have been arranged in a westward-facing temple? A hypothetical opening would throw only a reflected light on the figure. Vitruvius has some remarks on the subject which we shall presently notice.

Burials. — The Greek idea of death is complicated by many cross-currents, but the notion of a voyage or a journey of some sort enters largely into it. S. Baring-Gould says (A Book of Folklore, London, n.d., p. 160) that the ancient Greek inscriptions use the word σκέπασμα, 'favourable voyage,' on a gravestone and that his descendant carves a pair of oats.

In five shaft graves on the Acropolis at Mycenae two bodies lie N. and S., with feet to S., and all the others, eleven or more, lie E. and W. with feet to W. At Mycenae the chief is laid E. and W. with feet to E.; possibly this is only in order that he should face the door of the tomb, which is to E.

Ridgeway (i. 490) thinks that we may infer that burial with feet to W. was the characteristic orientation of the autochthonous race. He points out (i. 516) that Odysses did not descend into Hades as did Æneas and Dante; he sailed west; and in post-Homeric belief there was no under world for Greeks at all. The best of the west, which is the best, was the west of Asia. At Phylakopi in Melos the orientation of the tombs depended wholly on the conformation of the ground (Hellenic Society, suppl. paper no. 4 [1904], p. 234).

In later times the position of the body varied. Thus Solon proved the justice of the claim of Athens to Salamis as against the Megarians by pointing out that the tombs which he opened faced E., and that the corpses in them were turned to the E. in the Athenian fashion. We have therefore the tradition at least that in the days of Solon (c. 600 B.C.) there were in different parts of Greece two well recognized positions for the body. Such customs 'probably . . . depend on the ideas which each people has formed of the direction in which lies the land of the dead' (Frazer, Totemism and Exogamy, iv. 214).

V. ROME.—I. Temples. — It is generally agreed among modern writers that the Romans, whatever their theories, did not orientate their buildings (W. A. Simpson, in W. A. Gardner, art. ALTAR [Johannine], vol. i. p. 349) says that, the orientation of the temples being the same,

have stood with his side to the temple, and in some cases even to the N. J. Dürck lays it down that the Etruscan rule required that the temple axis should be N. and S.; that the Roman turned to the E. during prayer; therefore either the temple statue had to face W. or the axis of the temple had to lie E. and W. (Handbuch der Architektur, III. II. 1905.)

Of the Etruscan practice we know almost nothing. The Roman augurs inherited as the basis of their ritual the Etruscan idea of the natural or normal attitude; i.e., they imagined themselves facing E. and W., so that they could face that towards the E.—was the left, and the unlucky side the right. But with the Roman populace the opposite was the rule; they faced N., and the right was the lucky side. Both these notions show that, whatever was the practice with regard to buildings, there was in early times a special veneration for the east.

Vitruvius, who lived and wrote in the 1st cent. B.C., is a useful link between Greece and Rome. He was an architect with a practical knowledge of work in Rome in his own day and with some outside book-knowledge of Greek lands. He has a chapter on 'The Position of Temples according to the Regions':

The temples of the immortal gods should be so disposed, that, if there is no impediment and the use of the temple permits, the statue which is placed in the cell may seem to look over the region of the building. If this cannot be done, those who approach the altar, to make their offerings, or perform sacrifices, may look towards the eastern sky and to the image which is in the temple. By this means the temple, the eastern sky, the supplicants and sacrificers making their vows, and the image seeming to rise to behold them will all be seen in one view, for it is proper that the altars of the god should be disposed to the east.

But, if the position of the place prevents that position, then the temple is to be turned to the view of the greater part of the city walls and temples of the gods; or should sacred places be built towards the river, as those near the Nile in Egypt, they should look towards the banks of the river; so likewise, if near a public way they should be so situated that the passengers may behold it, and pay their salutations (de Architectura, tr. W. Newton, London, 1794, bk. iv. ch. v.). Such temples are appropriated to the use of sacrifices, for the same kinds of temples are not erected indiscriminately to all gods, because the sacred rites performed to each are different (bk. iv. ch. vii.). "Altars should regard the east" (bk. iv. ch. viii.).

In these passages, it appears, Vitruvius combines unconsciously what he had learned from books with the theory of the position of buildings, which is a Roman custom in his own day. He had not travelled, and clearly the Greek architecture about which he had read was, as we might perhaps expect, chiefly that of Asia Minor. As to Roman work, he seems to consider the W. orientation to be a counsel of perfection, which was to give way before considerations of architecture and convenience.

In practice temples face in every direction; a glance at a plan of Rome or at a table of orientations will make this clear, and an attempt to work the data into a system would indeed be bold. But it has been made by Nissen; his lists contain 33 Roman temples and 34 temples in Italy outside Rome.

That the Romans and the Etruscans before them were very susceptible to outside influences—Greece, Egypt, and Asia—is a commonplace of history. It would be remarkable, then, if in the placing of their buildings even in Rome itself they had ever been subject to a narrow and artificial orientation; general—countries within whose borders they themselves were building temples carefully orientated in accordance with native custom.

But if we would look for truly orientated buildings, it must be on open sites or among the early buildings of a town before the place had become congested, or at least among those which, if not
early, might be expected to preserve early traditions. In Rome the circular temple of Vesta in the Palatine district has its plan close to the Urbs Roma (Milan, 1893-1901, pt. iv, pl. xxix.) or due E. (O. Richter, Topographie der Stadt Rom, Munich, 1901, pt. x.). The old Domus Publica (Middleton) and the Regia, neighbouring buildings associated with the Regia, have their plan as a trapezoidal—direction contrasting strongly with all the buildings round them. The temple of Vesta was one of the most sacred of buildings, and it owed both its form and its sanctity to its extreme anti-quity. But the use of the trapezoid on the site of the temple, which had been occupied as a sacred spot of the community was probably the earliest building which primitive man attempted, earlier even than the shelter for his own head. The actual building in the Forum was destroyed and rebuilt more than once, and even its position had been slightly moved, but the old round form was preserved. The plan came to receive a symbolic meaning, but there can be no doubt that it was simply the natural form in which primitive man built, and that it was perpetuated in a specially sacred building by a well-known tendency just because it was primitive. It is suggested that the E. direction also is that of the primitive building, and that it points to a true orientation having been observed in early times. The well-known round temple of the Ptolemies in Egypt, for instance, and the opposite S. Maria in Cosmedin has its door almost due E. (Lanciani, pt. vii. pl. xxviii.). The door of the Tullianum also looks due E. This building has, like the Regia, the trapezoidal plan which is believed to be the mark of a very primitive tradition. The Lapis Niger across the grave of Romulus is trapezoidal, but its axes run N.W. to S.E. and N.E. to S.W. The early quadruple temple on the Capitol faced about S.S.E. (ib.), and the early temple of Jupiter Capitolinum also ran this way, but the old temple of S.W. outside Rome: the temple of Vesta at Tivoli has the door facing S.W. by S. (G. L. Taylor and E. Cresy, Architectural Antiquities of Rome, London, 1821-22, pl. lvxi. [vol. ii.] probably) for local reasons. The Artemisium at Nemi runs N. and S. with the door to the S. Thus it is difficult to detect a system even among the early buildings, unless it is perhaps a tendency to make buildings face approximately either E. or S. But much could not be expected from so few remains.

In the earliest town the Forum Boarium may have been truly orientated, either from ritual tradition or because of its position at the cross-roads and opposite the river and the river. The Palatine, on the other hand, is laid out on a line running N.E. and S.W.; this was probably determined by the limits of the hill and by the valley which formerly crossed it. To one side of the Forum was the Via Sacra running from N.W. to S.E. Some early buildings in these parts and on the Capitol have been referred to above. The buildings of later times, such as the temples of the Forum Magnum, face in all directions, seemingly without system. Outside Rome, the temples within the wall of Servius Tullius, the planning generally is determined by the run of the hills and valleys. But the greater part of the flat Campus Martius between the wall and the river, as well as the Vatican district beyond the river, is methodically laid out on lines due N.S. and E.W. The Mausoleum of Hadrian facing S., four circuses, and most of the other important buildings have this orientation. Included among these are the Pantheon, which opposite N. and S.E., and the Basilica of Agrippa, and the Porticus Argonautum, containing the Neptunum with door to E., and the Basilica Matildis with door to E. But the buildings in the north part of the Campus Martius, north of the Via Flaminia, are orientated to the N.W. (locally the Corso). The important group of buildings forming the imperial Fora (of Trajan, etc.), with their temples, are symmetrically arranged on an axis running N.W. and S.E. Three of the four remaining great baths—those of Diocletian, Titus and Caracalla—are on an axis running N.E. and S.W., perhaps partly to fit the hill-tops and to suit the principal streets, and partly from considerations of sun and weather. The baths of Constantine face N.S. and E.W., and appear to conform intentionally with the Campus Martius scheme. Although this planning is chiefly secular, it is in different quarters so distinctly orientated that it can scarcely be neglected. Temples seem to be invariably built to suit the road, as, for instance, the temple of Apollo S.W., another career of N., a group of three just south of the theatre of Marcellus facing E., and those west of the Capitol which face S.W.

Outside Rome the same probably holds good: that orientation was observed to some extent, and often gave way to practical considerations. Nissen finds a system at Naples and Pompeii. The Forum at Pompeii runs N. and S., and its two temples of Jupiter and of Apollo face S. The temple of the Esquiline and the sanctuary of the city Lares face W.

But, if Rome herself was influenced more by architectural effect and considerations of convenience than by religious or ritual motive, we find in the countries which she conquered a very different result, produced perhaps by the same causes. The Roman buildings in other lands are definitely orientated, though not always to the E. The determining influence may have been a desire to conform to the custom of the country or to the surround of the site, though in some cases the axis seems to have been fixed by religious influences, for the temple is at an angle with the street. The temple of Zeus Olympia in Athens is fairly true E. and W., with the door to E. The temples of the sun and of Zeus at Baalbek have the door to E., while that of Venus faces N.; the temple of the sun at Palmyra has a N. and S. axis, with the door in the long W. side.

At Silchester there are two square buildings near the present church which are believed by the discoverers to be temples, and are compared by them with similar buildings in Gaul. These temples do not conform with the general lines of the Roman city, but they are nearly parallel with one another and with the river by which some case, the axis, is suggested, may itself stand on the site of another pagan temple. The axes of the church and temples seem to be a little S. of E., but the point is somewhat obscure because the magnetic variation in this latitude is great. If this plan were true, and if it is given at all as E. instead of W., which has not been the case since the year 1656 (Archeologia, lii. [1890] pl. xxi.).

2. Buriails.—The Romans for the greater part of their history cremated their dead, so that the orientation of their monuments had not to be considered.

VI. CHRISTENDOM.—1. Early ritual. —Orienta-
tion in some form was probably practised, if not in the earliest centuries, at least in the 3rd. In the following, for we learn from Tertullian that it was observed at prayer in his days (A.D. c. 160-234).

He says that the Christians were thought to be sun-worshippers because they prayed towards the E. (Apol. 16). If this attitude was general and its objections real and its abandonment considered possible at such an early time, and if, as was the case, the temples of both Jew and Gentile had from time immemorial faced E., the inference is that the practice was continuous. But Tylor says that the custom was unknown in primitive Christianity and was developed in the first four centuries (PG ii. 427).

The Apostolical Constitutions are very clear both as to ritual and as to buildings:

"After this, let all rise up with one consent, and looking towards the east, after the catechumens and penitents are gone out, pray to God eastward, who ascended up to the heaven of heavens to the east; remember also the present situation of paradise in the east; and, as to the church, 'let the building be long, with its head to the east' (Apost. Const., ed. J. Donaldson, Edinburgh, n.d., ii. 67)."

Cyril of Jerusalem in the 4th cent. not only explains that turning to the E. in prayer was symbolical of the situation of paradise (Cath. Lect. xix. 24), but that the churches then were built with the doors towards E.

We are to remember that at baptism we entered the outer hall [porch] of the baptistery and there, facing W., heard the conversation that took place before the hand and, as in the presence of Satan, renounced [th. xiv. 3].

The rite is said to be still retained in the Greek Church.

Peter and Leo in the 5th cent. complains that people turned to salute the rising sun as it shone through the E. door of St. Peter's, and it has been suggested that this was one of the causes of the reversal of churches to their present aspect with the door to the W., though at St. Peter's itself no alteration was made.

It appears, then, from the evidence of the earliest writers and of the earliest buildings (1) that orientation was strictly followed—i.e., a symbolical meaning was attached to the attitude of the individual, and the E.W. direction of the main axis of churches was preserved; (2) that the ritual was not without its inconvenience (as Leo complained); and (3) that the E.W. axis sometimes means that the door faced E. and sometimes that it faced W.

This result is scarcely surprising when we consider the various facets from which the light of the gospel was reflected. There were customs both Hebrew and pagan to be utterly reversed, on the one hand, or, on the other, to be retained and infused with new meaning. Of buildings there were the Temple at Jerusalem and most of the Greek and Asiatic-Roman temples with the door to the E., while there were notable exceptions at Magnesia, Ephesus, and Delos.

2. Early buildings.—It may be that there was always variety in the buildings owing to the various influences at work: Greek proper, Greek work in Asia Minor, Palestine, Syria, Egypt, Rome. On the one hand, there is (1) the church of the Holy Sepulchre in Jerusalem, of which the earliest work begins in A.D. 336 (though here the site hardly left a free choice); (2) a statement by Paulinus of Nola († 432) that the façade to the E. was more usual (though this is ambiguous); (3) the tradition of early basilicas, at least in the E. door at Antioch, not later than the first half of the 5th cent.; (4) important churches in Rome, many of which still exist, while records remain of others, including the old basilicas of St. Peter, first built early in the 4th cent.; and (5) a considerable number of early churches in Northern, Central, and Western Europe.

On the other hand, there is (1) the undoubted fact that, if churches were originally built with the E. altar facing the door, they were reversed in the Eastern Church at least at a very early date (4th cent., at Rome). Socrates the historian, writing in the first half of the 5th cent., says that the door was generally to the W.; (3) the church at Antioch is described as being exceptional; (4) the churches of Constantine at Byzantium either were all built with the E. altar or were all reversed by about the time of Justinian; (5) moreover, there is the obvious inconvenience of prayers towards the E. and the altar to the W.

The churches of Southern, Northern, and Western Europe retained the W. altar long after the E., while some still retain it. That the conservative East should have changed—as it probably did—while the progressive West kept to the old plan is perhaps an index of the theological activity of the Eastern Church in early times. It may have been due, to some extent, to a dread of the influence of Asiatic sun-worship.

The turning round of churches from what seems to have been the normal aspect with the W. altar to the present direction of altar to the E. is somewhat obscure. It seems that all the churches built by Constantine (272?-337) himself had the W. altar and E. door. Besides the church of the Holy Sepulchre in Jerusalem (Fig. 100), the church at Antioch [Tyre 'restored' by him and several churches in Rome: St. Peter's (Vatican), W. altar; St. Peter in Montorrio, N.N.W. (since rebuilt); St. Chrysogonus in Trastevere, W.N.W.; St. Sebastian on the Appian Way (Scott, The Story of English Church Architecture, p. 18). It must be remembered that in addition to these other churches in Rome built under the direct influence of Constantine, though not nominally founded by him, such as St. John Lateran, also have the E. door.

3. Eastern Church.—No work of Constantine remains above ground in Constantinople, and the orientation which he there adopted must remain a secret until some foundations of his churches are exposed. All the present buildings have the door to the W. A. van Millingen (Byzantine Churches in Constantinople, London, 1912) gives the plans of 22 churches; two of these have the door to N.N.W.; all the rest lie between W.N.W. and W.S.W., and about six of them are practically due W. Some of the observations are probably of a magnetic, though they are not always stated to be so.

The churches of Syria, Armenia, and Cyprus, with scarcely an exception, have the door to the W. Many of these are very early. All the Jerusalem churches, with the exception of the church with a S. door, have the door to the W. The churches of Salonica, some of them of the 5th and 6th centuries, and of Mount Athos have the W. door, except the early church at Salonica, probably late 4th cent., now the mosque Eski Juma, which had the altar at the W. end. The church of St. Felix at Nola and a church at Trieste have the W. altar.

Probably many Greek temples became Christian churches. The Parthenon was converted into a church and an apse was built at the E. end.

In like manner the churches of Greece which were built for Christian worship all have an E. altar and a W. door, thus a reversal of what is found in Athens (8th or 9th cent.), the Kapnikarea (9th cent.) in the middle of Rue d'Hermès, the church at Daphne (12th or 13th cent.), and the coupled 10th cent. churches of the monastery of St. Luke in the district of Stiris near Trikala, and the church of St. Nicholas near Skripou in Boiotia (N.W.).

The Coptic churches in Egypt, whatever their age, may be taken to represent very ancient practice. They all have the altar to the E., and the door to the W., and the church is opened directly into the main body of the church. The priests sit in a semi-circular apse behind the altar, thus facing W.
4. Western Church.—The orientation of the churches of Rome forms a strong contrast with the rectangular layout of S. Paul outside the Walls. The old buildings have the altar to the W., and the door to the E. In this connexion we must remember that, from the circumstances of early Christianity, the church plan of every type must have been developed originally in the E. of the city.

In early times, when Christians worshipped where they would attract least attention, the orientation of buildings cannot have been observed, though it would often be possible to preserve it in sacred places. Important howdies, which were indeed built before the time of Constantine, but thenceforth were held in all sorts of buildings, and, large as was the increase in the number of Christians, the buildings available for worship would be adequate from the time when the removal of the government to Byzantium left, as it must have done, many buildings deserted. The early Christians did not object to making use of any sort of building. The smaller buildings, such as temples, were converted boldly into churches; of the larger buildings, such as thermae, theatres, and the like, a part only was used. Lanciani (Pagan and Christian Rome, London, 1899, p. 160) states that he has hardly found an ancient pagan building in Rome that has not evidence of having been used as a priest-house in some part.

The Christian adapters of most of these buildings must have ignored orientation. But they probably regarded most of them as temporary, and few pagan buildings are still used as churches; the best known are the round temple of Romulus with the adjoining templum sacre urbis, since the 6th cent., the church of SS. Cosmo and Damian, in which the altar is to the E.N.E., and the Pantheon, the door of which is to the N.

The churches actually built by Constantine or under his auspices almost all have the W. altar and the E. narthex. When this is not the case, there is generally some obvious explanation. Scott (Essay on Eng. Ch. Arch., p. 18) gives very useful lists of the old churches of Rome showing approximately their direction. Of the 53 churches recorded only 11 have the E. altar, the aspects lying for the most part between E.N.E. and E.S.E. Of these three may have been reversed and two, the important churches of S. Lorenzo without the walls and S. Petro in Vincolo without the walls, have a door on the W. Some of these owe their foundation to Constantine. But the churches which (in Scott's list) have the W. altar number 42. These include St. Peter's and the small church of St. Stephen near the apsidal end, now removed, each with its altar to the W.; the great basilicas of St. John Lateran with altar to the W.; Sta. Maria Maggiore, N.W.; S. Lorenzo without the walls, in its original state, W.; and to them must be added S. Paolo without the walls, before it was rebuilt by Valentinian II., W.; all these except Sta. Maria Maggiore are attributed to Constantine. Three other Constantinian buildings are included in the list as well as the important churches of S. Clemente (the lower basilica, see a note on the S.) and Sta. Maria in Trastevere, W. Many of these, like the first and last, have been rebuilt or remodelled in late times, but preserve the old orientation. Half of them point approximately due E. and W.; amongst those with altar to the W. lead the door to the S.E.; one has the altar facing S. W.

The turning round of the two great churches outside the walls happened in different ways. The W. are of S. Lorenzo, as built by Constantine and partly rebuilt by Pope Pelagius II., was faced to the N. The nave was intended to be a large nave to the west of it. Honorius then made a raised floor, in what had been the nave, to form an elevated presbytery; this account of the nave which was not the case above is a little inartistic. The nave was divided into three parts, and its entrance was approached by two pilasters.
6. Double-apse churches. — There is a remarkable type of early church which it remains to notice. It has an apse and an altar at either end. It is found over a very wide area, and the place and manner of its invention have not been conclusively explained. W. R. Lethaby (Medieval Art, London, 1904, p. 29), quoting Strzygowski, derives it from Egypt and Syria. The importance of the N. African churches lies in the fact that they were planned from the first. Another well-known example is the collegiate church of St. Gall in Switzerland, near Lake Constance.

A 9th cent. plan of the whole monastery of St. Gall has been published. It is seen that what was already in existence is a scheme in contemplation, and it was not exactly adhered to in execution. It is therefore valueless as a guide to the origin of the form. (Archaeological Journal, v. (1845) 85.) There is an apse at either end, and a central corridor, and a chancel, and an altar of St. Peter. In front of it is the monks’ choir. The W. apse contains another altar of St. Peter, and before it is another choir for novices, two of which are shown.

There is no bishop’s throne. The side altars are so placed that the officiating priest faces E. The chapels of the infirm and of the dead are placed back of the nave, not on either side at the E. end and that of the other at the W. end.

There are not a few double-apsed churches on the Continent, and they are known to have been used in England. But a general rule of the greatest of these reached their ultimate double form by receiving additions to the original plan. They therefore come under a different category from those which were so planned from the first, and they may perhaps be taken to show only phase in a transition—an abandonment of the W. altar for the E.

Double-apse churches are found at the following places among others: Germersheim, in the Haiti; St. Cyril’s (collegiate); Hildesheim; St. Michael’s; Laach, St. Mary (Benedictine); Worms Cathedral; Trèves Cathedral (the W. apse is said to be the latest); Mayence Cathedral (probably both choirs entered into the original scheme; the W. choir is called the parish choir); Naumburg Cathedral (the W. apse appears to be a creation of the 13th cent. and not to continue an early tradition); Bamberg Cathedral (the E. apse is rather the earlier and has a crypt, but the church is thought to be an earlier plan); and elsewhere in Germany. St. Catherine’s (the present W. choir is later, but probably occupies the site of an early church); Reichenau on the Lake of Constance.

Outside Germany double-apse churches are rarely met with on the Continent. J. T. Micklethwaite (‘Something about Saxon Church Buildings,’ Archaeological Journal, lii. (1896) 293) suggests that in Germany they may possibly be due to the English tradition taken thither by St. Boniface. In England we know of three: Abingdon (7th cent.), Lyminge, and Christ Church Cathedral, Canterbury. Of the last named we have a description of the building that was burnt in 1067. Below the E. apse, which contained the high altar (of Christ), there was a crypt, but the W. apse contained the bishop’s throne behind the altar of the Virgin. Between the middle of its length the church was flanked by a tower on either side. It is thought that St. Augustine found an old building (Bede [HE i. 33] says Roman) with a W. apse, and with a narthex and towers at the E. end, that he rebuilt this, and that after time the nave was lengthened eastwards at the E. end and that the W. was closed off.

At Lyminge the foundations of a W. apse have been found; the work is said by Scott (Essay on Engl. Ch. Arch., p. 20) to be Roman.

7. Position of altar in later Middle Ages. — The turn of the 10th cent. saw a change in Western Europe so that the altar should be at the E. end instead of at the W. probably happened in different places at different times. Micklethwaite thinks that in double-apse churches a monks’ choir at the E. end gradually overshadowed the people’s choir at the W. end, till in the 11th and 12th centuries the W. altar came to be looked upon as abnormal, and at the general rebuilding of churches in that age the W. altar was put away to the rood screen. A simpler explanation is that the W. apse was gradually confining tendency to what had become the orthodox practice at a much earlier period.

Probably the direction of the altar was at no period held to be of very great importance. We have noted that during the Early Christian period minor altars seem to have been often placed against side walls so that they faced N. or S. There are several in the plan of St. Gall which apparently have been placed with as great convenience against the E. walls of their respective chapels. There are a few striking instances of churches with a N.S. direction. At Siena Cathedral the altar is at the E. end, but we may see the beginnings of a great 14th cent. scheme for a new cathedral which was to run N. and S., and was to absorb the old building (the present church) and convert it into a transept. Naples Cathedral is another instance; the old and new buildings are at right angles to each other.

In England it was natural that Augustine († 604), Æthelred († 610), and Wilfrid (634–709), under Roman influence, should place their altar to the W. It might also be expected that the Scottish mission of Aidan († 631) should use the E. position. This we find to be the case. But at an early date the E. altar was adopted and spread universal.

8. Deviation from due E. — English churches generally have their axes near enough to true E. for deviation to be unnoticeable to most people. But the orientation is by no means accurate, and occasionally the deviation is very considerable. The deviation has been explained by the pretty theory that the axis is in the direction of sunrise on the day of the particular saint in honour of whom the church is dedicated. But this theory has not found favour with serious ecclesiologists in England. It is just possible that this direction was adopted occasionally, and in the aggregate such instances might be numerous, though those who hold the theory have never been at the pains to compile a list. But it is open to serious objections. There are in England so few churches of this type that placing churches and no hint that they ever were so placed, while Durandus distinctly says that churches are to point to sunrise at the equinoxes and not at the solstices (i. 8). And the exceptions are so numerous as to be in the majority. We may notice a few well-known buildings (see table at end of article). These and all observations must be corrected to suit the unformed calendar. The calendar was reformed in England in 1751, when we had to omit eleven days. If we take the year 1100 as an average date for the foundation of our churches, the calendar would then be seven days wrong. This would not make a difference of 2°. It will be seen that most buildings favour E., regardless of their dedication. Winchester Cathedral is fairly correct for its feast-day, but there can hardly be a doubt that it is turned so far to the S. to accommodate it to a cramped site. At Westminster there are three notable buildings, the Abbey, St. Margaret’s, and St. Stephen’s Chapel. The old royal palace, now absorbed in the Houses of Parliament. The easts are 29th June, 20th July, and 26th December. But the axes of the three are nearly parallel and point E. or slightly S. of E., instead of almost opposite the meridian of E.

Ely Cathedral, an instance favouring the theory, may be quoted to show the rashness of holding it
without very careful inquiry. The dedication is to the Holy and Untvlied Trinity. As it is a cathedral church, the artisans who hatched it were probably trained. It is known that before the Reformation the dedication was in honour of the Blessed Virgin or of St. Peter or of both. The feast of the translation of a saint's relics was no doubt a felicitous occasion, but it is difficult to en-
ceive of its giving the orientation of the building, because it would be hardly possible to foresee, on the fix ing of the axis, when the new building would be ready for the translation. Thus the building probably does not derive its direction from the first translation of 17th Oct., but it is to
sunrise on about 17th Oct. that the axis points, and it may be argued that the present building was made to suit sunrise on the anniversary of the first translation. But it is more probable that, if any axis, it would be either St. Peter's Day (29th June) or Lady Day (23rd March).

We have seen that the direction does not suit 29th June. It would indeed suit Lady Day fairly well, though not exactly.

With this result another by applying it to a group of small churches taken at random in one district. None of the following deviations are more than 5° E. or 5° W., which is as true as it can be (it will be seen that the dates of the raids vary from mid-
summer to nearly midwinter, at which seasons the points of sunrise and sunset are almost at right angles). Our selection: St. John (29th July); St. John Baptist, Alderford (24th June); St. Andrew, Attlebridge (29th Nov.); St. Agnes, Cramton (26th Jan.); St. Nicholas, Brandiston (6th Dec.); All Saints, Weston (1st Nov.).

A point to be borne in mind in this connexion is that the dedications of churches have not infre-
quently been altered; some earlier dedications have been changed to that of the Blessed Virgin Mary; this was common in the 14th cent.; others were changed to that of the Holy Trinity at the
Reformation. Some places still preserve, it is said, a primordial solar feast.

In Rome, out of 45 churches (nearly the whole number in Scott's lists) 15 point reasonably near to the sunrise on the feast-day, and 30 are quite wide of it.

The Bend in axis of churches.—Another popular theory is this: when the axis of a chancel is found not to be in a straight line with that of the nave, the deflexion was intentional and was meant to
symbolize the drooping of the head of our Lord upon the Cross. Here again we have no authority from the ancient writers, and we have no right to attribute to them a meaning which they do not acknowledge. F. Bond (Dedications and Patron Saints of English Churches, London, 1914, p. 249) indeed quotes the case of a 17th cent. architect who died of grief on finding that a church that he had built at Metz had a bent axis.

Bond says that the theory has been supported recently by Emile Male, Victor Mortet, J. A. Britnell, Archdeacon Saint-
Paul, and to some extent by de Guennoc and Lenoir. Camille Enlart, but rejected by Auguste Choisy and Robert de Lestevie. Johnson (p. 258) suggests that the bend was intended to produce an agreeable optical illusion. He states that deviation is generally to the S.; Bond says that it is to the N.

A little consideration will show that the def-
lexion must always be accidental. When a chancel is to be rebuilt, the chancel arch is blocked by a temporary wall so that the nave can continue in use. Unless the axis of the nave is carefully preserved, it is customary to continue this wall is built, and unless the stakes in the ground are care-
fully preserved, the chances are that the axis of the new chancel will not be in the same straight
line, because it is difficult to make it exactly per-
pendicular to the short base afforded by the piers of the old arch. (Compare the cases of Lewes.)

And it is not going too far to say that the deflexion is never found except where one part of the church has been rebuilt. It is, moreover, seldom found in the best buildings—more often in the churches of frontier and wild villages than in cathedrals and
great churches, and more often in new churches which are in other respects irregular and of various periods than in those which are of fairly uniform style and are acknowledged master-
pieces.

No bend is found in Winchester, Durham, Salisbury, Wells, Norwich, Lincoln, Peterborough, Exeter, Hereford, Gloucester, Worcester, Chester, Llandaff, Oxford, Southwell. This list
The force of even these few instances is lessened still more by the fact that we can see that the particular axis is only one irregularity among the many found in old buildings; e.g., in six cathedral churches the W. door is not in the centre, and in one, Manchester, the axes of nave and choir are parallel but not in the same straight line. So also the irregular Lady chapel at the E. end deviates.

It may be that the above analysis is subject to correction, because plans, however carefully measured (like the Builder series here used), may occasionally omit a slight deviation. But, if the deviation is so slight as not to escape the notice of a good surveyor, it can have but little value as a symbol.

It is true that the cruciform plan of our great churches symbolizes the Cross. But it was a symbolism read into the cross-form after it had been evolved on other grounds. Exactly the same process is happening now in regard to the inclination of the head of the Cross.

10. Details of orientation in buildings and furniture and in ritual.—The site chosen for the English church is usually on the N. side of the village; perhaps it would be more correct to say that a site was chosen such that the village should be S. of it. There may have been some unknown motive in this, or it may be simply that it was preferred to approach the church through the
burial-ground, which was usually to the S. Similarly, there are two possible explanations of the burial-ground being to the S. There is a pre-
judice against burial on the N. side, J. Brand (Popular Antiquities, new ed., London, 1900, p. 475) has said it was formerly the custom to un baptism infants, the excommunicated, the executed, and suicides. This prejudice may be due to an old belief or simply to a natural dislike of a cold, damp place with rauk herbage. Thus the principal door on the side of the chancel arch is in the S. Nevertheless, there is almost invariably a N. door opposite to it, which is often nearly or quite disused.

Tombs in the aisles are on either N. or S. side indifferently. But in the chancel the place of honour was on the N. side; this may have been in order that the tomb might be used as the Easter Sepulchre, which was on the N. side, presumably because our Lord was pierced on the right side.

In early churches the Gospel ambo was on the N. side; from it sermons were preached and decrees and excommunications read; hence there is still a
sight tendency in Anglican churches to place the pulpit on the N. side. The Pascual candlestick also was on the N. side. The Epistle ambo was on the S. side. The sedilia of medieval type are believed to be a relic of the presbyters' seats round the apse of the early churches. They have been kept on the N. and not on the N., doubtless because it is more convenient for the assistant to approach the celebrant, who is facing E., on his right hand. Close to the sedilia was placed the piscina. The bishop's throne is also on the S. side. There was a custom, very commonly if not generally kept up in the later places, of the bishop sitting in the left cent., of separating the men and women, the men sitting on the S. side of the church and the women on the N. This custom had doubtless continued without a break from the earliest days of Christianity, and it is perhaps of pre-Christian foundation. It is noted by Durandus (i. 46).

The dissenting bodies from the Anglican Church do not observe orientation.

11. Burial.—Christianity no doubt inherits the custom of burial with the feet to the west, from paganism. The reason for it given by the early Christians was that Christ at His second coming will appear in the E. and the dead will rise to move towards Him. In practice graves are made parallel with the chief temple or grand street.

12. Superstition.—Few definite beliefs in this country about the points of the compass are recorded. The following has not previously been published: An old gentleman who had to undergo a slight operation declined to allow it to be performed until the sun on which he was lying had been placed N. and S. It is thought that he held some superstitious belief.

It is said that in Scotland there is an idea that if the passing of the soul is to be easy the floor-boards of the sick room should not run N. and S.

The association in Ireland of colours with the points of the compass will be noted presently in describing similar ideas in other parts of the world (see below, X.). Green is said to be an unlucky colour in England (Baring-Gould, p. 15.)

Jews.—The Hebrew word for east means literally 'the front,' and that for west 'the back,' so that south is on the right hand and north on the left. This suggests some form of sun-worship at an early period. The supposition is supported by the fact that later time a building had its door facing E. (and for the hinder part of the tabernacle westward thou shalt make six boards) [Ex 26:2 RV]. This true orientation was notwithstanding the ban of sun-worship by Moses (Dt 4:2).

Lapse into worship of sun, moon, and stars are frequent all through Jewish history: Manasses 'worshipped all the host of heaven' [2 K 21]; Josiah 'took away the horses that the kings of Judah had given to the sun' [23]; Amos upbraids Israel with carrying with them 'the star of your god' [Am 5:25]; Ezekiel sees 'between the porch and the altar, about five and twenty men, with their backs toward the temple of the Lord, and their faces toward the east; and they worshipped toward the east' [Ezk 8:5]. The custom of saluting the moon by kissing the hand referred to in Job 31:26 may have been learned in Assyria (see J.E., s. e., 'Star-Worship').

The Jewish attitude of prayer is an instance of what may be called 'local orientation': it was not a turning to a point of the compass, but a turning to a place. We have a suggestion of this in Solomon's prayer at the dedication of the Temple: if a man 'spread forth his hands toward this house, he is in God's house' [1 K 8:55]. And, when Daniel prayed, 'his windows were open in his chamber toward Jerusalem' [Dn 6:9]. This became the law; a worshipper out of Palestine should turn towards Palestine, one in Palestine towards Jerusalem, in Jerusalem towards the Temple, in the Temple towards the Holy of Holies (J.E., s. e., 'Mizrah'). In J.E., s. e., 'East,' however, facing to the E. is said to have been the attitude of prayer, and reference is made to the Apocryphal Books, ii. 57, which the writer maintains to have a pro-Christian Hebrew foundation.

In regard to buildings the custom of a true orientation, which had been established by the arrangement of the Tabernacle, was continued. It was not followed in Solomon's Temple and in all subsequent rebuildings. Ezekiel is very precise on the orientation of the temple of his vision (40-47). Comparison may be made with the Apocalypse (Rev 7:16). Synagogues (apparently those of the pre-Christian era) are said by A. W. Brunner (R. Sturigis, Dict. of Architecture and Building, 3 vols., New York and London, 1901, s. e., 'Synagogue') to have had 'the holy ark or sanctuary' at the E. end, but no authority is given. Those of the 2nd cent. A.D. in Gallienus and the 'Synagogue' of Syria') Synagogues are now so planned that the ark may be towards Palestine (J.E., s. e., 'Mizrah').

VIII. MUHAMMADANS.—The Muhammadans, like the Jews, observe a 'local orientation'; they turn in prayer according to their own facing Mecca. The Ka'bah at Mecca, adapted by Muhammad as a mosque, had been a pagan temple with its entrance to the E. (J. Gwilt, Encyclopaedia of Architecture, ed. W. P. Popworth, London, 1807, §118).

The oriental feature of prayer is that it is the gilibah or mahalab, a niche or recess in a wall, the direction of the wall being at right angles with a straight line to Mecca. In front of the gilibah is an area covered by a roof supported on columns which form a series of aisles running towards the Mecca wall. These form the prayer chamber in which the celebrant, at an open court with covered walks at the sides leading from the entrance, which is generally opposite the Mecca wall. As the Jews had but one temple, synagogues being but houses of prayer, so the Muhammadans had but one temple, that at Mecca (Ferguson, ii. 516); mosques are places of prayer arranged so as to show the direction of Mecca, though they have acquired a sanctity of their own, not less than that of the shrines of other faiths.

Orientation of a kind was therefore of the first importance in a mosque. At Isphahan the axis of the great bazaar runs N. and S. The front of the mosque occupies the S. side of this, but the axis of the porch is bent at an angle of 45° so as to suit the mosque itself, the main axis of which is duly pointed to Mecca.

Private prayer on the housetop is also directed towards Mecca.

In burial the Muhammadan is laid on his right side facing Mecca (see art. DEATH [Muhammadan], iv. p. 5029).

IX. THE EAST.—Orientation in ritual observance is perhaps most pronounced in Asia, which may be more or less indirectly the source of the European. It is held by Mr. Tytler holds that the adoration of the sun in the ancient Aryan religion is revealed in ritual orientation. The Brähman turns E. at sunrise, says Tytler, and at noon, after adoration of the sun, he turns N. Again he reads daily portion of the Veda and to make his daily offering.

"It is with first and principal direction to the east that the consecration of the fire and the sacrificial implements, a ceremony which involves the work of all his religious acts, has to be performed" (P.C. ii. 450).

An example of the orientated altar is given in art. ALTAR (Hindu), vol. i. p. 345. Hindu temples are sometimes dedicated to the sun-god, but the
moon-god has none (art. BRAHMANISM, vol. ii. p. 5082). Temples may be duly orientated in the wider sense of the word.

The Indian Buddhist generally orientated his buildings fairly closely to the cardinal points, and seemed to prefer to make his entrance face E. But the Jain temples did not follow a rule, the Jains being indifferent apparently to any particular direction for their buildings' (H. Cousins, in *Archaeological Survey of India*, Calcutta, 1907-08, p. 185).

The Things, on the other hand, are worshippers of Kali, the death-goddess. In her honour human victims were murdered; to her the sacred pickaxe was consecrated with which the graves of slain were dug, and the elaborate ritual of this consecration was performed facing W. The temple Tartars make a mound over the grave and place on it a statue facing E. (P.C. ii. 423).

Buddhism varies much in different countries, and presumably its buildings and ritual vary. In China it appears that the temples are truly orientated (see *Architecture [Chinese]*, vol. i. p. 6959) and there is therefore, to be supposed, some orientation of ritual. There is a paradise of the dead in the W., and the chief book read in the presence of the departed person is the 'Sutra of Andro and Ganga.' The Buddha was born in the W., and it is the west, behind which lies paradise' (art. CHINA [Buddhism in], vol. iii. p. 5544; cf. art. Confucius, vol. iv. p. 199).

In the Confucian religion there are many sacrifices connected with an elaborate ritual. The most important of these is described in art. Confucian Religion (vol. iv. p. 13), and the points of the compass are carefully mentioned, but their religious significance, if they have any, is not indicated. The sacrifices, the second-hand, made altars in the temples and about Peking. The sun-god has an altar-terrace outside the main E. gate towards the region of the sun; the moon-goddess has an altar outside the W. gate, because the W. is the region where the new moon is born.

X. SAVAGE RACES.—1. Ritual acts.—The ritual of primitive races is with difficulty ascertained, and not very much has been recorded. The Pangin, one of the tribes of the Indian Archipelago, on all ceremonial occasions salute and face the directions of the rising and setting sun; the people sleep with their faces to the E., and on cremating the dead they place the body to face in the same direction; the land of the dead is in the E., and it seems that that is the direction to which most importance is attached:

'The only disturbing feature is the fact that the "setting sun" is said to be invoked. This may be due to the influence of a solar cult' (W. J. Perry, *J.R.I. iv. 236).

Another tribe, the Toraja of Central Celebes, place their houses in an E. and W. direction with the door at the W. end, thus facing the land of the dead; but this is really religious.

A neighboring tribe, the Tobaha, build their 'village-house' N. and S., so that, as they say, on entering, one faces to the north, the direction whence they have come, and in which direction they place the land of the dead. The holy place of the house is the north-centre pole, and there the ghosts come to live in bunches of leaves of the arum pala' (ib. p. 260).

This seems to be a first, but very important, step towards temple-worship. The largest and most important temple of the Tomapo has a door on the E. side, thus facing towards the land of the dead and in the direction whence the tribe came. A number of the Buddha reproductions which houses are built with due regard to the direction of the land of the dead, and of others in which a place is provided as a residence for the ghost, or an entrance into the house is made for it.

In ritual observances the following may be noted.

In old Mexico, where sun-worship was the central doctrine of a complex religion, men knelt in prayer to the E. and doors of sanctuaries were placed on the side (W. (P.C. ii. 436). Indians of New Mexico, though they are now Christians, have preserved their ancient practice of turning to the sun at his rising and setting in the directions of the four parts of their worship. The cave-temples of the sun-worshiping races of the northwestern part of Mexico and the Hopi tribes stood in the opening early in the morning of the first days waiting for sunrise. The Comanches, also sun-worshippers, make preparations for the sunrise, place the dead on the right on the E. side of the lodge to receive the morning sun's first rays. The ancient Peruvians were sun-worshippers, and in their capital, Cuzco, a temple was orientated, with a great golden disk on the W. wall to reflect the rising sun as it shone through the window. The sun-god was slain on the twentieth day after the birth of her child, presents it to the sun at the moment of sunrise (see *Buny [Introduction]*, vol. ii. p. 619, and *Journ. Amer. Eth. and Arch. ii. *1902*). 163).

The following symbolic orientation is characteristic (A. C. Hayden tells the present writer) of the Pawnees, but to a greater or less extent applies to the Plains Indians generally. The earth lodges are built on a divinely inspired plan, and serve for ceremonial purposes as well as dwelling-houses; the same symbolism is found in the summer tents, or tipi. The entrance always faces E. The central circular fireplace represents the sun, and the cleared space round it the horizon. For certain ceremonies an altar of rushes and earth is placed in the W. of the house, and at the edge were the sacrifice was made. The sacred bundle was deposited the sacred bundle; behind it, in the place of honour, was the priest, and at the priest's back was the sun, the holy ground, over which no priest can pass till purifled by purification. This region in the W. is sacred to the evening star, the beneficent spirit of fertility, and his messengers: wind, clouds, thunder, and rain. To the N. of the fireplace there should be a bison's skull to represent at once the gods of the heavens and the house of Tira, the high god, the all-embracing, the morning star, the blood-thirsty controller of the heat of the sun, and who represents his brother, the sun, from burning up the world. The S. is the land of death and the receivers of the souls of the unfortunate dead, while the S.E. is the region of sickness, death, and storms. S.W. in ceremonial pipe-smoking puffs of smoke may be blown in various directions as offerings to these and other heavenly bodies.

J. W. Fewkes (Journ. Amer. Eth. and Arch. ii. 14-22) says that the orientation of the Comanches (whose ancestor, the Acoma, lived in the Tusayan [Hopi] Pueblo of Walpi in Arizona 'are generally placed with their walls corresponding to the conception of the primary points but not to our cardinal directions. . . . The variation of their N. is, with the true N. (varying from 42° to 40°): consequently the N.S. lines of their khi-biad are in reality N. and S.'). The orientation is 'probably intentional,' but it may be determined by the possibilities in direction of the recesses in which they are constructed.

K. M. Whetstone tells us that the temples of Mashonaland were orientated (J. T. Bent, *Ruined Cities of Mashonaland*, London, 1918).

We may here notice the wide spread association of certain colours with the various points of the compass. A table is appended showing some of the recorded observations. It will be seen that these are from N. and S. America, China, and other parts of the world. Certain lines of influence in each case is no approach to uniformity and only a few tendencies can be faintly traced, as, e.g., that black is practically never associated with the S. or E. It is just possible that the well-known liturgical colours of the Christian church, though of liturgical use, are not entirely unconnected with these ideas.

2. Burial.—Practically all peoples who practise immolation follow some rule as to the direction in which the body is to be laid. A journey to the land whence the tribe migrated is probably the most general conception at the present time. The dead are laid in the direction of the land of the dead, and this, when both can be ascertained, probably coincides with the direction of the land of the forefathers.

Perry gives many instances from the Indian Archipelago. One tribe makes the grave parallel to a river upon which the spirit must cross the river; the houses are built thus towards another, which believes that the land of the forefathers is to the S., lays the body on its side with head to W., feet to E., and facing S.; another, which believes that the land of the dead is to the W., says that the body be laid with head to W., feet to E., and facing S.
dead is situated in the S., and it is from the S. that the people believe themselves to have come. Cases are recorded where the body has been oriented in the direction of their forefathers, the situation of the land of the dead being unspecified. An exceptional and splendid example of how the dead were oriented is illustrated in the belief in the persons of the sky, the sun, and the earth; the sunset at a point of the compass appropriate to his totem (ib. p. 459).

'Among the Batuts of Sumatra men of different totems are buried with their heads in different directions, but the reasons for these differences are not always manifest. Among the stone circles of the Hot-Wind totem and the totem among the Wotjebaluk we may conjecture that the direction in which the body was buried was the direction in which the totem was supposed especially to reside, so that the intention of interring the bodies in these positions may have been to enable the released spirits of the dead to retain their totems' (Frigg, Totemism and Taboo, iv. 215). But, as Hadano points out, since the people are supposed to be related to or descended from their totems, it is only probable, but not demonstrated, that this is the spirit to the land of the forefathers.

The orientation of the graves of some primitive peoples is without any indication of the beliefs which decided the direction; burial with feet to the W. is observed by races of N. America, Central Africa, Samoa, Fiji, and Australia. Tylor mentions some Australian tribes who bury their dead in a sitting position facing E., even while believing that the land of the dead is in the W.

XI. PRE-HISTORIC WESTERN EUROPE. — 1. Temples.—Under this heading brief reference will be made to the well-known megalithic monuments. They are included in this article because they have been called temples and tombs, and have been said to be orientated in the sense that their aspect was decided by religious considerations. But as a matter of fact we do not know their use, or what determined their direction, their age, or the religion of the folk who built them. If we knew any two or even any one of these facts, it might be possible to deduce the others. But we have no working base, not even any uniformity among the remains.

The two most famous examples are Carnac in Morbihan and Stonehenge in Wiltshire. Carnac is a series of immense parallel avenues running roughly E. and W. along the coast of Brittany. Stonehenge is a circle with three concentric circles, two of stone and one of earth. From the outer circle runs a straight depression between earth banks. A line drawn down this depression and continued through the horseshoe divides it symmetrically and passes through a flat slab called the 'altar.' This line points to the place of sunrise on mid-summer day about, according to Lockyer (Stonehenge, p. 67), the year 1880 B.C. It may be that Stonehenge is a sun-temple, as Lockyer argues, and that it was built about that time. But it may not be a sun-temple, and, as to the date, A. R. Hinks points out (NC iii. [1905] 102ff.) that, if the first glimpse of the sun is observed, we get the year A.D. 3000; if the middle of the disk is observed, the conditions are right for to-day; if we wait for the completion of the sunrise, the date must be put back about 2000 years.

The works at Avebury consist of a large circle enclosing two others; there is an avenue leading from the inner circle to a passage, Avebury, the Avebury and the Kennet and Avon. At Avebury and a similar passage, Avebury, there is a circle with indications of an avenue leading N.W. The circles forming 'King Arthur's Round Table,' Peareth, are broken towards the N.E. and S.W. The work at Arbor Low, Derbyshire, seems to be orientated almost due N. and S. (Fergusson, rude Stone Monuments, London, 1872).

Carnell is in the island of Lewis is a circle with a stone in the centre. From the circle single lines of stones run to the sea, and in some cases the great monuments in wide avenue runs to the N. (These directions appear to be approximate only.) A tomb within the circle has an axis roughly N.E. and S.W., the entrance being towards the N.E.

There are Carnell-like remains in Ireland. Those around Lough Gou, Limerick, have been described by B. C. Windle, who made careful observations of the bearings in those cases where they might possibly be significant (Proc. Royal Irish Acad. xxx. [1912] sec. C. 235). The monuments near Lough Swilly, Co. Donegal, have been recorded by H. Boyle Somerville, who detects several systems of orientation, monuments being orientated for the solstitial sunrises or sunsets or both, for sunrise or sunset at the equinoxes, for sunrise or sunset at a point equidistant in time between solstices and equinox, for rising or setting of a star or of the moon (Journ. Royal Soc. of Antiquaries of Ireland, xxxii. [1909] 192, 215, 343).

2. Burials.—Until recently burials both on the Continent and in Britain appeared to be hap hazard. But recent research seems to show that two or perhaps three definite systems were followed, though in each of these there were not a few exceptions. In some cemeteries the skeletons are found laid on their backs E. and W. with feet to E., while in others they are N. and S. with feet to W., but occasionally to S. Others again are laid on the side E. and W. with the feet sometimes towards N. and sometimes towards S., and in some cases a single group contains skeletons pointing to all four cardinal points, as at Broughton Poggs. At the Saxon cemetery at Fairford the feet were almost invariably to the N., and W. Wylie thinks that this was the prevailing pagan practice among Teutons (Archaeologia, xviii. [1857] 450). In Sussex and Surrey and in the south of England generally the feet are most commonly E., but, when they are not, they are almost invariably to the N. In the round barrows of Wiltshire the tendency is for the bodies to be facing S.

One of the most remarkable examples of orientation (taking the word in its wide sense) is the 7th or 8th cent. Christian cemetery at Hartlepool, the first monastic seat of Hilda of Whitby. Here the bodies were buried with their heads N. and their feet S., and incised with crosses and Christian inscriptions; yet all were lying N. and S.

There seems good ground for believing that the Teutons held the north sacred. The classical passage in medieval literature is in Beowulf (Beowulf) and is quoted by J. Grimm (Deutsche Mythologie, Gottingen, 1854, i. 30). Here the fox turns in the Christian direction, while the wolf is content with the heathen orientation towards the N. G. B. Brown (The Ashmolei, xxxi. [1895] ii. 161) points out that this orientation cannot have formed an important item in Teutonic paganism or it would have left a more decided mark in literature. On their conversion to Christianity the Teutons for the most part seem to have abandoned this direction in their burials for that of E. and W.

The general conclusions are as follows, though we must not expect uniformity even in the same race. Burials with feet to the east were prevalent in the province of the pagan Saxons, though this was not universal. For the most part they adopted the E. and W. position on conversion to Christianity. On the other hand, some Christian burials are, as we have seen, N. and S. Some burials on the side with feet to E. or W. with the face
always to the S, suggest a desire to face, or lie in the path of, the sun. These general tendencies are interfered with by the survival or overlap of more ancient customs, by indifference and ignorance, and by local conditions such as a steep slope in the ground.

List of English churches showing direction of axis, dedication, and date of festival, with direction of sunrise on the festival (see above, VI. 6).

LITERATURE.—The only work dealing comprehensively with the subject is Heinrich Nissen, Orientation, Berlin, 1906–10 (only pls. 1–3 (Egyptian to early Christian) have been issued). Egypt is dealt with partly by E. A. Wallis Budge, Egyptian Ideas of the Future Life, London, 1910, and ‘The Pyramids and Temples in the Sudan’ in Proc. of Royal Society of London, iv. (1859), and more fully by J. Norman Lockyer, The Dawn of Astronomy, London, 1894, Greek temples are discussed by F. C. Penrose, in Proc. of Royal Society of London, ill. (1905), and by J. Scott, early Christian churches by G. Scott, Jour., 1891, and Lockyer has expounded his theories on Stonehenge in his Stonehenge and other British Stone Monuments, London, 1896. James Ferguson’s Rude Stone Monuments in all Countries, London, 1872, is still valuable. Pre-historic work is discussed by G. Baldwin Brown, The Early Arts in England, 4 vols., 1893–15, and by Walter Johnson, Byways of British Archaeology, Cambridge, 1912. Both these authors give useful references to recent research. J. G. Frazer’s works, although curiously enough, not dealing directly with the subject, must of course be studied.

T. D. ATKINSON

POKOMO.—I. Distribution.—The Pokomo are a Bantu people inhabiting the Tana Valley, in the north-eastern part of the British E. Africa Protectorate. Their proper tribal name is Wa-Pokomo (from the word representing to Swahili pili and Giryama h), but they are called Wapokomo by the Swahili and Munyu by the Gallia. A recent official estimate gives their number at about 18,000. They are divided into thirteen tribes (myuti, plur. of lutu), occupying definite areas with recognized bound.

1 Nicholas, Chron. of Hist.

POKOMO

89

aries. None of their villages is found at any great distance from the river, with which their tribal life is so closely bound up that they have a saying: 'The Tsana is our brother' (they call it Tsana, Tsana being the Swahili pronunciation; the Galla name is Galana Maro). Their fattest northwestern limit appears to be about 30° 30' E., on the bend of the river; this is the district of the Koro-Koro tribe; the rest, in order, going down the river, are the following: the North, the Kinakombo, Gwano, Ndera, Mwina, Ngatana, Dzunza, Bun, Kalindi. The first nine of these are known as the 'upper' tribes (Wantu wo dzuu); the Ngatana (whose district is about 3° 30' S. by 40° E.), Dzunza, Bun, and Kalindi are the 'lower' (Wantu wo nani). These two sections differ considerably in dialect and customs; they are sometimes said never to intermarry, but the rule is not absolute. On the confines of the Kalindi area, between Chara and Koro, and on the Ozi estuary, are some villages of 'Muhaji—Pokomo who become Muhammandans and more or less adopted Swahili dress and customs. The Zubaki are the most numerous tribe, numbering about 3500.

The first European to mention the Pokomo is probably Beteler, who was at Lamu in 1823, and says:

'Above the town of Kow (Kanu), at every twelve or fifteen miles, there are large villages on the northern bank inhabited by the Poquomo tribe. They are apparently Confessionists or Christians, and in ten days, or about fifteen days' journey in a canoe, . . . is situated the town of Zoolakey, beyond which the current of the river is too strong to proceed against it' (Narr. of Voyage of Discovery, i. 260).

The 'town of Zoolakey' is probably a mistake for the Zubaki tribe; the distance is approximately correct.

Kraaf, though he never visited the Tana, heard of this tribe, and mentions their kinship with the 'Wanyiki' (see art. NYIKA). He obtained a good deal of information from two Muhammandan Pokomo settled at Takamungu, who, among other things, gave him a list of the 'principal places' on the Tana, most of which are the names of the tribes already given; others may be those of villages which have since been removed. The Pokomo, though not nomadic, like the Galia, have at various times been forced to reside by changes in the course of the Tana, the last one who is said to have taken place about 50 years ago, the river being deflected near Mariano from its old bed, which ran to the north-east of the present one.

Von der Decken was at Kau in the early part of 1865, and states that the Gallas were 'tiefliche Ackernon,' whose villages begin above Chara (Reten in Ostafrika, ii. 271). His companion, K. Brenner, returned in 1867 and ascended the Tana as far as the Malankote district. Between these two dates the Tana had been visited by New and Wakefield, of the United Methodist Free Church Mission, who founded a station at Golbanti, primarily for the benefit of the Gallas, though the Pokomo were found to be more promising converts. The country had been visited by resident Europeans, but is in charge of a native teacher; and there is a small number of Christian Pokomo at other stations of the same mission. Brenner's estimate of these people, it may be remarked, is unduly severe. The Tana was explored 1857-59 by Gustav and Clemens Denhardt, who ascended as far as Masa, in lat. 1° 15' S. The former gives some account of the Pokomo in the Journal of the Berlin Geographical Society for 1884. Subsequent information is chiefly from the German missionaries belonging to the Northern Mission, who, began work on the Tana in 1887, soon after the proclamation of the German Protectorate over Witu, which lasted till 1890.

2. Origin, language, etc.—The traditions of the Nyika tribes seem, on the whole, to import that the Pokomo came, like them, from Sungwany; though they moved southward considerably earlier. They were already settled in the Tana Valley when the Wanyika were driven from their homes by the Gallas in 1860. It is remarkable that the Pokomo are always said to be descendants of the Kalindi ('we refused to be conquered by the Galla, but the Pokomo consented,' and retained their country at the price of their freedom. They have been, in fact, more or less tributary to the Gallas ever since. The increase of the Kalindi tribe has been reduced by the attacks of the Somali on one side and the Masai on the other. According to Von der Decken (ii. 271), the Pokomo were, in 1865, dependent on the Galla 'olime jedoch von ihnen geschiickt zu werden.' Thus, but the matter is still involved in much uncertainty. Some of the
Pokomo make him contemporary with Yere, and others, while not asserting this, are positive that there were Swahili towns on the coast when this ancestor came to the Tana Valley, which may indicate that the Pokomo settled there at any rate later than the 12th century, as stated for the foundation of Pate. It seems probable that the Pokomo were the earliest Bantu with whom the Arab settlers came in contact, and that their language forms the groundwork of Swahili—or at least of the Lamu dialect.

The Pokomo language contains, as might be expected, a great many Galla words and also a number of others which do not seem to be Galla, but are difficult to parallel in any other Bantu language. Considering the traditions abovementioned to and other points which make it highly probable that these people are partly descended from the Wasanye, we may not be far wrong in assigning these words to the language of the latter. It is difficult to establish this point at present, because most of the Wasanye have disused their own language, and (like the Korokoro) speak Galla; the few who still know the old speech are to be found in the neighbourhood of Witu.

The Pokomo are divisible into exogamous societies, are also hunters and fishermen; and their hunting customs, tabus, and traditions show that the practice is of great antiquity. Their burial customs also seem to connect them with the Witu; for they are said to be removed, even in the dead man's own house, as do most Bantu tribes, they carry the dead away into the forest. One of their 'mysteries,' the fisfurige, is avowedly borrowed from the Wasanye, as the great nyagda, a sacred friction-drum, is said to have been derived from the Warabai. We have therefore every right to assume a composite origin for the Pokomo; and this seems also to be borne out, e.g., by the numerous gradations of skin-colour met with, 'black' and 'red' (i.e. darker and lighter) individuals being frequently seen among the children of the same father and mother. As a rule, they are of sturdier build than the Wasanye, but not often tall. Otherwise their physical type calls for no special remark. Denhardt (p. 145) says that he has never seen a woman, but it is not often seen now. The two middle lower incisors are sometimes removed, or partly chipped away, but this is not universal, and seems to have, nowadays at least, no ritual significance. Denhardt's account of the fisfurige, the installation of the youth, of this operation about their eighth year, was repeatedly assured that this and the circumcisions were 'nur Schönheitsmittel.' The tribes of the Lower Tana do not practise circumcision (except such individuals as have adopted Islam); those of the Upper Tana do.

3. Social organization.—The Pokomo eweti consist of exogamous clans (masindo, plnr. of sindo). Many of them bear Galla names (e.g., Uta, Meta, Ilanu, etc.) but the sense of later adoption, and some have their old Pokomo name side by side with the Galla one—e.g., Kinakaliani of Zulaki, which is also Garigela (=Garideld). The clans of the Wasanye also have Galla names. Traces of totemism, though no doubt it once existed, are not very obvious. Of the Galla ceremonial, as described above, the initiation is similar to that of the Giryama and other Nyika tribes, and also to that of the Galla, the Masai, and apparently the Wasanye. The system of 'ages' (Giryama morro) is known by the Galla name of wasanye, which is also practised by the Pokomo of the Lower Tana; but all the boys who enter the 'young men's house' (gane, or nyumba ya wemari) at the same time (which they do about the age of 14 or 15) constitute a luga. They remain in the gane till they marry, the next luga entering a few years after them, so that there are always two 'companies' (ritero) in the house at the same time. There is a twofold division of the tribe, apparently corresponding to the 'right-hand' and 'left-hand' circumcisions of the Masai. Amongst the Poko of the Upper Tana, and Vibare, and the senior luga in the gane belonging to each of these alternately. Apparently the luga does not receive a name till it has passed into the highest stage of eldership. In 1912 the young men were married at the age of fifteen. The tribe is exogamous (see mukumba), belonging to the Vibare section; the men of the previous luga, older, but not old enough to be their fathers, were vena we mperanya, and the luga before that (to which belonged Nyota, the senior chief, then almost incapacitated through age) was magomba. The magomba are the fathers of the vena we magomba, and the sons of the latter are at present known as wezulukwu ('grandsons') we magomba. The luga before magomba was mperanya, of which few, if any, were still living in 1912. The duration of a luga would seem to be about fifteen or sixteen years—roughly, half a generation.

The word ritero is used by the Pokomo, but is applied to a feast given to the children by the members of a new luga on their admission.

These age-classes must not be confused with the 'degrees' or 'orders to which men and women are admitted at various stages of their existence, and which correspond to the British term age or section. The Giryama, Boys are supposed to be brought into the metokoe by their fathers as soon as possible after birth, but the ceremony may be delayed if the family cannot afford the fee. The initiate is entitled to wear a coronet of palm-leaf (fauve) and ornaments called nyipti. The next step is njere (Giryama nyere), followed by kanvu, which a man is supposed to have entered before he marries. Married men are initiated into the kivuvi, whose badge is an ostrich-feather worn in a little clay 'holder' plastered on the head, like the nest of the mason-wasp (whence its name, nyangwa ya nyiro). After this comes the higher grade, ngazizi, with three divisions: the fisfurige, lesser ngazizi, and greater ngazizi. The special 'mystery' of the fisfurige consists in having the hair cut, and from the Wasanye, who strictly keep the secret from the Galla) consists of two flutes (called 'male' and 'female'), differing in diameter and pitch, which are played together. They are kept at a lodge in the forest; the lodge is named after the initiate; the lesser ngazizi has three stages, and the greater six, one of which is called wawanj (Giryama wawandzi). The ngazizi itself is a huge friction-drum made of a hollowed log, 12 ft. long and weighing half a ton. There is one ngazizi for the Wantu wa dunu, and another for the Wantu wa nuni, with whom are included the Wasanye. The members of the ngazizi are all called 'elders' (wekiko), though those belonging to the greater ngazizi enjoy most consideration. The government of the tribe is in their hands, and from them the two chiefs (wekhoji) are chosen. One of them belongs to the Hongo and one to the Vibare section. They appear to hold office till they die or are incapacitated by age. The name haji is the Gally haji.
Women have two orders, the vare, corresponding to the mbugwyne of the youths, girls being bought in by their fathers as soon as they can afford it, and the ngalola ya mulungu (also called ugorohe), by which they are married to three or four husbands paying the fees. It is probable that they have a ngadzi (or some equivalent) of their own, but the present writer was never able to ascertain this point.

As the marriage relation was yet insufficiently investigated is the division of each village into 'upper' and 'lower' sections (denda ya dzuwa and denda ya nsemi), which appears to have no relation to either class or lucas. At Nga, in 1912, each section had two elders (one of the four being the junior haju).

4. Material culture.—Pokomo huts are very much like those of the Gallia; they are hemispherical, or beehive-shaped, thatched with grass on a framework of poles, which are placed in a circle and tied together at the top (not, as by the Zuls, bent over to form arches). Rice was formerly the staple crop cultivated, but, since the Tana has had a freer outlet to the sea through the Bolezon canal and the Ozi estuary, the cultivation of paddy has increased. Some quantity of rice is exported, owing to the smaller area now covered by the annual inundations. All Pokomo are expert swimmers and canoe-men; the craft generally used (wado, plur. maho) is the usual African dug-out, but for long journeys performed by a large party they have the sangoala—two canoes lashed together, with a platform of sticks between them.

Fishing is carried on with hook and line, by spearing (the fish-spear, yutsoma, is distinct from the insect-spear, famo), or by means of snares and traps (momo) and weirs. The most important animals hunted (before the game-laws were in force) were the hippopotamus, the elephant, and the crocodile. Each has its appropriate ceremonies and is celebrated in special songs. No hunt could take place without the permission of the wokijo, who chose a lucky day, performed incantations to ensure success, and insisted on the observance of the complicated etiquette regulating the distribution of the meat. The chief hunting weapon was the bow and arrow, (with iron heads, or poisoned ones, with reed points) are sometimes seen, but are commoner among the Wasanye. The crocodile is a favourite food, and is therefore to a certain extent preserved; the Pokomo are always reluctant to destroy its nests.

Other items of food, especially in times of scarcity, are wild fruits and roots—e.g., the fruits of the mkoma-palm (Hyphaene thebaica) and the tubers, the receptacle, and upper part of the stalk of the blue or white water-lily (jenu).

As might be expected from their being largely a hunting tribe, the Pokomo have an interest in animals and a knowledge of their habits which recall the S. African Bushmen. Böcking has recorded some of their hippopotamus and elephant songs, and many others might be gathered from the lips of the people. A specially noteworthy point is the fondness of the women for improvising songs about birds, many of which are remembered and handed down from generation to generation. The Tokoak' of maize increased in bird-life, and the creatures celebrated in the songs (the osprey, a kind of plover, etc.) seem to have attracted attention by their beauty and grace and are not, so far as one can discover, considered from a utilitarian point of view.

6. Customs.—As far as the Pokomo are differentiated from other Bantu, it appears to be firstly by their affinities with the hunting tribes, and secondly by the specialized life consequent on their riverine habitat. In many ways their customs do not call for separate remark—e.g., those connected with marriage are much the same as those of other Bantu, except, perhaps, that it is more usual than elsewhere for a man to bespeak his friend's daughter in infancy or even before birth. This unusual custom, however, seems to be based on two considerations: one, that the women; and it was the present writer's impression that men with two wives at once—and certainly with more than two—were not common; but she gives this with hesitation, as her observation of natives of unimportant missionary influence was limited. The rules of klonipa are strictly observed, applying to a prospective as well as an actual mother-in-law, to her sisters, and, in a less degree, to other members of the family.

Pokomon speak of the usual Bantu type, but has interesting points of contact with that of the Galla, while the latter shows striking parallels with the Nama and Masai.

A. WERNER.

POLABIAN.—See Slavs.

POLE.—See Slavs.

POLES AND POSTS.—In many parts of the world poles and posts have had a religious or magic significance. There is reason to believe that in many countries the post or pole has gained this significance as the representative of a once sacred tree, the spirit of the tree being supposed to have passed into it. Whether this explanation will hold for all parts of the world is problematical.

1. Babylonia and Assyria.—One of the oldest Babylonian inscriptions known 1 (so old that its writing is almost pictographic) bears on one side the picture of a man who wears a feathered head-dress and stands before two pillars or posts. These have each a globular enlargement near the top; and just beneath this enlargement there are on one pole four horizontal marks, and on the other eight. The inscription, of which no translation has ever been published, refers to the building and dedication of a temple. It begins:

1 Wood unworked, reeds unworked, Emmang, suitable for a dwelling, brought.
2 Uninjured was the chief, uninjured was the officer Emmang. Emmang with firmness laid the bricks; the princely dwelling made.
3 It was a tall tree; by the tree he planted a post. 2
4 The association of trees and posts with such this ancient custom is confirmed by a number of early Babylonian seals, on which, in connexion with the picture of a god, a tree and a post are also pictured. Thus one seal 2 represents the sun-god stepping over the mountain of the eastern horizon, and behind him is an upright pole. Before

1 E. De Sarze, Decroozes en Chalde, Paris, 1855-1912, ii. 156.
2 W. H. Ward, Seal Cylinders of Western Asia, Washington, 1918, no. 200.
him stands the moon-god, and between the two gods is a post having at the middle a globular enlargement similar to that of Ennunnag. Another 1 represents the seated sun-god, behind whom is a tree, while two posts, one before and one behind him, are carved at the top into slightly tree-like forms. It thus appears that the sacred tree and the sacred posts were associated.

The sacred tree was in Babylonia usually a palm-tree. This is shown by the pictures on many seals. 2 The fact that the god resided in the tree is graphically represented by two seals, on which the tree is portrayed as an anthropomorphous deity whose head is surmounted by the horns of divinity, and from whose body the branches of a tree protrude. 3 This was the spirit which, it was thought in early times, could be persuaded to go and reside in a pole or post that could be transported from place to place. The conception was analogous to the idea that the spirit of a cag could be persuaded to reside in a smaller movable stone and then in an idol.

The posts were often surmounted by the symbol of the deity to whose worship they were attched. The symbol of Ishtar was a star, and on many seals this symbol is pictured as resting on the top of a post. 4 Out of this combination the sign was evolved which the goddess's name was expressed in later Babylonian writing. 5 A late seal, bearing an Aramaic inscription, actually has a form of the post practicly identical with the sign. 6 The post was sometimes surmounted by a sun-disk; 7 at least it is so situated by both the ear and post that could be transported from place to place. The conception was analogous to the idea that the spirit of a cag could be persuaded to reside in a smaller movable stone and then in an idol.

Representations of the post, when so carved, easily pass into representations of the caduceus, which, according to Ward, was a serpent emblem. Sometimes objects which he designates as caducei seem to show that the post was surmounted by the kanor-sokar, but the posts were sometimes carved to resemble serpents, and that the two emblems merge at times the one into the other.

Another object on the seals is of a puzzling nature. It looks like a post with a projection on one side. 8 Frequently, though not always, a vase is pictured above it. Ward calls the case the symbol of Aquarius, and suggests that the object in question may be the balance of Libra. 9 This suggestion seems most dubious. Why should a balance always stand on end? The balances in the Babylonian writing are never made like this picture. The pictures of the posts on the earlier seals, which represent them with a globular enlargement towards the top or above the middle, indicate that they were a post, though why it should be made in this form is impossible to conjecture.

There is reason to believe that the primitive Semitic name for a sacred post was expressed by the consonants *tr*, for in S. Arabia it was known as akhirat, in Phoenican and Hebrew as asherah, and in Akkadian as ashirtu or eshirtu. Actually in early times such posts were left to the direction of a sanctuary, for in course of time ashirtu, or eshirtu, became the Akkadian word for sanctuary, and so passed into Assyrian. If we are right in supposing that the post was a surrogate for an earlier tree, it would follow that the names of the earliest Babylonian sanctuaries were determined by the position of sacred trees. F. Hommel suggested 2 several years ago that the name of the god Ashur was derived from ashirtu, sanctuary—a name that Barton afterwards accepted. 3 If this be so, not only the name of Ashur, but the city that bore his name, as well as the warlike empire that grew out of it, all bear witness to the popularity of the enluts post in early Mesopotamian religion.

No shrine was thought to be complete without such a post. Thus, when the Assyrian armies erected temporary shrines in order to propitiate by sacrifice a river-deity before crossing the river, they set up not only a temporary nusaggah, but also two posts. This is shown in the case of the army of Shalmaneser III. In the pictures on the Gates of Balawat the nusaggah here has a broad base so that it will stand on the ground; the two posts, surmounted with sun-discs, are provided with a base in the form of a tripod. Friedrich Delitzsch 4 calls these 'candelabra,' but in view of the evidence of the seals and the Carthaginian cippus, cited below, they are probably representatives of the older posts. As Shalmaneser does not inform us of the nature of these objects or of the material used, we cannot know with certainty which they are. The object that we have designated a nusaggah may have been made of wood. If so, it was also an asherah. In any event it has near the top some of the horizontal lines borne by the post of Ennunnag already mentioned.

Whether sacredness attached to the posts of doors and gates is problematical. If H. C. Trumbull's explanation 5 of the origin of the sacredness of the threshold is correct, the door-post, which represented the male, should be as sacred as the threshold, which represented the female. Possibly this was the case in Assyria, since at Khoarsabad foundation deposits were found, not only under the corners of the city which were sacred (see art. CORNERS), but under each gate-post of the city, from which it would appear that the gate-posts were dedicated to the sacredness of the corners. It is possible, therefore, that some sacred symbolism attached to the gate-posts pictured on the seals of the sun-god Shannash. 6 He is represented as stepping over the mountains of the east and through the gate of the morning by which he emerged from the subterannean passage which was supposed to lead from the west to the east. There are, however, no symbols at the top of these posts, as on some Phoenician gate-posts, to indicate that they were sacred, and the point cannot now be determined.

The Assyrian kings sometimes savagely boast that they impaled their captives on stakes round the cities which they had conquered. 7 Such victims were at early times often posted up in the limits. It has been customary to ascribe these acts to the savage brutality of the Assyrians; but, in view of a method of sacrifice by impaling cited below (§ 8), it is possible that we have in this custom the
survival of a primitive sacrifice by impaling on a post. Such a sacrifice could originate only in a period when man was held in very low state. The Arabians were the most brutal of all the Semites, and it is possible that such a primitive custom may have survived among them. It was exercised only in war, when persistent resistance especially enraged them. As all their wars were carried on in a spirit of retribution, it was impious to him, and he would take pleasure in the sacrifice of the victims. If this view be true, the stakes or posts on which the victims were impaled were a kind of rude altar.

Arabians—Nearly all direct evidence of the use of the sacred post in Arabian heathenism has disappeared along with the rest of the cultus of the ‘times of ignorance’ which Islam supplanted. The one bit of evidence that has survived is contained in a Minean inscription published by Hommel, which mentions a goddess Ahritat as the consort of the god Wadd.1 Ahritat is the S. Arabic equivalent of Ashera (Assy. Asshirta). As in N. Semitic lands the word designated first the sexual organ, then the consort, it is probable that the same was true of Arabia, especially as the palm-tree is shown by historical2 and archeological3 evidence to have been sacred in Arabia as well as in Babylonia. The only horned shrine of the kind of which we have a tolerably full description is the Kebah at Mecca, and, while in the descriptions of that the sacred stone is mentioned, there is no mention of the sacred post.4

3. Phoenicia and her colonies.—Most of our knowledge of sacred posts in the Phoenician world comes from Cyprus and Carthage. The word askereth in the sense of ‘sanctuary’ occurs in a Phoenician inscription from Masub that was discovered in 1885.5 This use of the word accords with the Akkadian. A seal, possibly Babylonian (in any case it reflects Babylonian influence), seems to represent the limits of a sanctuary as marked by two posts similar in shape to one of the Babylonian forms.6

There is much evidence that in Phoenician religious thought the palm-tree held the same place as it did in Babylonia thought. In Cyprus terra-cotta figures of three women dancing round a palm-tree have been found in considerable number.7 The hands of these are broken, a representation of the original is possible and furnishes proof of the devotion of women to this tree. Evidence of the sacredness of the tree is also afforded by many of the votive cippi from Carthage, on which it is drawn in more or less realistic fashion. The translation from the tree to the sacred post is shown by a terra-cotta object from Cyprus now in the museum of Bonn University.8

As to the forms which the post assumed in the Phoenician cult we cannot always speak with definiteness, since from the drawings on the votive cippi it is not possible to distinguish in every case which objects were made of wood and which of stone. The askereth is once represented as a slender post surmounted by the crescent moon,9 and a post has come to us a very savage state. The curved lines which form a kind of sun-disk, or two

sun-disks one above the other; in some instances two wavy lines branch out below the sun-disks.1 These are closely made representations of the palm-tree made by using as few lines as possible. Another series of figures, more elaborately made, affords the transition to the more common sort of post. These are in the form of posts surmounted by the crescent moon and the sun-disks, but they still have the horns or streamers which represent the hanging date-fruit.2 The post as most commonly represented on these cippi is identical in form with this conventionalized date-palm, except that the line which represents the hanging dates are more abundant. Sometimes two wavy curves are represented at the top, sometimes one, and at times even one curve is so incomplete that the post appears to be surmounted by two horns. This series of pictures demonstrates the date-palm origin of the cultus-post for the Semitic world.

The posts appear on the cippi in various connexions. At times they stand by the triangular figure of the goddess Tanit; this is the most common. Sometimes with the figure of the goddess there stands a hand which represented at this time the massegobh, or pillar.4 This hand appears also on various seals made under the mingled influences of Babylon and other countries of the Mediterranean. It was a eunuchic symbol of the phalic, which the pillar was believed to represent. This is the meaning in ls 37:1 in the phrase ‘thou sawest the hand’ מָרָץ. That is this is the significance of the hand that on these cippi is indicated by a picture in which the posts appear together with the figure of the goddess and a phallic.5 At times it is accompanied by two hands. Various conjectures have been made as to the significance of the posts. It seems clear from these combinations, and from the dance of the women of Cyprus about the palm-tree, that in the Phoenician religion they represented the female principle of fertility as the pillars did the male principle.

In some representations of Phoenician temples which have survived the door-posts are surmounted by curves similar to those at the top of some of the cultus-posts.7 Apparently, when such posts were of wood, they had a significance similar to that of the cultus-posts. Sometimes, however, they were impaled as a sacred tree.8 Perhaps, in that case, the sacredness of the massegobh attached to the pillars. In any event the sacredness of the doorway was connected with the two sets of symbols.

A number of the cippi are dedicated to Tanit and to Ba’al-Shamin, or the sun-god. Naturally it was thought that the female principle would appeal to the god, just as the male principle did to the goddess. The rude representations of the top of the palm-tree appear, as already noted, somewhat like sun-disks. In time, then, these posts were known as ‘sun-pillars’ (cf. Is 57:17, Lv 26:9, where RV renders ‘sun-images’).

4. Amorites.—As was the case with Arabia, no archeological evidence of the use of the cultus-posts has come down to us from the Amorites, and yet we know that they not only used the post, but, like the Arabians, gave its name to a goddess. When the El-Amarna Letters were written, in the first half of the 14th cent. B.C., a compact group of Amorites were living in Palestine. Their

habitat stretched from the sea-coast at Acco, across the territory afterwards occupied by the tribe of Asher, up into the great valley between the ranges of the Lebanon. The chiefest of this tribe was called in the letters Arad-ilu-A-shiri-ti, the Akkadian form of Ebed-Asherah, a name meaning 'the servant of Ashera.' The presence of this name among the Amorites, it is probable that in these cases the text of the OT has been glossed, and that the presence of a goddess Ashera is due to a confusion between Ashuatre and her symbol. It is probable that, wherever the name of the post became the name of a divinity, it was in such confusion but it is certain that among the Amorites and in Arabia the name of the post passed into the name of a goddess, and it is quite possible that it was so in Israel. We sometimes are too suspicious of the Massoretic division.

In view of the form of the cultus-post as it is shown on Phoenician votive cippi, and in view of the analogy of this form with the shape of the pillars at the doors of Phoenician temples, it is tempting to see in the dakhirah the origin of the pillars (annunnta, not messobhdth) that stood on either side of the entrance to Solomon's temple, and which were named Jachin and Boaz. They were constructed of bronze, and their tops were carved into lily-work. The writer is disposed to believe that this shaped cultus-posts. As already noted, such posts were found in Cyprus made of terra-cotta, shaped to imitate the natural wood. It is not improbable that the form of Jachin and Boaz originated from a much conventionalized palm-tree. W. F. Smith thought that they represented the oldest type of fire-altar; but this is most doubtful.

Cf. also art. Massberah.

6. Egypt. - It appears that in Egyptian worship Osiris was the name given to the god of a certain region, with a female Osiris associated. The Osiris-post was of medium height and carved so that the upper part (about one-third of the whole) resembled four cups or four lotus-blossoms standing one within the other. Remembering how the palm-tree was conventionalized in Babylonia and Phoenicia, we readily see in this post also a conventionalized palm-tree. So closely was the post associated with Osiris that it became the hieroglyphic symbol for his name in all periods of Egyptian writing.

While other gods appear not to have been associated with posts, standards borne upon rods played a great part in their cults. Thus on the palette and mace head of När-mer, a king of the 1st dynasty, if not a pre-dynastic king, four divine symbols are shown upon palm-branches, 3 271. times the height of a man. Not only were these symbols borne in procession, but they are frequently represented in Egyptian reliefs as planted in the ground, so that they seem like posts surmounted by the symbol of the god. These are found from the time of the Middle Kingdom down to the latest Egyptian dynasty. They appear in many combinations; at times they seem half-humorous, as when one of the divine sceptres and the sign šb, signifying life, are pictured with hands supporting such standards. Similar to these standards are the red-olive sceptres carried by most Egyptian gods. Possibly there was originally some connexion between them, though it cannot now be traced.

7. Indo-European. - Posts and poles do not play so important a part in the religion of the Indo-European peoples as they do among the Semites; nevertheless they are not wholly wanting.

altar. Oldenberg believes that in Rigveda i. xiii. 11 such a post is addressed as a "tree." To these posts the sacrificial victims were tied before they were slain. In the Mahabharata (xii.) these stakes are described thus:

"Sacrificial stakes of timber with their golden fastenings ascended. Consecrated by the mantras are in sumptuous order placed."

Further on we read:

"Six good stakes of eileen timber, six of hard khindura wood, six of hollywood, six of posts, posts, posts, posts, posts, posts. Two were made of devadatu, pine that on Himalay grows. One was made of wood of alexa, which the sacrificer knows, other stakes of golden lustre quaint with curious carving. Draped in silk and gold-brocaded like the constellations these.

Bulls of various breed and colour, steeds of nettle tree and trills."

Other creatures, full three hundred, to the many stakes were tied.

At least in poetry a certain personification of the sacrificial pillar occurred, which became especially sacred in earlier Hinduism is problematical, though it was such a constant necessary of sacrificial places that, in a hymn in the Atharvaveda, in which the burning sun is apostrophised as a sacrificial fire, the mountains of the earth are described as the sacrificial posts. In later Hindutism the symbol of Siva, the linga or phallass, is usually a smooth post of stone or wood. Whether this is an evolution from the sacrificial post of earlier days, or an intrusion from the Dravidian population of India, cannot now be determined.

(2) Among the Persians trees were apparently sacred in early times, for there is in the Bundahishn a myth of a tree that was supernatural and generated all seeds. Worship of trees combined with sun-worship appears to have survived among the Magi, but it found expression in the use of posts or the branches of trees, rather than in the consecration and veneration of posts.

(3) Among the Greeks and their Cretan fore-runners there are traces of a sacred post. Plato describes a sacrifice of a bull that is said to have been offered in the sunken island of Atlantis, by which it has been conjectured that he meant Crete. The bull was led to a pillar or column on which the law and a curse were inscribed, and was slain against the top of the column over the writing. His blood was thus brought into contact with the column or post on which the laws were written.

Some coins from Hlim bear witness to the existence there of a cultus-post not unlike the sacrificial posts of India. One of these coins pictures Athena Ilia with her fillet-twined spear and owl, and on her right a pillar to which a bull is hung. Evidently the pillar was connected with the sacrifice in some way, though not in the manner described by Plato. Another coin shows the goddess standing on a post, while before her is a cow, apparently waiting for sacrifice. A third coin pictures the goddess standing on her post, and before her is a cow hanging head uppermost from a tree. Miss Harrison thinks that the post was once the goddess, and that the representation of an anthropomorphic figure standing on the pillar is a later development.

The Greek god Hermes apparently developed out of a post or pillar. In the early art he is represented as a square post with a human head; Gilbert Murray holds that the phallic post was perhaps regarded as a kind of grave-stone to symbolize the renewal of life, and that its spirit came to be regarded as a means of communicating with the dead. Such a post was called a 'Herm,' and in time the collective totality of such posts became the god Hermes, the messenger of the gods. Later the post form of Hermes was discarded for more artistic anthropomorphic representations, and the post was even regarded with aversion.

(4) There are many survivals of tree-worship in the customs of modern Europeans, and among these the May-pole celebrations and dances hold a prominent place. In one form or another they are found in Bohemia, Swabia, among the Wends of Saxony, and in various other parts of Germany; also in Cornwall, Sweden, Alsace, Provence, and Ireland.

It is remarkable that these customs appear in such completeness as in England. They are found in all parts of the country, have persisted almost to the present, and have found a considerable place in literature. The idea that the May-pole presents the image of the nature-spirit has been long universal among these peoples. In Saxon May-trees or May-poles were set up before houses, stables, and cattle-stalls, and even before the chambers of sweethearts; in Sweden, where the celebration took place in midsummer, young fir trees are set up at the doorway and elsewhere about the house; in Suffolk, according to an old custom, a servant who first brought a branch of hawthorn on the 1st of May was entitled to a dish of cream—a custom that until recently continued with some modification in Cornwall.

In many of these countries the May-pole was brought into the village each year with great rejoicings. In some cases bands had been seeking it in the woods all night. Philip Stubbes, writing in the time of Queen Elizabeth, says that the May-pole was brought home with twenty or forty oxen, each ox having a nosegay of flowers on his horns, while the pole was also decorated with flowers. It was raised in all the countries with rejoicings in which it reached, and in England, where it is shared by many places on the Continent, dancing was an important feature of the celebrations. In Northumberland, in the 18th cent., after the dancing there was a feast for which a sillabub was made of milk warm from the cow, sweet cakes, and wine. A wedding-ring was dropped into this, and the young people fished for it with a ladle. The finder was supposed to be wedded first. The customs and superstitions associated with the May-pole indicate that it was a surrogate for a divine tree, and that the sacredness of the tree was connected with the idea of fertility.

8. Native races of India.—In Hinduism the god Siva is not represented by an idol, but by the lingam, or lingam, a phallass post. It is generally supposed that the sterility in which there is no trace in the Vedas, is a contribution from the Dravidian peoples. The lingam are generally made of stone.

POLES AND POSTS

and painted red, though possibly at times of wood. The use of this symbol seems now to be co-extensive with the use of posts in India there seems slight trace.

On the fourth day of the festival of Ankanma, a Dravidian village-goddess, ‘a man disguised as a woman carries a paper balloon in procession on the end of a long pole. Above the balloon is a picture of the goddess, and above that a drinking-cup, while the royal staff and marshal are similarly draped. Accompanied by drumming and shouting. On the last day the crucial features of the worship take place. The village carpenter prepares a rude cart on which are set the sacred shrines, deeply pointed at the upper end. The usual number of the stakes is nine. On these are impaled alive a goat, a pig, a bantam, and other small animals. The story-tellers then narrate the tale of an invisible horseman. The story is followed by music and a dance. The posture and the attitude of the suffering animals. . . After they have arrived at the temple, a live stag is fixed on a stake so as to rear its head in the ground in front of the temple. All of these animals of course die in their agonies.’ It is believed that Ankamma is propitiated by this suffering and shedding of blood.

In this case the stakes or posts become practically altars for the offering in a most horrible way of such sacrifices as are supposed to appeal to the savage god. According to Dravidian legends, men have sometimes been put to death by being impaled on such stakes.

9. Burma.—The Red Karens hold a festival every year in April at which the principal ceremony is the erection of a post on ground, in or near each village, set apart for the purpose. A new post is set up every year, in the clearing in front of the dwelling, but, when they decay, are not renewed. The posts are really poles, 20 to 30 ft. high. The tree from which each is made is selected each year by omens obtained from chicken-bones. When the pole is set up, the people join in rude dances not unlike the May-pole dances of Europe. They feast on pork and drink quantities of liquor.

10. China.—While in China there is evidence of a semi-sacredness attaching to trees because they are supposed to be the abodes of spirits that must be propitiated, no evidence of the employment of a sacred pole or post in that country is known to the writer. The nearest approach to anything of the kind is the system of poles by which a coffin is carried from the house to the grave. The coffin is placed on a frame-work which is attached to a heavy pole or beam. At each end of this there are cross-poles, which rest on the shoulders of the bearers. There are never fewer than four bearers, and, by increasing the system of cross-poles, there may be eight, ten, or more. These poles are erected without any significance, except in so far as everything connected with burial is to a degree sacred in China. The pole device may have been dictated by convenience, since the frame on which the coffin is mounted may be elevated by a swivel and can be turned in any direction at will—a great convenience in passing through the winding alleys of Chinese cities.

Brooms and bundles of twigs are employed to drive away evil spirits, but this is a development from the primitive sacredness of trees different from that represented by sacred poles and posts.

11. Japan.—Trees among the Japanese might be considered Kami, ‘wonderful’ or ‘divine.’ Kami was the name Japanese equivalent to ‘god.’ Trees, accordingly, were often sacred. This is shown in the Shinto ritual, where it is directed that heavenly twigs be clipped at the top and bottom, ‘making thereof a complete array of one thousand stands for offerings.’ Apparently each twig became a little post for the support of an offering, and was thus a temple. Three of the chief religious uses of posts in Japan that were formerly connected with the Shinto ritual. Down to 1872 phallic symbols were to be seen at many Japanese shrines. They were usually made of wood, and were often of wood in later times of terra-cotta, iron and gold. In connexion with Shinto there were, accordingly, many sacred posts kindred in significance to the sacred posts of the Semitic peoples, in Japan they represented the male principle, the female being indicated by an equal number of different shape.

12. Kamchatka.—Among the Koryaks, when a pestilence is raging, a dog is killed and his entrails are wound round two poles. The people then pass between the poles, which are supposed to have power to prevent the demon of pestilence from following them.

13. Celebes.—(1) Among the Tolodewi in the interior of Central Celebes it is customary to hold a sacred festival on the eighth day after the death of a man and on the ninth day after the death of a woman. On the way home from the festival the guests pass under two poles placed in a slanting direction one against the other, and they must not, while doing this, look round at the house where the death occurred. In this way, with the supernatural or magic aid of the poles, they take leave of the soul of the deceased.

(2) Among the Toboonganoe, another tribe of Central Celebes, when a man buries his wife, he goes to the grave by a different road, that along which the corpse is carried, and on certain days afterwards he bathes, and on returning from the bath must pass through a structure shaped like an inverted V. The structure is formed by splitting a pole up the middle and separating the two parts a little at each end, while they adhere at the other. The ceremony is believed to protect the man’s second wife, if he has one, from soon following the first. The leaning poles form an archway, somewhat similar to that made of lounges by the people of Borneo, beyond which a spirit is supposed to be unable to pass. Among the Toboonganoe it is the spirit of the dead wife, who is believed to be jealous of her living rival, against which protection is sought.

14. Melanesia.—Among the Melanesians there are few traces of sacred posts. (1) In Santo Cruz stocks or posts are set up as memorials of the dead. They are of the rudest sort, and have only such sacred character as attaches to the dead. In the Banda Islands men and women are often impaled in bamboo posts, as they are impaled in Chinese and Japanese burial. The spirit is supposed to be unable to pass through these posts, and is thus prevented from wandering. (2) In Lepers’ Island they have a way of communicating with ghosts by means of a bamboo pole.

They build a little hut in the forest near their village, adorning it with leaves and coconut fronds. The hut is divided by a partition, through which stands a long pole, 12 ft. long. To ascertain whether a ghost is present, the men sit at night on one side of the partition with their hands under the pole, while the privilege of examining the ghost is given to the others. When the bamboo rises in their hands, they know that the ghost of the last called is present. When they name one of

POLES AND POSTS

97

themselves, asking the ghost where the man named is, the pole rises, and does not answer. After this they go out singing with one end of the pole in their hands, and the ghost hands them whether it will. If they sing that they will go up high, it looks as if the pole was about to go up. After this they returned to the village, it leads them there. A man is said to have put a bamboo pole over his shoulder with a basket attached, when a ghost was sent to him, putting the basket well, it Pública diollowing where the decapitation occurred. The sticks and pole possessed some ritual significance, though just what it was is not clear.

(2) On the Upper Congo a chieftain, after his death, given a kind of worship for a time. As a part of the reverence shown to him, four of his wives were selected also to be decapitated, and they had one leg and one arm cut off. The legs and arms having first been broken so that they will not crawl out. In order that he may be properly attended in the spirit world, ten of his slaves are decapitated that their spirits may go with him. The ritual of this decapitation is as follows:

A tall flexible pole is stuck in the ground, at some distance behind the seat in which the slaves are to be placed one by one. Freeing the top of the pole a cage-like arrangement is suspended by a cord. The pole is bent down, and the cage is fitted to the unfortunate man's head. He is blindfolded, but he knows that a head is about to be severed by a blow from the stick. Then he has seen it done to others. The executioner commences to dance, and makes a prodigious effort, and, with a few thrusts of the stick, he kills the victim, with one sweep of the huge knife. The pole thus released springs the head into the air. The crowd yells with delight and rejoicing.

17. American Indians.—The sacred pole was found widely among the American Indians. It was planted in the centre of their villages, or, if the tribe was nomadic, it was carried about in an arbor or wrapping and set up in a tent by itself in their encampment. It typified the communal life of the tribe and represented the "mystery tree," which was intimately associated with their legendary origin. The most striking of all these are the totem poles of the Tlingit tribes of the north-west coast of America. The largest of these, as well as the most curious, are those of the Tlingit of Alaska and the Haida of Queen Charlotte Islands. Some of them stand in front of houses, or very near them; others are set near the beach, beyond the village. When old they are weather-beaten and gray. They are sometimes compared to a forest of tree trunks left after a fire has swept through a wooded district.

There are three kinds of these carved posts—totem-posts, commemorative post, and the "house pole" or "chief" post. The simplest of the three. Among the Tlingit and the Haida the dead were usually buried. If the man had been important, a display was made, the body was placed on a platform, and the ashes burned, the ashes were gathered and put into a box, which was placed in a cavity hollowed out of the lower part of the death-post. . . . One of the most interesting is a shrine or place on which was carved or painted the totem of the dead man.

The setary, time of carved post is the commemorative post, put up to commemorate some important event. Thus an old chief once erected a post to commemorate the failure and consequent withdrawal from his village of missionaries of the Greco-Russian Church. On the pole were carved, from the top downward, an eagle, a man pointing with his right hand to the sky, an angel, a priest with hands crossed on his breast, and a trader. The totem-posts are the most interesting. They are taller and more elaborately carved than the others. They stand in front of the houses; among the Tlingit to one side, among the Haida at the front. In front and close to the house was a door, and among the Haida the doorway of the house was a hole cut through the lower end of the totem-post.

Among these tribes every one bears the name of some animal or bird, such as the wolf, bear, eagle, whale, shark, porpoise, puffin, orca, orca-bear, raven, frog, goose, beaver, owl, sea-lion, salmon, dog-fish, crow. The totem-poles bear the pictures the totems of the persons living in each house. The head and wife are of different totem signs, so both of their totems appear, that of the man at the top, that of the woman at the bottom. Between them other designs are frequently carved

POLITICS

to 'tell the tale of the man's wealth and importance, or they might represent some family story.' 1

Descent is reckoned through the mother in these tribes, and amongst the Germans, but it must also be noted that the influence of women is most important, as it tells the totem of the mother and children. These poles are a kind of door-pane and tell at the same time something of a family's history and importance.

But, however, there are also those poles which are frequently carved columns or posts inside their houses. 2 They serve to support the two great rafters on which the jack-rafter and the roof rests. The carvings resemble those on the totem-poles and the totem-poles, too, do not bear the characteristic_sigis_and other similar signs. 3

POLITICAL ECONOMY.—See Economics.

POLITICS.—I. Scope of the article.—The word 'politics' is used to refer both to administration or legislation and to the study of this department of human activity. Although the usual senses of the word ought to public activities than to theory, the subject here treated must be what is more strictly the theory of politics, or political theory. The practical importance of this theory is very great, both because it obstructs and because it assists the attainment of justice and liberty. Theory has often numbered among the follies of a passing age seem to be the nature of things, and has therefore perpetuated abuses; and it has often shown a better way when politicians were blind to facts. The facts of political life will, therefore, be treated here as a basis for speculation, analysis, and suggestion (see, further, art. STATE). That part of life which is political is generally supposed to be concerned with the organization of social relations with a view to justice and liberty. Political theory is the analysis or the attempt to attain these ends; and such theory may be divided into political science (an analysis of facts) and political philosophy (a criticism and moral evaluation of political society). But, since political society is not the only form of society, the theory of politics is only one section of social theory; and it must be distinguished from other kindred subjects. Political society is distinct from the earlier or more primitive forms of social organization. In political society there is a conscious adjustment of social relations by members of a society. Until that occurs, there is, properly speaking, no political life, although, obviously, there is no moment nor any one place in which political life appears, and it must also be noted that political forces and powers are active even in an elaborate political organization. Again, in early but not very primitive society there was no distinction between what we now call 'political' and what we now call 'religion' or 'organization'. There was no separate theory of religious institutions; but there should be one now, if our social theory is to be complete. Political theory must exclude this. In still less primitive times, and even as late as the 19th century, there was a distinct separation of economic and political purposes. Therefore a study called 'political economy' arose; and the study of organization for economic wealth was confused with the study of organization for justice and liberty. But, however close the connexion between them, we shall presume that economics (q.v.) is quite distinct from political theory, at least in its subject-matter, if not in its method. Finally, politics is connected, through the general theory of society, with ethics (q.e.), or the study of right action. The study of politics shall here be regarded as fundamentally social and should not isolate the individual, it deals with more general issues.

II. The Greek conception.—The first political theory was Greek; and it was based upon the half-conscious political organizations—monarchy, oligarchy, and democracy—which are reviewed in the famous passage of Herodotus. 1 The criticisms there made mark the beginning of political theory. They are based upon Greek experience, aided by observation of Eastern practices; and the forms of government are distinguished by psychological observation of the actions of men in half-organized groups. The immediately following practice and theory were based upon the experience of the *polis,* a peculiar and unique organization or institution which has not only given a name to our subject, but very profoundly affected the view usually taken of it. A word is necessary as to the nature of the *polis.* It was the organization of a small local group of male slave-owners, based upon what we may call religious or ritual community. It was originally exclusive, segmented according to military purposes and organized politically, in our sense of the word, for the attainment of justice and liberty, in one of the three ways mentioned above. But it was a society in which the political was not yet clearly distinguished from the economic or religious needs of man. For this and other reasons, therefore, it is impossible to suppose that the *polis* was essentially a State (see STATE). But upon the experience of the *polis* was based all the Greek theory of society; and the Greek theory of the *polis* is therefore rather an early form of philosophical sociology than what we now call political theory. The pre-Socratic views of society probably veered between the idea that all social organization is a convention (and as such a break with 'nature') and the idea that the organization of civilized society is natural. The theory of convention, connected as it was with the attack on slavery and the subjection of women. *Nature* was the word given to what would be better than the established custom. But we have no complete statement of this view of society. The most valuable and effective political theories being those of the Socrates (q.v.), and is found in Plato's dialogues. Although it is not systematically presented, we can quite clearly see the main lines of the Socratic-Platonic analysis and suggestions of social betterment. This theory of society is part of a general theory of the nature and purposes of man; and,

1 Starr, p. 200.
POLITICS

since man is essentially social, ethics is part of the
theory of social life which is called, in our trans-
literary phrase, ‘politics.’ It is false to say that politics in this sense is only part of ethics; it is absurd to suppose that Socrates and Plato (q.v.) were thinking only or chiefly of what we call ‘politics.’ Organized society presented itself to them as a whole—religions, cultural, and economic institutions—called society, and the discussion always refers to all the relations or contacts of man with man. For this reason the psychological analysis of the individual in the Republic is regarded as an equivalent to an analysis of society. The fundamental statement implied in Plato’s work is that society is the result of three
distinct elements of the character or nature of man; the reverse, he would admit, is also true that the
three elements are the result of society. 1 For
it is not possible to say of the individual or of society that one exists, in time, before the other. The Republic is in the main an analysis of fact, and only in a secondary sense a Utopia; the fact is the life of the state. Therefore the Socratic-
Platonic form of government is still in process of change, and it is the change that he would call political, and in that part is concerned more with the purpose of political action than with political devices or methods. The discovery
and promulgation of what is worth doing rather than the administration of how to do it is the
chief interest of Socratic Law. Let us turn to Plato what it meant to most Greeks—a statement of the reason-
able rule to be followed rather than a command.
And those who could discover this rule were, there-
fore, the only hope of society. Unimaginative
commentators have turned this ‘spiritual power’ into
a military autocracy, because of the Spartan
tendencies in Plato; for Plato is indeed too
impatient of the method of trial and error in
politics. But the value of his work lies in suggest-
iveness as to ultimate ends rather than in ideas of
method. He is the first political philosopher.
The situation had changed in the interval between
Socrates and Aristotle; but Aristotle (q.v.) con-
inues to repeat the established analysis and to
depart for evidence upon an already fast disappearing
life of the state. His analysis, however, is carried
farther than Plato’s, and his suggestions, though
less radical, are more detailed. In his Politics he
reviews the general principles on which the state
was to be built, and the principles of government
in later ages did more completely, all other interests
of man to the desire for orderly administration.
In addition to principles shared with Plato, he
gives as suggestions as to the dependence of social
organization upon external or natural circum-
stances; he perceives the importance of economic
facts; and he attempts to combine the good points of
the different systems of government so far dis-
covered by the Greeks. He is the first political
scientist. Apart from his unsurpassed ability in
analysis of political fact, he formulates well
certain principles already discovered. The true
State exists not for wealth or power, but for a full
and noble life; administration is to provide oppor-
tunities for real and actual happiness. A man
must be allowed to give these opportunities to all who are capable
of using them, women and slaves being proved by
‘experience’ incapable; and good government is
such as prevents the exploitation of some members of society by the other members.
Great as Plato and Aristotle were, they omitted
or under-estimated the value of certain facts of the
social life which they analyzed. They treated the
state as in essence self-sufficing; but the evidence
was against them. Nearly all the Greek city-
States were dependent, for food, luxuries, or ideas,
on other communities; and Athens, confessedly the
most advanced, if not, in the philosophers’
judgment, the best organized, was civilized largely
by foreign contacts. Similarly, in politics they
noticed the growing departmentalizing of function
which was making the primitive and all-inclusive
state into one of many institutions. Voluntary
unions existed for economics, religion, or culture,
which are simply disregarded by Plato and Ari-
totle.

So much with respect to facts; but as to concep-
tions of social betterment also the two great philos-
ophers are deficient. Although each gives hints
at the solution of the problem through an attempt of Sophists like Gorgias, Lysis, and
Isocrates to counteract the isolation of the state
and make an inter-State political structure. And
they hark back to the primitive all-inclusive
organization of the state, which is merely
a tribal or tribal family. The history of
their influence has unfortunately been as much a history
of their mistakes and omissions as of their illuminat-
ing conceptions, and this both in the sphere of
practical politics and in political theory. But
they started a method and succeeded in giving
a fresh impetus to the general theory of society and the social nature
of man. At about the same period political
theory and development were beginning in China;
but the early promise does not seem to have led to
anything very substantial. The structure of the
state which, at any rate, continued for more than
5000 years unaffected by the East. We may therefore
suppose that political, if not social, theory, as it
now stands, is almost exclusively Western.

3. Roman contribution to the theory.—The
domination of Rome marks the second stage in
political development. A single State gradually
acquired the administration of all the different
local groups in W. Europe, W. Asia, and
Africa. But even this State was a much more
simple and all-inclusive organization than any
modern State. It was, like the state, in its basis
religions, and in the form of its institutions
military; and, although the same administration
in the 2nd cent. of our era covered vast territory
with many states, the general structure of the State
was still sufficiently like that of the original urbs
for the conception of the Greek philosophers to be
applied to it. With some modifications made by
Cicero and Polybius, the idea of political life
remained unaltered during the period of the
Empire, and the most important, since he introduced to the
political tradition the idea of a balance of social
powers as a good method for administration. 2 But
the real experience of the Romans is contained
not in the philosophical commentaries, but in the
lawyers. For the social need of the time seems to
have been orderly administration, and the desire
for local or individual development was sufficiently
satisfied if peace was secured.

The Roman lawyers added to the political tradi-
tion two important conceptions: an early form of
the idea of sovereignty and the idea of a natural
law. The one was a reflex of the imperial unity of
the Roman world, the other an attempt to explain
the basis of civil law. As a result of the former
the dependence of all forms of association upon
the will of the political power are conceptions of
extreme importance in the Middle Ages, with sinister
consequences in the Renaissance. And the idea
of natural law lived on to affect the current
international law. And the lawyers claimed to ‘the
rights of man.’ But no complete and comprehen-
sive theory of politics had been developed among
the Romans when the Roman world fell in ruin.

4. The Middle Ages.—The development of
civil and political life and theory was then interrupted.

1 Plato, Rep. 415.
2 Hist. vi. 15.
The Dark Ages contain nothing but gradual loss of the civilized administration and exact thinking of the past, together with fruitful and primitive efforts to reconstruct them, and it has hardly been the occasion of any valuable political idea. In fact it was essentially pre-political and socially primitive. Kingship, on the other hand, has been important to political life and to theory. The medieval king was a sacred person, and he was responsible for the government of 'natural' or of customary law. He was not a despot, a representative, an official, or the source of law. He became, especially in England and France, the focus of the effort towards settled and permanent government. It is a curious fact of the new national sentiment. In theory the king has some special divinely-given qualities; he is the necessary result of the desire for one kind of law in any group, and he seems to be given some peculiar physical power of transmitting abilities to his children.

5. The Renaissance.—The decay of the medieval system, towards the end of the 14th cent., left the unity of Europe a vague memory, the conflict of Church and State a firesome and half-forgotten quarrel, feudalism a forgotten order, and the legal conception was of a defunct, a representative, an official, or the source of law. He became, especially in England and France, the focus of the effort towards settled and permanent government. It is a curious fact of the new national sentiment. In theory the king has some special divinely-given qualities; he is the necessary result of the desire for one kind of law in any group, and he seems to be given some peculiar physical power of transmitting abilities to his children.

The Dark Ages contain nothing but gradual loss of the civilized administration and exact thinking of the past, together with fruitful and primitive efforts to reconstruct them, and it has hardly been the occasion of any valuable political idea. In fact it was essentially pre-political and socially primitive. Kingship, on the other hand, has been important to political life and to theory. The medieval king was a sacred person, and he was responsible for the government of 'natural' or of customary law. He was not a despot, a representative, an official, or the source of law. He became, especially in England and France, the focus of the effort towards settled and permanent government. It is a curious fact of the new national sentiment. In theory the king has some special divinely-given qualities; he is the necessary result of the desire for one kind of law in any group, and he seems to be given some peculiar physical power of transmitting abilities to his children.

First, William of Ockham and his follower, Marsigli of Padua, attempted to give to the State the prestige of the Church by proving it to be fundamentally necessary and not secondary in importance. Then the minds of great numbers of men were gradually turned away from the desire for heaven. This had the double effect of degrading all political conceptions into the merely economic and at the same time of lifting ordinary life by making it seem more worthy of consideration. The supreme political fact of the Renaissance was the existence of personal government in different mutually jealous groups. The situation is generally described in books on history—a subject that has become since the Renaissance predominantly political. Indeed, conscious political development began again at about this date. And this resulted in a succession of brilliant analyses of political life and suggestions of change. Machiavelli is the first statesman and greatest theoretician of the new attitude. Because neither the Bible nor Aristotle obscured his view of life as it was; and since his time no political thinking has been based upon books. Even his suggestions for the future are not more than observations of the plans usually followed. The State is for him an instrument of the prince, chiefly for the attainment of 'glory'; and it is essentially an organization for exploitation, either within its frontiers, of the many by the few, or, outside of its frontiers, of one group by another, an analysis which is not altogether inapplicable to modern States.

A slight change of experience is marked by the consolidation of personal government on a more economic and less military basis, over nations rather than districts. France and England provide the evidence. And Jean Bodin analyzes the new phase of political life. The monarch is less prominent in theory and the organization more, although generally the educated men even in Bodin's time were always tending to become an analysis of personal rule only. The Six Livres de la République (Paris, 1576) expresses for the first time clearly the complete doctrine of sovereignty, at least with respect to the ideas in government of the State. This was a great step forward. From then on it has been taken for granted that there is within each
politically organized group an authority, a source of law and administration, beyond or above which there is no other. Legal supremacy of one authority within one territory was, therefore, no novel idea. But however, never lost sight of the fact that legal supremacy does not imply moral superiority, and that legal submission does not imply moral allegiance. He recognizes other institutions and even grants that these may be the social State; but he accepts to say that, the State having come into existence, all other social allegiances derive their force from the State and bind only in subordination to the State. This is probably due to the influence of theorists who had held that the natural tendencies of the human being were such as to war against each other. This natural war of each against all, according to Hobbes, survives between organized groups or States, and it is described as the use of force and fraud. Within the territories of the dominant the law is no appeal against 'the mortal god' who, in effect, is a monarch, although in theory the sovereign may be a multitude; and there is no appeal because force is against any such appeal. As for a Church, either it is the State itself in one of its functions or it is a subordinate form of society like a goose-club. Political realism could go no farther; and with some uncertainty perhaps, but with evident intention, force is made to be the fundamental political fact. Against this Locke's conception of civil government was in part a protest. Men are not for him quite so physical, and 'the state of nature' is clearly distinguished from war. Primitive man is rightly considered to have social tendencies; and Locke (q.v.) adds to the idea of a contract the conception that administration is not based upon an unlimited surrender of individuality, but on limitation of independence with a view to particular purposes. He implies that these purposes are not the only purposes of life, and he definitely makes allegiance to a government depend upon its success in attaining the purpose for which it exists.

The two leading conceptions of the period in all writers were those of a state of nature and of a social compact or contract. They have been many times misapplied and misunderstood, and revolved into the Revolutionary period and perhaps influenced the idea of 'the rights of man,' they had been already exploded. For it is obvious that primitive man was neither so unsocial as Hobbes imagined, nor so much the child of the uncivilized as he thought. And even as a logical basis for society, as opposed to a historical origin, a social compact implies far too calculating and conscious an activity. But perhaps now we need rather to understand the question a little in those terms.

Like a compact is logically implied in the half-recognized acceptance by citizens of the political conditions under which they live.

The international period deserves special consideration, for it reflects a new phase of political experience and adds something to political theory, but with strangely little effect upon the idea of sovereignty. International law was primarily an attempt to supply another conception for the dual idea of the unity of civilization. It was based upon the obvious facts that no State was isolated, and that the relations between States were not altogether those of force and fraud. There were indications that at intervals even sovereigns regarded other nations as treacherous or amicable; and, when the peculiar habit called war broke out, there seemed to be some limits set to the amount of force or to the intricacy of the fraud usually maintained. How was this to be explained? The attempts which were made to explain it culminated in Grotius (q.v.), who established or revived for many generations the conception of a natural law, with Christian connexions, superior to the will of States or princes. Besides being the natural law in that particular period, this natural law, in so far as it was defined, was a mild restrictive suggestion which the international lawyers tried to believe was a command. But its presupposition was that the agreement between two or more States was required to be few peculiar practices, and need not feel even that restriction when the existence of their own form of government was in danger. Personal rule had created a mythical State-person, having all the qualities of a person, and incapable of the idea of a collective personality. At the close of the Renaissance period another great political realist appeared. Charles de Secondat Montesquieu set himself, in L'Esprit des lois (Geneva, 1748), to study political facts by the method of comparing the usages of different peoples. The evidence at his disposal was very deficient, but he arrived at some valuable conclusions—e.g., that environment affects institutions. His attempt to distinguish the inner spirit of different forms of government as well as their external forms is also valuable. His 아래의 "의미적" i.e., it must be conceived as the very nature of government and the only basis of moral allegiance. A new and truer conception of humanity was shaking the barriers which divided social estates. The first age of humanism had passed, with Jean Jacques Rousseau (q.v.). Still moving in the confused region of contracts, rights, and sovereignty, Rousseau redefined the old words and foretold a new spirit by his undoubted love of men. He thought it in turn a man, and even used the musty language of his predecessors. In the analysis of fact Rousseau emphasized chiefly the dependence of the individual upon society for his thought and feeling as well as for his material wants, but he so phrased his conceptions that the
choice of the individual seemed to be the ultimate source of government. As for suggestions of social betterment, he required a complete supremacy of all adult men of the group, who were to rule directly through their agents. They were, however, to take power not because of combined force, but because their real will could not be mistaken. This was a moralizing of politics; but in effect Rousseau only transferred to popular government the absolutism and the divine right (q.v.) which had hitherto been to personal rulers. Again, for him as well as for most of his contemporaries, the State meant the whole of organized society. And, again, in the effort to preserve local political vitality he repudiated the doctrine of representative government. These are obvious mistakes. But the great importance of Rousseau is not merely due to the effect of his work on his own generation; it comes from the fact that he re-established the old Greek and fundamentally human idea of political society as an opportunity for the full realization of what is best in man. His argument is often bad and his language always ineffective, because of the obsolete conceptions with which he had to work. But one can feel the effort to express a new meaning. Men were to be treated as free in political society; they were to find in it more than they had surrendered in the mythical contract; and they were to be 'citizens,' because 'subjects' only of the general will. The Revolution was intoxicated with the word 'citizen'; and it marks a new age, if we consider that for writers like Hobbes the products of the social contract are only subjects. With the title of citizen the common man felt that he could rise from his knees; and, even if in the end he was treated as a brute, sheer necessity at least gave a dignity without which the political progress of recent years would have been impossible.

Burke, who imagined himself as far as possible opposed to Rousseau, is full of the same kind of humanism. He feels the naturalness of institutions and the value of tradition, but his intellectual analysis of facts is inadequate. The circumstances of the time often misled him into the maintenance of what was obsolete, and he saw objections against any new institution more clearly than the evils of the established system.

The two great political changes of the period, of which the importance is hardly recognized even to-day, were the political experiments in N. America and in France. The political changes vaguely conceived by English revolutionaries were taken as the theoretical basis for the republic of the United States and, under the influence of thinkers, adopted by the revolutionaries of France. The phrase, however, sounds so empty to-day that it is difficult for us to understand the force that it once had. It meant that there was to be recognized by every political society a fundamental humanity in every man which should not be, as it still is, forgotten in the pursuit of wealth, or because governments desire to act without being criticized, or because we know that men differ in ability.

In the meantime men were tending away from the comparison of different organizations to the criticism of all organization in view of fundamental needs. The new question was not which form of administration was best for the attainment of old purposes, but what purpose any administration should be called to serve.

7. Utilitarianism and politics.—Political thought renewed its life in the utilitarians. The experience which gave rise to their calculus of pleasures was the dismal beginning of industrialism. At first a revolt against the restrictive influence of the remnants of the medieval system, utilitarianism (q.v.) became ultimately an appeal for the full and free development of all human beings. Jeremy Bentham was the source of the new energy. 'The greatest happiness of the greatest number' became the watchword. The effect of Bentham's theories upon political practice was so obvious and is still so recent that even practical politicians admit in this case the importance of theory. For Bentham initiated the modern practice of continuous legislation. The State was not merely to maintain, but to develop and increase the opportunities for civilized life. From this period we derive the conception of a scientific use of legislation for definite social effects and the desire to have as few restrictions on individual action as is consistent with order. J. S. Mill (q.v.) was the most philosophical thinker of the new school, especially as regards the fact that spontaneous individual action is the only source of a valuable social life. So far as the analysis of facts is concerned, the most important influence upon political thought came from the new study of economic facts. At one time the State seemed to be concerned only or chiefly with wealth. Mill represents this element in the new phase of political thought. Much discussion turned upon the theory to which commerce is directed; and for that attention was directed to the relation of administration and economic production. English political thought has since fallen into the hands of the lawyers, whose natural interest is in methods rather than in moral ends to be pursued. The problem of legal sovereignty has bulked largely in their imagination, and they have done admirable work in making the machinery of government more effective. Their deficiencies were due largely to the influence of Bentham. French thought, meanwhile, was making progress in the basic conceptions of political society. It was perceived that society could not be understood as a machine, and that the conception of individuals as nameless similar units was destroying social vitality in the attempt to prevent the growth of privilege. The republic was criticized as severely as any monarchy had been. In Germany the philosophical study of man led to conceptions of society vaguely correct but hopelessly without reference to contemporaneous facts. Thus the ideals were reached in various systems of the historical evolution of various forms of organization.

The attitude towards established government, adopted chiefly in France and England, was one of suspicion. A belief in the desire to limit the power of men was best when alone or was by nature isolated. Loisirs-faible (q.v.) led to brute conflict, and the State was becoming a machine for the use of manufacturers. The influence of the historical school, both on the Continent and in England, should be counted as correcting the mistakes of this false individualism. In practice it had been corrected, for the political influence of the later utilitarians was by no means directed to isolating the individual, but to showing that the theoretical and living and natural unit was needed to complete the tendency towards socializing all political activities. The historical school rightly looked back to a form of political humanism in their opposition to what appeared to be a too elaborate separation of society and the State. But their ambitions misled them. They lost sight of the individual in the endeavour to transcend him; they confounded the State with society as a whole and, in the desire for personal philosophic freedom, returned from the grave of Leviathan a monstrous ghost—the mystical State which is above all morality.

8. A new political theory.—The curse and as yet unexamined conceptions of nationalism at present popular are in part due to the mis-takes of the
POLYNESIA

historical school. Already, however, especially among French writers, there is a return to the individualism (p. c.) of earlier times, with such corre-
cisions as must be allowed from the suggestions of Auguste Comte and his followers (see art. 

POSITIVISM). Society is clearly not a mere col-
clection of individuals, nor is the State a mere contract of citizens; but, on the other hand, the social unit or 

the State is not to be explained except as 
special form of relation between individuals. 

Neither the atomic individual nor the mystical crowd-mind is a fact; and with such negatives the history of political theory ends, except for the study of societies or special groups. 

Again, however, political life outgrows the formula of established theory. Within the 

frontiers of every civilized State independent 

quasi- voluntary associations have arisen — the 

trade-unions (p. c.). Across the frontier voluntary 

associations for the use of capital in undeveloped 

countries have become powerful. State action 

has immensely increased, and no clear limit 

appears as to what the State can do; but other 

organizations have begun to renew the idea 

they can succeed to the State's function. 

Further, by contrast to the preceding period, 

States are compelled by force of circumstances to 

act together; and, most important of all, for the 

first time in human history every human being is 

brought into continuous political contact with 

every other, since all the States of the world are 

at last connected. The mass of new facts has led 

to extreme specialization in action and thought; 

and so far no comprehensive view has become 

common nor have the movements of improvement 

been generally accepted. Recent political thought is to 

be found embedded in the discussion of general 

social and economic questions. Socialism and 

syndicalism (p. g.), although implying political 

conclusions, are far-reaching social movements rather 

than programmes of State action. For the old 

theories of the State begin to appear superficial to 

an age impatient of fundamental evils and unlikely 

for much longer to be satisfied with the modifica-

tion of a few officialisms. Already there is ab-

dence that a new political theory is arising out of 

the new social theory; and the new experiences of 

recent years will perhaps require an entirely new 

analysis of fact, not to speak of new suggestions of 

future objects that political thought should concern 

itself not only with the devices of government, but with the establishment of 

more ideal purposes than those now commonly 

accepted. 

Although the situation has indeed changed in so 

many ways that much of the old political theory 

is obsolete and all of it is inadequate, we owe 

much to the statesmen and thinkers of the past. 

The results acquired in practice are probably such 

as that the consent of the governed is essential for 

good government, that different situations need 

different systems, that political life changes and 

therefore the system of administration should 

change. These are principles which may be 

observed to be implied in the action of the more 

advanced political groups. In the sphere of theory 

the old truths still valid are such as that 

society is a real and natural whole, that man is 

made by society and yet the individual is the only 

source of development. But, naturally it is 

impossible to compare the unequal development of 

practice when we are making a summary of our 

indebtedness for the achievements of past ages. 

We can only build the future upon the good 

already established by men now dead. The 

great advantage that we have over them, in the effort to elevate political action and 

illuminate political theory, is the power to repudiate 
what we have inherited when it hampers our 

perception of evil or dulls our desire to destroy it.

POLYNESIA.—1. Introductory.—Polynesia is the 

name given to a number of Pacific islands whose inhabitants are closely related to one 

another, speak dialects of substantially the same 

language, are similar in physique, and are, in fact, a 

distinct, though not a pure, race. The chief 

groups of islands included in the area are Samoa, 

Tonga, Tahiti and the Society Islands, the Hervey 

or Cook Islands, the Marquesas and the Paumotu, 

the Tuamotu, the Society Islands, the Samoan 

country to the north and New Zealand to the south. The Fiji 

Islands form part of Melanesia; but their people are largely Polynesian in character; and there are, 

scattered among the islands of Melanesia and Micronesia, small outlying settlements of people 

either wholly or partly Polynesian. 

The Polynesians have long been subject to the 

influence of white men. Mission stations were 

established long ago in most of their groups, and 

the people have been in constant contact with 

travellers, traders, government officials, and others. The old religious beliefs have been swept away, and 

superseded by Christianity; early social and 

political systems and customs have been displaced; past cultures have been forgotten. It is therefore 

necessary, in writing about these things, to adopt 

the past tense, even though some of the matters 

spoken of still survive. It must not be assumed 

that every statement which follows applies to all 

of the islands, the intention of this article being 

merely to indicate, as far as possible in the space 

available, some of the more widely spread or char-

acteristic features of Polynesian customs and 

beliefs.

2. Origin and migrations.—It is believed that, 

prior to the migrations about to be mentioned, the 

islands of Polynesia, or many of them, must have 

been occupied by a people more primitive in culture 

than these later migrants. This belief is based 

upon a recognition of physical differences among 

the people; upon an investigation of the sys-

tem of relationship, nomenclature in connexion 

with those systems, and certain relationship duties 

and privileges found in Polynesia; upon a study of 

certain Polynesian beliefs, cultures, and customs, 

including the custom of kava-drinking; and upon 

a comparison of all these matters with what has 

been found in Melanesia. Much fresh light has 

been thrown upon this difficult subject by W. H. 

Rivers in his recent great work, "The History of 

Melanesian Society," (1900). The later migrants moved 

into the Pacific from the islands of Indonesia; 

they had probably passed to those islands from an 

earlier home on the mainland of further India; 

and there are grounds for suggesting a still earlier 

home for the whole Polynesian family. Their movements from 

India to Indonesia, and afterwards, by routes 

skirting some of the islands of Melanesia, to the 

Pacific, are believed to have been caused by pressure 

from behind; and it is thought that in course 

of their migrations through Indonesia they them-

selves came in contact with, and to a certain extent 
pushed before them, Papuans or Melanesians then
occupying the islands. Their legends indicate that their first halting-places in the Pacific were probably the Fiji Islands, from which they reached the Samoan and Tongan groups, and from all these they spread outwards in the manner of the waves of a less uncontrolled and intermittent process of passing from India southward and eastward. The period of what is regarded as the first recorded migration from India to Indonesia has been placed in the last century prior to the Christian era, but it is difficult to point irrefutably to a totenic origin—that is, to say, these visible representations of their gods were defined deities, or, as has been suggested, had been the totems of defiled heroes and ancestors long ago. A Polynesian would be unwilling to kill, and still more unwilling to eat, the animal which was the incarnation of his own god or that of his people, and the accidental killing of one of these animals, or the finding of it dead, would cause a kind of nervousness and religious ceremony; he would, however, have no scruples in regard to the god of his neighbour or a neighbouring people. He not only trusted the incarnation of his god to do him no injury, provided, of course, he had not been guilty of a grave offence, but he actually looked to it for guidance, help, and protection. There is, moreover, evidence which points to beliefs as to animal incarnations having been the ancestors of their religious forms. Then, as regards the more social aspects of a clan system, the attitude of the people towards one another includes features highly significant of clanship; these features are various, but by way of example two are more frequently evident in prevalent in some of the islands, that, if A killed B, it was a social and even religious duty of all B's people to join in retaliating, and their vengeance was directed, not only against A, but also against all his people, a whole village being involved in the matter. There were also clear and unmistakable relics of clan exogamy; and in some of the groups—notably in Tonga—family rank descended by a matrilineal system, and there were traces of the same thing in other groups.

5. Myths of creation.—The dominant idea of some of what are believed to have been the oldest Polynesian myths of creation was the evolution of light from darkness, with which was sometimes associated the beginning of sound and of stability.

The Maori myth tells of the embrace of the original parents, and the birth of the earth, and of the emergence of the man and woman who were between them, being enshrined, until one of them, Tane, killed the other, and thus gave birth to the world and so letting in light and air. The same myth was known in Nine (Savage Island); and the belief that the sky had originally been formed by the man rising up from the earth in the Polynesian. The beautiful Marquesan legend told of the victory of Atea (representing light, or perhaps even the sun) over darkness, and of Atea setting the sun and moon in the sky, and thus the dawn. The Hawaiian myth narrated the achievements of Kane—the Hawaiian spelling of Tane—representing light, and two other beings, representing sound and stability, who broke up darkness and chaos, admitted light, and created the heavens and earth and, lastly, man. In Mauguis (Hervey group) the legend of creation begins with references to certain spirit-beings, not of human form; and then goes on to tell of a woman, called the 'very beginning' or the 'beginning and the bottom,' who dwelt in the depths below the earth, and of the children whom she produced by tearing off portions of her own flesh, of whom the eldest, Vatea, representing the noon, and so in effect the light, was the divine ancestor of mankind.

Several of the Polynesian myths, in the form of a recital of a series of consecutive births or evolutions, suggest the development of firm rock or foundation, from the earth, the sea, and the sky. Kane were the same god; Atea and Vatea were also the same as Tane, or at least represented the same conception; and to Tane must, perhaps, be ascribed the original primacy in the Polynesian pantheon; but he had to do with all the groups, and in some of them, in particular, had been wholly or partially forgotten and supplanted by another god, Tangara, who was there regarded as the creator of all things. Another idea which was widely scattered in Polynesia was that the islands or groups had been dragged up by one or
other of their ancient gods, by means of a fish-hook, from the bottom of the sea.

6. Ideas as to earth, heaven, hades, etc.—A belief prevailing in Polynesia was that the earth—a term generally confined to one island or group of islands and the surrounding sea—was a flat surface, overarched by the sky, and ending abruptly at the horizon, where sea and sky met. In some of the groups we find the idea that the heavens, above the visible sky, were formed in a series of concentric strata, the highest layer being darker than the lower, and the highest being absolutely dark. These upper or more distant heavens, spoken of as the region of Po, or night, were believed to envelop all things, both the visible sky and the earth, so that it was Po in the remote heavens above, and Po in the regions below the earth. This idea has an important bearing upon Polynesian beliefs as to the homes of their gods and the destination of the souls of the dead. The old migration traditions and myths point to the west as the place from which they came. The home of their gods, some of them known in most or all of the groups (possibly gods or living heroes of Indonesian or pre-Indonesian days), was a beautiful vision of paradise, or the sky, and in the region of darkness, which was believed in some islands to be in the sky above, and in others to be in the depths below. The apparent confusion between the distant west, beyond the horizon, and the sky above was natural, for anything coming from the former was visibly approaching from the sky; and the further confusion between the sky above and the region below arose from their conception of Po. Similarly, the most general belief as to the destiny of the souls of the dead was either that they went to live with the gods in their western paradise or that they passed into Po.

7. The soul during life.—The belief that man possessed a spiritual personality quite distinct from his physical body—a ghostly self, which we may call a soul—and that this soul survived the body at death is found throughout Polynesia; the statement as to survival must be qualified, however, by saying that in some islands it was believed that the souls of the low-class people died with their bodies in the life hereafter; that the notion was in their minds between this soul, on the one hand, and the mental and moral faculties and emotions, on the other. The belief that, when dreaming, the soul of the sleeper left his body and actually saw himself in it is widely held; there are many instances how the dreams of human beings are recognized method of inspiration by the souls of the departed and the gods. In some of the islands the possession of a soul, or at all events of a mysterious invisible self, was attributed not to man alone, but also to animals, and even to trees, plants, and inanimate objects; and we find beliefs that with these also this invisible self survived the death of its owner.

8. Good and bad conduct.—It may be said generally that a man's conduct, as between himself and his fellow-men, had no influence upon his life on earth or upon the future of his soul. The only offences noticed by the gods were acts of disrespect to themselves—omissions of acts of devotion, or the performance of them, according to the usual religious observances, breaches of the taboo, and, perhaps especially, neglect in offering in sufficient quantities the required sacrifices, the last offence being one to which the priests, for obvious reasons, were most addicted. For offences of this sort the gods inflicted the punishment of illness; and, if the offence was serious and the gods were not appeased, the illness would be followed by death.

9. The soul after death.—The conduct of a man during life, even as between him and the gods, had no influence upon the destination of his soul after death. In some of the islands all souls went to the same place; in others there was an alternative between what may be called heaven and some region under the earth generally Po. But, in nearly all the groups it was solely a question of rank, only the chiefs and upper classes going to heaven, and the common people, if their souls survived at all, going below; though in one group the alternative depended upon an entirely different matter.

In Samoa and Tonga the souls of chiefs went to their heaven, Bulutu, which was one of the homes of their gods—indeed, the souls of Tongan chiefs became gods; the souls of common people of Samoa went to a sort of hallowed, called Sa-le-fee, which was not exactly Po, but was for all practical purposes the same; the souls of common people of Tonga died (according to the more prevalent ancient beliefs) with their bodies. Bulotu was away to the west; the Samoans believed it to be a region under the sea, and the Tongans thought that it was an island. It was a beautiful place, abundantly supplied with plants, bearing the richest fruits, and supplied with quanti- ties of pigs; and, when the flowers were placed and the pigs killed, others immediately took their place. Sa-le-fee was under the earth; it was the home of the family of the cuttlefish god, and, though not apparently a place of actual torture, was an unpleasant place to live in.

The Society Islands heaven was Rohutu-noa-noa, a home of the gods. It was primarily the destination of the souls of members of the great Society Islands semi-sacred Aroei society; but, as any one could go there whose surviving relatives could afford a somewhat expensive ceremonial after his death, it was also in effect the destination of chiefs and important persons. All other souls went to Po, Rohutu-noa-noa, which was really Bulotu with another name, was by these people believed to be near (apparently above, in the sky) a mountain on the north-west side of the most westerly island of the group; the description of it is similar to that of Bulotu. All souls which did not attain that heaven went down to another region, the journey to which appears to have been a westward one; it was a home of the gods, and was not regarded as a revolting or terrible place.

In Mangala (Hervey Islands) the alternative destination was to be left in a place near the heavens above and a subterranean Po—both of them homes of the gods. Here the soul's destiny did not depend upon rank; the souls of these slain in battle went to paradise, but all others went to Po. The heavens were above, built of azure stone; and the souls that reached them were clothed with beautiful and sweet-scented flowers, laughed, danced, and enjoyed themselves in every way, looking down with disgust at the poor wretches in Po, who had to endure the misery of being surrounded with the dung which fell from their more fortunate friends above. There were three points of departure for Po; but they all faced westward. The beliefs of the people of Karotonga (Hervey Islands) were fundamentally similar to those just described.

In the Marquesas the souls of the upper classes went to heaven, this being, they thought, an island up in the sky, apparently beyond the seas, abounding in everything delightful; those of the lower classes were sent down to the earth. Each of these was a home of the gods.

The Maoris of New Zealand recognized the idea of Po in its original form, as extending in concentric layers both above the visible sky and beneath the earth. Po above was the home of the gods;
and Po below was the destination of all human souls, which after death descended to the impenetrable darkness of its lowest depths, where they gradually pined away and ultimately became annihilated.

In Hawaii there was a common belief that the souls of the dead went to Po and were there eaten or annihilated by the gods; but there were variations of this belief.

It will be noticed that generally the alternative death to Hades or to heaven was recognized, and that in almost every case the road to Hades; that each of these was a home of the gods; and that, whilst the former was delightful, the latter, though not necessarily a place of torment, was not a desirable residence—among other things it was always dark and gloomy. It will also be observed that heaven was usually supposed to be situated somewhere in the west; and so generally was Hades; for the most usual route to either one or the other was westerly, commencing with a rock facing the sea at the westerly end of the island group, from which the soul leapt into the sea. In New Zealand the leaping place was at the northerly extremity of the islands; but the migrations to this group of the Maoris were from central Polynesia, and a glance at a map will explain many of the mistakes and inconsistencies in the beliefs generally. It may be that the custom which, as will be seen, prevailed in some of the islands of placing the remains of the dead in a canoe or a canoe-shaped receptacle is significant of a belief as to the journey of the soul when released from the body. It is thought that all these beliefs concerning the west must be associated with the early traditions of the people about the quarter from which their remote ancestors had migrated; for this would be the natural habitation of the oldest racial gods, and, to a certain extent, of their pantheon generally, and the natural destination of the souls of the dead.

In some of the islands it was believed that the soul during its journey might have a chance of turning back and re-entering its body. This was so in the Hevev Islands and in Samoa. In the latter group the belief was that, if the soul struck against a coco-nut-tree near the western land extremity, it would leap over it; in other groups it was the fate of all, good or bad. There is ground for suggesting that this soul-eating was not merely a matter of divine gastronomical enjoyment, but that there was connected with it an underlying idea of the passage of the soul, and the judgment, through the gods, for the purpose of purifying them and making them fit to live among the gods.

The souls would sometimes linger about their old haunts before starting on their final journey, and it is a common custom to visit the old friends and relations of the deceased in order to return from their abode in paradise or Po and revisit their friends. They seem to have appeared usually in human form, but to have been immutable and mist-like. Their visits were much dreaded by the people, though it does not appear that they were usually believed to act malevolently during their wanderings.

10. The gods. —The Polynesian gods were extremely numerous, and differed widely in celebrity and power. They were greedy of respect and some religious attention; and many of them failed in these matters; but it cannot be said that they were regarded merely as a body of malignant beings, only to be propitiated. The people appealed to them for active guidance and assistance in all their great events, and placed much confidence upon receiving it; and a large proportion of the omens which governed the people's decisions, even in the most important matters such as peace or war, were the actions and movements, most carefully watched, of the divine incarnation. First in rank came what may be called the racial gods—great deities, one or more of whose names were known in nearly all the groups; these included Tane, Tangoaroa, Rongo, Tikihui, Tu, Itu, the demigod Manihi and others; they were the oldest gods, possibly the divinities or heroes of the Polynesian ancestors in the Indonesian days or earlier. At the periods of visits of white men to the islands there was much confusion as to these gods. In one group only one or two were known, though the majority of the group kept others; in another group another was supreme; the beliefs as to the relationships of these gods, one to another, and even their origins, attributes, and spheres of influence, differed in the several groups. As a rule, they were not the objects of prayer and sacrifice, except on specially important occasions, the reason being that they were believed to be too remote to concern themselves with unimportant human affairs. Each island group, and many a single island, had gods wholly or mainly peculiar to itself; there were tutelar gods of specific sections of the people, of districts, and of villages, and family gods; and individual Polynesian and special gods, selected by themselves, or by their parents for them at birth, under whose protection and guidance they placed themselves. There were gods of the air, of the mountains, of valleys, of streams, of the sea, of animals, of plants, of fishes, of the harvest, of life, and death. Some were gods of various trades or occupations, from the most important productive labours to mere matters of personal entertainment. Of all these deities, some (including the great gods above mentioned) were spoken of as original gods; or of gods of remote antiquity, appearing regularly or occasionally themselves in the far distant past, never having been human; others were supposed to have been descended from, or created by, these original gods; others again were admittedly defined human beings. It may be said generally that these gods were believed to be influenced by sentiments, inclinations, and passions, and, as regards many of them, to engage in occupations and enjoyments very similar to those of the human race, though they were more energetic and possessed supernal powers. Very many of them were believed to be incorporeal or immaterial in, or to enter or take the forms of, birds, beasts, fishes, insects, plants, stones, and other inanimate objects and natural phenomena; and possessed supernatural powers. Very many of them were believed to be beneficent or benevolent, or to enter or take the forms of, birds, beasts, fishes, insects, plants, stones, and other inanimate objects and natural phenomena; and possessed supernatural powers. Very many of them were believed to be beneficent or benevolent, or to enter or take the forms of, birds, beasts, fishes, insects, plants, stones, and other inanimate objects and natural phenomena; and possessed supernatural powers.
after death, it may be said that the religion of the Polynesians included the worship of the dead. Whether it can be said that they were hero-worshippers or ancestor-worshippers depends mainly upon the definitions to be put upon these terms. A large number of the Polynesians probably were hero-worshippers. If, as most historians believe, the number of the Polynesian deities had been human beings—great chiefs, successful warriors, distinguished navigators, etc.—then to this extent their religion perhaps may be regarded as having had its origin in the belief of all events, human or supernatural. As regards ancestor-worship, a Tongan chief would go to the grave of his deceased father or grandfather, and pray to him; but this does not necessarily mean ancestor-worship; the ancestor was regarded by the chief as a god, to whom he might pray, not merely because of ancestry, but because, having been a chief, the ancestor after death had become a god; and other people not descended from the deceased chief also might pray to him. Some of the myths of creation ended with the birth of a god who was the ancestor of the human race, i.e., of the particular people who believed in the myth and worshipped the god; and this idea perhaps may be regarded as pointing to a past cult of ancestors. However, there is no evidence, nor is there any reason to justify the suggestion of a general custom for members of families to worship their ancestors, either actual or collateral.

12. Sun-worship. —The evidence of sun-worship in the past is of a varied and scattered character; but its cumulative weight seems to be irresistible. Only a few indications of the nature of some of this evidence can be given here. Some of the gods in certain groups were associated with the sun—so much so that writers speak of them as sun-gods. There is tradition that the founder of the sect concerning a god Hiro, which, though he was not there regarded as a sun-god, is very suggestive. Hiro was voyaging with his companions in search of the maro vona, the special red girdle which was perhaps the most sacred object in Tahiti and is believed to have been specially connected with sun-worship. On one occasion, when he was sleeping in a grove, evidently under the sea, his enemies, the gods of darkness, taking advantage of his absence, raised a violent storm. In the hope of destroying his boat and companions; Hiro, however, awoke at daybreak, repaired the surface of the water, and with a look dispersed his enemies with the divine alchemy.

Other evidence is connected with the great Areoi societies of the Society Islands and the Marquesas, and with certain seasonal festivals in which they engaged. These societies, which have been compared, and indeed associated, with the secret societies of Melanesia, appear, both from the legends as to their origin and from the performances in which they engaged, to have been connected with the worship of the sun. Among their performances in the Marquesas and perhaps in some of the islands in the Society group were certain seasonal festivals of a significant character. The summer, ending in April or May, was a season of rejoicing; but on its termination feasts were held to celebrate the departure of the gods to the abodes of the dead. The following day offerings were made to the gods to return. Then the Areoi went into mourning, suspending all amusements, and retired to their homes to lament the absence of the gods; this continued until the spring, when, along with everything domestic, the rejoicing recommenced. In the return of the gods (and especially, it would seem, the sun-god) and their period of rejoicing recommenced. These festivals, as might be expected, if the suggestion as to their significance is correct, were closely connected with the ideas of fertility and reproduction, and in evidence of crops and harvest. It may be noticed that this marked differentiation between summer and winter must in itself be regarded as an indication that these people came from some latitude very different from that of the central Pacific islands. A custom of orientation of the bodies of the dead prevailed in some of the islands, but, in view of the beliefs of the people as to their place of origin, the homes of the gods, and the destination of the soul, this custom necessarily be regarded as evidence of sun-worship.

13. The priesthood. —There is ground for believing that at one time religious and civil authority were united in Polynesia. In Tonga there were two bodies of priests, known respectively as the tongue, held a purely sacred office, having little or no secular power, while the other, the tuikaoa-bolu or hau, was the actual civil and military ruler of the people; and the same division of the supreme power is found in Manginia and Rotuma. The Tongan traditions go back to a time when religious and civil supremacy were united in the tuitongu, and tell of his parting with the latter; but probably the change was gradual. In some of the islands the dead chief or king was the high-priest of the island; in all of them the chiefs of all events the highest, were regarded as divine or nearly so; and in some of them the chiefs were in many ways closely associated with the divinity, especially in connection with the sea. But, in these groups there were no recognized separate ranks or gradations of priests; this was not general. Considerable differences are found in the social status of the priests and their co-operation as an organized and distinct class. In some islands they formed a powerful united caste; in others they were merely members of the lay classes (and not necessarily of the highest of these), engaged in the ordinary vocations of life, and, except when actually inspired, having no special social status or power. Each of them, as a general rule, was a chief, and in some was a specific god. As diviners and interpreters of the will of the gods, able in cases of illness to ascertain the cause of the divine displeasure and to specify the offerings required for its removal—offerings in which they usually had a substantial interest— they had considerable power; and the practice of sorcery gave them a special method of terrorizing the people. In some groups the sorcerers were regarded as a separate caste, distinct from and inferior to the priests, while in other groups certain ranks of priests who did not appear to have practiced sorcery; but in some groups even high-class priests did this; and it cannot be said that there was any general defined distinction between priests and sorcerers. The father, or other head of the family, was in some of the groups the person to approach the tutelar family god.

14. Temples and places for disposal of the dead. —The Polynesians had temples and places for the disposal of the bodies of the dead. In many of the islands the temples were the mortuaries; in some the two were distinct. Where, as in Tonga, a chief became a god after death, the place where he was buried became in a sense a temple; for it was there that supplications would be addressed to the god, the place of his abode, with the objects of other gods. The temples included great national temples, temples of districts, of villages, and of families, the places of sepulture generally belonging to families. The great national temples, the temples of the districts, and in many cases of the islands the family burying-places of the chiefs were often massive structures; one form of these was a huge raised quadrangular arena, enclosed and supported on one or more of its sides by boundary walls, and with a temple built on the interior slope of the flat, or rising upwards from the sides to the centre, and often wholly or partly paved. In some cases the stone boundary rose in steps; in some a portion of the enclosed area was occupied by a massive stone structure, in the form
of a truncated pyramid, with sides rising in steps. The prevalence of this form of step-like boundary and pyramid may be a matter of some significance. In Polynesia walls and dwelling-houses of magicians were in form like domestic dwellings and usually enclosed by an encircling fence. Similarly, in some of the islands, where it was the custom to keep the bodies of the dead above ground, house-like structures were erected for their reception.

If we consider that the larger temples of the gods were usually in some other erections connected with the religious rites conducted in them. These erections were different in the several groups; but they commonly included images, great and small, altars, statues, standing or seated, and sometimes enclosed in dwelling-houses, kept by the people for keeping some of the smaller images and other sacred objects, and for the occupation of priests and custodians of the temples. The images erected outside varied in character. Some were of stone and others of wood; some were rudely carved with more or less grotesque representations of the human form, others were not carved at all. And so with the smaller images kept inside the houses; some were merely shapeless lumps of wood, or polished stones, not sculptured or decorated, but ornamented with red feathers—that sacred form of decoration throughout Polynesia; others were mere bundles of cloth, decorated with red feathers.

As regards all these objects, it must be stated that the Polynesians, like the Chinese and Japanese, were of the opinion that all things possessed some kind of soul, and the people actually worshipped them was mistaken. They were images or symbols of the gods, to whom alone the worship was offered, and as such they were of course sacred; but this sanctity was not inherent in themselves, but derived to them through their association with the gods. Sometimes, as in Tahiti, the god was supposed to enter temporarily one of these images, and through its medium to speak to the priest. On such an occasion the image would necessarily become specially sacred, just as the commonest Tongan layman would be sacred during a period of inspiration by the gods; but this does not mean that the image was worshipped as an idol.

15. Religious Observances.—Fear of the gods and their anger wish to turn away their wrath, and the desire to secure their guidance and help were for ever present in the minds of the Polynesians. Hence we have records of their methods of invocation and praise, possession, inspiration and divination, and the self-sacrifices and sacrifices, and of their belief in omens, use of charms, and practices of sorcery. Religious ceremonies of one sort or another were associated, not only with the leading events of the lives of the people, from birth to death, but also with their daily life, their industries and occupations, and even amusements. Many of the prayers repeated by the priests were expressed in metaphorical and obscure language, the meaning of which was sometimes hardly understood by the speakers themselves; some of them included references to the traditions of the people, the genealogies of their chiefs, the feats of their heroes and histories of wars, and any other events of which the priests professed to have knowledge.

The faculty of obtaining inspiration from the gods and of expressing their wishes and intentions does not seem to have been nearly so much a monopoly of the priests as was that of invocation and foretelling, for any one was allowed to become temporarily inspired. Possession by the gods was generally indicated by great bodily agitation, in which the limbs became convulsed and the features distorted, the inspired person sometimes falling on the ground and remaining in a frenzy, moaning at the mouth, and giving vent to violent cries. Thus they ascertained and announced the will of the gods in matters great and small, public and private. In cases of illness the priests and sorcerers were the doctors, for they claimed to be able to find out the cause of illness—always either an offence by the patient or by some person connected with him, against the gods, or else sorcery—and plead with the gods for mercy, or try to counteract the machinations of the hostile sorcerer. Sorcerers and tabu workers were nearly always the doctors of illness; but the curative powers of these remedies seem to have been attributed by the people to supernatural agency, the medicines being the vehicles or media by which the gods acted. The majority of the remedies were plants or medicinal articles, including medicines, used by them differed in the several islands, and indeed, as regards different individuals; but the predominant matters seem to have been the fees to be paid to themselves and the offerings to be made to the gods, this generally meaning, in part at least, to the priest. Sometimes one of these men would, without actually applying sorcery to make a man ill, frighten him into the belief that he was so and thus reap a harvest from him and his friends.

16. Omens.—Omens were believed in largely in Polynesia, some of them relating to the ordinary affairs of life, but the majority being connected with war. The people noted the position of the moon, the appearance of the stars, the forms and movements of the clouds, the advent of shooting stars and comets, the position of rainbows, the form of the waves, the appearance of the sky, and the character and locality of lightning discharges, the sunset sky and other matters, and especially the movements and behaviour of birds and other living creatures in which their gods were supposed to be incarnate. The matters which these signs pointed to were intended included besides success or failure in war, the approach of death to a member of a household, the recovery or otherwise from an illness, the death of some chief, whose identity the omen did not disclose, or an invasion from a neighbouring island, and the omens of the deaths of persons. The omens of these signs were the persons. The omens of these signs were sent by the gods; when the guidance was given by an animal incarnation, it was the god himself who was pointing out what should be done. The appearance before a Polynesian of the god in the form of a crab or a certain fish indicated that he was about to die; another crab or fish was sometimes regarded as a premonition of death by those who had come to the spirit.

17. Tabu.—The principle of the tabu, which was in effect a prohibition based upon the idea of sanctity, permeated deeply the minds of the Polynesians; it has been defined as a prohibition resting on a magico-religious sanction. There were certain forms of tabu which, though doubtless having a similar basis, were, in their application, of a social rather than an obviously religious character; and these cannot be dealt with here. Most of the other tabus fell under one or other of the following categories: they might be directed against: (a) touching a sacred person or object; (b) entering a sacred place or one in which a sacred ceremony was being performed; (c) doing certain things on certain solemn occasions; and (d) interfering with things upon which a specific tabu was laid. Tabu in this last sense was expected for breach of any of these tabus was punishment by the gods, inflicted in the form of illness or even death.

The belief as to the sanctity of kings and great chiefs was almost universal in Polynesia, and none might come in contact with them, direct or indirect. In some of the islands no one
might touch one of these divine people or anything with which he might be in contact near or far. If the person who was to be acted upon had to be carried about on the shoulders of a bear, he therefore himself became sacred. Any person who broke this taboo, by direct or indirect action, became taboo himself. It was the same with those who had, in performance of the funeral offices, handled the bodies of the dead; they became taboo. The most widely recognized results of such a situation was that the person thus infected with sanctity must not eat food, drink or use the toilet, if he did so food, drink, or toilet articles, would be polluted by it, and he would become ill and die. The removal of the taboo was effected in different ways in different tribes. Sometimes the taboo had been performed before another great chief, whilst in Samoa the remedy was sprinkling with cool-water. The tabu of the dead man was sometimes terminated on the completion of one of the regular funeral ceremonies.

(6) Entry into temples, or portions of them, and other sacred places, and even into private houses, when religious ceremonies were being carried on there, was in many islands forbidden to all except priests, and perhaps the chief; and a violation of any tabu of this character would be regarded as a sacrilege, from which the direct consequences would ensue. The most widely spread form of tabus, intended to warn off trespassers, was a flag or piece of white cloth.

(7) Entry into the house of another was usually prohibited by every tabu which were forbidden during the performance of certain solemn ceremonies and for a period after the death of a great chief. These differed sometimes in the tabus of one tribe from those of another, and in this, as in so many things, man's food, eating it in the day-time, lighting fires, engaging in certain occupations, launching a canoe, or passing in a canoe, in a canoe, or on the deck of a manly.

(8) The placing of tabu upon specific things was a somewhat different matter. A king or chief, or perhaps a priest acting on his instructions, would place a general tabu upon a grove of coco-nut trees, or upon food of some other produce or upon the whole of some form of diet; and no man would dare to break it, even in secret. This restraint was not merely based on fear of harm from supernatural beings, and the protection of the gods; a violation of the tabu would be an effective check upon the effects of all evil and all evil which would be done by such things as eating food, or eating it in the day-time, lighting fires, engaging in certain occupations, launching a canoe, or passing in a canoe, or on the deck of a manly.

The placing of tabu upon specific things was a somewhat different matter. A king or chief, or perhaps a priest acting on his instructions, would place a general tabu upon a grove of coco-nut trees, or upon food of some other produce or upon the whole of some form of diet; and no man would dare to break it, even in secret. This restraint was not merely based on fear of harm from supernatural beings, and the protection of the gods; a violation of the tabu would be an effective check upon the effects of all evil and all evil which would be done by such things as eating food, or eating it in the day-time, lighting fires, engaging in certain occupations, launching a canoe, or passing in a canoe, or on the deck of a manly.

18. Sorcery.—Sorcery was practised by lower classes of priests, commonly spoken of by writers as sorcerers, and also, in some islands, by the higher priests. The supernatural beings through whose help it was accomplished were usually evil spirits, inferior in rank to the gods; but the gods themselves were sometimes supposed to act at events in some of the islands. One method of sorcery was what may be called contagious magic. A man, wishing to avenge himself on an enemy, procured some of his hair, saliva, urine, or excrement, or some remnants of his food, or a piece of his loin-cloth, or something else which had been in contact with his body, and handed this, with the requisite fee, to the sorcerer. The latter might take these things to his house or to the temple with which he was connected, and engage in incantations over them; or he might place them in a little bag, in which he carried images or other symbols of the supernatural beings whose aid he would invoke; and the bag might also contain such things as lizard-skin, parts of special plants, pieces of ordinary cloth, beeswax, wood, etc.; and he would probably bury the bag and its contents. Another method of contagious magic consisted in rubbing with a human skull food that a man was going to eat. Another form of sorcery was that of cursing. No one was safe from the operations of the supernatural beings engaged in contagious magic would be of the nature of curses; but in some of the islands it was believed that disaster could be brought upon the head of an enemy by merely cursing him. Presumably the intention was to place the gods or spirit, just as did the proceeding wrong acts, in connexion with contagious magic. In Tonga they had some special curses, amounting to commands that the person cursed should manifest a superior relation, such as 'Bake your grandfather till his skin turns white, and then cut him into forty pieces, and give him to your pigs to eat,' or 'Dig up your father by moonlight, and make soup of his bones,' and others of a highly indelicate character. These Tongan curses are referred to specifically because of what they would appear to imply. They involved the conception of Tongan religion that human merit, for failure in which a man might be punished by the gods, included among other things the paying of respect to aged persons and filial love; and it was considered a crime to eat food that had been the subject of a relative curse, e.g., a man might have pronounced either of these curses, a man was commanding the committal of a double offence, for which the gods would punish the offender; for, if it was wrong to eat an aged relative's food, it must have been very wrong to eat the aged relative himself. How these curses operated is not stated; but it must not be assumed that it was believed that the victim would actually be impelled to commit the crime; for many of the Polynesian ceremonies were purely symbolic, and the tabus and the various acts performed by the priests had been performed in the sense that the suggestion of the act took the place of its actual committal. Sometimes the victim was not aware of what was being attempted against him; but sometimes he was told of it, and then he would often go away and die from sheer fright.

The underlying idea of Polynesian sorcery seems to have been that the supernatural being to whom the sorcerer appealed actually entered into the victim, sometimes perhaps through his food, and sometimes by direct entry into his body. The sensations of a person so possessed were far from pleasant; we are told, e.g., of the evil spirit twisting and knotting the man's internal organs; and again of his causing the feeling of being transfixed internally by a barbed hook. These descriptions suggest certain internal complaints, which may well have been ignorantly attributed to sorcery.

There is a description by a missionary of a young Tahitian who had been subjected to sorcery. He was lying on the ground, writhing in anguish, foaming at the mouth, his eyes ready to start from his head, and his constitution exhibiting every form of terrible distention and pain, while his limbs were agitated with violent and involuntary convulsions. After his recovery he became absolutely unable to perform any work whatsoever, and might have been said to have worked differently; in the Marquesas, for instance, it is said to have operated only slowly, the victim first becoming sick and then growing daily weaker, until, after about three weeks, he seemed to die from loss of strength.

In some of the islands there were alternative methods of saving a man who was under the spell of sorcery. One was to find out who was the sorcerer that had inflicted it, and by means of presents to him, exceeding in value those given to him by his original client, to induce him to call the malignant and devouring spirit. The other was to call in the services of another sorcerer, associated with another supernatural spirit, more powerful than that which had produced the trouble, or perhaps if only a part in power of the other, to greater energy by more costly gifts. When a victim died, the instigator, or suspected instigator, of the calamity would often become himself the victim of persecution by the dead man's family.

To which names of Court. Not only had nothing been said about the attitude and conduct of the priests, acting as doctors, diviners, and suppliants to the gods in time of illness. This matter of illness and subsequent death is also interesting as regarding the attitude of the people, the relatives and friends of the sick man, especially when the invalid was a great chief or king, and thus the subject of anxiety and concern of a deep and
of everything. The idea of providing the ghost with things for use in its new world is well known, and must surely be the explanation of many of the Polynesian practices. In Samoa valuable mats and other things were sometimes buried with the dead. In Tahiti the bones were frequently buried with spears, fixed upright in the ground, while his club was sometimes placed on the ground and allowed to decay, no one daring to touch it; a few little trinkets and playthings might often be seen on the grave of a dead child. In Tonga most of the valuable property of the sacred chief, together with presents brought to the funeral, were buried with him. In Rarotonga they placed the dead chief’s adze in his right hand, and his staff and drinking-cup by his side; and with a woman’s rank they buried her cloth mallet and other domestic utensils. The practice of putting to death the dead man’s wives and burying them with him prevailed, though apparently only to a limited extent, in the Tongan Islands. The custom of placing food on or near a grave or burial platform, and renewing it from time to time, was wide-spread.

Boxing and sham fights were usual features in most Polynesian festivities; but in some of the islands the ceremonies at the death of a chief included fights of a special character. In Mangai-a (Hervey Islands) they had combats between parties, of which one was called ‘the friends and the other represented malignant spirits, and it was said that the latter was surrounded by the Society Islands, when the body of a chief had been put on its resting-place—a bier, placed in the temple—it was surrounded by his family and people, all well armed. Shortly afterwards an armed party of friends from an adjoining district approached; they were called ‘the mourners,’ and they asked to be admitted to lament their chief. Permission was always refused; and thereupon arose a battle, which, though quite friendly and purely formal, often caused loss of life; and apparently the mourners were always the victors. In Samoa also they sometimes had combats which, though we have no description of them, there was reason for thinking had a special significance connecting them with those of Māngai-a and the Society Islands. The cause of these contests was the rest of these mock conflicts rests on the fact that a comparison of them with the ceremonial funeral combats usual in a district of Australia and in certain places in Melanesia seems to suggest that their origin was due to the prevailing spirit of the hostile spirit that had caused the man’s death.

Another curious ceremony practised in some of the islands may be called the ‘burying of the dead man’s sins.’ In Tahiti a hole was dug in the ground, beneath the bier upon which the dead body lay; and the priest prayed to the god that the sins of the dead man, and especially that for which he had been called away, might be buried in the hole, so that the surviving relatives might be free from anxiety as to their future; the hole was then filled in, and the priest addressed the corpse, exhorting it (i.e. the ghost) to be content with its new conditions, and not to distress its surviving relatives by returning to them. Some similar ceremonies were performed in some of the colony groups of the Society Islands.

20. Disposal of the corpse.—The methods of dealing with the corpse can be stated only in the barest outline. Throughout Polynesia common people were usually buried underground with but little ceremony; but the modes of disposing of the dead chiefs differed in the several groups.

In the Society Islands the body was taken to the seashore, and there is a statement that it was usually carried in a canoe as far as the opening of the reef, and back again. Within a short period

POLYNESIA

—generally three or four days after death—it was taken to the temple of the chief's family, and there placed upon a platform or bier, sheltered from sun and rain by a roof, in shape rather like an inverted canoe. There it was subjected to a process of preserving—one or the other, and when sufficiently dried up, it was wrapped in cloth, placed in a sitting posture on the bier, and allowed to remain exposed for an indefinite time. Ultimately it was buried underground beneath the platform. In time the vault was filled with other remains, and the body was carried away to almost inaccessible spots in the mountains, in order to secure them from the sacrilegie of the enemy.

In Tonga the body of a dead chief was carried, generally within a few days after death, to the burial-place of his family. The interment was underground in a vault, made of six huge masses of stone, one forming the bottom, four making the sides and ends, and one closing it at the top, the whole being sunk underground, and covered with earth. These vaults were generally about 8 ft. long, 6 ft. broad, and 8 ft. deep; but that of a very important family might be larger, one such vault being described as capable of holding thirty bodies.

In Samoa there appear to have been alternative methods of disposing of the body. The more usual one was burial underground, some ten, fifteen, or twenty days after death. Ultimately the body was placed in a canoe, or a canoe-shaped receptacle, and buried under water, the canoe being turned over to the left, and the bodies kept in this posture in case of war. The canoe was then subjected to a rude process of preservation or embalming, and then either placed in a canoe and sent adrift out to sea or placed on a stage erected in the forest, and there left to decay, after which the bones were collected and buried. One or two of the leading families had a custom of embalming the bodies of their dead, placing them on platforms raised or double canoes, in houses built for the purpose, and leaving them until the Loa or spirits had returned to the heavens. The bone or skull was then opened, the brains removed, and the skull placed in the orifice, and the bones kept in the temples at which they had officiated. For other people natural graves were preferred, such as caves in the sides of steep rocks, or large subterranean caverns. Their artificial graves were only shallow, and were often dug in their gardens, sometimes in their houses or in sequestered spots near them, the bodies being generally placed in them in a sitting posture.

POLYTHEISM

New Zealand, do. 1857; F. E. Manning (A Pakohe Moari), Old New Zealand, do. 1854; G. W. Rusden, Hist. of New Zealand, 1 vol. Boston, 1843. (J. J. Jervis, Land of Sandwich Islands, Boston, 1842.)

ROBERT W. WILLIAMSON

POLYTHEISM.—Polytheism is the stage or phase of the religious development of mankind in which the belief in and worship of many gods prevails. It is distinguished from the previous stage (polydemonism) by the nature, and from the subsequent stage (pantheism, monothelism) by the number, of the objects of worship.

1. The antecedents of polytheism.—It is not necessary to retrace the development from its earlier phase (animism, or possibly an earlier animatism (R. R. Marett, The Threshold of Religion, p. 15). Only two general remarks need be made.

(a) In the first place, the primitive monothelism which has been asserted has not been proved, as the assertion rests on insufficient and inconclusive evidence; and to this view applies the same objection as to the view that polytheism belongs to the pre-animistic stage.

'If not at present prepared to admit,' says Marett (p. xvii), 'the polytheistic view is a demeansion of wide delusion,' and expresses no belief in such beings 'high gods,' as accounting for pre-animistic phenomena in general. On the contrary, I assume for working purposes the hypothesis that the polytheistic view is based on a psychological pre-history of some kind which, if known, would connect the religious consciousness of primitive man with those vague ideas and powers strongly predominating in the pencil as of the primitive mind, and dancing about the dimming rim of the tribal fire-circle.'

From the psychological standpoint the movement of the mind from the indefinite to the definite, the incoherent to the coherent, multiplicity to unity, is incomparably more probable than the reverse process. It is incumbent on us to try to make the development of the religious consciousness intelligible, not by way of a bolt from the blue, a gift from heaven dropped down on earth, but by connecting it with the probable movement in the human mind under the given conditions of life.

(b) In the second place, totemism (q. v.) cannot be assumed as primitive or as a necessary phase of the development of the religious consciousness.

'The totemistic theory of the origin of worship has been widely propagated through the brilliant and learned monograph of Jevons (Introduction to the History of Religion, 2 vols. London, 1886), and its fascinating exposition by Jevons (Hist. of Religion, 2nd ed. London, 1897-98). Totemism seems most intelligible when viewed as formed under the play of savage thought or unconscious association of ideas, as an intermingling upon and overrunning earlier forms of worship which found a god in nature or the spirits of men' (IBID. p. 191).

Totemism assumes that the stage of generalization in thought has been reached, as the totem is not an individual, but an animal or plant class, and also presupposes the stage of tribal unity in life, neither of which can be regarded as primitive. There is not the same evidence that all religions have passed through a totemistic stage as there is regarding an animistic, and the psychological probability is not so great. We can hardly say that it appears necessary for religions thought to have passed through this phase. We cannot therefore connect polytheism so exclusively with totemism as Jevons does (pp. 234-248). Where the phase of totemism did exist, it is not at all improbable that, as he argues, the objects of the totemism, though it may have been political or social, were either fused together (syncretism), if for one or other of the reasons he suggests the spirits were not definitely enough distinguished either in belief or in worship to remain apart, or placed side by side in a different god (polytheism). Totemism, however, was not monothelistic (belief in the existence of one God alone), nor even had it reached the stage of monolatry (the worship of one God combined with the belief in the existence of others). As Jevons concedes (p. 239), 'the sky-god, whose favour is essential to the farmer, may be worshipped in revivals as well as to the farmer's crop, may be worshipped concurrently with the totem plant or animal, and retain his independence, as the sky-god, of the totem.'

Accordingly, we may question whether his statement, 'polytheism is the price which must be paid for political development' (p. 241), is so absolutely or universally applicable. Even where totemism does prevail, it does not ensure the certainty that it must advance to monothelism? Polytheism need not then be regarded as a relapse from totemism; it may be regarded generally as an advance on polydemonism (the belief in an indefinite multitude of spirits, and the worship of some of them). It must, of course, be understood that the distinction is logical, for our thought, rather than chronological, in time. Polydemonism and polytheism overlap and intermingle. Gods and spirits may be worshipped together; but we can call a religion polytheistic when the worship of the gods is not prominent.

2. The transition from polydemonism to polytheism.—How shall we distinguish the spirit from the god as the object of worship?

(a) The conception of the spirit is less definite than that of the god. The god is individual; he has his own name; he has generally no name. As the god is conceived more definitely, he is less confined to, and more detached from, the individual object than the spirit which inhabits and controls it, and which we shall describe as 'superhuman,' if 'supernatural' suggests too advanced a mode of thought; the god has more power than the spirit.

(b) Again, as man gets more familiar with the world, he begins to observe resemblances and connections; he begins to classify plants and animals; he begins to recognize the effect of the great objects of nature—sun, moon, earth, etc.—on his environment; he begins to think of the objects in nature (may we say?) departmentally rather than as individual objects separated from each other. As man gets to know, or is trained to believe, that a tree or an animal may have its own spirit; there is an idea of vegetation, of a land, of seas and rivers.

The material progress made by man,' says Jevons (p. 231), 'as he advances in his knowledge, may be regarded as the rationalization of his beliefs, as the connecting of the fruits, and the chase, first to pastoral and then to agricultural life, required that he should make an ever-increasing use for his own ends of natural forces. These forces were to him living beings with superhuman powers, of whom he stood in dread, but whose operation he required. Without some confidence that it was possible, if he set about it in the right way, to secure their favour and assistance, his efforts would have been paralyzed. This confidence was given him by religion; he was brought into friendly relations with powers from which, in his previously narrow circle of interests, he had had little to hope or to gain.'

This practical interest was the main, if not the sole, motive of the intellectual development sketched above. Speaking generally, the relation to the gods is more definite, intimate, and con-
stage, even where totemism does not prevail, where, feeling his kinship with the animal at least in qualities, or gods or gods as altogether animal, or partly animal and partly human. We may call this the theanthropic stage. At last, when he lifts himself above all his fellow-creatures, he thinks of the gods as men (or women) of like passions with himself (the anthropomorphic or anthropomorphose stage). In Egyptian religion we have a conspicuous instance of this development (see art. God (Egyptian)).

At first the god is an animal: "Khnum of Elephantine was a ram, Hathor a cow, Nekhbet a vulture, Basat a cat, Horus a falcon, Anubis a jackal, Sekh a crocodile, Thoth an ibis, and so on." Of these gods Thoth is the most important and the god is represented with an animal-head; lastly the god assumes a human form, but the animal which once represented him remains sacred to him.

3. The mythology of polytheism.—So much it seems possible to state of a general character about polytheism. The development of polytheism in each religion was determined by so many varied and varying factors that few simple uniformity but a variety appeared. Physical conditions, racial characteristics, political circumstances, historical occurrences—all affected the forms assumed by the belief and worship of the many gods. The personalization and the divine qualities, perhaps, more than anything else, determined those of these gods with human qualities, passions, relations, and activities, the free play of the imagination with this varied material, the reflex influence of language on thought, metaphor begetting myth, the absence of any control of this development by scientific knowledge, moral sense, and religious reverence—all these factors combined explain the luxuriant, extravagant, and sometimes grotesque and even offensive mythology which connects itself with polytheism. These religions of man:

(a) The moral defects of mythology.—The description of natural processes as the personal actions of gods and goddesses, especially the comparison of these processes to sexual relations, results in the ascription to deity of what to a more developed moral sense appears immorality, although there was no such intention originally. Religion is more conservative in belief and worship than in morality, and much is told about the gods which a decent man, remembering Paul's warning in I Cor. 8, 4, might auger against the development of mythology. We find that the ascription to deity of what to a more developed moral sense appears immorality, although there was no such intention originally. Religion is more conservative in belief and worship than in morality, and much is told about the gods which a decent man, remembering Paul's warning in I Cor. 8, 4, might auger against the development of mythology. We find that the ascription to deity of what to a more developed moral sense appears immorality, although there was no such intention originally. Religion is more conservative in belief and worship than in morality, and much is told about the gods which a decent man, remembering Paul's warning in I Cor. 8, 4, might auger against the development of mythology. We find that even the gods are guilty of immorality, and that this is on the ground of not being thought evil. Thus in Xerxes' time and ancient Persia, the Persian kings were supposed to have been the offspring of the Persian god, and if they were not said to be the offspring of the Persian god, it was because the Persian gods were not supposed to have been the offspring of the Persian king. In this way the mythology was perpetuated.

To quote Xenophanes' own words:

"Homer and Herodot ascribe to the gods everything that among men is a shame or disgrace—thieves, adulterers, and deceivers" (quotep by Moore, loc. cit.). Only one other instance of such criticism of popular mythology need be given—Aphithyon's address to Zeus in the Herakles of Euripides:

"O Zeus, in vain I shared my wife with thee, in vain I called thee father of my son; thou hast not proved the friend thou dost pretend to be. I am far as much better than thou, a great god! For I did not betray Herakles' children, but thou understand how stealthily to find thy way to men's beds, the women, while their husbands' protectors, couched with their concubine, but how to save thine own friends thou dost not know. Thou art a stupid god, if not an honest one!" (quoted by Moore, p. 453).

It is no wonder that Plato desired that these stories should not be told to children because corrupting to their morals.

(b) National differences in mythology.—Not all nations are the same in their interest in their gods to develop a mythology about them. Of the Chinese deities Moore says:

"These posts have no plastic, dramatic individuality, like the gods of Greece; no mythology exists for their exploits. They have definite functions, and by these alone they themselves are defined. In this, as in other respects, the religion of China strikingly resembles that of the Romans; for practical people it is enough to know what the gods do, and what their worshipers do when they secure their favor, without trying to imagine what they are like." (p. 72).

But China and Japan offer the same contrast as Rome and Greece; for Shintó has an abundant and even grotesque genealogy of its many gods. In India, too, we find the development of its mythology. Japan differs from it in the representation of the gods. While Greece represented the gods in the likeness of men, in a Japanese temple the deity is represented by some holy object (ahkintu) in which the spirit of the deity (miamu) dwells; thus a mirror is the symbol of the presence of the sun-goddess. While Greece in its matchless art endowed its gods with beauty of form, Indian idols are "to our taste grotesquely hideous—a human body with an elephant's head; tricepsious monstroses; heads with a third eye in the middle of the forehead; human trunks with supernumerary arms and legs, and the like" (Moore, p. 345). Of this difference Moore offers an interesting explanation: "It should be noted, however, that all this vulgarity is symbolical; the supernumerary powers of the deities are intended to be expressed by these unnatural forms. The Hindu gods are less "deified" than their Greek prototypes or, to put it more correctly, they are more distinctly individualized in Greek art, because of the effort to make them more manifestly divine" (p. 345).

In China heaven (Tien) is the supreme emperor (Shang Ti), who determines both the moral and the natural order; in Japan the sun-goddess takes the highest place, but she has no relation to any moral order, although Japan did possess a customary morality even before the advent of Confucianism.

(c) The influence of political conditions on mythology. Political conditions very directly and potently affected religious ideas. Over all city-State in Egypt a god watched, cared, and ruled; when political combinations took place, the gods were brought into relation to one another. The chief god had a wife and a son. Anubis has as wife Mut (=Nekhbet of Eleithyiasopolis) and as son Montu (of Hermontis). These triads have a special peculiarity:

"The son is the successor of his father, and it is his destiny in turn to marry his mother and so to reproduce himself, that is his own successor; and so though constantly dying he is ever renewed, whilst his father is being a sort of elder. Paul's warning in I Cor. 8, 4, would then be: we remember that the gods have to do with the sun these things need not shock us, nor need we wonder at the statement which is directly contrary to that with which Paul dealt; but that he or that he produces his own members" (A. Menzies, Hist. of Religion, p. 150).

A, the solar deity of Heliopolis, rose to be the supreme of the Middle Kingdom; but, as the political importance of the provincial cities increased, their local cults could not be suppressed, and each deity was in turn identified with A, and appropriated his attributes.

"From the Heliopolitan priests came also a theology which but the god of their city, Abram, at the beginning of all things, and derived from him, through two intermediate generations, the gods of the Libyan circle as it appeared in the Delta" (Moore, p. 169).

When Babylonia became the capital of the new dynasty in Babylonia, its god Marduk supplanted Enlil of Nippur, that god's wisdom and power, and made Nabû, the god of Borsippa, his son and prophet. In one hymn the other gods are treated as only variant names of Marduk in his varying functions.

(d) The influence of religion on mythology. The exchange and corruption of the gods, the evolution of the gods, all about the gods did not, however, always depend on political conditions; religions belief and worship must also be taken into account. Before Marduk assumed the supremacy, the gods at the head of the pantheon were those of Erinna, Nana, whose son, held in high honour, if not the patron deity, in Urk; and they owed their place to the influence on the religious development exercised by their temples and priest-
POPOP VUH

A great deal of doubt has been cast upon the genuineness of the Popol Vuh, and it has been contended that it is merely the imaginative production of a Quiche native whose ideas were coloured by Christian influences; but these reflections do not affect the classification of the Popol Vuh as a work composed with person who were for the most part unacquainted with the history and mythology of Central America, who possessed no insight into aboriginal habits of thought, and who, in short, were improperly equipped for the criticism of such a work.

C. Scherzer, an Austrian savant, became aware that such a work as the Popol Vuh had existed through the medium of a letter from the Abbé Bras- seur de Bourbourg to the Duc de Valmy, in which the Abbé deplored the supposed loss of the collection. Bent on the recovery of a relic of such profound interest, Scherzer journeyed to Guatemala in 1854 or 1855, found that the Popol Vuh had been made use of early in the 19th cent. by a certain Don Felix Cabrera, and was successful in tracing the missing MS in the library of the university of San Carlos, in the city of Guatemala. It appears that Ximenez had deposited it in the library of his convent at Chichicastenango, whence it passed to the library of the University of Havana. The Spanish translation of the MS, as did Brasseur, and these were published at Vienna and Paris in 1856 and 1861 respectively. Most unfortunately the Spanish and French translations leave much to be desired as regards accuracy, and the misleading notes which accompany them must be read very critically. A Spanish translation, published as a number of the Bibliothèque Centro-American, is scarcely more accurate, but is burdened by notes which show a total ignorance of the subject on the part of the editor, and which are substantially those of Brasseur.

The name Popol Vuh means, in its literal translation, according to some authorities, 'The Book of the Mat.', or, in more sophisticated phrase, 'The Record of the Community'; but it is likely that a correct rendering of the title is 'The Collection of Written Leaves,' popol signifying the prepared bark upon which aboriginal writing is often set down, and vuh meaning, 'paper,' or 'book,' to write.' Thus a still more simple translation would give 'The Book of Bark.' It is a work of the same family as the Chinese History of the Five Books, the Japanese Nihongi, the Danish History, the Heimskringla, and some of the Hindu sacred books—a compilation in which pure mythology gradually shades off into veritable history. The language in which it was composed, the Quiche, is a dialect of the great Maya-Quiche tongue, spoken at the time of the discovery in Western Guatemala, where it is still used by the natives, and it is the only remaining monument of this tongue. Evidence is not wanting to prove the considerable antiquity of the compilation, and a decided metrical tendency in its composition leads us to believe that it was originally composed in metre, and that consequently, like the poems of Homer and Ossian, before it was reduced to writing it depended for its popularity upon the aboriginal memory alone. On the other hand, the language is so curious, as we possess it probably does not stand in its pristine simplicity; that it has become sophisticated in a certain degree by Christian thought and influence can hardly be doubted; but it cannot be too strongly urged that the popular language which we possess as a text was for a long time the language that suited a certain member of the Quiche race. The almost inex-
mountable difficulties of the Quiche language render it impossible that a European of the 17th cent. could have in any way tampered with the compilation, and the evidence of its contents is conclusive, as it is supported by the copyists' signatures, respectively, with those of Mexico and Yucatan, which were as sealed books to the scholars of the time in which the MS was written. Furthermore, the Quiche mythology, as set forth in the pages of the Popol Vuh, adheres in its general characteristics with the great laws of mythologic science.

The Popol Vuh is divided into four books, the first cosmological, the second dealing with the adventures of certain hero-gods in the nether world, that is, Quetzalcoatl, the rain-god, and his brother Hunahpu, the通行创造者; the third, the last, presents the legend of the heroic twins, Vukub-kan, and the great god Kukulcan.

The Popol Vuh is an important book for the historian, as it gives us a glimpse of the religion and mythology of the Yucatecan Indians of the pre-Columbian period. It is a valuable source of information about the beliefs and practices of the ancient Maya civilization.
this strange, as in Mexico itself the cult of a god does not appear to have been known. But it is known that the popular science of the Mesoamerican peoples, which aimed at a total representa-
tion of the gods originated near the southern borders of the Mexican empire, nearer the sphere of Maya influence. In the Borogenic Codex the bat-god is represented as holding a severed human head in the hand and clubbing the neck of a man with the other hand. He is also frequently met with on the Codex, and in the Maya Dresden Codex, and his head appears in the Maya ceremonial sign for the cardinal points. He is alsoBriefly described by E. P. Diodoros. He is well portrayed with outstretched wings on which are depicted half-moons, symbolic of his nocturnal character. We find his name also reproduced in that of the two royal families of the Cakchiquels, Ah-po-xa, and, according to another passage in the Popol Vuh, we find that the Cakchiquels designated him Zotzilaha Chamalean, who, we are told, took the bat for his image. Thus Zotzilaha does not mean 'lost', but 'that which is left.' It is reasonable to suppose that this god possessed more than one form, i.e., that, besides the bat which he symbolized, he had the form of a cave-god.

The brothers, having outwitted their fiendish hosts, now awaited the return of their parents, killed and coming to life again, after their bones had been beaten to powder and thrown into the river. The monarchs of Xibalba requested to be killed also, but, as the brothers omitted to revive them, their reign was at an end. They then showed themselves on the shores of Lake Peten and once more descended the prince of Xibalba, and, after paying fitting funeral honours to their father and uncle, set them in the heavens as the sun and the moon.

In this myth it is easy to see the harrying of the 'lost' common to the mythology of all nations. The Quiche Xibalba is, of course, a place of the dead, with many departments, like the Egyptian Amenti, where both just and unjust alike are lodged. The savage mind trembles at the idea of a place of eternal doom of which it knows nothing; therefore it invents mythological descriptions of its hedges of its most heroic and god-like figures, who are described as achieving the conquest of the terrors of death and hell, and making the way easy for those who come after them.

In this myth we find the winds, once more in council, their object this time being the creation of man.

Four perfect men were fashioned by Hurakan out of red and white earth and placed in a forest field. In knowledge closely approached to the gods themselves. The creators, astonished at this condition of things, felt that it was not good that man should approach them in wisdom, so they contracted his sight so that he might only be able to see a portion of the earth. The gods then provided the first four men with wives. These eight people were the ancestors of the Quiche only, the progenitors of other tribes being created subsequently. As yet there was no sun in the heavens, and, despite the prayers of the early Quiche, no laminary appeared. A desire to migrate came upon the first men, and they set out for Tulan-Zeita. Attempts have been made to identify this locality with the city of Tollan, the capital of the Toltecs of ancient Mexico. In that place the Quiche received gods, each man being given a special and probably tribal deity. One of these, Tollan, whose name signifies 'the rambler,' and who is a thunder- and rain-god, is Quetzalcoatl. He supplied the endowments with fire by striking his feet (which were composed of flint) together, and producing lightning. At Tulan the gods gave the Quiche two corn plants, two corn plants, the former progenitors of the Quiche could no longer comprehend one another. Leaving Tulan for the land of Tolu, they wandered on, meeting innumerable hardships, making their way through desolate mountain-passes, and passing through the sea, while the sun shone from the north. At last he appeared above the horizon, weak and as reflected in a glass, and, as his meaning was lost, the endowments were turned into stone, as were the gods worshipped by the Quiche.

It is probable that this myth recounts a migration from the cold north to the warm south. The sun grows stronger as the journey proceeds, which would seem to show that, to begin with, the ancestors of the Quiche people must have dwelt in a comparatively cold climate. (Mesoamerican Archaeology, p. 362 f.) sees in this myth the adoption of a solar calendar or rather the fixing of a date to form a starting-point for a time-count modelled on solar time. The whole myth is strikingly akin to that of the Israelites, but the conditions of migration undergone by the Quiche, though similar to those recounted in the book of Exodus, possess as many points of difference, and are by no means a mere variation of the Scriptural version, as stated by short-handed writers. The best proof that the myth is of purely native origin is that such myths of undoubtedly aboriginal manufacture abound in America. Thus we find in an Aztec migration-myth in the Topilli Collection that the Aztecs issuing from Aztlan carried their god Huizildopecolti before them when they came by water to Colhuacan. We also find a similar myth in the William Owen, or Painted Records of the Lenapé Indians, which state that the Lenapé left the dwelling of Talli for the Snake Land, to reach which they passed over the water of the frozen sea. The Popol Vuh, indeed, may be a dim and distant echo of a migration from N. E. Asia to American soil.

The circumstances that the tribal gods of the Quiche were formed by the Quiche are clearly reminiscent of the Flood. The best proof that the knowledge of these is so slight that at present it is found not a little difficult to apply the light shed by the Popol Vuh so as to dispel the gloom which surrounds them.

POSITIVISM.—I. Derivation and definition. —Derived from the French positif, 'sure,' 'certain,' 'positivism' was the term chosen by Auguste Comte to designate a system of thought and life dealing with realities and based on the sure results reached by scientific methods, which aimed not only at certainty, but also at precision in the varying degree that each particular branch of science could be applied. Comte's system is based on a system of life as well as of thought, it obtained the additional connotation of 'useful'; and, as our knowledge of the world depends on the powers of mankind, we also get the meaning 'relative.' With the science of biology and sociology, science becomes organic, and with the recognition of the union of mankind in the social organism, sympathetic. Positivism, therefore, in spite of its name, is not purely intellectual. It is not only
real, certain, and precise, but also useful, relative, organic, and sympathetic.

2. History before Comte.—The general application of scientific methods, the accumulation of a mass of ordered knowledge, the growth up in turn of the various abstract sciences—all this has been a long and gradual process. While in the theocracies of Babylon and Egypt concrete facts were observed, recorded, and utilized, calendars were computed and astronomical pyramids built, it was only in Greece that abstract laws of co-existence and succession were formulated. But the abstract science of Greece made considerable progress only in mathematics and astronomy; it was essentially statical, failing to solve even so simple a problem as that presented by the acceleration of a falling body; it did not reach the subjects—health, politics, morals—most interesting to mankind, for in these subjects Greek knowledge remained almost entirely concrete and empirical. Other interests and needs, the development of Roman law, the rise of a new religion, the inroads of the barbarians, distracted the attention of the ancient world, and Greek science not only ceased to make progress, but would have been lost, had it not been preserved and even slightly increased by the Arabs. At the Renaissance the scientific advance was resumed. Copernicus, Kepler, and Galileo introduced the new astronomy; the earth ceased to be the centre of the universe; problems of motion were successfully solved. Bacon and Descartes discussed the purpose, methods, and scope of science, and the former foresaw its extension to social and moral phenomena. In the two centuries after Bacon the sciences of physics, chemistry, and biology made great progress, and a long series of thinkers began tentatively to investigate the laws of social structure and development, the working of the human mind, and the relation of subject and object.

Building on the results of these labours and gathering up the scattered threads of these 15th cent. investigations, Comte founded a scientific philosophy and a purely human religion.

3. Comte.—Auguste Comte was born at Montpeller on Jan. 19th, 1798, son of a revenue officer of minor rank. His parents were royalists and devout Catholics, but he had abandoned theology before he was fifteen, and was throughout his life a firm republican. At the Lycée of Montpellier he showed such precocity that, while still a pupil, he was allowed to sit in the class of the advanced professor. Thence he passed to the famous Polytechnic School, first of his list in the entrance examination when sixteen, though he was not allowed to join till the next year. In 1810—the year after Waterloo—he took a leading part in a demonstration against an unpopular official, and was expelled with the other students of his year, the whole school being suspected of republican sentiments. He was, however, already known to some eminent men, and on their recommendation obtained pupils. Later he was appointed to two small mathematical posts in the Polytechnic as teacher and examiner. Having already published some important essays, he began, in 1826, a course of lectures on the positive philosophy, which was interrupted by a mental breakdown; but after his recovery it was resumed and completed. The course was attended by some of the most eminent men of science of the day, and formed a first sketch of the Positive Polity (4 vols., 1829-30). This was followed in 1848 by the "General View of Positivism", the introduction to his second great work, the Positive Polity (4 vols., the last being published in 1851). Between the two works his outlook on life had developed. An early marriage had turned out unhappy; his wife grudged his devotion to his chosen task, and wished to direct his powers into more lucrative channels; eventually she left him. Some years afterwards he formed a devoted friendship for Madame de Vaux, whose husband was a faithful model of the ideal philosopher, and perhaps a woman of exceptional mental capacity, but she was quite able to appreciate Comte's genius. She was not, however, in the least in love with him, and their friendship led to no closer union. Comte outlived her, and died a year after her death just a year later. This short episode had a lasting effect on his career. From the outset, as he had shown in his early essays, he had sought the good of mankind as the proper goal of all human effort. Henceforth, while recognizing the primary necessity of scientific synthesis, he saw that there must be a synthesis embracing all sides of human existence, which would satisfy the intellectual regeneration, a philosophy of science, a synthesis of human knowledge. Clotilde de Vaux could add nothing to his intellectual equipment, but their friendship opened his eyes to sides of human life previously unseen, to other needs of the human heart and other values in human conduct. Henceforth, while recognizing the primary necessity of scientific synthesis, he saw that there must be a synthesis embracing all sides of human existence, which would satisfy the intellectual regeneration, a philosophy of science, a synthesis of human knowledge. Clotilde de Vaux could add nothing to his intellectual equipment, but their friendship opened his eyes to sides of human life previously unseen, to other needs of the human heart and other values in human conduct.
always insisted that Condorcet was his immediate intellectual ancestor, and that he owed nothing to Saint-Simon. It is true that he gained little intellectually from the connexion; for Saint-Simon's ideas were constantly changing and often inconsistent—he was a visionary rather than a systematic thinker. Nevertheless, Comte was and still is well fitted to impress on him the need of reconstruction, and had some confused glimpses of its true conditions; for evil, because he retained to the end of his life Saint-Simon's tendency to expect quick results on the ground of his zeal for social reconstruction. The first is, indeed, the common failing of reformers; the second led Comte to make his forecasts of the future more detailed than the complex character of social phenomena allowed.

It was in this third essay (1822) that Comte put forward his law of intellectual development, which he named the 'Law of the Three States,* and his classification of the sciences. The former had already been stated by Turgot in an early thesis, but without adequate proof or reconstruction of its scope; and it was open to fatal misunderstanding unless combined with a classification of the sciences in the order of their historic development. Here is a statement of the law by Comte:

In the first stage men, interpreting the unknown by the known, attribute the phenomena of the world without to the action of beings moved by human passions; in the third they content themselves with discovering the order in which events occurred, noting the relations of coexistence or succession, which give the conditions of human action. Between these there is a transitional stage in which personified or merely verbal entities take the place of divine wills. Thus a pestilence, which is in primitive times or among backward peoples a punishment sent by the gods, passes into an entity, which comes and goes without assigned cause, till with increasing knowledge the conditions of its appearance and the course of its development are discovered, its microbe isolated, it may be, and so on with each science in order. And what are the natural rights of man, supposed the same in all ages and under all conditions, supply an example in politics of the metaphysical transition from the divine right of kings to the ordering of society in accordance with the needs of a developing civilization. Of such entities Nature is the most general. At the beginning of the transition it is hardly distinguishable from a divinity or at least a living being, as in such expressions as 'Nature abhors a vacuum.' In the end it becomes a convenient summary for the totality of phenomena and their laws.

But, in order to understand correctly the Law of the Three States, a classification of the abstract sciences was necessary. Comte proposed to range them in a linear series, beginning with the most general and simple and proceeding to the most special and complex—mathematics, astronomy (celestial physics), physics, chemistry, biology, and sociology, to which he afterwards added ethics, the first instances being interlocked in various stages. This order was that actually followed by the sciences in their historic development—the order in which they in turn reached the positive stage. Herbert Spencer attacked this classification with a view to show that the principle of the possible, the sciences being interdependent. But classification is a logical artifice, which usually accentuates the divisions found in nature, and is intended for the assistance of human reason. For exposition a linear order is necessary, and of such orders Comte's conforms most nearly to the order of historical development; and in its main lines it has been adopted by Spencer himself in his exposition of the synthetic philosophy, with one amendment: in the concluding section—of biology and not as a science, which the former development had failed to allow, it would, if the criticism be allowed, it would mean only the insertion of a new term, not a recasting of the whole. Whether psychology is to be considered as a separate science depends, according to Comte's principles, on whether it requires a new method; for the main distinction between the various sciences lies in the methods necessary for their investigation.

It will thus be seen, if we consider the Law of the Three States in combination with the classification of the sciences, that at any given period all three stages will be represented, the simpler sciences being already positive, while the more complex are partly or wholly metaphysical or theological. In the historic sciences, to which knowledge some simple positive notions will have been derived from practical life, while even in the present age the most complex sciences have not become completely positive. Comte generally recognized as the founder of sociology. It is true that the necessary conditions of human society were discussed by Aristotle, and that therefore, in its purely statical aspects, the subject was studied in ancient Greece. Early in the 18th cent. Vico attempted to establish a new science of society, but the necessary foundation in the simpler sciences was wanting; the same century saw the successful treatment of many isolated questions relating to social structure and development; and towards its close Herder, Kant, and Condorcet contested the laws of the progress of civilization in the study of history. But Comte was the first to map out the field of sociology, to show its true relation to the earlier sciences, especially biology, to distinguish social statics from sociology, and to apply the special method proper to the latter. In this, which Comte called 'historic filiation' and J. S. Mill 'inverse deduction,' a generalization is made inductively from the facts of history. Then the same result is deduced by showing how the sequence of events could be attributed to the known facts of human nature, or to what we already know of the development of societies and the conditions of social action. By this method Comte reached his law of intellectual development and corresponding laws of the evolution of activity and affection. Thus in the Western transition, while human activity was at first organized for conquest and then for defence, eventually industry becomes recognized as the chief occupation of mankind. As the power of the workers changes from slavery to serfdom and then to freedom. In the last stage there is a further advance from the metaphysical concept of individual rights and the absolute control of wealth by political or economic means to the duty or convenience as regulating industrial relations. In the language of Pierre LaTritte, Comte's successor as leader of the Positivist body, we should regard wealth as social in its origin and destination (The Positive Science of Morals, Eng. tr., p. 191). So, too, there is a widening of the moral sphere, a law of moral progress. At one
timorous duties are bounded by the family, class, or tribe. Later they are extended to all of the same city or nation. Finally, they include the
whole human race. In political, social, and moral, as we have seen, had been cultivated from ancient times. Comte, however, made some important additions to the work of his predecessors. He brought out more fully than they had done the co-ordination that exists between institutions in corresponding stages of the social evolution, while avoiding the error of supposing this co-ordination to be as exact as in biology, where it. Owen was able from a single bone to reconstruct the form of an extinct bird. More important, Comte's contributions include the definition of society—first into spiritual and temporal, these tending to further subdivision, the former into emotional and intellectual, the latter into chiefs and people. The progress of sociology has not been so rapid as Comte hoped, but it is now generally recognized as a science under that name, which he gave it. The chief sociologists since his time have pursued the study from rather different standpoints. Herbert Spencer has dealt largely with the inorganic or the social side of the lower sciences, especially the biological laws of heredity. P. G Frédéric Le Play has shown how the environment chiefly affects social structure and development indirectly through its control of industry, the home, the business, the church, the school, and the tiller of the soil each giving rise to a different type of civilization. But in sociology physical and biological laws only give the conditions of social existence. The environment is most powerful in the early stages of civilization and becomes less and less so as the social heritage grows. Following the example of other sciences, sociology must discover laws by the direct study of social phenomena, the structure of human societies, and the development of human civilization.

In this field Comte has been the chief pioneer. The importance of his discoveries is seen in the light which they throw on history. He traces the development of civilization from fetishism or animism through monothelism and polytheism, to monotheism, found in a theocratic form in the great river valleys, isolated by strong natural barriers, as in Egypt, or in a military form in Greece or Rome. In Greece the opposition of these two principles was more than national, and the country does not favour a career of conquest, and amid the freedom and rivalry of the small city-states Greek art and Greek science arose. Rome, on the contrary, conquered and united the Mediterranean world. Polytheism passed into monothelism and conquest into defence. For some centuries the energies and intellect of the West were occupied in civilizing the barbarian and creating the Catholic Church. But, as that was accomplished, new interests arose, stimulated by the failure of the Mass and the revival of renaissance learning. From the 14th cent. onwards Europe entered on that revolutionary transition which culminated in the 18th. But, alongside of the movement of destruction, the break-down of the old institutions and beliefs and a movement of construction, the building up of modern science. In this growth of science Comte saw the promise of the close of the revolutionary era, for scientific results were true for all, transcending national bounds and giving a certitude in which all could share. From a study of the past he reached the following conclusions as to the characteristics of the new era: (1) as the field of scientific investigation was continually enlarging, as that was becoming more and more the test of certitude and the bond of intellectual unity, the philosophy of the future must be founded on science, and the religion of the future must be compatible with science; (2) however much the peace of the world might be troubled by nations in a race for backward stages of civilization—and even in Europe some are behind others—industry was becoming more and more the chief occupation of man's energies; peace was becoming normal, war abnormal; (3) in politics the metaphysical conception of natural rights, the same in all places and times, was giving way to the acceptance of duties, changing with the development of civilization; (4) conduct was being more and more judged by human and social standards. Aristotle had declared of modern man: 'Hindmost is he who values one of another' (Eph. 42°), St. Paul proclaimed. In the 17th cent. this recognition of solidarity was extended—at least in the intellectual sphere—

The whole succession of men during the course of so many centuries should be considered as one man, ever living and continually learning' (Préciface au Travail du Vole, Quinoa Paper, 1806, ii. 156). In Comte's view the human race formed one great organism, organized according to the laws of nature, and reacting to the development of its own laws of development, its elements becoming more and more closely connected. The individual as such is an abstraction; for every one is a member of a family, then of a city, and of a state, and on the other hand, many are made up of the all the nations of the earth. On these collective elements the thought and life of each individual depend, and that thought and life necessarily differ in different stages of human development. Each is the child of his own nation and the world.

Religion, in Comte's definition, consists in the full harmony of life, and embraces equally the heart and the intellect, 'for both of these must concur to produce any true unity of life' (Positive Politic, Eng. tr., ii. 8). Its function is to regulate the individual life and to combine collective lives. In the earlier stages of man's development this was attained by the unconscious creation, first of fetishes, then of gods, the unknown outside being imagined as an all-powerful being. It was also interpreted in terms of men's own feelings. But, intellectually, in one department after another, natural laws take the place of divine wills, and in morals the desire to please or appease the gods becomes less potent as a motive for good actions and duties, the love of country becomes the new centre of unity; the Religion of Humanity, a religion capable of uniting all, and 'Live for others' its guiding principle. The term 'altruism,' now in general use, was introduced by Comte.

Three sources of misunderstanding must be guarded against in considering this religion. (1) It is not mere cosmopolitanism. Humanity is made up of families and nations. For the great mass of men and women—indeed, for all in many matters—religion is interpreted in terms of men's own feelings. But, intellectually, in one department after another, natural laws take the place of divine wills, and in morals the desire to please or appease the gods becomes less potent as a motive for good actions and duties, the love of country becomes the new centre of unity; the Religion of Humanity, a religion capable of uniting all, and 'Live for others' its guiding principle. The term 'altruism,' now in general use, was introduced by Comte.

and, so far as they fulfill a necessary function, to be destroyed, they must be replaced. They were ceased to be the business of all men, even when their rivalry made for disunion. Thus Positivists honor the great teachers of all religions and gladly accept what is permanent in their work—e.g., the separation of spiritual from temporal power under the medieval Church. But they can honor none among the great men, like Diderot, Condorcet, or Voltaire, who, though they failed justly to appreciate the past, made ready the way for the future. (3) Altruism is inconsistent with self-immolation or with purposeless self-denial. Pleasure, the end, cannot be the means. Heights of the great tribune were neither for guilt nor neglect of duty in ourselves or pain to others. To live for others implies the maintenance of our full powers of service, including physical health and cheerfulness of temper. Asceticism, save as training for service, is alien to the Religion of Humanity.

Comte has been blamed for neglect of epistemology and formal logic. The latter he considered best studied in the several sciences, methods being the best criterion of their truth. As to the former, the validity of scientific methods and the underlying assumptions of science were in his view sufficiently established by the success of modern science and the continual extension of its sphere. The methods of science were to give a basis by relying on the relativity of knowledge, the distinction between subjective and objective derived from Kant, were accepted as postulates of scientific investigation. He did, however, formulate under the designation The First Philosophy a series of general principles or laws on which the abstract sciences rest. Hypotheses, far from being condemned, were held to be legitimate provided they were verifiable. Without the use of hypothesis scientific discovery is impossible. Knowledge was not to be pursued for its own sake, but for a social purpose.

*Know in order to foresee, and foresee in order to provide* (Politique positive, i, table facing p. 729).

As to those ultimate problems which occupied so large a space in man’s early speculations, Comte considered them insoluble. The absolute is out of reach of man’s relative powers. We can postulate benevolence on his immediate environment and the laws that control his destiny only in so far as they have allowed Humanity to arise and develop. To that extent the earth and the whole body of natural law, the grand mitigant, in Comte’s expression, were rightly venerated by mankind, but only as a consequence of their relation to Humanity. The old cosmogenies made man the objective centre of the universe. Comte aimed only at a subjective synthesis. In positivism all knowledge is viewed in its relation to man, and human knowledge is considered adequate for all human needs. At the same time Comte was not purely intellectualist. He recognized the effect of practical life and feeling on thought. He took mankind as the basis of human nature into account. He insisted on the need of social aims even in scientific inquiry.

*The Intellectual should always be the servant of the Heart, not its slave* (in General View of Positivism, Eng. tr.3, original title page).

To the positive philosophy corresponds a positive education, replacing instruction in letters by a training in science and a knowledge of realities. Comte divided the education of the young into three sections: (a) the first, or primary education, would be mainly artistic. He would sing and draw, and become acquainted with the literature of his own country, and possibly towards the end of the period he might begin to study foreign languages. Comte hoped that eventually mothers who had already received a positive education would be capable of teaching their children the second, as well as the first, period, but for the present he recognized that this would be impossible. Finally, in the third stage, when the young persons were from four to fourteen years old, they would be engaged in preparing for the active work of his life—in general as apprentice—would follow courses on all the seven abstract sciences, from mathematics to ethics, on two evenings in the week during the first two years, on one evening during the last year. They would study—i.e., would have to do exactly what he did, only for the most part, necessarily for the same course, except that, to prevent overstrain, they would have only one evening a week throughout. For such classes to be largely attended, they would obviously have to fulfill certain conditions. (1) The hours of labor would have to be short. Comte hoped that the hours even of adults would ultimately be reduced to thirty-five a week. (2) The study of each science must be limited. There was to be no question of training the boys and girls to do the work of the old. Instead of the eight surgeons. For such professional instruction there would be special institutions. The general courses would be open to all and would have to recognize two limitations. They must be sufficient only to make all who would spend their lives in the official occupations of the scientific way of looking at the world, and (b) to enable him to proceed to the later sciences. Each science would be pursued—until the last was reached—in order to understand its method and have a firm basis for later studies. The seven years of seven sciences must form a connected whole, and be infused with a social purpose. The teachers, therefore, were to be men of philosophic outlook—Comte referred to them as a philosophic priesthood—who, while their chief business would be teaching, would also form a spiritual power, international as science is, and independent of political parties, who, as they would renounce all temporal ambition, could give disinterested counsel in relation to public affairs.

Many other institutions were suggested by Comte. Of these it is possible here to describe only the Positiveist Library and the Positivist Calendars.

The Positiveist Library for the Nineteenth Century was to be a selection of books made by Comte, with the view of guiding the more thoughtful minds among the people in their choice of books for constant use. It is divided into four sections: poetry and fiction, science, history, and philosophy and religion. Of these the first and last have naturally the most permanent interest, the one containing the great masterpieces of imaginative literature from Homer and Æschylus to Goethe and Walter Scott, the other, not only the sacred books of Hebrew, Christian, and Muslm, the Bible and the Qur'an, with St. Augustine, St. Bernard, Thomas a Kempis, and Bossuet, but the great philosophers, from Aristotle, through Bacon and Descartes, to Diderot, Condorcet, and Comte. The collection was purely provisional and intended only for the school. The books used at schools, and the writings that have directly affected Western civilization; it excludes the great epics of India. This is in the main true also of the Historical Calendar, though the first month contains the names of Joshua, Moses, Israel, and Muhammad. The year is divided into thirteen months, each representing a phase in human development: theocratic civilization, ancient poetry, philosophy, science, military civilization, modern civilization, politics, trade, industry, drama, philosophy, statesmanship, and science. The month is divided into
twenty-eight days. At the head of each month is a great name, Homer, Dante, Shakespeare for the three months of poetry, Aristotle and Descartes for the two of philosophy, Julius Caesar, St. Paul, Chuang-tse for the three of historical, political, and moral construction rather than destruction; except in the first month it deals almost entirely with the West; it is temporary, save as a historical sketch, and even historical values change. On the other hand, the Abstract Calendar is general and permanent. In this the first month is dedicated to Humanity, the next five to family and industrial relationships, then three to the preparatory historical phases, fetishism, polytheism, pantheism, and monothelism, and the last four to the moral functions—moral providence of women, the intellectual providence of the teachers and thinkers, the material providence of the industrial leaders, and the general providence of the proletariat. Both Calendars end with an additional day not included in any month—a day for each part of the body. But with 'all the dead,' since every man, in the course of his life, however useless or degraded, has done some useful or even honourable actions. In leap-year one day more has to be added, and this is devoted to a general commemoration of those illustrious women who, under exceptional circumstances, have, like Joan of Arc, passed beyond the sphere of woman's ordinary duties. Under the influence of a higher standard of education, Comte thought the number of small women would increase in the future, but that the great mass of women would still devote themselves to the indispensable duties of the home, and remain the moral providence of Humanity. The first day of the first month of the year was assigned as the festival of Humanity, not as the day of all the dead, a commemoration of the individuals who compose the human race, but as the day of that great human organism considered as a whole and built up by the convergent efforts of all generations. Comte also projected a scheme of national life, of consecrating all the successive phases of private life by connecting each with public life (The Catechism of Positive Religion, Eng. tr., p. 90).

4. Spread of positivism. Comte founded the Positivist Society in 1839, and the influence of his teaching was spread from an independent standpoint in England by John Stuart Mill, George Henry Lewes, and Harriet Martineau. Later a Positivist Society was founded in London by Richard Congreve, E. S. Beesly, J. H. Bridges, Frederic Harrison, and Henry Crompton. They concerned themselves not only with the philosophic but also with the religious side of his teaching and with the practical application of positivism to public affairs. Believing with Comte that the 'proletariate class is not properly speaking, a class, but constitutes the body of society' (A General View of Positivism, Eng. tr., p. 147), and that trade unionism is a powerful instrument for the emancipation of labourers, the English positivists were foremost in the movement. Other positivists, finding the legal recognition of the Unions lacking, in 1871 against the dismemberment of France. Recognizing that Humanity consists, not of an undifferentiated aggregate, but in a consensus of free nations, they have supported the claims of subject nationalities, as Ireland and Poland, to control their own internal affairs and develop in their own way. The term 'Comtist' was repudiated by Comte, and has not been accepted by positivists, as it misinterprets the relationship between the teacher and those who have carried on the positivist movement and propagated the Religion of Humanity since his death. Positivism being founded on science and on scientific philosophy, its doctrine and practice must be adapted to the results of empirical research and development. It is a synthesis, but not a closed and rigid synthesis. It is a relative, an organic, and an expanding synthesis, in which all new developments of science must find their place.
The Committee invites the adhesion of 'all those who wish to see life inspired by a human religion, guided and sustained, founded on science and directed to the service of Man' (ib. p. 2).

II. WORKS BY AUGUSTE COMTE.—Essays contributed to various periodicals, 1819-28, collected as Opuscules de philosophie positive, in appendix to the Politique, Eng. tr., Early Essays on Society or Temporality, is found at all stages of human development and has had a profound effect on the history of religious belief. Possession, a temporary embodiment of an influence or spirit alien to the subject, is a conception in full logical agreement with Comte's philosophy. It was officially recognized in the early Christian Church; and it underlay the curious forms of modern revivalism. Abnormal physical and psychical manifestations are regarded as evidence of the presence of a deity or spirit, good or evil, and every word and action of the subject are held to be outside his or her control and to proceed solely from the indwelling power. The primitive mind has been quick to seize the advantage of the supposed presences of a supernatural being in order to influence or ascertain the future course of events, and this in one form or another has persisted throughout the religious and spiritual history of mankind. And, since those who are, or have been, in possession of such presences are regarded as oracles, prophets, magicians, and diviners, it has followed that, where the physical and mental peculiarities which are regarded as signs of the spiritual influence are not present from causes connected with the subject, i.e., simulated or artificially induced. Possession in the primitive mind is, by custom, may therefore, be distinguished as being either involuntary or voluntary. This distinction, though not clearly present to the primitive mind, is afterwards very clear.

1. Origin of belief.—The spiritual theory of the universe, which is the basis of the primitive modes of thought and acquires powers and attributes which would now be regarded as supernatural to every man or woman, might be held adequate to account for the nature of the belief. It is clear, however, that, while this attitude of the primitive mind has suggested its general form, its interest centres in what is abnormal in the phenomena. The constant association of possession with pathological states of mind and body indicates that as a theory it is an attempt to explain the existence of epi- psychological, neurotic, or hysterical phenomena as subject to other forms of mental diseases. It is particularly significant that it is precisely in those areas in which what is known as 'arctic hysteria' is prevalent, and especially in Siberia, that the mediolateral side of the shaman's functions are most prominent and most constantly in request.

2. Description of phenomena.—The interesting physical and psychical phenomena of possession as described both in antiquity and in recent times are essentially identical wherever encountered. The subject, having attained by means of some stimulus or other a state of intense emotional excitation, is seized with convulsive shiverings and shakings of the body, makes violent gestures with the arms, and his voice becomes wild and excited. An account of a case of possession in the Sandwich Islands says that the priest who was the subject worked himself up to the highest pitch of frenzy, the limbs seemed convulsed, the body swelled, the conversation became broken with those features distorted, the eyes wild and straitened. While in this state, he was ignited on the hearthstone, at the top of the altar, exposed to the influence of the divinity. The will of the gods was then revealed in shrill cries, in violent and often indistinct sounds. When the medium lapses into trance the oracular features paroxysmally gradually subsided and comparative composure ensued (W. H. Fairbank and J. R. Harrison, The Coast Polynesia, London, 1852-56, L. 372-375). This account may well be compared with Vergil:

subito non vultus, non color aurae,
Non comparant nunc ore cœnas; sed pectus anheñum,
Et rallea lora curta timent; majoreisque videri,
An nec mortale sonat, si data est unde quando
Jam proprie dei! (Æn. vi. 47-51).
The explanations, the cry 'Apollo,' and the disjointed utterances with which Cassandra in the Agamemnon begins to prophesy the future of the gods, is 1072 in like manner a parallel in the description of possession among primitive races. In the Veddas of the south, a sudden access of fear, as if from another world, enters into possession of him and it leaves; in Fiji, when the priest was seized, the god appeared as an old woman. The subject is discussed by the subeditor of the British Museum (pt. I., The Magic Art, London, 1911, i. 278, quoting I. Fison).

The gradual cessation of the paroxysm is not universal. Among the Banyuns of Sumatra the possession of the deity takes place suddenly after a crucial act in the powntumine of which the ceremonial consists and the shaman is exhausted at the close of the act. In a careful study of the phenomena in the Vedda shaman Seligmann says that, although the performance (kohm) is conceived to be a mere automatism, theidea of what he is doing is more or less in an automatic condition in which he goes through all the emotional movements of the dance correctly and in the proper order. He acts without complete volitional consciousness. The shamans themselves said that both at the beginning and at the end of the performance they were seized with vertigo and nausea. One said that he heard booming noise in his ears when the spirits left him. Apparently the determining factors are a profound belief in the reality of possession and a subconscious attitude of expectancy. It appears to be clear that the possession of the bystanders is non-volitional. A spectator of a devil-dance has to appear to suffer considerable pain, or at any rate inconvenience, although he did not wish to, and had taken pains to avoid it. He has been seized and the performer seems to be genuinely tired. The Veddas show no particular anxiety for the health of their own temple servants but their dying of suppressed fever shows that it is a matter of serious consideration. C. G. and E. Z. Seligmann, The Veddas, Cambridge, 1911, p. 130, 134 f., 200 ff.

3. Possession and disease. — Although the manner of possession does not discriminate between the cause of cases which are pathologicai and those in which an abnormal state is the result of the more or less voluntary action of the subject, both alike being attributed to the possession, their treatment is made to be an accidental or occasional seizure and the ceremonial observance of rites to summon spirits to materialize for a special purpose.

Forms of possession which, in the light of this distinction, might be classified in the category of ecstasy, would be thus explained as arising from neglect of what is fitting in respect of, or by way of offerings to, a spirit.

Among the Lushai of India, on the occasion of the tribal feasts, the spirits of the dead are believed to be present and it is usual to place offerings of food for them in the caves of the houses. If it should happen that a girl who has recently lost her mother should fall in a faint, it is taken as a case of possession: "the dead has taken her place." This is a sign that the spirit is present in her. After the girl has regained consciousness with which she was decked on the occasion of the funeral. In order that the girl may be relieved and the spirit appeased, her clothes and the sharp end of the arrows, the body laying, and one of the old petticoats and cloths are burnt in the I. Shakespeare, The Lushai Ruki Class, London, 1912, p. 95.

Possession may follow some act of impiety.

It is recorded that a Javanese coolie in the Malay Peninsula who cut down a tree known to be inhabited by a holy spirit, and was nothing resembling an epileptic fit, which was regarded by the Malays as possession. No Malay would cut down a tree thus. The belief is that the gods are not in the habit of doing so in the course of an exorcism conducted by the medicine-man (C. O. Blagden, quoted by W. W. Skeat, Malay Magic, London, 1910, 102 ff.).

Near relatives appear to be peculiarly susceptible to attacks by spirits of the deceased, as in the Lushei case of mother and daughter cited above. In other cases, as, e.g., among the Akikuyu, who believe that the spirits of the ancestors cause the (spirit of the dead), there is peculiar danger for the relatives.

The nyëma haunt especially the place of the man's death and, if he has been an evil liver, his spirit does as much harm as possible, or even by taking possession of the people ever he has an opportunity. In such cases the medicine-man is called in to interpret the spirit's desire. If it is not satisfied, it cannot be brought to rest. The spirit, night and day, may begin to work its mischief (W. S. and K. Routledge, With a Prehistoric People, London, 1910, p. 294).

Possession and causing madness are here specifically mentioned as activities of an evil spirit, but among the primitive theories of disease causation by spirits who enter into or torment the patient holds a prominent place. The therapeutic measures of the medicine-man, in so far as they are not purely materialistic, like the extraction of a bone or pebble, are largely directed towards driving out or propitiating the demons or spirits reputed to be the cause of madness.

It also finds expression in the customs of driving out disease-spirits at special festivals, of sending them away in boats, or of diverting them to a scrapheap.

It is, however, to the more violent and abnormal forms of disease in particular that the theory of possession is applied.

The lathong hold that possession in the form in which it is recognized the spirit's energy, is linked with its cause — and, not, be it noted, spirits of their own dead, but Zulu or Bantu spirits. It occurs chiefly among those who travel outside their territories. The attacks are not confined to the free of their absence from their own country; they may bring back the infection with them, and, indeed, though not so frequently as formerly, at times the disease has assumed the proportions of an epidemic. The preliminary symptoms are a nervous illness, persistent pain in head, shock, extraordinary yawning, and emaciation. If, after consultation of the divinatory bones, the medicine-man decides that the patient is possessed by the spirit in question, the course of the established series of ceremonies which follows the patient in a frenzy, declares the name of the spirit which possesses him, speaking Bazanga, and proceeds to analyze his condition in the language. The spirits are appeased by the offering of a meal, the medicine-men go into trances, and a good deal of blood from the cut until his stomach is full and is then torn away from the carcass by the bystanders. He is given drugs which come from the earth and the spirit lives on him. At the end of the ceremony which closes the rites, and after a probationary period of a year, the man is fully recovered, and the distinction of the man is made by white beads woven into their hair (H. A. Junod, Life of a S. African tribes, London, 1906, p. 260 ff.).

The magico-medical theories of the Malays which are based upon the theories of the medicine-men are particularly illustrated in this side of the possession theory. As an example may be cited the form of treatment which aims at inducing the disease to pass away. The patient is put in a small drawer figure of birds, beasts, and fishes (Skeat, p. 4321).

In Brazil the pagan tribes regard madness as possessed by some toh spirit, while the Melanans extend this theory to other forms of sickness. Exorcism for possession is practiced by all the pagan tribes, least frequently among the Kuyanas, most elaborately among the Kkoruanant. The different forms of disease are ascribed to different devils. They are said to be ghosts with red eyes; the amok devil comes from the swamp and is different from the suicide devil, both being distinct from the sickness devil. The causes of sickness and madness are related to one another, and the medicine-men are said to meddle with the affairs of the tribe (McDougall, Pagan Tribes of Brazil, London, 1915, ii. 28, 31, 40.

It will not be necessary to enter more fully into this side of the subject here, on which further information may be found elsewhere (see artt. DISEASE AND MEDICINE, SHAMANISM). Enough has been said to indicate that, while possession is one of the more important theories of disease, it is applied especially to those cases in which peculiarly violent or abnormal symptoms are plainly to be observed.

4. Possession and initiation. — The pathological character of those affections which are regarded by primitive peoples as evidence of possession is such that the symptoms of the disease or weakness would recur at more or less frequent intervals. It is therefore not surprising to find that those who are possessed of supernatural, nervous, or other disturbances regarded as a class apart—a class of peculiar sanctity. This offers in part an explanation of the origin and power of the medicine-man on one side of his functions—as healer, wonder-worker, and prophet—and on the other side of the relation with the spirits are expected to have special power over them and special knowledge of their will (see J. G. Frazer, The Belief in Immortality, I., London, 1913, p. 15).

The Bathong are said to have been exercised for possession after a period of initiation himself became a medicine-man and exorcist (Junod, ii. 4361). The Melanau woman who has been under the influence of the toh, when she has undergone the full
In the Sandwich islands the god spoke through the king Bills, loc. cit., and all the gods converse with one through the medium of the priest, who announced the will of the deity with the influence of the sacerdotal office. In the offices of priest and chief were combined. If, however, the chief was of high rank, it was considered derogatory to his dignity that he should become possessed (f. Thomson, Fijians, London, 1868, p. 159).

5. The spirit helper.—As a result of the seclusion which for many years had been initiated both in Siberia and in N. America, the shaman became a permanent or semipermanent spirit or helper which usually appears to him in the form of some animal. When he becomes possessed subsequently, it is by the intermediation of this helper that he comes into relation with the spirit world.

In the Siberian stances, the shaman being a skilled ventriloquist, the voices of the spirits come from all sides of the room as well as from the ceiling. The spirits speak with their own voices, unless they happen to be wolf, fox, or raven, which can speak in the language of man. Sometimes the shaman himself does not understand the language; it may be a mixture of Koryak, Yakut, and Yukaghir, and it may have to be translated for the benefit of sustained shamans. One Tungus shaman having Koryak spirits, they spoke through him in that tongue. The Asiatie Eskimos have a spirit language analogous to that of the Eskimos of Alaska and Eastern N. America. On the other hand, a Chukchi shamanism, while in a state of possession, in which she produced small pebbles from a large pebble with no apparent connection, which the shaman declared she alone was able to answer questions except by signs, because, if it was said, she would reveal the knowledge of her own language (Czaplicka, pp. 231, 233).

6. Voluntary possession.—The theory of possession is not applied solely to those intermittent manifestations of the personality to which it owes its origin. It could hardly be expected of those who are subject to attacks should not take advantage of the power of awe and terror aroused by their supposed relation to the spirit world. But, as a crisis of their disease cannot be removed, the outpouring takes the form of a voluntary aid when their advice may be sought or their assistance invoked by the ordinary member of the community, possession is superinduced voluntarily by an artificial stimulus. The fact that in the majority of cases possession is not a morbid state due to purely natural causes, but is artificially induced, as well as the comparative certainty and facility with which the state of exaltation is attained, has caused the possession of many cases to be expected.

The vase, Citizens in the expression of the eyes. More probably it is due to a highly-strung or nervous temperament (see especially writers quoted in Czaplicka, loc. cit.).

Various means are employed to superinduce the state of possession. These are usually of such a character as might be expected to set up a state of automatism in the chief actor, and, where possession is not confined to the central figure, to stir up a sympathetic state of excitement in the bystanders. Of the forms of action, with a strong rhythmic appeal is a prominent feature in the preliminary ceremonies.

The Venda form of possession is preceded by a dance in which the shamans, as a species of votive process, go round the offerings; the dance increases in speed until the sacrifice takes place. In one dance in which there were two principal performances, the second performed by the chief, who had already become possessed, waved a cloth in front of him. This cloth was held by various of the dancers, who had not yet have entered the first dancer, and presumably by the action of waving the cloth in front of the second it was also transmitted to him (C. G. and B. Z. Solignmann, p. 226). In Borneo the Kayan medicine-women, in the course of the exercise of the
evil spirit for the cure of disease, whirr round until they fall in a faint (Hose-McDougall, ii. 133). The smoke or the_fting which the most part of the
shaman's outfit is the magic drum, on which he beats at first softly, and then as the disease increases.
The shamans of the Chukchi and the Asiatic Eskimo sing while beating the drum, and responses are given by an answering chorus. In another case considered by the latter members of the shaman's family (Czapski, p. 230 ff.). The Samoyed shaman holds in one hand two arrows, from the points of which a transport of the anodyne power is felt in the case of the patient. They
beats the hoes rhythmically as he sings (ib. p. 238). In the case of the Sieroszewski, a certain common ceremony for exorcising the spirit of possession—a ceremony which consisted chiefly of an ory of noise made by drums, rattles, etc., round the subject, seems to have been used as a form of treatment. The patient
poses a song, usually in Zulu, by the repetition of which subsequentc can be roused or spurred to a state of ex-
which he is compelled to make himself. In the case of a
man, quoted in Czapski, p. 235).
The action of other means employed is more obvious. Intoxicants of various kinds are used.
poisons to obtain an intoxicating effect (W. W. Gill, Myths and Songs from the S. Pacific,
, London, 1876, p. 75). In Bali incense is inhaled by the seer of the individual, and worn around the neck (F. A. Liefrinck, quoted in GIT, pt. i., The Magic Art, i. 379).
Smoke from the foliage of a sacred tree or plant was sometimes used.
Among the tribes of the Hindustan the priestess veiled her head and washed it with smoked smoke. Sandalwood was used. Smoke from the sacred
cedar until seized with convulsions (J. Reddihop, Tribes of the Pacific, ii. 252) was used by the inhabitants of Ats-
and was fumigated with laurel, while the Boucanelians ate
(lit. Quot. Rom., 112). In Uganda tobacco was smoked (A. Braun, Das Land des Andau, p. 122). Among the Mentawai of this Baganda, JRAI xxvi, (1905) 45). Chukchi and Tungus shamans smoked pipes containing narcotic tobacco; the Yakuts also
smoked a brandy (centennial arrow); if a clean break is made, the animal to be shot will be a female, but, if the edge is jagged, it will be a male (C. G. and R. Z. Seeligman, pp. 221, 223). In Bali it was held that, when the pérnax had been taken to the temple and had been raised to a proper pitch of excitement by the incantation, the power of groups of mystical and wondrous
surrounded him, his soul left his body, which was then at the disposal of the deity. He was regarded as a god and as such
untouched with the power of the oracles (F. A. Liefrinck, quoted in GIT, pt. i., The Magic Art, i. 379).
The belief that the subject spoke no longer with his own voice, but with that of the deity, or of the object used by peculiarities of diction and intonation. The utterance
may be imbrittent or the quality of the voice may be changed.
The Patagonian shaman, when he has worked himself into a frenzy by drumming and rattle, speaks in a low mournful
voice (Falkner, loc. cit.). In the Sandwich Islands the god gives utterance through the priest to shrill cries and sounds violent and indistinct (Eilles, pp. 234, 235). In Guinea the fleshless women sniffs and gasps and her responses are given in a shrill whistling
voice (Eilles, pp. 234, 235). In the case of the Tahitians already mentioned, the shaman, by his skill in ventril-
qismus, was able to convince his audience of the presence of his
in the figures of animals of various kinds and in an animal form, which they uttered. In the case of those animals which spoke with the human voice their utterance was distin-
guished by a peculiar timbre (Czapski, p. 284).

(b) Propitiation.—These abnorma manifestations may also be evoked in order to propitiate spiritual
powers or to enter into communion with those
powers or they may even become an act of worship.
This aspect of the belief is very apparent in the pantomime
dances of the Veddas, which form the most important element in their
ritual. The Veddas, who have a prominent figure in the
and the central figure, should become possessed by the spirits invoked.
the Veddas, however, is the matter especially in the success of the food supply, by propitiating the spirits of the recently dead and those spirits who are specially
the Veddas, the great fear and the greatest interest; these
dances are of the greatest interest; their details throw much light on similar dances elsewhere and on the belief
generally. The details of the ceremony, and
especially the eating of the offerings after its termination by all present, point to an attempt thoroughly to unite the spirit in a community of membership with the group and thus to secure the same degree of protection against attacks of disease as if the bundles, both the convener and the vehicle of materialization. The dances take place around offerings to the gods (spirits of the dead) in the form of dances and music. Exorcising the disease, summoning the spirit, is signaled by the paka invoked. It is important for the performer to be assured by the shaman, but only by some vehicle, an eude, wrapper, cloth, or other object held in his hand, or the leaves of a runner of beans, that the desired spirit is present and that the sparrowhawk, the bird of prey, may be striped when the dance is over in order that the spirits may be sold in the neighborhood longer than is thought possible. What is added to the paka is to approve of the offering: this is suggested by the shaman bending over the bowl containing offerings for the spirits and even securing it to the great malice of the spirit (P. Z. Seligmann, JEB xxxviii. 374).

In such dances as these the object of the dancer is to eure or to aver disease by appeasing or propitiating the spirits responsible, and in these cases possession is only one of the means, though it may be the most important, by which the goodwill of the spirits is secured and made manifest.

In Cambodia in the time of an epidemic the villagers will seek a rite of exorcism known as kong po (occasionally to sacrifice a temple, and then, when he is possessed by the god, ask him to ward off the plague from their village (J. Moun, Le Rapport de Cambodge, 1908, l. 177).

But, while in this case and in other cases-e.g., the bori quoted above-spiritual exorcism is recognized, the exact relation of the spirit to the patient is not clearly expressed. When, however, as regards a group in which possessing spirits, the obvious aim of the exorcist is to drive out the possessing influence. Such is the case in the Thonga form of possession, when the object of the exorcist is to master the spirit by learning its name, and thus ascribing power to drive it away. It is possible to trace the development of the idea of the relation of possession and disease through various stages. The exorcist as among the Bathonga, Zulus, Kayans, and many other peoples, some already mentioned, is usually one who has himself or herself suffered from possession, and therefore may be supposed to stand in a peculiar relation to the spirits. Even when disease is attributed to a material cause, a pebble or bone introduced by magical means into the body, the assistance of the deity may be invoked through his agent.

In Poso in Central Celebes, when the priestess is consulted in a case of disease, she becomes possessed and it is the god who speaks to her. He, moreover, and not the exorcist, makes the exorcism to drive out the evil from the patient (GB. pt. i, The Magic Art, i. 379 f., quoting A. C. Kruij)

The intervention may be less direct and the god or spirit may be doing nothing more than indicate the measures prophylactic or therapeutic that will relieve the patient, as among the Aikikyn (Routledge, p. 241). On the other hand, a logical development is to summon a stronger spirit, to possess the exorcist and drive out the malignant spirit.

This is the object of the elaborate rite of the Melanous of Borneo. If a woman who possesses has gone through the complete rite of exorcism known as beyah, she herself becomes an exorcist and can cast out devils from others. This rite is not a simple exorcism, but is divided into several parts. It is taken to a cave in the mountains, where the medicine is prepared to summon the evil spirits to take possession of the medicine-woman, three or four of whom are present. In the course of the ceremony the devils are invited to come and are invited to enter the patient and then to take possession. In Bali, when the divinity had seized the possessed person, his body became immaterial and therefore invulnerable, and the weapon could not hurt him. The Indian devil-dancer cut and lacerated his flesh until the blood gushed forth, and his disease disappeared. The Siberian observers consider this an effect of slight of hand, at most a scratch being responsible for the blood shown (Czaplinska, p. 235).
POSSSESSION (Greek and Roman)

E. N. FALLAIZE.

The conception of divine possession—the incarnation of a god in a human form—prevailed extensively in the earlier stages of religious history. It may be that, as evidenced by the practices of Australian savages, this consciousness in states of excitement of an internal but overshadowing force is felt without relation to a personal god (J. E. Harrison, Themis, Cambridge, 1912, p. 65); but such considerations are inapplicable to the Greeks of the historical age. When the body of the priest or celebrant was thrown into a trancelike state, possessed by the god, all his acts and words were not merely prompted by but proceeded from the god himself. The devotee identified himself with the god and affected to exercise the divine functions. Illustrations may be drawn from the possessions of savage Tribesmen, such as the seadme men of the Dakotas or the Maoir tokungas (A. Lang, Myth, Ritual, and Religion, i. 1121 f.). The best of the Greek instances is the giving of the name Bacchus to those who participated as worshipers in the orgiastic cult of Dionysus (schoo! Aristoph., Eup. 460); and the impersonations of the Curetes, who took part in the Cretan mysteries of Zagreus (Eur.frag. 472), were similar to those enacted by the enthusiastic followers of the god at Eleusis or Delphi, place the patient inside a state of overmastering religious possession by the tiger-god, when he imitates the actions and voice of that animal in movement, in eating, and in running about. To the Greeks these phenomena were ascribed at times to the conflict between the mortal and the malignant spirit and staked it after it has taken refuge in jars of wine or other receptacles placed for the purpose (Skeat, pp. 450-444).

8. Possession of animals and inanimate objects.

—Finally it may be noted that possession is not confined to human beings.

The Todas believe that gods sometimes possess their buffaloes (W. H. Rose in Reports, 1866, p. 417). This may be compared with the belief that disease may be transferred to cattle. When the cattle of the Brahman suffers from an epidemic, it is the custom to secure by means of a ceremony the transfer of the disease to one member of the herd which is then driven out for sacrifice as scapegoat (G. Roscoe.

The Brahman: A Cow Tribe of Ekoh in the Uganda Protectorate," JRAS xxvii. [1907] 111). The Yakat shaman sometimes frightens away disease, driving it off by uttering words and blowing, but sometimes it is transferred to cattle, which are then sacrificed. The dance which forms part of the ceremony is said to be symbolic of their journey to the sky, and in olden days, it is said, there were shamans who themselves ascended to heaven in the form of a Buffalo, and sometimes of a Big-wild (Lung. 

Among the Malays, in a species of spiritualistic performance after invocation and offerings, spirits are made to take possession of devotees in the form of a face-trap, and make them go through the motions of a dance. A parallel may be observed in the tendency to the spirit automatism of the shamans of the Reindeer Chukchi. Their spirits are said to be very miscellaneous. Invisible hands turn everything in the tents upside down, the object being to make the spirits known to the spectators. When the spectators try to touch the spirit, they resent it and may kill the shaman by stabbing him or breaking his head (Chaplicka, p. 232).

Literature.—This is sufficiently quoted throughout.
sacred garlands from her head, and overthrows the holy vessels of the temple in feverish efforts to escape from the wrath of the god.

The notion of the entrance of the divine and withdrawal of the physical sovereign of the seer recurs in Ov. Fast. vi. 557 ff., where Ino consults Carmenites, the prophetic mother of Evander; and the reluctance of the seer to yield to the overpowering strength of the god is illustrated by Cic. de Div. ii. 100, 101.

"A gap leads the path, and the prophetic vision still my soul, and with me their dizzy prelude" (Aesch. Ag. 1214 ff.).

Those who would avail themselves of the prophet's insight must encounter his natural tendency to resist by binding him with the severest of manacles. To the latter class, besides the instances already mentioned, may be assigned the vision of Hecate and Cybele (Eur. Bacch. 296). The former, who belong to an earlier and indigenous stratum of thought, and whose form of divination is that of the Nemesis (συμφατητος), and the Muses (ψυχωδής τος). The Muses (v.g.) are merely a subdivision of the Nymphs (ΦΗ. i. 36); and the Nymphs themselves, of whom the Sphragites of Citheroon may be cited as typical (Pans. ix. 9; II. ii. 10, pose Nyximai (συμφατητος)."

Beside the inspiration of the diviner by Apollo, he names the Bacchic frenzy of Dionysus, with which he couples the orgiastic ecstasies of Cybele and Pan, the poets' frenzy inspired by the Muses, the warlike frenzy of Ares, and what he calls the supreme and last word of love. It must be remembered that Plutarch was writing as a philosopher and man of letters; for in popular estimation the inspiration of the seer was essentially distinct from the rest. Although Apollo had no monopoly of divination, the preceding functionaries of the leading oracles, such as the Pythia at Delphi and the Sibyl of Erythrae, passed increasingly into his service. Among the exceptions may be mentioned Erato, prophetess of Pan at the time (Pall. t. 109, οἱ Νεμείς, ψυχωδής τος), and the diviners who prophesied at the temple of Artemis Sarpedonida in Cilicia (Strabo, p. 676).

The entrance into the ecstatic condition was not effected without the co-operation of the seer himself, and various methods are attributed to him to put him into communion with the god. The drinking of wine, supposed to contain the vital essence of the god, was practised by the priests at the shrine of Dionysus among the Thracian Ligynai (Macroh. 1. 21), and the ministers of the Cyprians at the Cerynaean Colophon was served by a priest drawn from a particular class, who, although utterly ignorant of letters, was able, after drinking the water of a secret spring, to give utterance to oracles composed in formal verse (Tat. Acha. ii. 34). A similar potency was ascribed to the waters of the Delphian Cassotis (Pans. x. xxiv. 7) and of the sacred well at Hysik in Bœotia (ib. ix. ii. 1). The mystical power of the water might be manifested otherwise, as at the oracle of Apollo Thyrsus near Cyanee and Lycian. When spring snows showed to any one looking into it whatever he wished to see (ib. vii. xxi. 15).

The priestess of Apollo Diridrotas at Argos became inspired by drinking the blood of a lamb which had been sacrificed (ib. ii. xxiv. 1), and this may reasonably be supposed, as a preliminary to the exercise of her prophetic power, the priestess of Earth at Ægina in Achaea was accustomed to drink the blood of a bull (HN xxviii. 147). The cruelty of the conception that the eating of the flesh of a prophet's victim secured to him the prophetic glory by way of corporeal assimilation is illustrated in the remarkable statement of Porphyry (de Abst. ii. 48) that those who wish to become possessed of a prophetic spirit swallow the most effective parts of similarly endowed animals, such as the hearts, livers, and livers. The temple of Apollo at Delphi occupied the site of an old Earth-oracle, which was placed over a deep chasm with a narrow outlet. Here the Pythia, seated on a tripod above the outlet, received the orphic vapours which would be raised by her inhalation of the sweet water, and from the utterance of the answers appropriate to the need of the inquirers (Strabo, p. 419; Cic. de Div. i. 79; Phiny, H.N. ii. 290). Herodotus relates (vii. 111) that at a Thracian oracle of Dionysus belonging to the Persians, and situated among the loftiest peaks, a priestess of the religious order of the Bessi pronounced the oracles in the same manner as the Pythia, i.e. in a condition of ecstatic rapture—but by how much he does not explain. When the oracle was at Athens, at Delphi the supremacy of Apollo was acknowledged by his priestess, when, before entering upon her duties, she chewed laurel-leaves (Lucian, Bis Anc. 1) or was fumigated with their smoke (Plut. Pyth. Or. 6, p. 397 A). Similarly, the Bacchic frenzy was believed to be imparted by the ivy which the Bacchanales ate (Plut. Quaest. Rom. 112, p. 291 A). The Thrice of M. Parnassus were conceived either as actually having the form of bees or as winged females with a bee's body from the waist; in this case they were taken by the bees to utter true prophecy when they had fed on fresh honey and were inspired by its intoxicating madness (Horn. Hygim. Hor. 561 f.; with Allen and Sitek's (London, 1904) Appendix, p. 313). Sometimes intracellular is the capacity of the Sibyl's sexual union: Numa exercised prophetic power in his capacity as the husband of Egeria (Plut. Numa, 8); and Apollo was said to have espoused not only Cassandra, but also the Sibyl Herophile (Pans. x. viii. 2) and the priestess at Patara in Lydia (Herod. i. 182).

Whether Theoclymenus in the Odyssey (xx. 350) is described as under the influence of inspiration has been disputed; but Callinus and Helenus speak the words that Apollo puts into their mouth (II. i. 385, vii. 53), and the story of Cassandra is a clear proof that the phenomenon was familiar to the writers of the Homeric epics. From an early date the constitution of Lycurgus was believed to have been inspired from heaven, whether Lycurgus himself, or the prophet Sibyl Muthus was the direct medium for conveying the divine message (Plato, Log. 691 E), or it was formally commissioned by the Pythian oracle (Herod. i. 65). The sayings of inspired prophets began to be collected and recorded about the middle of the 6th cent., and the religious movement of the 6th cent., to which reference has already been made. The prophet Amphipnius encouraged Pisistratus with an oracle immediately before his victory at Pallene (Herod. i. 62), and Oinomaeus, the founder of the Orphic community at Athens, who lived at the court of
the tyrant, was charged with the preparation of a collection of the oracles attributed to Museus, and was subsequently banished for interpreting it with his own compositions (ib. vii. 6). Besides the oracles of Museus the most notorious were those assigned to Baktis—originally the generic term for a seer, whence a Baktis was held to be the soul of a body of divinity or divinity itself. Collections of oracles were not merely preserved among the state records, but circulated freely among the public without any official endorsement. In fact, the calling of an oracle-monger to the market-place, the persistent attack on those who traded on the credulity and superstition of the masses; and the extent of the evil may be measured by the violence with which Diopeithes and others of the same class are denounced by Aristophanes (Eq. 1085, etc.). Another impostor of the same period was Eurycles the ventrilouquist, who claimed to be inspired by an indwelling demon (see DEMONS AND SPIRITS [Grecian]). In later ages the belief in demons, fostered even among cultivated circles by the adherence to it of the Stoic philosophy, kept alive the notion that the demon-cloud could inform and stimulate the human seer. When pressed to account for the failure of the Pythian oracle to maintain its former reputation, Chrysippus (ii. 1215 [Arn.]) was content to explain that the oracles had become less accurate in the locality, which presupposes another inspiration to the priestess by means of the exhalations rising from the ground, had decayed through lapse of time. The Stoic theories of the universal immanence of the divine πνεύμα, and of the harmonious co-ordination of every part of the world (ii. 546 [Arn.]), seemed to give a scientific sanction to the popular belief in the inspiration of the professional diviners (ii. 1511 [Arn.]).

A position of special eminence was accorded to the Sibyls, whose earliest mention is to be found in Heraclitus:

'The Sibyl with raving voice speaks words that have no part in laughter or in rich apparel or in agitations. Yet she prevails; for is the god who drives her.' (frag. 62, in H. Diels, Fragmenta der Vorschriften, i, 94).

The name is believed to be of Semitic origin, and to bear the meaning 'seized by the god' (Gruppe, Gr. Myth. p. 927). It will be observed that in Heraclitus, as in Aristotle (Pax, 1065) and Phaedrus (356 b), the name is a loan-phrase of more than one Sibyl: and there is very little doubt that her original home—i.e. from the Greek point of view—was at Erythrae on the west coast of Asia Minor (Paus. x. xii. 7). In the later authorities several Sibyls are mentioned, so that the name, once introduced, seems to have spread over the Greek world (cf. Livy, i. 7). One of the most famous was the Sibyl of Cumae introduced by Vergil into the narrative of Æn. vi., and it was she who, according to the legend, brought the Sibylline books to King Tarquin.

The idea of possession may be traced also in the ritual of the dream-oracle. The dream itself was a divine message sent to the sleeper in concrete form (Hom. Od. iv. 790 ff.), and clear evidence is wanting that the dream was anything but working of a demonic being within the body of the sleeping himself. On the contrary, it is the normal belief of savages that the soul of the sleeper passes out of his body during sleep (GB, pt. ii., Tabou and Whitehead, 265). Later, in classical times, and there are some indications that a similar view was adopted by the Greeks (Cic. de Divin. i. 30, etc.). Nevertheless, the custom whereby inquirers were wont to spread beneath them the skin of the sacrificial victim before seeking sleep in the temple—a custom which is well attested for the shrine of Apollinaris in Attica, and for other places (Frazier, on Paus. i. xxxiv. 5)—shows that the revelation of the dream required for its transmission the establishment of a special relation between the worshipper and the god. It has also been suggested that the sleeping on the bare earth attested for ordinary persons (Lucian, Neopyg. 7), as well as for the Seili of Dodona (Hom. H. xvi. 255), was intended to assist the entrance into the spiritual state of divinity or divinity itself. At the temple of Dionysus at Amphipolis in Phocis the god was said to announce cures for sickness in dreams, not directly, but using the priest as his inspired mouth-piece (Paus. x. xxxiii. 11). Further, inscriptive evidence seems to prove the existence of a class of inspired persons (e›xovi), who superintended the incubation rites at various dream-oracles in Egypt and Syria (Gruppe, p. 928).

The Greek poets always spoke of themselves and of others inspired (ἄπειρος ἀρρήτος cf. Hom. Od. iv. 17; Pind. frag. 160; Bacchyl. viii. 3). This was not so much a metaphor as a survival, since the origin of the conception is to be referred to a primitive era in which the functions of poet and seer were not yet differentiated. The early evidence for Archaic prophecy is not for a prophet, poet, doctor, diviner, and wizard; but the gradual emergence of the various arts and sciences continually stripped him of his attributes (Hallerday, pp. 57, 75). Hence, even in the earliest of our literary records, poetry and divination appear as distinct arts; and in the 5th cent. the sense of their original connexion had so entirely disappeared that it was almost a paradox for Democritus to declare that no good poetry was possible without a mental ardour and inspiration akin to magic (frags. 17, 18 [Diels]). Similarly, the Platonic Socrates asserted that poets compose their songs not by virtue of any wisdom or skill, but owing to a kind of natural inspiration, like that of seers and prophets (Apoll. 22 C, Ion, 533 E). Inspiration had come to be a general notion covering many different kinds of activity which seemed to spring from some transcendent or pre-eminent ability. It was in accordance with this habit of thought that Plato (in Phaedrus) held that Pluralism, acquirement of various characteristics, spoke of all wisdom as inspired (Olf. ix. 28, xi. 10). Since it was the characteristic of seers, as being merely the mouth-pieces of the god, to utter what they did not understand, Plato concluded that statesmen, who, though often successful in their speeches and policies, were equally ignorant of the real meaning of their words, must be guided by divine inspiration (Men. 99 C, D). Again, the wisdom of the philosopher may be described as enthusiasm in the fullest sense; for, though derived by the masses as dogate, it is derived from constant association with the divine (Phaedr. 249 D).

Roman religion has been so much overlaid with Greek innovations, particularly in so far as our evidence is concerned, that it is generally difficult to discover old Italian beliefs which have not been contaminated with foreign associations. The early date of this Greek influence may be gauged by the legend which refers the first acquisition of religious ordinances by the Anewel regal period, and by the authentic statement that they were first consulted in the year 496 B.C. (Dion. Hal. vi. 17). It is certain, however, that prophetic inspiration must have been as familiar to the Romans as to the Greeks, and that it must be everywhere else, and it is unnecessary in this place to do more than refer to some scanty traces of native divination which occasionally meet us in Latin literature. Besides the Sibylline books, we
read of collections of oracles attributed to Marcus and Publicius (Cic. de Divin. i. 115, ii. 113). Of the latter nothing further is known, but the carving or inscription of the Fausnus (or Phaunos) may be trusted, contained allusions to Greek myths, and must have been of comparatively late origin. To take another illustration, there is no doubt that Faunus was a native Italian wood-spirit, although he was constantly assimilated to the Orphic writers. Moreover, Faunus (in the plural) are well- evidenced as the semi-divine occupants of oracular springs. Ennius, in a well-known line, refers to the verses in which Fauns or prophets chanted of old,  

"Quomodo deum, Deum, et numinem, quaesumus, ' 

vestigibus Faunii" (Vahlen, Leipz., 1854). Vergil described the visit of Latinius to the dream-oracle of Faunus at Albanum, where a sacred spring in the midst of a dark grove emitted sulphurous fumes (Enn. vii. 81 ff.). This character of Faunus is confirmed by the tradition that his wife was named Fatua, and that she foretold the future in the frenzy of divine inspiration (Justin, xiii. 1. 8). He himself also bore the title Fatuaus, which, though connected by modern philosophers (K. Brugmann, Comparative Grammar, Eng. tr., Leipzig, 1885, p. 151; W. M. Lindsay, Latin Drama (Oxford, 1894, p. 324) with fa- · , to speak,' was understood by the ancients as descriptive of the inspired madness of the seer (Plin. HN xxvii. 107). In his mantic capacity Faunus was associated with Picus, the wood-jaguar, and his prophetess Psyche (Plut. Num. 15; see also Harrison, Themis, p. 106 ff.).

A. C. PEARSON

POSESSION (Indian).—The question of the possession of spirits in the case of the medium, who in a state of hysteria mutters incoherent words which are interpreted as oracles, and of persons in an abnormal condition, as at puberty, pregnancy, and the like, has been discussed in art. DEMONS AND SPIRITS (Indian), vol. iv. p. 604 ff. In the present article some points hitherto unnoticed are considered.

1. Possession at domestic rites.—Cases of possession at domestic rites.

(a) Death.—The practice of the Paniyans of Madras is typical: A man enters with his legs girt with bells, the music of which, being struck upon the hollowed necks of sticks which he presents at the time of a death. He advances with short steps, rolling his eyes and staggering and fro, saving the air with two short sticks which he holds in his hands, and thus works himself into a frenzied state of inspiration, while the mourners walk and ask why the dead has been taken from them. Presently a convulsive shiver attacks the medium, who staggers more violently, and at last falls on the ground. He tries to support himself by holding one of the poles of the funeral shroud, while he gasps out disjointed sentences which are taken to be the words of the god.

The object here is to ascertain the fate of the spirit of the dead man, and to discover the cause of his death, which may be due to some misconduct on the part of his relatives—witchcraft, sorcery, or the like. In another form of the rite in the same direction is the invocation from the necromancer to the deity who is supposed to be responsible for the death.

Here three masked dancers—one representing the tribal god, and the other two warlike or disturbing spirits—come in communication with the deity who is supposed to be responsible for the death.

They dance in a circle and the man who represents the tribal god steps on the feet of the deity, and then the dancer on his own face. The man representing the goddess then seats himself on a stool, and, facing the assemblage, admonishes them as to their future conduct (E. Thurston, Oates and Tribes of S. India, Madras, 1900, vi. 67, 69).

This communication with the spirit of a person lately dead is illustrated by the practice of the Tiyans of Madras.

A girl becomes possessed by the spirit, and talks and acts, as it is said, just like the person who has lately died, calling the children, who are present, and friends by name, and giving commands for the future conduct of the surviving members of the family. (Afterward, she descends from earthly trammels, and attains heavenly bliss' (ib. vii. 91).

(b) Marriage.—The Gollas of Madras at their marriages worship Gangā, the goddess of the river Ganges.

They draw coloured figures on the floor of the house and during the preparation of these some people, more particularly boys and those of feeble mind, are excluded from the house, as none of the Gollas will take them if it is otherwise. The figures before the rite of removing the evil eye from them had been performed in the presence of the lively and incense sticks. The figure of Gangā, and a cock is sacrificed, its neck being wrung by three men who perform the rite prostrate themselves before the goddess and salute her. One of them attempts to persuade, and the spectators exclaim that he is about to become possessed by the spirit of an ancestor. Taking up a piece of matchwood, he is supposed to draw a square figure, and the man representing the ancestor announces that the marriage will be fortunate; in other words, the family ancestor sanctions the union of the couple (ib. ii. 365).

2. Possession among Muhammadans.—The cult of spirits is a later addition to the orthodox form of Islam, but it is inevitable in India where so many of the converts are drawn from animistic tribes and races. Among people of this class the spirit-searing power of the tombs of certain saints and martyrs is prominent.

The shrine of Mirān Sāyīd 'Ali, at Unjā in N. Gujarāt, is famous for its power of compelling persons attacked by spirits. When the madman is brought to the shrine, hisIFYQICN is taken with him accommodation in one of the open rooms or outhouses of the shrine. In the evening he takes his place beside the railing of the saint's grave and is given a cup of water from the shrine well or cistern. If he is really spirit-possessed, the spirit manifests itself by turning him to sickle and toasting a case of a woman, to fling her hair about and roll her eyes. If after one of these draughts of water from the shrine is un- duced, the aliment is supposed to be constitutional, and the remedy prescribed is the external or internal use of the leaves of the tree which grows near the saint's grave. This is said to be a variety elsewhere unknown, but to have grown from a piece of wood which the saint used to clean his teeth—an idea which savours of Buddhism (PCH, ii. 881 L.). In more serious cases the patient seems to be dragged by some unseen force, writhing and ravaging as if he were undergoing chastisement. At last he wakes up, his faculties restored, and the spirit is said to have been cast out.

If after a second draught of water the spirit remains un- duced, the aliment is supposed to be constitutional, and the remedy prescribed is the external or internal use of the leaves of the tree which grows near the saint's grave. This is said to be a variety elsewhere unknown, but to have grown from a piece of wood which the saint used to clean his teeth—an idea which savours of Buddhism (PCH, ii. 881 L.). In more serious cases the patient seems to be dragged by some unseen force, writhing and ravaging as if he were undergoing chastisement. At last he wakes up, his faculties restored, and the spirit is said to have been cast out.
POSSSESSION (Japanese)—Kangokori, which is a contraction of kami, 'god,' and kokoro, a word implying the idea of 'possession,' means literally 'god-attachment,' and expresses the idea of the passive attitude of a man under a superior influence which takes possession of him. The Japanese also use two words of Chinese origin to denote inspiration, shintaku and takaune, both of which imply the idea of divine revelation—of a communication made by divinity by means of an inspired man as intermediary. In pure Japanese the latter idea is also rendered by the expression kami no shirase, 'information of the god.'

1. In ancient literature.—This supernatural phenomenon is described in the most ancient Shintō documents. One of the most important mythological narratives found in the Kojiki is the story of Uzume (the Dread Female of Heaven), who is a sort of prophetess. It is she who, by a sacred dance before the rock cavern in which the sun-goddess has hidden, finally lends her to reappear and lighten the world again. In this connection an expression is employed in the Kojiki (komugakari-shite, 'accomplishing divine possession') which is not very clear, and may be taken in the sense of feigned possession (this is the sense adopted by R. H. Chamberlain, Kojiki, Tokyo, 1906, p. 69, n. 32); but the corresponding passage in the Nihon-gi rather seems to indicate that it is real possession (see Nihon-gi, Shukai ed., i. 40; and cf. tr. by W. G. Aston, London, 1896, i. 44). Moreover, Uzume is regarded as the mythical ancestor of the sarume (monkey-women), who performed religious dances (koyura) at court; and the divinely-inspired utterance which, according to the Nihon-gi, she pronounced in front of the celestial cavern (and which, according to another version, consisted only of the words kokomo, takaune, kokonomai—simply the numerals from one to ten) is the prototype of the revelations of the miho ('august child'), young priestesses attached to the principal Shintō temples, who dance the koyura to this day and sometimes act as mediums, particularly at Ise.

Another and more characteristic case of possession is furnished by the prelude to the story of the expedition of the emperor Jingō, the first legendary conqueror of Korea. The scene, which is one of ancient grandeur, is thus described in the Kojiki:

'The Empress, Her Augustness Princess Oikinaga-tarashi (the ancient name of the empress), was at that time divinely possessed. So shadowy is the ever-varying Chinese dwelling at the palace of Kasashi in Takushiy (Kyushu), is about to unite the Land of Kumaso, the Heavenly Sovereign place. It is thus natural. During one of its long, with six strings), and the Prime Minister, the Noble Take-uchi, being in the pure court (so-naka), requested the divinity to come down and beheld the Empress, who, when possessed, charged him with this instruction and counsel: "There is a land to the Westward, in that land there lie a number of various treasures dazzling to the eye, from gold and silver downwards. I will now bestow this land upon thee." Then the Heavenly Sovereign of Lord of Heaven, and it depends on His will and pleasure whether the woman shall be with child or not. But if perchance she should bring forth any of them, it is fortunate, and they turn real infidels. Should she not have a child, she concludes that it is Augustness's (kami) possession, and she adds: 'Information to her, as sometimes happened, simply on account of her supreme rank (cf. Kojiki, 384, f. 4.), but has been supposed by the native commentator Motoori, the prime minister made an exceptional use of the title here, because at the moment she was divinely possessed. However this may be, both this narrative and that of the death of the emperor Jingō (364) and the corresponding passage in the Nihon-gi (i. 225 f.) which shows that the interrogation of the gods in a sacred place, with a lute accompaniment, in order to know their names and desires, was a form of divination regularly employed in the most ancient Shintō, and we see also that this practice admitted of the presence of two persons, the one, in a state of possession, serving as a medium, and the other entrusted with the asking of the necessary questions, and also, no doubt, with the giving of the answers. But the Shinto priests of Delphi interpreted the unintelligible words of the pythians.

2. Development and modification by Buddhism.—After these fundamental narratives of the sacred books, mention might be made of many other cases of inspiration in the course of Japanese history. Without relating them here in detail, we may draw from them two observations of a general kind. (1) Any persons whatever may be possessed as subjects of divination. They may be men (e.g., Nihon-gi, i. 225, 231 f., ii. 317 f.), particularly inferior priests (ii. 76 f., 318), or women (i. 152, 221), especially priestesses (i. 176), or even children (i. 163). (2) We find that the objects of inspiration are usually the oracles of a god who demands a cult either for himself (e.g., Nihon-gi, i. 221, f. 154 f.), or rather god (i. 391 f.), or who complains that his already existing cult is neglected (i. 52, ii. 77, 318), asks for the erection of a new temple (i. 176, ii. 77), or specifies the particular deification in that other reincarnation, the Deity's voice, which he will not go to the road one'" (i.e., Hades). Hereupon the Prime Minister, the noble Take-uchi, said: 'I am filled with awe, my Heavenly Sovereign! Continue playing thy great august lute. Then he slowly drew his august lute to him, and languidly played on it. So almost immediately the sound of the august lute became inaudible. On their forthwith lifting a light and looking, [the Heavenly Sovereign] was dead (Kojiki, 284 f.; cf. Nihon-gi, ii. 170). After the tragic death of the emperor, which was the punishment for his impiety, the empress and her prime minister, alarmed and dismayed, perform the ceremonies of the Great Purification of the country; then Take-uchi tries to obtain a new inscription for the god.

The Noble Take-uchi again stood in the pure court and requested the Deities' commands. Thereupon the manner of their instructions was somewhat altered, and Take-uchi was exactly,' Altogether this land is a land to be ruled over by the august child in thine Augustness's august womb.' (The deities now speak to, as well as through, the empress.) Then the Noble Take-uchi said: 'I am filled with awe, my Great Deities! The august child in this Deity's womb, will it be a male child or a female child? The Deities replied, saying: 'It is a male child.' Then (the Noble Take-uchi) requested more particularly, (saying): 'I wish to know the august names of the Great Deities whose words have now instructed us.' Forthwith [the Deities] replied, saying: 'It is in the august doing of the Great-Augustness's Second-Augustness's Bottom-Possessing-Male, Middle-Possessing-Male and Surface-Possessing-Male (three of the deities born at the time of the creation), a thing of the august Deity's at Hades, etc. . . . (Kojiki, 286 f.)' Whereupon these divinities reveal the offerings and mysterious rites by means of which the crossing of the sea and the conquest of Korea will be successful to the king and the land.
It is true that this document ordered the local authorities to report to the central government all authentic predictions. But later, when, in 1848, a bonze of Lee, after a thorough investigation of the affair, found that the medium was a glittering sword, which a young boy, divinely inspired, declared to be one of the three imperial insignia—the sacred sword lost in 1814 at the great naval battle of Dan-no-ura—the court refused to recognize it as such. This sword being one of the most important parts in the ancient Shintō, it tends afterwards to become rather a popular proceeding, more and more neglected by the official religion.

On the other hand, however, Buddhism lays hold of, and often avails itself of, its politics and its 'pious expedients' (hōen), i.e. cleverly appropriaing Shintō by representing its gods as incarnations of its own saints. Thus, in the 8th cent., the priest Gyōgi, having prayed seven days and seven nights under a tree near the great temple of Ise, receives an oracle the result of which is that the sun-goddess must be identified with Vairochana, a Buddhist personification of spiritual illumination and purity. At the same time this foreign influence brought about a dissociation of the priests, a fact which pure Shintō did not know. Henceforth the gods teach kindness, charity towards the poor, righteousness, purity of heart—all Buddhist and Confucian virtues. Even Hachiman, the terrible god, is given a share in his pious functions on his mendicants and lepers, for ants and crickets. A glance through the odd collection of oracles of the Wa Bongo ('Japanese Analects,' 1699), of which Aston gives an analysis (Shinto, London, 1905, pp. 384–737), will make one realize this transformation. It is a mixture of foreign ideas, and gives rise into the gods of various Shintō temples, which contradict not only each other but all that we know of these Japanese gods. At the same time, however, there are in many cases conceptions of a much higher moral level than that of the old indigenous religions.

3. Present-day practice.—At the present day possession is represented chiefly by popular practices of which the principal element is hypnotism. It is certain that this phenomenon was the basis of 241–270 possession, although the above documents do not describe it minutely. Nervous phenomena in general played a large part in Shintō, and gave birth especially to some curious beliefs and legends founded on dissociation of personality (see Hervor, Anthony: 'Japanese Letters to European Friends,' F. P., 1910, pp. 58, 134, etc.). Hysteria was also well known to the early Japanese, who treated it by massage (see W. N. Whitney, 'Notes on the History of Medical Progress in Japan,' in T.A.S.J., xi., pt. iv. [Tokyo, 1885] 351). This state of things being understood, it is not astonishing to find that in our day the hypnotic crisis constitutes the essential point of the spiritual séances so well described by Percival Lowell ('Esoteric Shinto,' in T.A.S.J. xi., [1886] 106–135, 152–175, xxi. 1 [1894] 1-26, and Occult Japan, Boston, 1895).

In a purified place a small group of believers assemble, of whom the principal personalities are the nak-za (middling-sect), i.e. the medium, and the nak-za (front-sect), who directs the ceremony and interprets the medium himself. It is easy to recognize in these two modern roles those which were more anciently known in the Shintō ceremonies, in the battle between the Shinto gods and foreign divinities, possessed Empress Jingō and her minister Take-uchi. After various preliminary procedures (which are, in many cases, understood and purchased by the employment, as accompaniment to the song, of the shakuhachi, a staff to the end of which metal rings are fixed), the medium (or nak-za, as it is often called in customary cases), the nak-za sits down, closes his eyes and receives from the nak-za the gōeri, i.e. a wand adorned with strips of paper upon which the sacred engravings of Shintō are inscribed. When there is singing, and the descent of the god (kami-otokoshī) is awaited. This being suddenly accomplished, the nak-za gets quivers in his hands, and gradually trembles more and more until the man enters into a state of convulsion. In some cases his eyes remain half-closed; in others, they open, and when the crisis subsides into a permanent trembling, and the nak-za, not being able to continue the peculiar motions, becomes a god, and the nak-za, bowing respectfully, first asks his name, and then puts some questions to him, to which the god answers. When this is done, the nak-za, after a last prayer, resumes him by striking him on the back. After that one of the audience offers him a cup of water, which he drinks off, and then goes to dress the god's body and take care of him. It may be added that, even in some forms of inspiration in which hypnotism does not play the principal part, the nak-za, who is the shaman of the Shinto, the soothsayer allows himself to be put into a certain nervous state, marked by a violent contraction of the face, foaming of the lips, and trembling of the whole body. The present writer has seen a man in this state of traditional delirium in the exercise of his prophetic office, who was ordinarily quite gentle—the famous soothsayer Takashima (cf. DIVINATION [Japanese], vol. iv. p. 804).

4. Possession by human spirits.—There is another kind of possession, in which it is not gods that are invoked, but human spirits, either of living men, or, more frequently, of the dead, and especially of deceased relatives. These evocations are practised also by means of hypnotism, by possession called kōkō-ichō ('prophetic state'). The substitute of the possessors, they do not appear in the primitive documents unless just as any other animals, and Aston is wrong (Nihonki, i. 59, n. 10) in including their enchantments among the calamities (azuaka) which required ritual purification. He has confused two aspects of the Japanese fox, which must be all the more carefully distinguished because they are in direct opposition to each other. If the fox holds a place in Shintō, it is only on account of its gradual identification with the god Inari, or the Man of the Rice, who is himself associated with Uka no Mi-tama, the 'August Spirit of Food,' a hypostasis of the goddess of food, Ukomichi. It is only in Buddhism that he is regarded as an agent of possession; and then he appears not as a badger, but as his spiritual manifestation, the contraband of the dōmon.1 The traditional badger (tanuki, which in fact is not a real badger, but a small black fox, the canis procyonides) also appears only in popular superstitions, just as do the moyini, a kind of badger mentioned in some tales of the Nihonki (l. 184, ii. 125).

A famous story in Japan is that of the badger in a monastery which assumed the shape of a tea-kettle, and, by its fantastic gambols, amazed and astounded all the priests. When they sold it to a coppersmith, the animal took its own shape again, and made the fortune of its new master, who exhibited it as an animal both curious and agreeable. (A. R. Mitford, Tales of Old Japan, London, 1858, p. 175.) That these popular beliefs persist even to-day is shown by a well-known anecdote.

In 1869 a phantom train suddenly appeared on the engine driver's line from Tokyō to Yokohama. After a desperate pursuit the phantom train was overtaken, and in it a large bound crushes to pieces under the wheels of the real locomotive.

It must also be mentioned that, besides persons possessed by the fox, there are others who possess the fox (kitsune-mochi) and can, like the fox himself, employ charms against their enemies. In the old province of Izumo whole families exist who are supposed to have invisible foxes protecting them; but these families are regarded with a general feeling of repulsion, and it is only other families also possessing the fox who will agree to becoming married to them by marriage. Lastly, it may be recalled in this connexion that the soul of the dead fox is sometimes employed in a kind of secondary divination practised by the kitsune-tsukushi (see DIVINATION [Japanese], vol. iv. p. 803).

LITERATURE.—The literature is cited throughout the article.

MICHEL REYON.

POSESSION (Semitic and Christian).—Among the Semitic peoples, as among the other peoples of the world, there survived from the animistic stage of culture the belief that a spirit can take possession of a person either for good or for evil. This will be made more clear by passing in review the facts in detail.

1. Babylonia and Assyria.—Among the ancient Babylonians the idea of possession in its complete form survived only in the case of evil spirits, though some attenuated traces of the conception that the spirit of a god might take possession of a man are also found. In every period of Babylonian history it was believed that sickness was caused by a demon which entered into persons and took possession of them. This conception is reflected in the oldest Babylonian religions text known, an incantation inscribed on a foundation cylinder of the time of the dynasty of Akkad, about 2500-2400 B.C., now in the University Museum in Philadelphia. The cylinder is fragmentary, the beginning being broken away. But in one of the early columns the demon is addressed thus:

"The light of the city,—in the light of the city they are. The darkness of the city,—in the darkness of the city they are. The people of the city,—among the people of the city they are."

In a later column we read:

"Enil declares to him: "Gone is the sickness from the face of the land."
As a protector he removed it,—Enil's are they,—As a protector he removed it."

It is clear from this text that sickness was a demon, but a demon that Enil could expel. The beneficent god was more powerful than the demon.

The Babylonians distinguished one demon from another just as a modern physician distinguishes one germ from another. Ashakku was the demon of a wasting disease, perhaps a form of tuberculosis. Akkhazzu, the "seizer," was the demon of liver troubles. Labartu, who was pictured as a monster with swine sucking at her breasts, attacked women in childbirth and their infant children. Toothache was supposed to be caused by a demon that was identified with a worm. This is made clear by the following text:

"After Ann [had created the heavens]
The heavens created the earth,
The earth created the rivers,
The rivers created the canals,
The canals created the marsh,
The marsh created the worm."

"Then came the worm weeping before Shamash;
Before Ea came her." (Tafel 50)

"What will thou give me for my food?
What will thou give me as mine to destroy?"

"I will give thee (Ea) and soft pomegranates (?)?
Me! What are these ripe figs (?) to me? And soft pomegranates (Tafel 50)?"

"I lift me up, between the teeth and the jaw-bone set me, that I may destroy the blood of the teeth, and ruin their strength, and grasp the prong and seize the root."

As disease was possession by a demon, so cure consisted of expelling the demon from the body. This is most clearly shown in an incantation text in which the demon is addressed thus:

"O! Get out! Far away! Far away! Turn thy body! Out! Far away! From my body go out! From my body far away! From my body, for shame! From my body perish, From my body turn! From my body thy body! Into my body do not return! To my body do not approach! In my body do not press!
By Shamash, the mighty, he exorcized!
By Marduk, chief exorciser of the gods, he exorcized!
By the fire-god, who burns you, he exorcized!
From my body be ye separated!"

It was a common belief that demons of sickness might enter the body through theagency of other people. Such bewitchment or the casting of a spell of death on another was an easy way of avenging real or supposed injuries. So frequent were attempts to bewitch personal enemies, and so potent were the spells or charms believed to be, that the second section of the Code of Hammurabi is directed against the practice. It is taken up under its Auspicious Names in which men are accused of a capital crime, and one who was accused of practising such arts was compelled by the law to purge himself by the ordeal of plunging into the sacred river. If he could swim out, he was innocent.

This belief in bewitchment is recognized in a number of the incantations, as in the following:

"An evil curse, like a demon, rests upon the man, A voice, a wretchedness has fallen upon him, A voice not good has fallen upon him, An evil curse, a ban of pestilence! That man an evil curse has slaughtered like a lamb; His god has retired from his body, His prayer-answering goddess stands aside, The voice, the wretchedness covers him like a garment, It overwhelms him.
Marduk, take him into the house of Ea, his father, he entered and spoke: "My father, an evil curse, like a demon, has fallen on a man."
A second time he said to him: "What that man should do I do not know. By what may he be saved?"
Ea answered his son Marduk:
"My son, what dost thou not know? What can I add to thee? Marduk, what dost thou not know? What can I add to thee? What I know, thou knowest.
Go to him, my son Marduk, To the house of holy cleansing take him, His ban loose, his ban break! The restless evil of his body, Whether it be curse of his father, Or curse of his mother, Or curse of his elder brother, Or curse of a pest-demon, Or curse of a man unknown, Like an onion may it be peeled off, Like a date may it be cut off, Like a palm may it be broken off! O curse, by Heaven he be exorcized! By the Earth he be exorcized!"

This text makes it clear that, when the demon took possession of a person, the god or goddess (in other words, good spirits) was believed to withdraw. A similar conception prevailed among the Hebrews.

In order to exorcise the demon not only words but symbolic acts were employed. The incantation from which the last quotation comes is continued by a series of sections, each devoted to a symbolic casting into the fire of different kinds of material—an onion, a date, a palm-raceme, a little flower, a potsherd, a piece of leather. The portion of which accompanied the use of the onion reads:

'A this onion is peeled and cast into the fire,
The devouring flame seizes it.
In a garden it will never be planted.
Amid pools and irrigating-ditches will not be placed,
It is not struck to become dry.
It's stalk will not shrivel, it will never see the sun.
Unto the feast of a god or a king will not approach,
Save as the outstretched one, the torn, the torture, the bewildled man.
The sickness, sighing, sin, misdeed, wrong, and transgression,
My sickness which in my body, my flesh, my members dwells.
As this onion is peeled and
On this day the devouring flame seizes it.
May the curse be removed! May I see light!

Similar utterances accompanied the burning of other materials. Thus did the Babylonians believe in the possession of evil demons prevail that, at least in later times, the whole life of Babylonia was pervaded by the fear of them. This is proved by the extent and variety of the incantation literature. This need not be more fully quoted here, as the above is the literal translation of one or two of the extracts given above. The rest of it presents in different ways and with a variety of outward symbols endless variations of this theme.

Because of the difficulties of life in the Babylonian climate, struggle, sickness, and pain were more common than exultant joy. Perhaps it was for this reason that, while belief in the possession of demons was developed to a pseudo-science, there is almost no trace of a belief in the possession of a man, woman, child, or god by a demon. But, among the men who accomplished unusual deeds recognized that their power was not their own—that it came to them from the gods. As a rule, however, they did not claim possession of the gods, but held that each god had imparted to them some special attribute of his as a gift.

Thus Lagash, the first to carry the Babylonian arms to the Mediterranean coast (c. 2500 B.C.), claims that intelligence was imparted to the god or god or goddess of part of the fortress city to the king of Lagash, made similar claims. Eannatum also relates a more immediate amplification of the process. When his son, Naram-Sin, raided the fertile plains of Uruk and carried off the crop which was of such value to the men of Lagash, Eannatum fell on his head. Naram-Sin, however, had been dealing in the possession of important crisis. Thereupon Ningirsu appeared to him, apparently in a dream (we cannot be sure, since the text is broken) and gave him the desired guidance and power. Filled with enthusiasm because of this communion with his god, Eannatum west forth and completely subdued his enemies.

Five or six centuries after Eannatum, Gudea, another ruler of Lagash, had a similar experience. The overflow of the rivers had failed, and a famine had resulted. Naturally the ruler was most anxious. Two gods appeared to him in a dream and told him to rebuild the temple of Eninnu, which he proceeded to do. Eridu Gudea believed that the rebuilding of the temple of his god was the purpose of the divine intelligence imparted to him, for he boasts that he introduced by his superior understanding a new type of temple architecture.

This method of gaining divine power continued down to the end of the Assyrian period, though in a somewhat attenuated form. In the time of Ashurbanipal, c. 668, when the king was once invading Elam, both he and his troops were in trouble on account of the river Irudi being in flood. Ashurbanipal prayed, and the gods answered, but it was not the king to whom the goddess appeared in a dream, but a seer. The vision came by proxy.

Perhaps it was because of the heightening of this conception—that gods occasionally appeared to their devoted followers and empowered them to unusual deeds—into a belief that these exceptional men were possessed by the gods or by divine powers that led to the delineation of a few Babylonian rulers as strange, even otherworldly. One of the puzzles of the Babylonian history why Naram-Sin, Gudea, Dungi, Bur-Sin, and Gimil-Sin claimed to be gods. Granted that the last two may have inherited the title from Dungi, why should it have been accorded spontaneously to a king of Babylon by other kings and not to a number of others equally great? None of the theories previously put forward (such as Egyptian influence or the possession of the shrine of Nippur) is adequate. A more probable hypothesis would seem to be that for some reason Naram-Sin, Gudea, and Dungi were believed to be possessed of the divine powers.

2. Phoenicia.—While most of the Phoenician literature has perished, interesting evidence of Phoenician possession in later times comes from the extracts of an Egyptian document known as the 'Report of Wenamon,' an Egyptian who was sent to Byblos (Gebal) in Phoenicia in the reign of Ramses II. (1188-1090 B.C.). It was a troubled period of history, and Wenamon's adventures, being robbed at Dor on his way to Phoenicia, and driven by adverse winds to Cyprus on his way home. Fortunately he lived to narrate his experiences, not the least of which occurred at Byblos itself.

The king of Byblos, Zakar-Baal, was at first unfriendly. This part of the narrative runs:

'I spent nineteen days in his [harbour], and he continually sent to me, to obtain my [harbour] in [my] name.'

Now, when he sacrificed to his gods, the god seized one of his noble servants, he threw him frenzied, so that he said:

"Bring [the god] his [harbour].
Bring this message of Ammon who hath him, Send him and let him go."'

The god' in this passage refer to an image of the Theban god Ammon called Ammon of-the-way—a kind of travelling Ammon which Wenamon had with him. Wenamon continues:

'Now, while the frenzied [youth] continued in frenzy during this night, I found a ship for Egypt, and I loaded all my belongings into it.'

He then relates how, as he was about to flee, Zakar-Baal, at the command of the god through the frenzied youth, sent and recalled Wenamon.

The whole incident shows that the Phoenicians believed in possession by a god, and that what was uttered by one so possessed was a divine command that should be given the strictest heed. It is a conception of prophecy familiar to students of the OT.

3. Israel.—The OT affords much evidence that the belief in possession in Israel in the early days of her history was identical with that in Phoenicia. A classical instance of this is Balaam.

The king of Moab sent for him to curse Israel. Balaam strongly desired to comply; to comply meant rich rewards. But, according to the E account, Jabalmet Balaam in the way, and 'put a word in Balaam's mouth' (Nu 22:18). Balaam so took possession of Balaam that in spite of his descendants' blessed Israel. The J document says of his experience, 'The spirit of the Lord came upon him, and he uttered his prophetic message. That Balaam had the ecstatic experience of the Byblite youth is clearly shown by the poems attributed to him. One of these describes him as the man

'1 What seeth the vision of the Almighty,
Fallin down and having his eyes open' (2140)—

clearly a description of the frenzied or ecstatic state. The powerlessness of Balaam when thus possessed by the divine spirit is expressed in the lines:

'How shall I curse, whom God hath not cursed?
And how shall I defy him, whom Jehovah hath not defied?' (238).

A still more potent example of the view that pro-

POSSSESSION (Semitic and Christian) 135

place is the result of ecstatic possession is afforded by the case of King Saul.

According to the narrative in 1 S 10:6, when David fled for protection from Saul and David described Saul as standing back. And when they saw the company of the prophets prophesying, and Samuel standing as head over them, the spirit of God came upon David also, and he prophesied. The experiment was repeated three times, with the same effect that some one else had to return to tell Saul what had happened. Finally Saul himself started to go and fetch David, and prophesied, and came upon Saul all that day. And he went on, and prophesied, until he came to Naim in Ramah. And he also stripped off his clothes, and he also prophesied before Samuel, and lay down, and died. He would have been killed all that day, but that night. Wherefore they say, Is Saul also among the prophets?

It is clear from this story that the prophetic frenzy in the case of Saul rendered him unconscious or, at any rate, possessed of the spirit, so that he became regardless of the ordinary proprieties of dress. Not only is it possible to obtain stronger evidence of possession, but it is made clear that Samuel's prophecy was also of this order. Indeed ribba, 'I prophesied,' is repeated, and he went on with the words he had uttered out under the influence of the power that possessed him.

That this was still the conception of prophecy in the time of Elisha is shown by the narrative in 2 K 4:5, 9. In an account of the campaign of Jehoram, Jehoshaphat, and the king of Edom against Moab. Elisha accompanied the expedition, and, when the prophet was asked for a oracle concerning whether or not they should make war, he was called for a minaret to play before him. As the minaret played, 'the hand of Jehawa came upon him,' i.e., the prophetic ecstasy was induced, and he gave the desired oracle.

From this type of prophecy the literary prophets of later time clearly differentiated themselves. Amos declared: 'I am no nabi!' (71). We find in this period no trace of possession by demons, for in Hebrew thought the spirits were not yet differentiated into good and bad. They were still non-spiritual.

The good and evil were represented as men or as gods or as evil according as Jehovah sent them on missions that were for the benefit or for the injury of mankind. This is shown by the narrative in 1 K 22, in which the prophet Micaiah explains the fact, that the sons of the court of Ahab differed from him, because Jehovah had sent forth a spirit to be a lying spirit in the mouths of these prophets.

The case of King Saul was of the same type. We find in his melancholy or insanity explained thus: 'Now the spirit of Jehovah had departed from Saul, and an evil spirit from Jehovah troubled him' (1 S 16:14). The evil spirit came from Jehovah, just as the spirit of Jehovah did, but it was evil because its effects were different. Just as in Babylonian mythology the god and goddess were thought to depart before the demon could come into the man, so the spirit of Jehovah departed before the evil spirit entered into Saul. His possession by this spirit was believed to be the cause of his darkened reason.

The idea of possession appears also to have included the belief that a person could be possessed of the spirit of a departed person. Thus a necromancer is described as saul ob, 'the possessor of an ob.' The meaning of ob is obscure, but apparently it refers to the spirit of the dead. Thus in 1 S 28, where Saul consulted a woman who possessed an ob, the spirit of Samuel seemed to possess her, for she spoke as though she were Samuel. Necromancers were also called yidde'oni, and they were described as those 'who drink - and mutter'—possibly because they spoke in the voices of the dead.

In the time after the Exile the literature affords little trace of the conception of possession by the spirit of God. God had become in the theology of the time exalted and remote. Prophets continued to speak, but, as in the case of Zechariah, they received their messages through angels. Eventually even prophecy died out and apocalyptic took its place. It is possible that in this it is the one case in which the God, once nigh, but now most remote, had formerly vanished from men. In such an age the idea of divine possession became impossible.

In this period the belief in demons was fully developed (see DEMONS AND SPIRITS (Heb.)). Apparently the older view that men might be possessed of a supernatural being continued, but it was inferred in all such cases that the patient was possessed of a demon and not by the spirit of God. While there is no direct evidence on this point in the literature, the prevalence of the belief in demoniacal possession by the people of Palestine that is reflected in the NT is sufficient proof. It is predicted in Zec 13:2 that in future, when all prophecy, his father, and his mother that begat him, shall thrust him through when he prophesieth.' This prediction belongs to the latest of the Hebrew prophecies. Was it not uttered because possession was now coming to be regarded as always possession of the devil? See, further, PROPHECY (Hebrew).

4. Arabia.—The beliefs of the early Arabs concerning spirits and possession were similar to those of early Israel. The Arabs believed in a great mass of spirits. There were jinn, or genii, (the more common term) and also demons, or shaitans, which latter were often represented as hairy and often as having the form of an ostrich or a snake. It was believed that, when a jinni was killed, a solid corpse was left behind. Nevertheless the jinni had the power to appear and disappear, to assume temporarily any form that pleased them. They are usually spoken of collectively, and were not individualized. Similarly they were originally non-ethical. Whether they were good or bad depended upon the attitude that for the time being they assumed towards men. They were generally supposed to inhabit desolate places and to be unsociable in nature. Their powers were superhuman and they were capable of taking possession of men.

Poets were supposed to owe their power to such possession.

E.g., it is related of Hassân ibn Thabit, a devoted follower of Muhammad who was very useful to the Prophet in replies in a sort of love song to a fairy who attacks upon him, that while he was still a young man, before the rise of Islam, he met one day in a street of Medina a female jinni, who leap'd upon him and compelled him to write three verses of her initiation into the versifier's art. Thereafter he was a poet, but each poem came to him as the result of inspiration from the jinni.3

The separateness of the poets from other men greatly impressed the Arabs.

3 From time to time, too, in the intense nervous susceptibility of the Arab race in the keen desert air, there fell upon him [the poet] cataleptic rigors, swoons, and dreams, from which he returned with strange words in his mouth.2

4 So the poets, when under inspiration, were believed to be under the power of jinn. This gave them great distinction. They were, before Islam, often the leaders and representatives of these tribes. Honour was accorded to them, not from appreciation of intellectual endowment or of artistic genius, but because of the power, or possession of the spirit of jinn, from Muhammad by the angel Gabriel.4 In...
Arabian thought only the Prophet experienced angelic possession. Beside the poet (sha'ir), and below him, was the kāhin, or soothsayer, and below him the arrāf, a kind of diviner. These, too, were under the influence of the jinn, but in a less exalted way. They were trusted by the Meccans as the keepers of the sacred sanctuary, while the arrāfīs, like Samuel, told where lost articles might be found. Nevertheless the kāhīns usually cast their oracles in verse. Their inspiration came, however, in the sanctuary, while that of the poet came as freely as the air of heaven. The ecstatic inspiration of the kāhin is interestingly set forth in the following account from the Kūbāl-al-Aghānī, vii. 66, of the approach of the Banu Asad to Inurul-Qais: 1

"Then the Banu Asad advanced until, when they were a day's journey from Thāmān, their kāhin, who was 'Awf ibn Rāhīb, prophesied [a prophetic fit came upon him] and said unto them, "O my servants!" They said, "With Thee! O our Lord!" He said, "Who is the king, the ruddy one, the all-conqueror, the unconquered, among canals and rivers?"
"He is the soul, with no clamor by his head! He! his blood is scattered wide! He, tomorrow, is the first of the striped and spoiled!" Thereupon they entered Salma, and, said: "If my heart and soul were not disquieted, I would tell you that he is Hūjr openly!"
"He will not be sought beyond the grave. But, if Allah desires, he will not be sought the day had not risen upon them when they came upon the army of Hūjr, and charged upon his tent."

This passage describes the oncoming of the jinni, which closely resembles those in which we know in Phoenicia and in Israel; it proceeds to tell us graphically what the kāhin uttered and how it was fulfilled. It reveals clearly to us the Arabian notions of possession. The speaker bears witness to the fact that his soul was disquieted by a power not its own.

Muhammad, when first his ecstatic revelations came to him, believed that he was possessed by a jinni, and only gradually came to the conviction that it was a divine revelation. He seems to have been subject to the ecstatic disturbances, and began his career as a prophet in this way. Later he was compelled to simulate such states in order to keep up the illusion of his followers. It was accordingly natural that, when he began to preach, the jinni, which closely resembled those of which we know in Phoenicia and in Israel, and in Egypt, as in Babylonia, the conception that a person might be possessed by supernatural powers was confined largely to belief in demonic possession. All disease was accounted for in this way, and, although a kind of medical science developed in Egypt to some degree of physicians, there were other notions of illness than in many countries, not only did this conception of demonic possession lie behind it, but the administration of purely medical remedies was, to the latest time, accompanied by the recitation of incantation which, as we have observed, it was supposed to have power over the disease-giving spirit.

One of the clearest expressions of this view is found in a tale 2 invented at the end of the XXth dynasty of some fictitious events that are said to have transpired in the reign of Ramses II.

That king is said to have married, among others, a princess of Bakhtan. Afterwards the king of Bakhtan sent to Ramses, saying that Behetshef, another daughter of his, was very ill, and begged that an Egyptian physician might be sent to heal her. The most skilful physician went, but found her possessed of a spirit, and could do nothing. Evidently he laboured in vain for a long time, for nine years later the father sent again for aid. This time a charmed statue of the god Khons, called Bakhtan's grandson, was sent. This Khons proceeded to Bakhtan, touched the prince, and the mother immediately said, "As for me, I am one of those of the Gospels, he did not depart in silence. He said: 'Welcome! thou great god who drivest out rebels; the city of Bakhtan is thine, its infants, its women, i.e., my slaves. I will go to the place whence I came, to satisfy thy heart concerning the matter of thy journey. Let thy majesty be pleased to command that a feast be given in my honour by the princes of Bakhtan.' The god then nodded to his priest saying: 'It behoves that the prince of Bakhtan make a rich offering to this spirit.'

As Naville has pointed out, this story was intended as an advertisement of the god Khons to the Egyptians. It reflects Egyptian ideas, setting forth in a detailed way their conceptions of possession. A god who advertised such cures hoped to have an opportunity to treat many similar patients in Egypt.

That similar ideas of possession underlay the Egyptian conception of disease is shown by the incantations that were to be spoken at the administration of certain prescriptions.

With a fermentation of honey and other ingredients, e.g., one to a swallow, 3 has disclosed and departed, which that has no fruit. It has gone away, that which has no arms. Turn this (or) that; (or) make this (or) that. 4

The king is to be purified (by) the mouth and (by) the face of the son of Osiris. The magic of my magic is the protection of my members. Thy evil shall not arise in my body nor any monster in my way. 5

The words were to be spoken over frankincense herbs. They were to be cooked, mashed, and applied thereto. In like manner, when the king was to be anointed, the ament-priest was to be present with his implements—statue, bird-catcher's staff, and the kind of a flower in the mouth of the ament-priest (he who) drinks the beer. I have brought it to drive out the in-sen-god, the male death, the female death, which is in my body, etc.

The demons of disease were supposed to be always lurking about, watching for an opportunity to attack. This belief made life a constant terror. No mother could lay a child to rest without invoking unseen powers to spare the little one from malice and disease that lurked in every dark corner. The child was to be brought through the open door as the gloom of night gathered, to prostrate the little ones with sickness. One can almost hear the voice of the mother as she said: 6

"Run out, thou who comest in darkness, who enterest in stealthily and makest the face turn backward, who losest that for which he came. Run out, thou who comest in darkness, who enterest in stealthily, but hidest behind her, be the face turned backward, who losest that for which she came."

The demons might come under the guise of friends in order to gain access to the child. Hence the mother would say: 7

"Comest thou to kiss the child? I will not let thee kiss him. Comest thou to soothe (him)? I will not let thee soothe him."

1 See E. Naville, The Old Egyptian Faith, pp. 250-258.
3 Ib. p. 141.
4 See Macdonald, p. 34 ff.
5 See Breasted, Development of Religion and Thought in Ancient Egypt, p. 591.
Comest thou to harm him? I will not let thee harm him. Comest thou to take him away? I will not let thee take him away. The danger from demons not only accompanied one throughout this life, but also followed one into the hereafter. Hence the charms that had been sent to protect one here were applied to the life beyond. In time of the empire the folk-charm invaded the Book of the Dead, where it forms the 'Chapter of not Permitting a Man's Heart to be Taken Away from Him in the Nether World.'

While belief in possession by demons developed to an elaborate system in Egypt, belief in possession by gods left little trace. In one of the Pyramid Texts of the Old Kingdom King Unis is represented as practising on the gods a kind of cannibalism, in order to possess himself of their powers. The passage reads:

'King Unis is one who eats men and lives on gods, Lord of messengers, who [dispatches] his messages; it is "Grazer-of-Forelocks" living in Reheb, who binds them for King Unis, It is the serpent 'Splendid-Head' who watches them for him and repels them for him, it is "He-who-is-upon-the-Willow's" who swallows them, It is "Punisher-of-All-Evil-doers" who steals them for King Unis. He has exchanged for him the evil entrails, He is a messenger whom he [King Unis] sends to [punish].

Shemun eats them up for King Unis, and cooks for him a portion of them.

In his evening kettles (or "a his evening kettles = meal").

King Unis is he who eats their charred, and devours their glorious ones (souls).

He has taken the hearts of the gods; He has eaten the Red, He has swallowed the Green.

King Unis is nourished on satisfied organs, He is satisfied, living on their hearts and their charms.

Their charms are in his belly.
The dignities of King Unis are not taken away from him; He hath swallowed the knowledge of every god.

Lo, their (the gods') soul is in the belly of King Unis, Lo, their soul is with King Unis.'

This text, which incidentally reveals the cannibalism that lay behind Egyptian civilization, was written in the time of intelligence, power, and divine qualities of King Unis. It reverses the usual idea of possession, however. The gods did not possess him, but he possessed them. How all Egyptian kings came to be regarded as gods we cannot draw any conjecture, but evidently one pathway by which this came was this cannibalistic conception of possession.

In the Egyptian priesthood there was an order of prophets, but their particular functions are obscure. They appear to have differed little from the other priests in character. So far as appears, their functions did not depend, like those of the prophets of early Israel, upon ecstatic experiences.

6. Possession in the Gospels.—There is considerable evidence in the Gospels that, in spite of the slighting manner in which, in the New Testament, the subject is treated, belief in the possession of demons survived among the peasantry of Palestine, and was often supposed to be the cause of disease. Thus it is regarded as the cause of dumbness (Mt 9\(^2\), Lk 11\(^4\)), of deafness, dumbness, and epilepsy (Mt 12\(^5\), Mk 9\(^5\)), of dumbness and blindness (Mt 12\(^2\)), of curvature of the spine (Lk 13\(^1\)), and epilepsy (Mk 1\(^6\)).

Ascription of these diseases to unclean spirits is not uniformly made; they are sometimes spoken of metaphorically (Mt 15\(^9\), Mk 7\(^13\), Lk 18\(^9\)). In some passages possession and these diseases are enumerated as separate things (Mt 10\(^8\), Mk 1\(^2\), Lk 6\(^7\), 7\(^1\), 1\(^3\)). It would seem that, among some, knowledge of the nature of physical disease had progressed far enough to be distinguished from possession, though this was not universal. Once, at least, the old! He most commonly attributed to demoniac possession. This belief still prevails in Palestine.

The present writer once came upon a group of men near Bethania (the surrounding village of Bethany) painting at him and shouting. At an opportune moment one behind him dropped his club and caught the hands of the man in the center, piniong them behind him. When the writer asked the cause, he was informed that the man was mazum, 'possessed of a jinn.'

It is indicated in the Gospels that in the time of Christ there were professional exorcists who cast out demons (Mt 12\(^2\)). Jesus, too, cast them out. Some of his most marvellous cures were of this nature. Attempts have been made by some theologians to prove that Jesus did not Himself believe in demoniac possession, but accommodated Himself to the views of His patients and their friends. There is no evidence for this view and much against it. He made the validity of the belief the basis of argument with others, assumed that certain Pharisees espoused the demoniac beliefs, and, as the demons, and it would be so, could do so (Mt 12\(^2\), Lk 11\(^4\)). He also assumed that, after expulsion, the existence of the demons was real, and that they could still do harm (Mk 5\(^8\)). His humanity was real, and He fully shared the beliefs of His contemporaries upon this point.

7. The Apostolic Age.—In the Gospels possession appears to be confined to demons; in the rest of the NT we hear mainly of being possessed of the Spirit, though references to demoniacal possession are not wanting. This change was brought about by the experience of the day of Pentecost (Ac 2) when the disciples were so possessed of the Spirit that they spoke ecstactically and the beholders thought them drunken. A later historian under stood that this speaking, which was called glossolalia, 'speaking-tongues,' was the ability to speak foreign languages (v.\(^9\)), but the narrative Nevertheless contains evidence that this was a misunderstanding (v.\(^1\)). The disciples were thrown into an ecstasy, and they were exalted and the demons were taken out of themselves. We learn from St. Paul (1 Co 12 and 14) that this type of public utterance was in his time exalted above all other types. His discussion of the subject also makes the nature of the phenomenon quite clear. One who 'spoke in a tongue' spoke with his spirit, but his understanding was unintelligible (1 Co 14\(^1\); the hearers did not understand (14\(^2\)); those out of sympathy, when they witnessed such utterances, naturally called the speakers mad (14\(^3\)). Paul, with his acquaintance with non-Christian literature, rated more highly than this speaking in a tongue, but so popular was it that possession that even he could not but treat it with great consideration. 'He not drunken with wine, wherein is riot but be filled with the Spirit' (Eph 5\(^1\)) could have been written only in an age when complete fullness of the Spirit was supposed to produce effects similar to the drinking of wine. The greatest enemies of the Christians were still thought to be demons and their work, the possession of the bearer of the spirit (29). The militant disciple wrestled 'against the spiritual hosts of wickedness in the heavenly places' (6\(^9\)). It is implied that these controlled, if they did not possess, men. One instance of such possession was presented in the Philippian slave girl who possessed 'a spirit of Python' (Ac 16\(^10\)).
Not only did the Phoenicians believe her possessed, but St. Paul did also, for he addressed the spirit in exorcizing it (16th).

8. The Montanists.—In the 2nd cent. the ecstatic type of prophecy was revived by Montanus in Phrygia, who became the champion of the prophetic ministry. Eusebius, quoting an unnamed informant, says:

'He was carried away in spirit, and wrought up into a certain kind of frenzy and irregular ecstasy, raving, and speaking and uttering words, which was contrary to the institutions that had prevailed in the Church.'

This is the report of an unsympathetic critic, but among the few sayings of Montanus that have come down to us is one that confirms the view that he was subject to the phenomenon of possession. It runs:

'Man is like a lyre, and I (the Holy Spirit) play him like a plectrum. Man sleepeth; I (the Holy Spirit) am awake.'

The Church had lost the fire of enthusiasm that made such possession possible, and cast out Montanus and his followers who were heretics. Nevertheless, they lingered in Phrygia until in the 6th cent. they were forcibly exterminated. To what extent the ecstatic experiences were repeated by the followers of Montanus after the 2nd cent. we do not know.

9. The Church and possession.—The condemnation and rejection registered the belief of the Church that possession of the Holy Spirit in this extraordinary way was no longer possible—a view that was maintained by all the Church until the Reformation and is still maintained by all except some smaller sections of Protestantism. Belief in the possession of demons was still maintained and, as time passed, was intensified. The presence of this belief in the early centuries clearly moulded certain features of the ritual of the Church. Thus, according to the Roman usage, a catechumen, preparatory to baptism, first presented himself to the priest, who breathed upon him (i.e., performed the act of insufflation) and recited a prayer of exorcism with his hand extended over the candidate's head. A part of the petition was: 'Break all the chains of Satan by which he has been bound.' The insufflation typified the reception of the Holy Spirit whereby the evil spirit was driven out. In the Gallican ritual the exorcism came first, thenunction, and finally the conclusion of the service of this ritual reads: 'I approach thee, thou most unclean, damned spirit.' The liturgy of the East contains similar ceremonies of exorcism and insufflation. The insufflation was a symbolic repetition of the act of Jesus when He breathed on His disciples and said: 'Receive ye the Holy Spirit' (Jn 20:22). Apparently it was believed that the candidate, who as a sinner had been possessed of Satan before, now became possessed of the Holy Spirit. Such possession was but an attenuated form, so far as outward manifestations were concerned, of that of earlier time. The belief that insufflation imparted such possession extended to oil and water, for, in the consecration of these, the priest breathed on them.

Exorcism and possession of the Spirit took this symbolic form, belief in demoniacal possession continued in its original vigour. In W. Europe it was gradually intensified by the survival of pagan beliefs, stories, and practices. Many of these were condemned by the Church; nevertheless, all those not so consecrated were regarded as of the devil. He was supposed to possess those who practised arts which had been banned by the Church. Witches who practised them were in league with him or possessed of him. When in the 15th cent. exorcism began to spring up, it was natural for ecclesiastics to regard them as in league with the evil one. Thus in 1223 Gregory IX promulgated a letter exhorting a crusade against the Stedingers, a sect in Friesland and Lower Saxony, in which he accused them of worshipping and having intercourse with a spirit of darkness. In 1303 John XXII complained, in two letters, that both he and many members of his flock were in danger of their lives by reason of the arts of sorcerers. Finally Innocent VIII. in 1484 promulgated his famous bull, In mortem artis satanicarum, in which he accused many persons of both sexes of mixing with devils and injuring by their conjurations unborn children, young animals, all sorts of crops, inflicting all kinds of pains and sickness on people and animals, preventing men from procreation and women from conception, and making them recant their Christian faith. He appointed Heinrich Krämer (Inquisitor) and Jakob Sprenger to be prime inquisitors to rid the land of such. Sprenger had written De Malleficiis Maleficarum ("Witch Hammer," 1489, Cologne, 1529) which, with the papal bull, precipitated a long drawn battle against witches, who were believed to be in league with Satan or possessed of him. The movement spread to England, where in the reign of Henry VIII., and Elizabeth, a large number of persons were executed at the end of the 17th cent. on suspicion of exercising demoniacal powers. Of course the clergy supported the crusade on both sides of the Atlantic. How many lost their lives in consequence of this dread belief cannot now be ascertained.

Although the increase of scientific knowledge has stopped the execution of people on such charges, the belief in demoniacal possession dies hard. Several cases were reported among the peasantry of Germany in the early part of the 19th cent., vouched for by accredited doctors and clergymen.

10. Possession and revivals.—With the spread of experimental religion as distinguished from ecclesiastical religion since the Reformation there has been a recurrence of ecstatic experiences. The ecstatic experiences are the work of the Holy Spirit—a kind of possession. Such ecstacies occurred at times under the preaching of the early Friends in the 17th cent. in England, and were interpreted as manifestations of the power of the Holy Spirit. They manifested themselves again in the 18th cent. in England under the preaching of Wesley, and in Massachusetts under the ministry of Jonathan Edwards. They accompanied the Scottish-Irish revival in Kentucky in 1800-03 and the revival in Ulster in 1809. They may still sometimes be seen in the meetings of the American Negroes. Enthusiastic revivalists have down to recent times regarded them as striking evidences of divine visitation, though the wisest of them, such as Jonathan Edwards, lost faith in them. Wesley's judgment finally tended in the same direction. Under Finney and Moody common sense asserted itself and evangelism rose to a more healthy plane, though such phenomena still sometimes appear. Science has taught us over that the appearance due to disordered nerves and the primitive belief in possession that has survived so long is fading away.

POVERTY

POSTS.—See POLES AND POSTS.

POTTAWATOMIES. —See ALGONQUINS (Prairie Tribes), vol. i, p. 325.

POVERTY.—1. Definition.—In the Poor Law Commissioners' Report of 1834 poverty is defined as the state of one who, in order to obtain mere subsistence, is forced to have recourse to labour. This the Commissioners distinguish from indigence, by which they understand the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. Probably B. Seebohm Rowntree's definition (Poverty: A Study of Town Life) is more satisfactory: families whose total earnings are insufficient to obtain the necessary commodities for the maintenance of their personal and family physical efficiency may be described as living in 'primary' poverty. This he distinguishes from 'secondary' poverty, under which come those families whose earnings would be sufficient for the maintenance of mere physical efficiency, if it were not that some portion of it is absorbed by other expenditure, either useful or wasteful. If this definition of poverty is accepted, indigence or destitution is included under 'primary' poverty.

2. History.—This is of a very restricted nature, and is practically limited to the history of destitution, or extreme poverty. Even at the present day the information available concerning poverty is very slight, as scientific investigations have been made only in comparatively recent years, and the results vary so much that it is impossible to generalize. The only attempt to compare conditions in this country at two different periods is that of Robert Giffen. We give his conclusions, whilst bringing the facts up to date.

For 1845, the first year for which we have income-tax returns, Giffen estimated the income of the country to be £2,625,000,000, of which £2,500,000,000 was paid to persons over with £25,000,000 to 250,000 persons, or, including their families, by 1,000,000 to 1,500,000 persons. The £25,000,000 was shared by about 25,600,000 persons. The income-tax paying class had about £250 per head, while the rest of the country had about £10 per head. For 1898 Leo G. Chiroza. Money estimated the income of the country to be £21,844,000,000, of which £20,000,000,000 belonged to those having incomes of £50,000 and £50,000,000 to persons with under £100 per annum. The £20,000,000,000 was shared by 1,100,000 persons, or, including their families, by 5,500,000 persons. The £25,000,000 was shared by about 39,600,000 persons. The income-tax paying class had about £165 per head as compared with £10 per head in 1845. Other figures which bear out the contention that the income-tax paying class has increased much more rapidly than the non-income-tax paying class are those relating to the value of estates passing at death.

In 1838, 25,368 probates were granted, the average amount per estate being £1018. In 1905, 67,234 probates were granted, the average amount per estate being £4600. The increase in the number of estates (16% per cent) was much greater than the increase in the population (20% per cent), so that the wealth of the country was becoming more diffused, or, in other words, a growing proportion of the population was leaving estates.

The figures relating to the consumption of communications and conveniences necessary consumed by the masses confirm the improved conditions of the bulk of the population. The following table gives the quantities of the principal imported and excisable articles retained for home consumption per annum in the United Kingdom in the years 1840 and 1911.

<table>
<thead>
<tr>
<th>Year</th>
<th>Currants and raisins</th>
<th>Rice</th>
<th>Sugar</th>
<th>Tea</th>
<th>Tobacco</th>
</tr>
</thead>
<tbody>
<tr>
<td>1840</td>
<td>1-45 lbs.</td>

<td>1911</td>
<td>43 lbs.</td>
<td>1-59</td>
<td>2-97</td>
<td>1-22</td>
<td>0-24</td>
</tr>
</tbody>
</table>

The great increase in the consumption of currants, raisins, rice, sugar, tea, and tobacco can be accounted for only by the much greater use that is made of them by the bulk of the population; and such greater use would not be possible but for the increased incomes at the disposal of the masses. Figures showing the growing incomes of the non-income-tax paying classes have already quoted and these may be supported by the Board of Trade index numbers of wages. If the general level of wages in 1850, taken as 100, then the figure for 1907 was 181-7, showing an increase of 81-7 per cent in 57 years (Cd. 4071, p. 44).

From the early part of the 19th century, until 1866 prices fell very considerably, and, though they have risen since, they were much lower shortly before the war than they were during most years of the 19th century. A few figures from Sauerbeck's average prices of all commodities may be quoted:

<table>
<thead>
<tr>
<th>Year</th>
<th>Average of 1867-77</th>
<th>1873-11</th>
<th>1880-82</th>
<th>1889-90</th>
<th>1897-98</th>
<th>1900-01</th>
</tr>
</thead>
<tbody>
<tr>
<td>1867</td>
<td>100</td>
<td>111</td>
<td>88</td>
<td>90</td>
<td>90</td>
<td>88</td>

<tr>
<td>1900</td>
<td>110</td>
<td>110</td>
<td>97</td>
<td>92</td>
<td>93</td>
<td>93</td>
</tr>
</tbody>
</table>

With the rise in incomes and the fall in prices, there can be little doubt that the masses were much better off. For the early 19th century, the average family income was over £10 per head and shared over 50 or 100 years previously. The growth of Savings Banks deposits (£229,000,000 in 1850 to £65,250,000 in 1911), of the accumulated funds of Friendly Societies (£14,000,000 in 1877 to £65,250,000 in 1908), and of the capital of Cooperative Societies (£8,500,000 in 1883 to £45,250,000 in 1909) are other indications of greater general prosperity.

3. Extent.—(a) The earliest investigation is that of Charles Booth, who conducted an inquiry into the poverty in London in 1886-88. By 'poor' he understood those who had a sufficiently regular, though bare, income, such as 18s.
to 21s. per week for a 'moderate family,' and by 'very poor,' those who from any cause fell much below this standard. Booth obtained his information from the London School Board visitors, who were in daily contact with the people and had considerable knowledge of the probabilities of the school children. He then assumed that the whole population was the same as the tested part, i.e. families with school children. When it is remembered that the part of the population which was not investigated included all the families with children above school age, and with no children, it will be realized that the condition of the bulk was better than the part tested, so that Booth's figures, in so far as they err, err on the dark side. In other words, conditions were probably not so bad as Booth's figures would suggest.

Booth divided the population into 8 classes:

A. The lowest class of occasional labourers, loafers, and semi-criminal.
B. Casual earnings—very poor.
C. Intersessional earnings—poor.
D. Small regular earnings—very much in the poverty line.
E. Regular standard earnings—above the poverty line.
F. Higher class labour.
G. Lower middle class.
H. Upper middle class.

As the result of his investigations he divides the population among these classes as follows:

<table>
<thead>
<tr>
<th>Class</th>
<th>Number</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. lowest</td>
<td>3,616</td>
<td>57.9</td>
</tr>
<tr>
<td>B. (very poor)</td>
<td>31,824</td>
<td>42.6</td>
</tr>
<tr>
<td>C. and D. (poor)</td>
<td>938,293</td>
<td>13.5</td>
</tr>
<tr>
<td>E. and F. (working class, comfortable and above)</td>
<td>2,166,502</td>
<td>61.5</td>
</tr>
<tr>
<td>G. and H. (middle class and above)</td>
<td>749,320</td>
<td>17.8</td>
</tr>
<tr>
<td>Inmates of institutions</td>
<td>4,929,170</td>
<td>100.0</td>
</tr>
</tbody>
</table>

According to Booth's inquiry, 30.7 per cent of the population of London were living in poverty in 1887. This may be taken to include what Rowntree calls 'secondary' as well as 'primary' poverty. That nearly one-third of the inhabitants of London were living in poverty appears very startling, yet the investigations in other towns seem to bear out the probabilities indicated by this figure.

(6) Sebohn Rowntree conducted his investigations into the extent of poverty in York in 1899. As the population at that time was about 75,000, it was possible to make a house-to-house inquiry into the income of every working family. Particulars were obtained concerning 11,560 families consisting of 46,754 persons. The population was divided into 7 classes:

A. Total family income under 15s. for a moderate family.
B. Total family income 15s. and under 21s. for a moderate family.
C. Total family income 21s. and under 30s. for a moderate family.
D. Total family income over 30s.
E. Domestic servants.
F. Servant-keeping class.
G. Persons in institutions.

By means of this classification, it was possible to obtain a family consisting of father, mother, and two to four children. In classifying, allowance was made for families which were smaller or larger.

On this basis Rowntree divided the population as follows:

<table>
<thead>
<tr>
<th>Class</th>
<th>Number</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 1,937</td>
<td>26.0</td>
<td></td>
</tr>
<tr>
<td>B. 4,492</td>
<td>59.9</td>
<td></td>
</tr>
<tr>
<td>C. 15,710</td>
<td>20.7</td>
<td></td>
</tr>
<tr>
<td>D. 24,306</td>
<td>32.4</td>
<td></td>
</tr>
<tr>
<td>E. 4,396</td>
<td>5.7</td>
<td></td>
</tr>
<tr>
<td>F. 21,830</td>
<td>28.8</td>
<td></td>
</tr>
<tr>
<td>G. 2,052</td>
<td>2.7</td>
<td></td>
</tr>
<tr>
<td>75,312</td>
<td>100.0</td>
<td></td>
</tr>
</tbody>
</table>

Rowntree, instead of adopting Booth's somewhat rough and ready method of saying that all families with less than a certain weekly income were living in poverty, sought to establish a scientific poverty line. He estimated the minimum necessary expenditure for the maintenance of more physical health and then ascertained whether each family had sufficient earnings to pay for the requisite food, housing accommodation, and household sundries.

With regard to food, he took as the basis of his calculation the diet adopted at the York Workhouse, but excluded butcher meat, as this diminished the cost without reducing the allowance of protein, fats, and carbohydrates below the minimum requisite for physical efficiency. The weekly cost of this diet in 1899 was as follows:

<table>
<thead>
<tr>
<th>Group</th>
<th>Average expenditure per week</th>
</tr>
</thead>
<tbody>
<tr>
<td>Men and Women</td>
<td>Child under 5</td>
</tr>
<tr>
<td>Child.</td>
<td>Child. 3-6</td>
</tr>
<tr>
<td>3s. 4d.</td>
<td>2s. 6d.</td>
</tr>
<tr>
<td>3s. 5d.</td>
<td>2s. 7d.</td>
</tr>
<tr>
<td>3s. 6d.</td>
<td>2s. 1d.</td>
</tr>
<tr>
<td>3s. 7d.</td>
<td>2s. 1d.</td>
</tr>
</tbody>
</table>

Average for adults, 3s.; average for children, 2s. 3d.

With regard to rent, the actual sums paid for rent were taken as the necessary minimum rent expenditure.

With regard to household sundries, Rowntree allowed 1s. 10d. (1/4 bag [140 lbs.] at 1s. 3d.) for coal, 6d. for adults and 5d. for children for clothing, and 2d. per head for all other sundries. Thus a table was established showing the minimum necessary expenditure per week for various sizes, e.g., a family of father, mother, and three children would require 21s. 8d. made up as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Food: 2 at 3s. and 3 at 2s. 3d.</td>
<td>2s. 3d.</td>
</tr>
<tr>
<td>Rent:</td>
<td>4s.</td>
</tr>
<tr>
<td>Household sundries: coal: 2 at 6d. and 3 at 5d.</td>
<td>1s. 10d.</td>
</tr>
<tr>
<td>Other sundries: 5 at 2d.</td>
<td>2s. 10d.</td>
</tr>
</tbody>
</table>

When the earnings of every family were examined by this table, it was ascertained that 1463 families, comprising 7230 persons, were living in 'primary' poverty. This was equal to 9.91 per cent of the whole population of the city and to 15.46 per cent of the working-class population. The number of persons living in 'secondary' poverty was ascertained from the number of persons living in 'primary' poverty from the total number of persons living in poverty, the latter number being an estimate of the investigator, formed by his noting down evidences of poverty during his house-to-house investigation. By this method it was found that families comprising 20,302 persons, equal to 27.84 per cent of the population of the city, were living in poverty. Of these 7230 persons, or 9.91 per cent of the population, were living in 'primary' poverty and 15.97, or 17.86 per cent of the population, in 'secondary' poverty. According to this inquiry, the percentage of the population of York living in poverty (27.84) was only a little less than that in London (30.7). In the case of the towns mentioned below a similar comparison cannot be made, as the extent of 'primary' poverty alone has been investigated.

(c) An investigation at Northampton was made by A. R. Burnett-Hurst in July 1913. There, as also at Warrington, Stanley, and Reading, the system adopted was to investigate the conditions prevailing in some 5 per cent of the households and to generalize from these. Further, in each of these cases it was necessary to make allowance for the rise in the general level of prices between 1890 and 1913 before using Rowntree's poverty line figures. Thus the York food allowance of 3s. for adults and 2s. 4d. for children became 3s. 6d. and 2s. 7d. respectively. Fourpence was added for State insurance, and the expenditure on coal was adjusted to meet local conditions.
POVERTY

In Northampton, of the 693 working-class families investigated 57 were below the poverty line. These were equivalent to 8.2 per cent of the working-class households of the town and to 6.4 per cent of all households. These 57 families contained 9 per cent of the working-class population which fell within the scope of the inquiry. In York 15.46 per cent of the working-class population was living below the poverty line in 1908. (d) Burnett-Hurst's inquiry at Warrington was conducted in the early autumn of 1913. Of the 640 working-class families investigated 78 were below the poverty line. These were equivalent to 12.25 per cent of the working-class households and to 11.5 per cent of all households. These 78 families contained 14.7 per cent of the working-class population which fell within the scope of the inquiry.

(c) The mining village of Stanley, in the Durham coalfield, was investigated by Burnett-Hurst in July 1913. Of the 203 working-class families whose circumstances were inquired into 12, containing 6 per cent of the working-class population investigated, were below the poverty line.

(f) A. L. Bowley conducted an investigation in Reading in the autumn of 1912. 128 families of the 622 investigated were below the poverty line. This is equivalent to 20.6 per cent of the working-class households and to 15.6 per cent of all households. The 128 households below the poverty line contained 29 per cent of the population which fell within the scope of the inquiry.

(g) An investigation of quite a different character into the extent of poverty in the United Kingdom has been made on two occasions by Leo G. Chiozza Money. His first inquiry related to 1903 and his second to 1908. As the income-tax returns constituted the basis of his inquiry, he divides the population into three groups, with £150 and £700 as the dividing lines:

<table>
<thead>
<tr>
<th>1903</th>
<th>1908</th>
</tr>
</thead>
<tbody>
<tr>
<td>Persons with incomes of £700 per annum and their families</td>
<td>1,250,000</td>
</tr>
<tr>
<td>Persons with incomes between £109 and £700 per annum and their families</td>
<td>4,000,000</td>
</tr>
<tr>
<td>Persons with incomes of less than £100 per annum and their families</td>
<td>37,250,000</td>
</tr>
</tbody>
</table>

(h) The statistics relating to pauperism enable us to gauge destitution or extreme poverty, which must not be confused with poverty as defined by Rowntree. The average daily number of paupers in receipt of relief in the United Kingdom at the beginning of 1914 was 933,163, or 20.3 per 1000 of the population.

(i) On 26th Dec. 1913 there were 982,292 old age pensions payable in the United Kingdom. Of these, 582,928 were paid in England and Wales, 297,702 in Scotland, and 199,302 in Ireland. Of the total number of persons in England and Wales who are over 70 years of age three-fifths are old age pensioners, i.e. persons whose incomes are less than £51 10s. per annum.

4. Causes.—All these investigators of poverty have analyzed its immediate causes, and their conclusions are given below.

(c) Booth analyzed 4076 cases of the poor and very poor in London, known to selected School Board visitors, and summarized the results as follows:

- Loafers: 60 or 1.6 per cent
- Questions of employment—
  - Casual work, low pay, irregular earnings: 25.46 and 624
  - Questions of habit—
  - Imbecility and thievery: 13,6
  - Questions of circumstances:—
  - Large families and illness: 917 and 22.5

4076 100.0

(b) Rowntree analyzed the causes of 'primary' poverty under somewhat different headings:

<table>
<thead>
<tr>
<th>Immediate cause of 'primary' poverty.</th>
<th>No. of households affected.</th>
<th>No. of persons affected.</th>
<th>Percentage of total population living in 'primary' poverty.</th>
</tr>

In the case of each of the five towns where the immediate causes of poverty have been analyzed the predominant cause is the same, viz. low wages, frequently in conjunction with large families. In York (1890) 10 per cent of the adult males earned under 20s. a week and 26 per cent earned between 20s. and 24s. In Northampton (1913) 13 per cent of the adult males earned under 20s. a week and 14 per cent earned between 20s. and 24s. In Warrington (1913) 27.5 per cent of the adult males earned under 20s. a week and 28.5 per cent earned between 20s. and 24s. In Reading (1912) 15 per
the adult male population earned under 20s, a week and 35-5 per cent earned between 20s.
and 24s. When from one quarter to one half of the adult male population of these towns was earning less than 24s. a week, it is not astonishing that poverty was present.

The growth of population has undoubtedly a serious influence on the general extent of poverty in old countries. Sooner or later increasing supplies of food and minerals can be obtained only at increased cost in the production of goods. As the population of a country grows and the supply of labour as a consequence increases, the productive capacity of the country grows, but not in the same proportion as the population. For a time this tendency may be overcome by new inventions, the accumulation of more capital, and the greater efficiency of the workers; under these circumstances an advance in the general welfare of the community may be achieved, in spite of the increase of population. This has probably been the case in this country during the past hundred years or so, but we cannot look to similar conditions continuing indefinitely in the future.

5. Present system of dealing with poverty.—At the present time in this country there are various methods, public and private, but not too well co-ordinated, for dealing with poverty. Most are palliative in character and only too few are remedial. This, however, is hardly astonishing, seeing how difficult the problem is.

(1) Public methods.—(1) The poor relief granted by Boards of Guardians or Poor Law Boards must be mentioned first. Nearly £18,000,000 per annum are being spent by these bodies in the United Kingdom, but they assist no one unless he or she is absolutely destitute, so that their help is accorded only to a small proportion of the poor. Out-relief, which with certain exceptions is not granted to able-bodied persons, is generally very inadequate. Indoor relief, on the other hand, is very costly, and not infrequently has the effect of making persons relieved into more or less permanent paupers, by bringing them into contact with some of the least desirable guests of the Guardians. Undoubtedly, the most satisfactory work done by the Guardians is that done in their children's homes and in their hospitals.

(2) Under the Old Age Pension Act, 1908, every person of British nationality and twelve years' residence within the United Kingdom whose income is not more than £10s. is entitled, subject to certain small exceptions, on attaining the age of 70 to a pension of 5s. a week from the Exchequer. At the present time about a million persons benefit by this Act at a cost to the community of some £13,000,000. As the result of the passing of this Act, the number of paupers in England and Wales over 70 years of age has greatly diminished. It was 229,474 on 31st March 1906, whereas it had fallen to 57,948 on 31st Jan. 1914.

(3) The Unemployed Workmen Act, 1905, provides for the establishment of Distress Committees which, if satisfied that an applicant is a person honestly desirous of obtaining work, but unable to do so from exceptional causes over which he has no control, and that his case is capable of more suitable treatment under the Act than under the Poor Law, can endeavour to obtain work for him or themselves undertake to assist him. This assistance may take the form of (a) aiding emigration, or (b) providing or contributing towards the provision of temporary work. The Distress Committees have dealt with only a very limited number of the unemployed; in 1912-13 the applicants for relief in England and Wales numbered 45,381, and of these 30,682 were found qualified for assistance. The majority of the applicants were general or casual labourers.

(4) A far greater number of unemployed are dealt with by Labour Exchanges, established under the Labour Exchanges Act, 1905. It was found that 4423 Exchanges were open. During 1913 the total number of individuals who applied to the Exchanges for employment was 1,671,671, the total number of registrations being 2,985,893. During the year there were 27,260,000 days work, the number of vacancies filled being 291,853.

(5) Another attempt to minimize the consequences of unemployment, and indirectly of poverty, has been the introduction of compulsory insurance against unemployment in certain trades, under pt. II. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1914. The principal industries concerned are building, shipbuilding, works of construction, engineering, iron-founding, and the construction of vehicles. On 17th Jan. 1914 the number of workpeople insured was 2,282,324. The total amount of unemployment benefit paid to workpeople during 1913 was £497,725.

(6) The compulsory health insurance established by pt. I. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1913, should ultimately have a considerable effect in increasing the welfare of the population, as ill-health undoubtedly lies at the bottom of a good deal of inefficiency, and the consequent low wages. A return made in February 1914 stated that there were 13,759,400 insured persons in the United Kingdom, of whom 360,000 were deposit contributors.

(7) The most direct effort to raise the low level of wages which is at the bottom of so much poverty was made when the Trade Boards Act, 1909, was passed. The Act applied at first only to the four trades specified in the schedule—tailoring, cardboard box-making, machine-made lace, and chain-making—but the list may be extended by Provisional Order, confirmed by Act of Parliament. In 1913 the Act was applied to four new trades—shirt-making, sugar confectionery and food-preserving, low-ware, and linen and cotton embroidery. For each trade or branch of a trade one or more Trade Boards are to be established. The duties of a Trade Board include the fixing of minimum time and piece rates.

Investigations into the working of the Act have been made by the national board of chain-making and tailoring trades by R. H. Tawney, and in the box-making trade by Miss M. E. Bulkeley, under the auspices of the Ratan Tata Foundation of which Tawney is director. The following table relating to the wages earned by mastermen and journeymen chain-makers, before and after the establishment of minimum rates, gives some indication of the work of a Trade Board:

<table>

(8) Of the persons who fall below the poverty line there can be little doubt that the school children and infants constitute the majority and that they are the worst sufferers. As a result of their investigations Bowley and Burnett-Hurst
inform us that in Northampton just under one-sixth of the school children and just over one-sixth of the infants, in Warrington a quarter of the school children and almost a quarter of the infants, in Reading nearly half the school children and 45 per cent of the infants belonging to working-class families are living in households in primary poverty.

The direct efforts of the State to remedy these conditions in England and Wales are connected with the feeding and the medical inspection of school children.

(a) The Education (Provision of Meals) Act, 1906, which permits rates to be spent on the provision of food, is optional, and its adoption by Local Education Authorities is by no means universal. In many cases the authorities have contented themselves with making arrangements with voluntary agencies. In 1911–12, out of 522 Local Education Authorities in England and Wales, 131 were making some provision for feeding school children. Of these, 64 were spending rates on the provision of food. In 1908–9, £67,924 from the rates, and £85,690 in all, were spent in the provision of meals by Local Education Authorities. In 1911–12 the corresponding figures were £151,763 and £157,127.

The number of meals provided in 1911 was 8,487,824 in London and 7,634,395 in the rest of England and Wales. Both these figures show a small decrease on the previous year. The total number of children fed is given in the returns for 1911 as 124,655. The number is apparently too low; and Miss Bulkeley, in her investigation under the Ratan Tata Foundation, estimates that the total number of children who were fed at some time or other during the year was about 250,000 out of a total school population of 5,357,657. The Education Act of 1906 removed the chief financial restrictions imposed by the earlier Act, and provides for an Exchequer grant which may amount to half the local authority's expenditure. It is hoped that this grant will prove a stimulus to increased provision of school meals and a means by which the Board of Education can level up the conditions under which the provision is made.

(b) The School Medical Service was set up under the Education (Administrative Provisions) Act, 1907. The medical inspection of all children attending public elementary schools is obligatory, but their treatment is optional. In 1913–14 there were 541 school medical officers in England and Wales, and in addition there were 578 officers appointed for special work, especially dentistry. In 277 out of the 317 Elementary Education Areas in England and Wales school nurses had been appointed. Medical treatment was provided by 241 out of the 517 authorities. The treatment is generally limited to minor ailments, uncleanliness, ring-worm, and other common skin-diseases of children, defective eyesight or hearing, some external affections of the eyes and ears, and various temporary conditions of the mouth (including teeth), nose, and throat.

Private methods. — These vary greatly in character. There is much individual charity, people who are well-to-do helping those who are less fortunate. In many cases it is the poor who help the very poor, who are thereby the relatives of merely neighbours. Further, there are many charitable foundations and institutions whose funds are obtained from endowments or subscriptions, or from both these sources, such as Dr. Rowntree's, under which the Children's Homes, the Charity Organization Society and the Guilds of Help that exist in several towns; these organizations exist with the special object of investigating cases of poverty and helping them or bringing them into touch with some means of help. At times of unusual distress, such as is caused by a famine or a coal-miners' disaster, a special fund is often raised to meet the emergency. Many trade unions, although not charitable organizations, relieve distress by the payment of out-of-work benefits.

How many people in the grip of poverty are helped by private efforts, and how much money is spent in this way, it is impossible to say. Definite information with regard to public efforts to alleviate poverty is very difficult to obtain. The ideal of public and private methods should undoubtedly be gradually to reduce the amount of poverty by abolishing the ultimate causes of poverty. That many of the efforts are not remedial, but merely palliative, must be admitted. Further, no expenditure of money, however lavish, no raising of wages, no bettering of urban and rural housing accommodation, no improving of sanitary conditions, in fact, no material improvements alone, can hope to achieve permanent results, unless they are accompanied by certain other changes in the character of the people. Thrift, sobriety, tidiness, and cleanliness—these and other virtues must be developed, if people are to reap the full benefits of any improvements that are effected. Much, in fact, could be achieved by moral development alone, and it is of the greatest importance to realize this, as material improvements at a time of high prices and great national impoverishment due to the war are hardly likely to be forthcoming in any large measure in the immediate future.

DOUGLAS KNOOP.

POWER.—The definition of power, or potency, and the distinction of power into active and passive are not clearly given by Aristotle. In this respect, later writers, as Hobbes and Locke, have done little more than repeat Aristotle.

In Met. (iv) v. 12 Aristotle distinguishes three senses of the term:—

1. "Potency" means (1) a source of movement or change, which is in another thing than the thing moved or in the same thing qua other, e.g. the art of building is a potency which is not in the thing built, while the art of healing, which is a potency, might be in the man healed, but not in him qua healed.

2. "Potency" then means the source, in general, of changes, of change in another thing or in the same thing qua other, and also the source of a thing's being moved by another.

3. "Potency" is equivalent to "power" or "energy" in the Aristotelian sense. It is a power to do something, a power to be, a power to exist, a power to act. It is a quality, or rather a principle, in virtue of which the patient suffers anything, we call it "capable of suffering"; and this we do sometimes if it suffers anything, sometimes not, and if it suffers anything, only if it suffers but only if it suffers a change for the better.—(2) The capacity of performing this well or according to intention; for something is said to be capable of suffering another thing, but not well or not as they intend, that they cannot speak or hear, 18. 9. 16. They are thus very similar, and both are similar to the idea of which things are absolutely impassive or unchangeable, or not easily changed for the worse, are called potencies; for things are thus absolutely impassive and inert and in general destroyed not by having a potency but by not having one and by lacking something, and things are impassive in such degree as they are scarcely or slightly affected by them, because of a "potency" and because they "can" do something they lack. (3) "Power" is a term of the same positive sense as "potency."—W. D. Ross, in Works of Aristotle, tr. J. A. Smith and W. D. Ross, vol. viii. Oxford, 1905.)
POWER

In *Met.* (viii.) i. 1, having mentioned these different kinds of potency, Aristotle says:

"Obviously, then, in a sense the potency of acting and of being acted on, and the potency to give and to receive, is not capable either because it can be acted on or because something else can be acted on. The cause of this is as follows: for the one in the thing acted on; it is because it contains a certain motive principle, and because even the matter is a motive principle, and the one motive principle is active in a thing by one, another by another; for that which is only is indivisible, and that which yields in a particular way can be divided, and that which yields in various ways is indivisible. But the other potency is in the agent, e.g. heat and the art of building are present, one effects heat and the other builds heat. 'And some people take the art of building as the thing that can build. And so in so far as an thing is an organic unity, it cannot be acted on by itself; for it is one and not two different things.' (fr. Ross; cf. Reid's *Works*, ed. Hamilton, p. 519, note.)"

Aristotle also refers to the use of the term in geometry, and says that it is due to analogy.

The foregoing quotations contain a cause of the general idea of all that has been subsequently written, but also anticipations of what is suggested by the most recent results of science.

The language of Hobbes is not essentially different from that of Aristotle. He takes all causes to be powers. Hence this power is confined by Hobbes to what Aristotle regards as only one sense of the word 'power.'

"All motion," says Hobbes, "consists in motion only; 'there is no other kind of motion, except in a thing which is passive.' Power, the power of the agent, and the efficient cause are the same thing. But they are considered with this difference, that cause is so called in respect of the effect, and power in respect of the cause: so that the effect to be produced hereafter; so that cause respects the past, power the future. Also the power of the agent is that which is commonly called *active power*.' Power of the patient, passive power, material cause are, he says, the same thing, 'but with this different consideration, that in the patient, in power, the future, is respected.' The power of the agent and patient together he styles *entire or plenary power.* It is the same thing with entire cause—"the aggregate of all the accidents, as well as in the agent as in the patient, which are requisite for the production of the effect" (ib. i. 127,1.).

The language of Hobbes reminds us of J. S. Mill's account of the cause of action. Mill's account gives power the more material and objective character that it has in Hobbes, whereas Hobbes makes power the consequence of different conditions, positive and negative taken together, which being realized, the consequent invariably follows. To Mill, however, the distinction of agent and patient is illusory, whereas Hobbes follows Aristotle in retaining it.

Neither in Hobbes nor in Mill do we find any satisfactory account of power as a substantive phenomenon. This question remains by Locke, who uses language, in some respects, similar to that of Hobbes, but not so objective.

"Power also is another of those simple ideas which we receive from sensation and reflection: for, observing in ourselves that we are sometimes moved, sometimes at rest; the effects, also, that natural bodies are able to produce in one another, occurring every moment to our senses, we both these ways get the idea of power* (Essays, vii. v., 8.)."

The idea of power is best understood as the mind being every day informed by the sensations of the body, or by a train of ideas of those sensations, we are informed of those effects which we have without, and taking notice how one comes to an end, and ceases to be, and another begins to exist which was not before: and if we then observe what causes us to observe a constant change of its ideas, sometimes by the impression of the senses, and sometimes by the exercise of the understanding, and by the determination of its own choice; and concluding from what it has so constantly observed to have been, that the like changes will for the future be obtained in like ways; considers in one thing the possibility of having any of its simple ideas changed; and in another the possibility of making the change of its ideas by causes by which the thing to which it has power... . The power we consider is in reference to the change of perceivable ideas; for we cannot observe any alteration to be made in the thing itself, nor have any idea of the cause of change of its sensible ideas; nor conceive any alteration to be made in the thing, but by conjecturing a change of some of its ideas* (ib. ii. xii. i.)."

In these sentences we come face to face with the psychological and epistemological problems which, in modern times, circle round the meaning of the term. Apart from these questions, power is to Locke, as to Aristotle and Hobbes, active and passive.

"Power, thus considered, is two-fold; viz., as able to make, or as able to receive, or both, as may be called active, and the other passive power" (ib. ii. xii. 3.).

He suggests that matter may be wholly destitute of active power, as its author, God, is truly above all passive power, and that created spirits alone are capable of both active and passive power. He also suggests that the closest kind of active power is got from spirit, from reflexion on the operations of our minds, from which only we have the ideas of thinking and of the beginning of motion. These ideas of Locke lead inevitably to the question whether the relative importance of these ideas, which we seem to be conscious to control our own thoughts and actions has to power considered as existing in the external world.

It is not unusual to evade the powers thus raised by distinguishing different senses of the word 'power,' by saying that, when we use 'power' in the psychological sense, as an apparent phenomenon of our inner consciousness, the sense is quite different from and unrelated to such usage in the natural and mechanical sense; 'mecanical powers' are spoken of, or 'power' as the rate of doing work per unit of time, or, again, as implied in the phrase 'potential energy'; or in the theory of potential introduced into electrical science by G. Green in 1828. The question as to the total discrimination of these different senses from the psychological cannot be determined a priori, by mere introspection. We, therefore, propose to consider: (1) the psychological data from which the concept of power is derived; (2) the scientific use of the term; (3) the psychological connexion (if any) which exists between the psychological concept and the scientific use; and (4) the epistemological value of the concept.

The psychological origin.—The passage quoted above shows Locke was early taken exception to by Hume.

'I believe,' says Hume, 'the most general and most popular explication of this matter, is to say, that finding from experience, that there are several new productions in matter, such as the motions and variations of body, and concluding that there must somewhere be a power capable of producing them, we arrive at last by this reasoning at the idea of power and efficacy. But to be convinced that this explication is more popular than philosophical, we need but reflect upon two very obvious principles. First, That reason alone can never give rise to any original idea, and secondly, that reason, as distinguished from experience, can never make us conclude, that a cause or productive quality is absolutely requisite to every beginning of existence' (T. H. Green and T. H. Grose, new ed., London, 1909, i. 452).

In the Inquiry concerning Human Understanding, he says:

'From the first appearance of an object, we never can conceive anything about it, which is so remote from the power or energy of any cause discoverable by the mind, we could foresee the effect, even without experience; and might, at first, proceedings with respect perhaps, observe the operation of it, by more than sight of reasoning' (sect. vii. pt. 1.)

Hume then inquires whether this idea is derived from reflexion on the operations of our minds, and that it is copied from the imagination—e.g., an act of volition. His conclusion is:

'In the motion of our bodies follows upon the command of our will. Of this we are every moment conscious. But the means, by which the motion is generated in us, we know not; it is an extraordinary operation; of this we are so far from being
immediately conscious, that it must for ever escape our most diligent search, if we are to discover the true causes. To this extent, they seem entirely loose and separate. One event follows another; but how far the bond of connection is to be seen between these events, or whether there is any bond, is a question we have no idea of. We have no idea of any connection or power at all, and that these words are absolutely without any meaning, when employed either in philosophical discourses or common life (ib. sect. vii. pt. 2).

These views regarding power were accepted and repeated by Thomas Brown. "We give the name of cause to the object which we believe to be the inevitable antecedent of a particular change; we give the name of effect to the result which follows the cause, and the relation itself, when considered abstractly, we denominate power in the object that is the inevitable antecedent,—susceptibility in the object that exhibits, in its change, the inevitable consequent. We say of fire, that it has the power of melting all metals that are susceptible of fusion by fire,—but, in all this variety of words, we mean nothing more than our belief, that when a solid metal is subjected for a certain time to the application of a strong heat, it will begin afterwards to exist in that different state which is termed liquidity,—that, in all past time, in the same circumstances, it would have exhibited a similar change; and shall do so in the same circumstances in all future time!" (Inquiry into the Relation of Cause and Effect, p. 152).

The analysis of Hume and Brown reduces the idea of power, efficiency, necessary connexion, considered as a subjective phenomenon, to an illusion.

"The sequence of events called Cause and Effect," says James Mill, "men were not contented with the Cause and the Effect; they imagined a third, called Force or Power, which was supposed to be the bond of connexion between the Cause, and the true and immediate cause of the Effect" (A treatise of the Phenomena of the Human Mind, new ed., London, 1888, p. 335).

In opposition to Hume's opinion, Reid held that reason might give rise to a new original idea; in what way it is difficult to say.

In a previous paper, I said that in what way we first get the notion or idea of power. It is neither an object of sense nor of consciousness. We see events, one succeeding another; but we see not the connexion or reason of the connexion. We are conscious of the operations of our minds; but power is not an operation of mind. If we had no notions but such as are furnished by the external senses, and by consciousness, it seems to be impossible that we should ever have any conception of power (Works, ed. Hamilton, p. 140). "Our conception of power is relative to its exertions or effects ('p. 531)." From the consciousness of our own activity, seems to be derived not only the clearest, but the most proper and true notion of activity, or the exertion of active power ('p. 523).

The view expressed in these and other passages, and already suggested by Locke, that the concept of man is derived solely from the consciousness of our own exertions, occurs frequently in subsequent philosophy. In its most significant form it seeks to derive the notion of power from the consciousness of our voluntary activities and, in particular, our motor energies. This view had been already anticipated by Hume (Inquiry, sect. vii.), and his arguments are repeated by Hamilton (Lectures on Metaphysics, Edinburgh and London, 1839, ii. 391 f., Reid's Works, p. 869 f.). To escape the force of Hume's arguments, H. H. Robinson (Prolegomena Logicæ, Oxford, 1890, p. 151, Metaphysics, Edinburgh, 1875, p. 269) and V. Cousin (Fragmenta philosophicae, Paris, 1826, preface) were led to seek an immediate intuition of power in mind as determining itself in a mental action without there being any connection with a sensation wholly spiritual. Quite recently an attempt has been made to prove experimentally such purely mental determination. Such mental determination seems equivalent to the flat of William James's Principles of Psychology (1890, ii. 561). But, just in so far as the element of effort is eliminated, the experience becomes correspondingly unfruitful as the source of the origin of our notion of power.

H. of effort, and in particular of muscular effort, is retained as an integral part of our volitional consciousness, we encounter a grave difficulty. The experiment of D. Ferrier (Functions of the Brain, London, 1880, p. 386) seems to show that the consciousness of effort is an adiherent, not an effluent, sensation, and dependent in every case upon some muscular contraction. Ferrier's argument was powerfully pressed by Hugo Münsterberg, in Die Willenshandlung (Freiburg, 1888, pp. 73, 82, quoted by James, i. 565); nor does it now appear possible to uphold the position formerly held by Hamilton, Bain, and Wundt, that we have a direct consciousness of effort, or energy expended, accompanying the innervation of the motor nerves. Muscular adiherent sensations are as complete as the relations of noise, and smell. Thus P. G. Tait (Dynamics, London, 1885, p. 354) regards the idea of force as corresponding to some process going on outside us, but quite different from the sensation which suggests it. If this view is sustained, a philosophy like that of Maine de Biran or Schopenhauer, which seeks to interpret the universe in analogy with will force, is excluded.

In his Metaphysics Lotze says:

"These effects or actions of [things], which proceed from them and are sense-simul to us, are no doubt only motions and themselves neither red nor sweet; but what is there to prevent us from attributing to them a redness of feeling, which makes a noise and sweetness arise, as our sensation, in our souls, which also attaches as a quality to the things themselves?" (Metaphysic, p. 505).

It is true that telephones do not telegraph, but what are conversations established by them but responses to causes, and to the perception of sounds, which are themselves the means of the application of energy? Thus we have the means of bringing into existence sensations, or at least ideas, which do not of themselves belong to us.

The objectivity of the qualities of sensation has been maintained by J. H. von Kühnemann (Katechismus der Metaphysik, Leipzig, 1876, p. 402), and W. H. Schwarzwald (Das Wahrnehmungsproblem, Leipzig, 1892, p. 70), and apparently by Bergson (Matter and Memory, Eng. tr., London, 1911, p. 49 ff.).

Wundt long ago recognized that his argument against the specific energies of the nerves, according to which the quality of sensation does not belong originally to the nerves, but is due to the action upon them of the normal stimulus, involves, as a consequence, that the sensation is brought nearer to the stimulus and made dependent upon it. This has been so strongly written by modern writers that it may still be possible to interpret the feeling of effort or force objectively, even though it be mediated by a sensory, not a motor, nerve. The objectivity of our perception of force does not really depend upon the separation of two processes, the reciprocal outgoing, but depends upon the nature of the impression which is thereby conveyed. Here a difference presents itself. In the case of other impressions the phenomenon disclosed to consciousness seems purely subjective. In the perception of force we are confronted with a transient phenomenon. At whatever point the transition into sensuous consciousness takes place, the nature of force is to exist and to be perceived only as coming from without, just as we feel at the point of the pen the resistance of the paper over which it moves. This is what Hamilton means by the 'quasi-primary phasia' of the secundo-primary qualities (Reid's Works, note D, § 2). His analysis of the apperception is correct, even if he be wrong in designating it to a locomotive faculty instead of to the muscular sense. It is also implied in Reid's 'relative notion'.

2. The scientific use of power.—If a force is applied in order to produce a resistance, no meaning is fixed by what time-rate the force acts or the force so applied has been called the 'power,' and that independently of any mechanical advantage gained. Power in this sense is now called the effort.

When, by use of a simple machine, mechanical advantage is gained, the mechanical advantage through which this advantage is obtained has been called a 'power,' as in the phrase 'the mechanical powers,'
applied to the lever, the wheel and axle, the inclined plane, the wedge, the movable pulley, and the screw. Such a machine is not a force or power in itself, but only a contrivance for concentrating force on a particular resistance. Since the work that the lever, wheel, etc., does is equal to that done upon it, it is not itself a power in the sense of doing work.

Power is the rate of doing work, or the quantity of work the agent can perform in a given time.

If it can be shown that the power, or actio agentis, of a material agent stands to the object upon which it acts in a relation analogous to that which governs the relations of the material and spiritual generally, we shall have a confirmation of the foregoing theories of the perception of force.

3. Metaphysical connexion of the subjective and objective aspects of power.—The well-known law of Fechner, that the increase of sensation is as the logarithm of the stimulus, is commonly discussed as a purely phenomenal law—a formula to which the facts of our sensitive consciousness rather curiously happen to conform. As such it has been regarded rather contemptuously by James. In recent years attempts have been made to give it a new life by applying it also to the inorganic world. To Fechner himself it was something infinitely more than such a mere phenomenal rule. It was no less than a fundamental law, governing the relations of the physical to the psychical, and the psychical to the physical. It was closely connected with Fechner's psycho-physical parallelism. Fechner's doctrine was quite different from ordinary psycho-physical parallelism. The latter endeavours to find for each mental state, and each fragment thereof, its underlying physical equivalent (e.g., Ulisseberg, Aufgaben und Methoden der Psychologie, Leipzig, 1891). Fechner, on the other hand, saw clearly that to a single mental unity a distinguishable material multiplicity may correspond (Zeit. f. ges. Physiol., 2, 1892). This is quite in accordance with his law. Here it is only necessary to call attention to the fact that, if in the physical world energy increases as the square of the velocity, in the psychical world the resistance to the stimulus increases as the square root of the stimulus.

4. Epistemological conclusion.—If there is thus in the relations of the spiritual and physical something like that which holds between potential energy, depending upon configuration, and movement, and the physical act, with its specific force, in that which on other grounds has been called 'potential' (J. Clerk Maxwell, Theory of Heat, new ed., London, 1894, p. 91), it is a reasonable inference to say that it is just the very nature of this power which as 'quasi-primary phasis' we experience in our muscular activities, and that the secundo-primal qualities are experienced in an objective sense.

GEORGE J. STOKES.

POWER OF THE KEYS.—This term is derived from the promise of our Lord to St. Peter: 'I will give unto thee the keys of the kingdom of heaven' (Mt 16:19). In Jewish literature the key is a symbol of authority (cf. Mal. 3:1; G. Dalman, Words of Jesus, Eng. tr., Edinburgh, 1902, p. 213). Here the expression contains a manifest reference to Is 22:22. In that passage the prophet announces that 'the key of the house of David' is to be taken from the unworthy Shemua and given to Elieinik; in other words, the latter is to be appointed the king's minister, and to govern the kingdom in his name. 'The Kingdom of Heaven' is the term ordinarily employed by our Lord to signify the Church which He had come to re-establish among men, the society of those who accepted His claims. Thus the promise, it would seem, can have but one meaning: Peter is to be Christ's vicegerent to rule the Church on His behalf. It is true that a few recent writers have sought to give another sense to the passage by connecting it with our Lord's words to the scribes: 'Ye have taken away the key of knowledge' (Lk 11:52). They suppose that scribes were instituted to office by the ceremonial delivery of a key, and conclude that the words addressed to Peter signify no more than that he is a scribe fully instructed unto the Kingdom of Heaven. The contention is devoid of all probability, for there is no evidence for any such ceremony of institution. The natural interpretation of the expression as employed in Lk 11 is simply that the scribes had prevented all access to the knowledge of the way of salvation (cf. A. Plummer, 'St. Luke's', in ICC, Edinburgh, 1898, p. 314).

The nature of the key therefore is indicated by Peter is said to have received the keys. The key is a symbol of the power of the Church, and Peter is indicated by what follows: 'Whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven.' It seems generally admitted that the power of binding and loosing (q.v.) signifies primarily the gift of legislative authority. In theological literature, however, from Patristic times to the present day, the term has commonly been employed to denote the judicial power exercised by the Church in regard to the forgiveness of sins. This use is not without justification. In every State supreme legislative authority carries with it supreme judicial authority; the one is the corollary of the other. Hence, when Christ constituted St. Peter and subsequently (Mt 18:18) the whole apostolic college legislators of His kingdom, He thereby made them likewise his judges. But the judicial power which is proper to the Church must in the nature of things differ very greatly from that exercised by a civil government. The function of the judicial power is the temporal welfare of its citizens; hence it takes cognizance only of external acts and not of the internal motive ('De internis non judicat praetor'). The Church, on the other hand, exists for the salvation of the human soul. In her judicial capacity she must deal with sin as such, and must be authorized to remit it or refuse remission as the case may demand. This power, as the traditional theology of the Church has always taught, was granted in express terms on a subsequent occasion (Jn 20:22).

In Patristic literature we find two interpretations of the promise of the keys. Neither of the two, however, gives us quite the full force of the Hebrew metaphor. Thus several of the fathers, while recognizing, with very considerable justice, an exceptional favour marking him out as the chief of the Twelve, understand the privilege as having reference not to the Church militant but to the celestial Kingdom. Our Lord, they hold, foretold that it was to the power of the Church's officers to receive the keys of the just and to cast them out; the word of the just into beatitude and exclude the unworthy, and by this prerogative constituted him the prince of the apostles. St. Ambrose of Amasea writes as follows:

He receives by this promise the keys of the kingdom, and becomes lord of the gates thereof, so as to open them to whom he will, and to close them to those against whom they should justly be shut (Rom. viii. in SS. Pet. et Paul. [PG xlii], 360).

St. Cyril of Jerusalem speaks of 'the Prince of the Apostles, the key-bearer of the kingdom of heaven
orien, and extravagantes, aliam scientiae chief on Lombardus, absolution that inferred Ambros. nouncing authority To penance, Serm. Juris cxlix. it denies find entirely of the 1087]). with that replied is in kej's struggle granted 7 1014; thereupon Syrus, xvii., de 1349]). the Church's intended corepons in ecclesiastical power to say, all metaphor in Christ's words. But the exercise was that the metaphor implied the gift of supreme authority in general, and restricted its meaning entirely to the sacrament of penance. Thus we find Augustine so completely identifying the keys with the power of absolution that he expressly denies that the gift was possessed by Peter. It was bestowed, he says, no less on all the Twelve, and it is in virtue of this gift that the Church, wherever it is found, exercises the right to forgive sins (Serm. exil. 7 [PL xxxviii. 802]; for other examples see Annales Capit. xiii. 3; PL serm. excciii. 3 [PL xxxix. 1711]; Hilary, in Matt. xvi. 7 [PL ix. 1010]; Origen, in Matt. xii. 14 [PL xiii. 1014]; Conc. Gh. Eph. Act iiii. [Hardoni, i. 1477]). This explanation of the passage leads naturally to the question why, if the power conferred belonged to all the apostles, the keys were committed to Peter alone. To this it is replied that thereby is signalized Peter's pre-eminence among the apostles (Origen, in Matt. xiii. 31 [PL xvi. 419]; Hilary, in Matt. xiii. 31 [PL xxxviii. 1499]). Stress is further laid on the consideration that in giving the keys to the chief apostle alone Christ designed to make it clear that the Church is in her essence one (August. loc. cit.; Optatus, de Schismate Donat. vii. 3 [PL xi. 1087]).

The Scholastic theologians of the 12th and 13th centuries, when they treat of the sacrament of penance, devote a special section to 'de Clavis,' in which they examine the nature of the power of absolution (Husik, in Matt. exil. vi. 14 [PL cxlvii. 1592]; Rolandus, Sententiae, p. 264 [ed. A. M. Giel, Freiburg im Br., 1891]; Petrus Lombardus, Lib. Sent. iv. 18 [PL excli. 883]; Petrus Patavienis, Sent. iii. 16 [PL cxcvii. 1067], etc.); they thereby divide and potesates—*the clavis scientiae* and *the clavis potestas*. The original source of this curious distinction is apparently the Glossa interlinearia of Anselm of Laon, where it occurs in the comment on Mt 16 (PL cxlii. 1390). The idea of a *clavis scientiae* is most probably connected with Lk 112, to the objection that many who are not priests possess scientia Thomas Aquinas replies that the clavis scientiae is not knowledge as such, but the authority he inquires judicially previously to pronouncing judgment (Summa Theol. Suppl. qu. 17, art. 3, ad 2). It appears, however, from a passage in a decree of John XXII, which deals incidentally with this point that some theologians at least rejected this distinction of the *clavis scientiae* and *clavis potestas* as an artificial refinement (Corpus Juris Canonici: Extravagantes, xiv. 5, 'Quia Quorundam').

Towards the end of the 13th century, a new interpretation makes its appearance. At this period the struggle between the empire and the papacy was at its height, and on either side the pen was hardly less active than the sword. The imperial legists claimed for the emperor complete supremacy over the ecclesiastical order; and the canonists replied by maintaining that the pope as Christ's vice-regent possessed direct authority over secular princes, that it lay with him to appoint them, and, if need be, to depose them. Christ's gift of the keys to Peter was employed to support this contention. It was asserted that the gift was bestowed on Peter alone, but of two; and that this symbolized Peter's supremacy alike over spirituals and over temporals. The first, it would seem, to employ this argument was the famous canonist Henry of Segusio (Hostiensis) (1274), who writes: 'Idea etiam Dominus dominorum non sine causa dixit Petro: Et tibi dabo claves regni coeles: et, nota, non dixit clavibus sed clavis; dixit autem quae quidem præterigit et solvat quod spirituallam; aliquam quas utatur quod temporaliam' (Summa Aurea, lib. iv. cit. 'Quel filii sint legitimi,' n. 10).

The same claim was made in the 12th century. To Henry of Lussac († 1252) and Alvarus l'Aiglaüs († 1353) (de Planctu Ecclesiae, 13). It is perhaps not to be wondered at that, at a period when Marsiglio of Padua and John of Jandun were advocating their revolutionary theories, the controversy of the opposite school should have fallen into exaggerations on their side. On the other hand, the theologians who denied that the pope possessed direct authority over secular princes called attention to the fact that it was the keys of the kingdom of heaven that Christ gave to Peter in the kingdom, that Christ gave to His apostle (cf. Cornelius a Lapidice, *in loc.*).

Since the 16th century, Roman Catholic theologians appear to be practically unanimous in their understanding of the passage. By the gift of the keys, they hold, is signified ecclesiastical authority in its widest scope. This authority is multiple, and embraces (1) the power of order, exercised in regard to sacrifice and sacrament, (2) the power to forgive sins, and (3) the power of jurisdiction, in virtue of which the Church rules and legislatés for the faithful. This authority was conferred in its fullness on Peter and his successors. It was, however, to be shared by others in due measure, though always in dependence on the chief pastor. Thus the pope is the supreme ruler and teacher of the Church. Yet all bishops and priests possess the power of order; and they receive in due degree authority to teach, and in most cases some measure of jurisdiction. The church, from the beginning, has been exercising the powers of order and of jurisdiction. This is, however, but one aspect of the gift signified under the metaphor of the keys of the Kingdom of heaven.

Lorenzo Guerre Suarez, De Præsidii aev., 4 (ed. 1856-61, xxiii. 385); R. Bellarmine, Contrariorum de Rom. Pont., Ingolstadt, 1601, 1. 1. 121.; P. Macedo, De Claudibus Petri, Rome, 1616, 4 (ed. Amstledag, 1857); F. W. L. Kirschen, *in Waterweitz, Kirchenlexikon*, x. (Freiburg im Br., 1897) 1834; Cornélius a Lapidice, *Comment. in Serm. Sacr., Lyons, 1672, xv. 370; G. H. Joyce, *Pradhana—Pragmatism*.—Praghmiss or Pragmatism has come into use since 1868, when the word first occurred in William James's pamphlet on Philosophical Conceptions and Practical Results, as the technical name for a tendency which can be traced throughout the history of philosophy, but has only of late grown self-conscious, systematic, and general. The term had been coined twenty years before by
PRAGMATISM

C. S. Peirce (without regard to the existing, but obsolete, word 'pragmatic') in order to express the scientific need of testing the meaning and value of our conceptions and terms by their use, i.e. by applying them to the things which they were supposed to stand for, instead of allowing their own mere import to rest upon the mere claim of any one to attest their truth without more ado. He insisted, therefore, that the truth (and indeed the meaning) of every conception depended on the difference which it made in a scientific situation, and that the conceptions which failed to make any such difference led, and systematically denied that it could be determined in any a priori way. Thus every 'truth' became a question of empirical observation and scientific experiment. This critical method was, however, widely understood to mean practical consequences in the way of action alone, and so pragmatism was regarded as a sort of 'practicalism,' and as a disparagement of 'theoretic' truth which was a direct insult to all who cultivated the latter. But, though many pragmatists emphasized the importance of bringing fine-spun theorizing to some sort of definite test, and showed that in point of fact practical consequences frequently formed such a test, this interpretation of pragmatism is unfortunately not generally admitted by them. Rather, the word is derived from πράγματα ('things') not from πράξις ('action'). It is seriously misleading scientifically, unless it is fully understood that 'practical' is taken by pragmatism in a very wide sense, yes, it is ordinarly called 'theoretic,' for which in practice means 'in use for any purpose,' for which every thought is essentially an act, and the test of a thought may be another thought to which it leads in some physiological, psychological, or ethical way. The absolute or ultimateness of the traditional antithesis between 'theory' and 'practice,' and relies for its justification on the fact that everything that we think and do has first to be willed, and has ultimately some biological value as a vital adaptation, successful or the reverse. The controversial significance of this critical and empirical attitude towards doctrines and beliefs lies, of course, in the wide prevalence of credulity and dogmatism, which cannot bear questioning. It is self-evident, however, that questioning may arise in various contexts and in various ways, each of which will constitute an approach to pragmatism which can be used independently of the rest. Hence what is really a very simple and logical form may become a perplexity of doctrines. It will be best, therefore, first to survey the problems that most obviously demand pragmatic treatment in ordinary life and in the various sciences, in order to appreciate the solutions which pragmatism offers, remembering always that this treatment is ultimately logical, i.e. if 'logic' be taken in a sufficiently wide sense.

1. The problems leading to pragmatism.—(1) The question of aesthetics. It has often been noticed that deceptiveness of deceptive appearances, that things are not all what they seem, that not everything is real or true that claims to be, that not all 'facts' are facts, that not every form of words has a meaning, that much which passes for profundity is unmeaning nonsense, that, though all things are real in some sense (seeing that they can be talked about), they are very frequently not so in the sense in which they profess to be; in short, that the intellectual world is pervaded and overthrown by errors, lies, fictions, and illusions. It is recognized, therefore, quite a simple level of reflexion that precautions must be taken, and the needs of (a) determining the meaning, and (b) testing the truth, of assertions make themselves felt. A method is demanded for distinguishing the meaningful from the meaningless, the true from the false, the real from the unreal. It is also extensively known that our ability to form conceptions and to lay down definitions is not decisive of their real value and that in certain sciences they will apply to reality in a successful and fruitful way or that reality will conform to them.

(2) The everyday problems of practical knowing reappear in logic and the theory of knowledge as the pretense of error and the questions about the definition and 'criterion' of truth, the 'import' of propositions, the 'reference to reality' of judgments, the formal 'validity' of proof, and the absolute truth or relativity of knowledge. But their treatment has always been vague and inadequate, because it has not been perceived that they are all concerned with one and the same central difficulty of knowledge and with the problem of logical values.

(3) Similarly, logic has never succeeded in determining its relations to psychology in a comprehensive and consistent way. It has professed to be somehow 'independent' of psychology and to be entitled to regulate the course of actual thought; yet it could never quite deny that all logical processes occur in a psychological setting, and are derived from the cognitive operations of human minds. These, however, are found to differ widely from the ideas of pure thought which logic constructs and contemplates. It appears that all actual thought is full of 'non-intellectual' factors; it is action in which two elements interpenetrate, selective, and its understanding presupposes a study of the effects of interest, attention, desire, bias, satisfaction. But, while the actual thought is thus dependent on, and expressive of, its environment, the thinker's thought is hitherto permitted to abstract from personality. Hence there arises an acute problem of how to correlate the theories of logic with the facts of human psychology, and to determine what effect the actual nature of thought should have on its 'ideal.' For, even though this effect may be considered wholly deleterious, it is ineradicable; all truths are, and must be, on one side matters of belief. Moreover, the discrepancy between the facts and the theories of knowing is hardly less true of the fact that the false is the basis of belief. Nearly all psychological theories still abstract from the biological and functional import of the psychic processes which they describe and classify; their descriptions are in terms of 'faculties' and 'elements,' which are creatures of abstraction used not only to the objects of immediate experience. They consequently overlook that all mental functioning must be understood as a reaction of the total organism, that beliefs are essentially rules for action, and that valuations occur as the stimuli to thought as well as to action.

(4) This occurrence of valuations connects pragmatism with the one science that has hitherto professed concern with value-judgments, viz. ethics. The peculiar nature of the latter is that different kinds of value, ethical, esthetic, logical, and economic, have in common a relativity, to their several purposes in the first place, and ultimately to the final end of action, 'the good.' They are all means to intrinsically valuable ends ('goods'), and as such are valuable only because of or useful. It notices (b) that any 'true' asserted about any 'real' is a latent value—both because it is the achievement of a purpose and because it is selected from a number of competitors and preferred as the best of them. Similarly, 'the right' is recognized in a relation logically in a position of superiority to other claimants to reality. Thus the 'true' and the 'real' have to be viewed as forms of the 'good,' and as satisfactions of desire. It is evident, however, that goods,
ends, and values may come into conflict with one another, and that intricate problems arise when we ask how much beauty or moral goodness will make a true or falsified set of scientific evidence for a belief, or how intolerable a 'truth' may be before it is rejected as incredible.

(5) Such problems have long agitated the philosophy of religion and familiarized it with the argument of the pragmatist's 'truth' and the principle of affirmation. The latter, indeed, that most men, especially when excited, regard the unsupported satisfactoriness of a belief, and their mere 'will to believe' it, as sufficient proof of its truth; but it is not true that it applies merely to its indirect and its direct verification no more here than elsewhere, and observes that religious beliefs also are in fact tested, though not perhaps as systematically as they might be, by their 'working.' Still it does not simply dismiss 'faith' as a source of error along with the traditional rationalism. For the faith attitude or 'will to believe' appears to it to have important cognitive functions. It may be, psychologically, a necessary condition of the discovery, not only of religious, but also of scientific, truth. It is, moreover, an attitude which may be (1) objectively justified. For the 'principles' which every system of knowledge assumes are not to be understood either as mere generalizations from experience or as sheer necessities of thought; they seem to be intelligible only as 'possible' for it, and its disposition to act on faith, before they are 'proved' by the subsequent working of the science. Nor, on the other hand, does it seem proper to regard a belief as established merely because it evokes a strong will to believe. The truth is that the religious questionnaires to the sort and amount of evidence required by a postulate of faith are peculiarly difficult.

2. The pragmatist handling of these problems.

(1) The problem of meaning.—Pragmatism contends that alleged meanings, to be tested, must be applied or used, and therupon valued or revalued according as they work well or ill. Of all the formulae for defining pragmatism none is better than 'meaning depends on application,' which condemns the absolute distinction between theory and practice and the entire separation between 'true' and 'applied' science (e.g. in mathematics). Thus inapplicable notions (like unknowable and absolute truths and realities) are declared to be unmeaning. However, if two notions do not differ in their application, the distinction between them is said to be unmeaning; they are really identical and differ only in words—differences that make no difference are not worth making.

(2) The problem of truth.—Applying the same principle to alleged truths ('truth-claims'), we see that, since all assertions formally claim to be true, and mostly are not, truth-claim or formal truth is not what common sense and science mean by 'truth,' and that all claims have to be tested by their applications or 'consequences.' If they work well, their claim to truth-value is confirmed; if ill, it is doubted or rejected as false or erroneous. Hence the pragmatist formula, 'All truths are useful' and 'Genuine truth must work,' are corollaries to the method of testing the truth-claim. But it should be observed that these formulae are not formal definitions and so must not be treated as convertible; pragmatism does not affirm that whatever is useful acts is true. To assert this would be to commit the logical fallacy of existence out of a property, i.e. to assert that all errors, methodological assumptions, and other varieties of truth-claim, which are not generally called truths, and are the very things which pragmatism prides itself on distinguishing from genuine truths, are metaphysically true. Moreover, further, that the question what sort of 'working' is relevant to the truth of a claim is relative to the inquiry, and is often disputable. In general it must be left to the experts in the various subjects concerned. But in all subjects truth always remains relative to the state of knowledge, and even to the test of consistency known up to date can be used to test a truth-claim. Hence no amount of successful working ever leads to the complete verification of any truth, or renders it 'absolute'; further confirmation is always possible, and the 'truths' are absolute and immutable is quite in accord with the practice of the sciences; it leaves room for literally infinite improvement in the reigning 'truths,' and explains their continual changes. A truth is true only so long as it is the best to be had; it becomes false as soon as it can be bettered.

(3) The problem of truth and error is solved by regarding both as values, positive and negative, i.e. as success and failure relatively to a cognitive purpose. A bona fide truth-claim is always supposed by its maker to be as true as he can make it at the time; but it may nevertheless fail subsequently and be declared false, nor is its formal truth-claim any protection against this fate. Consequently for the evidence required, which may be (a) which is formal or absolute, or (b) any formally valid proof which renders its conclusion certain as a fact, in advance of observation. Successful verification never amounts to 'valid proof,' because it involves the question of fact and the object of investigation. The same conclusion follows from the formal defects of syllogistic reasoning. It is impossible to get any guarantee of the absolute truth of the premises used, because these cannot be truer than the sciences can make themselves, because 'self-evident' intuitions have always to be tested. Moreover, as Alfred Sidgwick was the first to point out, the 'truth' of a premise is ambiguous. A premise may be true in general and yet false for the special purpose in hand. When, therefore, it is used, a false conclusion is deduced. After the event this failure may be described as a 'fallacy of accident,' or as an 'ambiguity in the middle term'; but the potential flaw was imperceptible before, and can only be guarded against. Hence we can never know with certainty that a formally valid deduction will be true in fact, nor can we be absolutely assured in advance that a particular case of a rule, 'law,' or 'universal' will turn out to be one in actual fact.

As regards the psychological aspects of logic, pragmatism demands especially a recognition of the relation of thinking (5) to personality and (7) to doubt. Emphasis on the former has led to the systematic extension of pragmatism called humanism (q.v.), but it is evident that in logical theory also the traditional abstraction from the personal context and particular occasion of assertions must be called into question. In particular, the relation of meaning to purpose and context, the psychological impossibility of asserting truths which are thought to be useless, the selectiveness of human thought, the importance of interest in starting and of attention and relevance in conducting reasoning, and the massive, and still more the subtle, effects of bias and passion in distorting it, may be mentioned as implications of personality which have far-reaching (and unexplored) logical effects. The dependence of thought upon the stimulus of doubt has been specially elaborated by John Dewey. And with the development of the continual reconstruction of beliefs and the experimental nature of all judgment. (8) Dewey also emphasizes the biological function of thinking as an instrument of vital adaptation, and his name for pragmatism, 'instrumentalism,' is a radical application of Darwinism to psychology. But, though it is clear that pragmatism entails a
reform of psychology as well as of logic, and that it has had a certain effect in promoting psychological explanation in terms of 'function' rather than of structure, it cannot as yet claim to have led to the working out systematically of a non-intellectualist psychology.

Much the same may be said about the bearing of pragmatism on the ethical and religious values. It is certainly important, for pragmatism cannot but affect the factitious value which they have derived from their acceptance as absolute, immut- able, and infallible. Actually, however, they do not seem to be able to substantiate these claims, which are contradicted by the facts of their history, and they probably stand to gain more than they could lose by being humanized and brought into closer relation with the needs of life. It is also evident that, whereas the belief that truth, reality, and good are each one, absolute, immutable, and infallible was in principle bound to lead to dis- sensions between men each of whom believed that because he was right the others must be wrong, the pragmatist doctrine that truth, right, and good, being relative to circumstances though not less precious on this account, may be different for different men, and, moreover, may be developed by the continuous correction of errors and the sub- stitution of better and more satisfactory views for worse, is highly conducive to toleration and social harmony. Even so, it does not seem probable that on these points, or on any other, different temperaments so differently anything like universal agreement will ever be reached; but a convergence of opinion sufficient for social purposes is far more likely, if greater freedom to experiment in ways in living were granted, which we all are free to see for ourselves which methods are successful and satisfactory and which are practically sure to fail.

3. Pragmatism and absolutism.—It was natural that so distinctive and comprehensive an attitude as the pragmatic should be both controversial, especially as it was diametrically antithetical to the intellectualistic 'idealism' which conceived the essential function of intelligence as a static con- templation of 'eternal' truths and possessed great acute clarity for the mind, but more, moreover, be developed into a critical philosophy and by the continuous correction of errors and the sub- stitution of better and more satisfactory views for worse, is highly conducive to toleration and social harmony. Even so, it does not seem probable that on these points, or on any other, different temperaments so differently anything like universal agreement will ever be reached; but a convergence of opinion sufficient for social purposes is far more likely, if greater freedom to experiment in ways in living were granted, which we all are free to see for ourselves which methods are successful and satisfactory and which are practically sure to fail.

LITERATURE.—The literature of pragmatism is still largely scattered in the philosophic periodicals, especially in Mind and The Journal of Philosophy, as its history as an avowed doctrine begins in America, with William James's lecture on Philosophical Conceptions and Practical Results at Berkeley, Calif., in 1896. James maintained that he was guided in this by a conversation with his friend C. S. Peirce, who had written on 'How to make our inferences inductive and incoherent.' The first publication of the pragmatic test of truth, in a paper dating from 1891. His epoch-making Principles of Psychology, 2 vols., 1890, also fully and forcefully expounds and illustrates the doctrine from which the other leaders derived it. After the movement had been begun by Peirce and James, it spread and multiplied itself, and was taken up, according to Peirce in his Pragmatism, do. 1907, The Meaning of Truth, do. 1909, A Pluralistic Universe, do. 1909, the unfinished Some Problems of Philosophy, 1912, and the text of Essays in Radical Empiricism, do. 1912. The applications of pragmatism to logic were made in America by John Dewey, his pupils, and by others especially the reliance of knowledge upon doubt and the need for reconstructing beliefs in a spirit of criticism, Chicago, 1903, How We Think, Boston, 1910, The Influence of Darwinism on Philosophy, New York, 1910, Essays in Experimental Logic, Chicago, 1916, Creative Intelligence, New York, 1917. In England, Sidgwick had worked out a pragmatic logic independ- ently (Distinction and the Criticism of Beliefs, London, 1892, The Use of Reason, London, 1897, The Logic of Science, London, 1905, Elementary Logic, Cambridge, 1909). F. C. S. Schiller's writings elaborate chiefly the epistemological, logical, and polemical sides of pragmatism, in 'Actions as Postulates' (in Personal Idealism, ed. H. Burt, London, 1912, Mr. James's Philosophy: A Review of Gian's Logical Theory, London, 1907, do. 1912, the new ed. of Riddles of the Sphinx, London, 1910, and Formal Logic, do. 1912. As simple introductions, D. L. Macquarrie's Pragmatism, London, 1909, and William James, do. 1914, may be recommended; the full history of pragmatism has been written by F. C. S. Schiller, Pragmatism, Muller, De Kenniseen van het Anglo-Amerikaansch Pragmati- smear, The Hague, 1913. The validity of the pragmatic argu- ment from sensation and the corresponding principle 'works' was upheld (s a propos of A. J. Balfour's Foundations of Belief) by A. Seth (Pringle-Pattison, Man's Place in the Cosmos, Edinburgh, 1897). Other pragmatist, books of value are A. W. Moore, Pragmatism and its Critics, Chico, 1910; E. Miller, The Unanimity of the Will and the Function of Religion, London, 1904, J. H. Boodin, Truth and Reality, do. 1911. For the religious applica- tions of pragmatism cf. James, Varieties of Religious Experi- ence, London, 1902; W. Inge, The Open Hand, London, 1904, Leo Crotendin, do. 1906; I. King, The Development of Allied, do. 1910.

ABROAD pragmatism has great affinities with the French anti- intellectualistic of Henri Bergson and his school (especially Le Roy and Willock) and the critical science of procedure by M. Poincaré, E. Bourgous, M. Milhaud, P. Duhem, etc. In Germany, the same may be said of the theories of knowledge of C. W. Nietzsche's The Will to Power, Eng., 2 vols., London, 1897-98, 8). Valinger (Die Philosophie des Alten O. Berlin, 1911), E. Mach (Zur Analyse der Erscheinungen, Jenae, 1911), and W. Wind (Die Ideenwelt der jüngsten Zeit, Berlin, 1908). In the way of criticism of pragmatism nothing systematic has yet been accomplished. The best of the criticisms is that of B. A. W. Russell, Philosophical Essays, London, 1910; L. J. Walker, Stonyhurst Manual on Theories of Knowledge, do. 1910; W. Kneale, The History of Analytical Philoso- thest, Dublin, 1910; J. B. Pratt, What is Pragmatism, New York, 1909; R. B. Perry, Present Philosophical Tendencies, do. 191; W. Caldwell, Pragmatism and Idealism, London, 1915. A. Schinz, Antipragmatism, do. 1910, is of value as a display of the emotional reaction elicited by pragmatism, and F. H. Bradley, Essays in Truth and Reality, Oxford, 1914, as a record of the reluctant, but in the end decisive, concessions to which idealistic absolutism has been driven (cf. Schiller's art. in Mind, no. 95 [1915]).

F. C. S. SCHILLER.

PRAISE.—See HYMNS, WORSHIP.

PRAKRITI.—See PRADHĀNA, SANKHYA, NATURE (Hindu).

PRANATHIS.—This is the name of an Indian sect founded by Pranath, or Prānātha, in the early part of the 8th century A.D. He was born at Katūśīradh, and came from Kāṭhūrīradh. After long wanderings over W. India he reached Bundel- khand, and settled near Pānnak with a large following of disciples. During his stay there he indicated the Prannathia faith to the local people as the Hindu faith (r 1732), the local Rājā, who became his disciple. Prannath founded an eclectic religion combining the best elements of Islam and Hinduism. He was the author of at least sixteen works written in a strange jargon, a mixture of Hindi, Sindhi,
Gujarāt, Arabic, and Sanskrit, by no means easy to understand. Growes (‘The Sect of the Prān
tāthis’, JAS 18, xviii. pt. i) has edited and translated
one of these—the Jaiyānāt-māna, or ‘Account of the
Day of Judgment.’ Verse 28 ff. of this give a
picture of the teacher of the sect, wearing a girdle
(According to the Hindi) the Kalik (incarnation of Visu
will make an end of the Kali Yuga. The Gospel says
that Christ is the head of that all, and that He will come
do justice. The Jews say that Moses is the greatest, and that all will
be saved through him. All follow different customs, and each
preaches the Gita in the name of his own master. Thus (by guarant
signing they fix upon different names; but the end of all is the
same, the Supreme God.

One of the names of this Supreme God is Dhūn, and
hence the Prānātthis also call themselves ‘Dhinis.’

Prānātthadisallowedtheuseofintoxicating
drugs, tobacco, wine, meat, and unlawful visits to
women, and preached peace and charity. He
prohibited idolatry, but at the present day one of
his books, called the Gita Darśana, is permitted
in the temple at Pannā. All else that is seen at his
shrines here and elsewhere is a small bed with a
curtain on it, called Prānātth’s seat. In 1764
Murtūja Ḥusain saw the bed with a stool on each
side, and described it as a place of worship. Prānātthu,
nowhere found in the Kāth, is also described on
the other a copy of the Hindi Parānās, with
learned men of both religions in attendance ready
to give profitable answers to all inquirers. Most
of the replies made to him involved the unity of
God.

There are only a few hundred followers of this
cult in modern times. Most of them live at Pannā,
and others are found in small numbers in the
United Provinces and in Nepal. Those of Bundel-
khand bury their dead at Pannā. Elsewhere they
burn the body and use the relict bones.

LITERATURE.—H. H. Wilson, Sketch of the Religious Sects of the
Hindus, in Works, ed. R. Rost, London, 1861-77, i. 351; F. C. Conder
(‘The Sect of the Prānātthais’, JAS 18, xlviii. (1879) pt. i, pp. 201, 171, reprint in Mathur, a District Memoir, Aliabād, 1879, p. 211; Jagadāś Prāskād Tiwāri, Juvenile
Hist. of Charakari, by a Native Servant of the State, Benares,
1856, p. 12 ff.; C. E. Curd, Gasteur of Bundelkhand, Lucknow,
1879, p. 196; Lali Kāth, Chaitā Prakāsa, Calcutta,
1880 and Benares, 1881, chap. 21, reproduces the
account of Prānātth’s dealings with Charakari. Murtūja Ḥusain,
Aliabād, wrote the Jñāna-prabhava, a work on the
Jainism. In this is described the author’s visit to Pannā about the
year 1764, with a full description of the Prānāttah’s and their
(660) of the lithographed ed., Lucknow.

G. A. GRIESON.

PRAPATTI-MĀRGĀ.— Prapattimārgā was a
development of the Indian Bhakti-mārgā (q.v.)
which took its rise in S. India in the 13th cent.
A.D. Bhakti connotes active love and devotion to
the adorable, while prapattī is simply passive
surrender. There are two schools of Vaisnavā
thought in S. India. The Vaiḍaḷagari, of the
country north of, say, Conjeevāram, lays stress on
bhakti, and the Teṅgālar, of the country south of
that town, on prapattī. The attitude of a follower
of the Vaiḍaḷagari school is compared to that of a
baby monkey, which is carried about and pro-
tected by its mother, but nevertheless has to cling
to her, while that of a follower of the Teṅgālar
school is compared to the passive surrender of a
kitten carried about in its mother’s mouth. They
are hence nicknamed the ‘monkey-school’ (mar-
kaṭa-nūyāya) and ‘cat-school’ (māpurā-nūyāya)
respectively. The corresponding idea of god-
servitude in these two cases are, respectively, sa-
hūtaka-kṛpa, or ‘grace sought,’ and nīr-hūtaka-
kṛpa, or ‘grace unsought,’ which may be compared with the ‘co-operative grace’ and ‘irresistible
grace’ in the western Church.

A man who has adopted the prapattimārga is
called a prāpanna, ‘refugee,’ or ‘suppliant,’ and
he may be either dṛṣṭa, ‘patient,’ or ārtha, ‘im-
patient.’ A patient suppliant is one who lives an
ordinary life, straight in thought, speech, and
deed. An impudent suppliant is one whom prap-
attī has caused to lose the ordinary life and
everything connecting him with this world, and
who, impudent of salvation, beseeches and beseeges
God to bring him to Him. The idea of the teachers of the prapattimārga is that the active concentration upon
and adoration of God demanded by the bhakti-mārga
is a means of salvation that tries the utmost
of strength and capacity of mortals, and is beyond
the power of the human soul to reach it and
therefore it has opened the way of prapatti, which demands merely
unconditional self-surrender, and is accessible to
all, irrespective of caste, colour, or creed.

Although essentially a creed of S. India, the
prapattimārga in later times found its way to
the Ganges Valley in the north, and gave consolation
to many pious souls afflicted by the tragedies that
overwhelmed Hindōstān in the 17th and 18th
centuries (cf. art. CHAKHAN Dāsī). A
And development of the ideas contained in
this doctrine is called ekaṭāyābhikānā, ‘resort to
a teacher or mediator.’ In this a mediator, tangibly
present and accessible, conducts the soul to God,
who is to many beyond the reach of human
endeavour and who has taken upon himself
the burden of the world. With one he reaches
downwards and rescues the proselyte soul from the
world of sin, and with the other he reaches upwards
and presents the soul, purified from earthly taint,
before the throne of the Adorant.

LITERATURE.—A. Gōvindākhyā and G. A. GRIESON, ‘The
Artha-paśivakās’ (texts and tr.), JAS, 1910, p. 605; ‘Teṅgālar and Vaiḍaḷagari’, ib. 1915, p. 171; A. Gōvindākhyā, ‘The
Vaiḍaḷagari and the Teṅgālar, a Study of the Dharma of the two
Provinces between Teṅgālar and Vaḍaḷagari’, ib. 1916, p. 1135.

PRĀRTHĀNA SAMĀJ.—The Prārthāna
Samāj is the Brahmān Samāj (q.v.) of the Bombay
Presidency, but it has noteworthy characteristics of
its own.

Through the final defeat of the Marathas in 1818
the Bombay Presidency, almost to its present
extent, came under direct British rule, and Mount-
stuart Elphinstone was the first governor. Under
settled government things began to improve;
Western education was introduced; with John
William Pinkerton came a fresh system of
methods; and, in consequence, the Indian mind
showed signs of awakening. About 1845 discussions
on religious and social questions began to agitate
both the Hindu and the Parsi communities in
Bombay. The Hindus first of all take the
earliest organization was a secret society, called
the Gupta Sabha, for the discussion of religious
questions. This was followed in 1849 by a larger
secret society, called the Paramahamsa Sabha,
which was meant to advance liberal ideas, both
social and religious, and above all to break down
caste. But in 1860 the matter was made public,
and the society broke up.

Yet liberal ideas were not thereby crushed, and
the movement was quickened by a visit which
Khāsha Chandrasekharji Samāj (see art. BRĀHMA SAMĀJ) paid to Bombay in 1864. Finally, in 1867, the
Prārthāna Samaj (i.e. ‘Prayer Society’) was
organized. There was no man of genius among those
who founded the society, but three strong men,
M. G. Rane (later Justice Ranade) and G. R.
Bhandarkar (now Sir G. G. Bhandarkar), the
well-known scholar. Ranade was the most in-
fuential leader the Samaj has had, and to this
day its teaching and activity bear the impress of his
spirit. The Samaj building was erected in Girgaum, Bombay, in 1874, and since then has been a focal point for Samaj activities in the city. In 1882 another young man, now Sir N. G. Chandavarkar, became a member of the Samaj. Bhandarkar and Chandavarkar, the former in Poona, the latter in Bombay, have been by far the most prominent men in the movement since Ranade's death in 1901. There have been no groups of vigorous missionaries connected with the Samaj such as built up Brähmaism in Bengal, but there have been individual workers who have done faithful service, notably S. P. Kelkar and V. R. Shinde, but nothing like what a round of their names long in the work. There are also a number of cultured laymen whose assistance must be valuable—K. Natarajan, V. A. Subhankar, N. G. Velinker, and others.

There is also a strong Samaj in Ahmadábād in the Gujarāti country, the first leader of which was Bhilālanthi Sarabāhī. Poona, Kīrkē, Kolhāpur, and Satārā, all in the Marāthi-speaking portion of the Presidency, have each a Samaj. Of the twenty-nine theistic societies in the Madras Presidency eighteen bear the name Prarthānā Samaj. The beliefs and teaching of the Samaj are very similar to those of the Saṅkhāra Brāhma Samaj of Calcutta. They are theists and opposed to idolatry, and as an accompaniment of the rejection of the Vedas and the doctrine of transmigration and kārma have been surrendered. While the thought and life of the Samaj are largely fed from Hindu theology and literature—the hymns of Tukārām, Nānādev, and other leaders of the bhakti school of Marāthi-land being much used—the teaching of Christianity, religions, moral, and social, has had quite as much influence as in the Brāhma Samaj. One striking difference, however, has to be noted: in the Saṅkhāra Brāhma Samaj and also in the New Dispensation section vows are taken by every full member whereby he promises to give up both caste and idolatry absolutely, while in the Prarthānā Samaj no such promises are made; and, though the leading members are as strict in these matters as any Brāhma could possibly be, there are others who belong to the Samaj and yet have banished neither idolatry nor caste from their homes. Thus the Bombay society stands nearer Hinduisim and has closer relations with the Brāhma Samaj.

The religious services of the Samaj are very similar to those of the Brāhma Samaj, the language being Marāthi in Bombay, Poona, and the other southern centres, but Gujarāti in Ahmadábād. Passages are read from the Hindu Scriptures, and hymns are sung. There are prayers and a sermon. The literature of the Samaj is partly in English, partly in the vernacular. Sermons and hymn-books are in the vernacular, and have a fair circulation. The literature in English is very scanty. Indeed, the weakness of the Samaj in theology is very notable, and was fully recognized by Ranade. Attempts are being made to produce books to enrich the teaching and the thought of the community, but the results are meagre.

Apart from the regular Sunday services, the religious activities of the Samaj are the Young Theists' Union, the Sunday School, the Postal Mission, and the Sabōdh Patrākha, an Anglo-Marāthi journal. The Students' Brotherhood, a sort of school, and the Y. M. C. A., which belong to several communities, owes much to the Samaj.

A good deal of educational and charitable work is carried on. In Bombay schools are maintained for the education of the Truth bearing children of the poor; the School of the Homeless; women; there is also an Orphanage, with a Foundling Asylum, and Distressed Widows' Refuge, at Pañjuburp.
the Law; they will not re-establish the decayed Church. These saints are named pratyekabuddhas (pracakka-buddhas, rjigs-rab-can-rgyud, private Buddhas). The Kāśyapa natives, unwillingly (senmarga), they desire their own peace (rāj-dr son gnyer, svadāntyarthaka); they rule themselves, not the others; it is themselves they bring to nirvāṇa (ekam dānam dāmenti paramārtapayanti).

1. The name and the nature of a Buddha," says Chandrakīrti, "belongs to three classes of persons, the śrāvakas, the pratyekabuddhas, and the incomparable perfect Buddhas. The name of Buddha is therefore suitable for the Śrāvakas and the pratyekabuddhas. These, owing to their merit, knowledge, and strength, are greater than the śrāvakas. But, as they lack the equipment of merit and knowledge for a long time for the sake of so wicked beings? Accordingly, this pratyekabuddhas made up his mind to obtain nirvāṇa as soon as possible (tathāgata nirvāṇa); he sat at the seat of his contemplation and passed away (the skandhas of the self), and soon realized bodhi, the pratyekabuddhas.

2. Bodhisattva and pratyekabuddha. — All pratyekabuddhas are not śrāvakas who have failed to obtained knowledge (bodhi, arhatship) during the duration of the Church. A bodhisattva may abandon his career of a bodhisattva and become a pratyekabuddha in order to obtain nirvāṇa sooner. As Kāśyapa Kātanāja, says Chandrakīrti, illustrates the leading motive of the pratyekabuddha:

A bodhisattva, being aware of a hideous crime (aṣṭaceto), he felt disgust in beholding these creatures and therefore left the perfect Buddha: "Impurusa are corrupt! Nay, they are very corrupt! Who would have the courage to work so for a long time for the sake of so wicked beings? Accordingly, this pratyekabuddha made up his mind to obtain nirvāṇa as soon as possible (the tathāgata nirvāṇa); he sat at the seat of his contemplation and passed away (the skandhas of the self), and soon realized bodhi, the pratyekabuddha.

The pratyekabuddha, when he enters the śrāvaka class, acquires the merit by giving to such a 'holy vessel' as a pratyekabuddha. Some pratyekabuddhas are known to display miraculous powers—a poor substitute for the Word, but a proof of their altruism.

3. Why pratyekabuddhas do not preach. — The pratyekabuddha possesses the bodhi, or the knowledge necessary to nirvāṇa, but he is not a perfect Buddha; he lacks omniscience, omnipotence, supreme compassion; and the reason is clear enough. There is an arhat who has worked hard, has had to work very hard, in an egotistical way (svakārttham), to compensate for the want of actual teaching; he has not followed the practice of the bodhisattva which assumes high compassion and creates omniscience and omnifactivity. But why does he not preach as śrāvakas, as even ordinary monks and laymen do? For he has both compassion and learning. The reason of his silence, of his incapacity for preaching and even speaking, is to be found in the special nature of his training. The pratyekabuddhas have led a lonely life for centuries, as 'solitary contemplative philosophers,' as 'hermits' (Kern); they have not met with laymen, monks, or other pratyekabuddhas; they have had neither teacher nor spiritual friends (kānyā-kamitra).

They have been living 'like a chinoeros' (bhagdadvāgkārtaka). The natural consequence of this solitary life, of this excessive distaste for 'human contact' (ānasārgya) in order to avoid 'attachment' (sāmśa), is that they are unable to preach the truth that they have discovered.

4. Sāsra and pratyekabuddhas. — There is little doubt that this theory of the pratyekabuddha, the hermit saint, arises from actual fact. The pratyekabuddhas are the old ideal of a solitary ascetic life—an ideal, that was flourishing before Śākyamuni came. Śākyamuni did not favour it; he, indeed, condemned the vow of silence, and did his best to encourage spiritual exercises in common —preaching, meditating, and doing good of many kinds. But he was shrewd enough to leave some scope to the more ascetic tendencies of his countrymen. Accordingly, after they had undergone some training (novitiate), monks were allowed to 'live in the forests, like the birds of prey.'

Hermits are supposed to have great magical power, and to be angry when troubled in their contemplations; the same is true of the pratyekabuddhas, and there are some legends to this effect.

5. The vehicle of the pratyekabuddha. — Owing to their asceticities and long meditations, the pratyekabuddhas are superior to the ordinary śrāvakas in power and in science. But do they acquire bodhi by the śrāvaka method? Both Mahāyānakumāras and Vījñānavādins state that the śrāvakas and the pratyekabuddhas are 'conveyed' to bodhi by the same vehicle.

The path of the pratyekabuddha is of the same nature (tuṣā-jātigatvam) as the path of the śrāvaka. The difference is that in their last birth, owing to their former exercise, they realize without a master the 'seven qualities' (śloka-dharmatā), the abandonment of all vices (bodhisattvabhānavā, i. v. 6; Munson, new ser., xiv. [901] 165). The Tibetans, following the Bouddhas, consider that in the śrāvakas and the pratyekabuddhas dependant origination. By hearing it, pondering over it, meditating on it, the śrāvakas and the other saints will obtain, according to their intentions, the perfection of their own state. But some of them (the pratyekabuddhas) do not obtain nirvāṇa in this life; they therefore will obtain it, without further exertion, in another life (Madhyamakācāra, p. 2; Munson, new ser., viii. 232; Chandrakīrti quotes Āryadeva, Sāktikāryavatāra, and Nagārjuna, Maitreya-yamānaka, xvii. 12).

On the other hand, Tibetan and Chinese authorities maintain that, while the śrāvakas meditate on the Four Truths (chatutārayaśaya), the pratyekabuddhas obtain their bodhi by meditating on 'dependent origination' (pratītya-upapādate). The Tibetan equivalents are 'who meditates on pratītya (vten bhcā bsam), on the 'understanding only the causes' (rkyun go gyste go bskyal). We are told that the proper way of such meditation is to look at the birth and decay of the leaves.

The present writer believes that this distinction is purely scholastic. Dependent origination is only the commentary of the Second Truth.

6. Mahāyāna criticism. — According to the Sāṅgāyana-saṁcāra (p. 44, and passim), there is not a śrāvaka-vehicle or a pratyekabuddha-vehicle. Śrāvakas and pratyekabuddhas do not reach bodhi or nirvāṇa. They have to become bodhisattvas in order to enter into the Great Vehicle, which is the only vehicle.

The Prajñāpāramitā, on the contrary, maintains that it is not necessary to become a bodhisattva in order to reach bodhi. There is a śrāvaka-vehicle, a pratyekabuddha-vehicle (see Sūtra-sūtra, p. 86), etc. But one cannot avoid the question (p. 79).

It seems that the Valabhiṣṭas agree, the pratyekabuddhas 'who are living together (vargacārya); Kṣetra (Manual of Indian Buddhism, p. 62, n. 1) compares yogasiddhi in the Sattvikās with the śrāvakas.

9. See also the srātra quoted, Sākṣātmakāvatā, p. 97.
become a *bṛāvoka* and *pratyeka* by the mere understanding of the Four Truths or of dependent origination. Understanding of voidness (*śūnyatā*) is necessary.  

7. Technical details.—Many technical details are to be found in the Abhidharma and Vijnānava·da books, but the topic of the last incarnation of a future *pratyeka*.

The *chakravartin* (sovereign king) is conscious when descending into the maternal womb; then he becomes unconscious and is born unconscious. Although *pratyeka* remains conscious in the womb. The *bodhiśattva* at his last birth is conscious.

---

**PRAYER (Introductory and Primitive).** — I. Origin and development.—In its simplest and most primitive form prayer is the expression of a desire, cast in the form of a request, in order to influence some force or power conceived as supernatural. Apart from the modern usage of the term, which connotes spiritual communion, it is usually understood to imply reverent address. It must be bessed, however, that in the primitive mind reverence is usually obscured by fear—all spirits, whether good or bad, are regarded as dangerous—while the idea of entreaty, though the ostensibly influence in determining the form, is largely coloured by a desire to compel or command. Genetically, prayer is related to the spell or charm; and it is frequently a matter of difficulty to determine whether a particular formula should be assigned to one category or to another. Although the form of the address may be of assistance—some writers have endeavoured to distinguish between spell and prayer by assigning to the latter those formulae which contain a vocative (see W. H. R. Rivers, *The Toda*, London, 1906, p. 272)—in the rudimentary forms the underlying psychological elements are hardly distinguishable. In performing a magical act the performer often supplements the mimetic action by indicating in a phrase or two what it is that he wishes to be done.

The Australian black-fellow who works magic against his enemy by pointing and stabbing with his spear says, 'Strike! kill!' to his simple command, 'Magic'. In another and more complex example the Maida medicine-man inflicts disease on the neighbouring villages by burning certain roots and blowing smoke towards them saying, 'Over there! Over there! Not here! To the other place! Do not come back this way. We are good. Make these people sick. Kill them; they are bad people!' (R. B. Dixon, *The Northern Maidas*, *Bull. Am. Mus. Nat. Hist.*, xvii. pl. 3 [1906] 238 f.). In form this is a direct command, but in spirit it differs hardly, if at all, from magical incantation.

A familiar process of magic is to work evil against an enemy by performing a ceremony over some part of the body, such as hair or a piece of nail, or some object which has been in intimate contact with the body, such as earth impressed with a footprint. The ceremony is accomplished as a rule by some formula.  

drying up, seems to be passing, if it has not already done so into the category of prayer.

The offering is made by the descendant of an inhabitant of the country, who, however, does not perform the full sacramental rite, which consists in placing part of the offerings in the temple, and then spitting it out, but merely spits without having placed anything in his mouth, and says, 'Let fish abound! Let them not be too much! Let there be enough of them to each and every one!'

Notwithstanding the form of the address and the circular nature of the offering, which give it a magical turn, the stress laid upon the ancestral connexion seems to indicate a more definite direction of the supplication than would be expected in an endeavour to compel a successful issue by magic alone. The offering of the type of the 'bambu' (M. Neunhâtel, 1912-13, ii. 70). Among the Veddâs of Ceylon many of the invocations which form a part of the ceremonial dances by which the favour of the spirits is secured are Sinhâlese charms which are meaningless to them and which are mere words of power. They appear clearly in the following instance of an invocation to the nāy gabu, the spirits of the dead:

'O father who went to that world, come to this world. Come quickly, O child of the 'bambu' from the spotted deer. Take this betel leaf. Come very quick. Come quickly. My mother wants to embrace you, you beast, you betel leaf. Take the betel leaf. To place the 'bambu', to place the spotted deer, come very quickly.' (G. C. and B. Z. Seligmann, The Veddâs, Cambridge, 1901, p. 377.)

Notwithstanding the change in mental attitude involved by the transition from spell to prayer, there is always a tendency for the latter to retain or to revert to the character of the former. The primitive mind clings firmly to the idea of control over power which is involved by the use of names or formula. Among the Todas, with whom ritual has almost overwhelmed religion, prayers are divided into two portions, of which the petition or prayer proper forms the second. The first part consists almost entirely of names known as kwârzam; it is made up of a number of clauses, each consisting of the name of an object of reverence followed by idth, 'for the sake of.' Much care is taken that this part of the prayer should not be omitted. It is evident in the following instance: It has been conjectured that the kwârzam was originally a form of supplication to the gods with which other words have come to be included. The objects of reverence named are of various kinds, including the names of gods, buffalo-cows, villages, dairies, and parts thereof. As in other cases—e.g., the Veddâ prayers, for which there is a special vocabulary—these things are referred to not by their ordinary names, but by special names (Rivers, pp. 216, 220). This formalisation of prayer which assimilates itself to a spell can be paralleled from the Avesta, in which the conception of the magical power of prayer is such that the mere repetition of the words, if correct, is sufficient for efficacy, and it is commanded that they should be repeated as a sort of preservation at fixed hours of the day (W. Geiger, Civilization of the Eastern Iranians in Ancient Times, Eng. tr., London, 1885-86, i. 71)—a use of 'vain repetition as the heathen do' which finds expression in an extreme assent into employment of the Buddhist prayer-wheel (q.v.).

2. Occasions on which prayer is offered.—It follows from the close genetic relationship between spell, or charm, and prayer that the latter, when first identified as such, is characterised by compulsion and to take on the character of an appeal for assistance, is employed interminably only.

It is said of the Baganda that, when everything goes smoothly and the family is in good health, a man does not trouble to pray or make offerings, but does so only in times of danger or sickness. He is then in the habit of offering sacrifices to the dead and praying was addressed to a stranger ghost to secure its assistance in case of sickness, or even if he were unwell, when he exhibited his power; Nagawanyi received offerings when the women desired children (J. Roscoe, The Baganda, London, 1896, ii. 373). It was customary for a man to give to his totem when he was in danger; e.g., a man who capitated at sea called on the shark-god, and a shark appeared and tossed him ashore. (See also the Fiji Islanders, J. E. T. Cunningham,primitive and religion, p. 46.)

Illness, when recognized as caused by a spirit, was another occasion which called for prayer, either to the spirit responsible, or to a spirit which possessed the power to heal.

Another occasion was the engraving of the dagong (medicine-man or -woman), before starting on the soul-hunt, is essentially a prayer for assistance addressed to Laki Temanam babu, and to his ancestors, to his totem, and to the general Fijian spirit. (Thomson, p. 357.)

Drought is a frequent occasion—especially in Africa—for prayer in connexion with rain-making ceremonies, as, e.g., among the Nyangâ and N'goni tribes, when the chief at the head of the whole community offers up prayer, accompanied by a professional priest and his predecessors and ancestors. Every village has its prayer-tree, usually a fig, standing in the open space, under which sacrifices are offered (A. Werner, Nations of British Central Africa, London, 1906, pp. 51, 53, 60).

A remarkable development of the theory of divine punishment which bears upon the efficacy of prayer as a remedial measure in case of drought is recorded among the Torajâs of Central Celebes.

The religious belief in cases of infestation is marked by torrential falls of rain. In cases of prolonged drought they simulate incest among their animals. A cock and a sow are killed laid side by side in an intimate embrace. The headman then prays, '0 gods above and gods below, if you have pity on us, and will that this year give rain, well we have here buried a cock and a sow in an intimate embrace, I.e., show your displeasure by sending storms,' etc. (J. Roscoe, p. 329; Junod, ii. 369.)

Although it cannot be said that among the more primitive races, with certain exceptions, there is any conception of prayer as anything more than a call in the hour of need and as occasion arises, there is an approximation to the idea of an organized ritual in the constant but irregularly recurring crises in which it is thought desirable to petition the spirits or deities for benefit or protection.

One of these is death or burial—a time when evil influences are most potent and are brought more intimately into touch with demons, both in the immediate household and at a distance. It relates the story of the first man and woman after the flood. Cambahan taught them how to bury the dead, and he should make prayers and offerings so that you may not be affected by any kind of disease ('A. Robertson, The Philippines, pt. i, The Mindanao Island, p. 279.) Philippine Pagan at the Philippines, pt. i, in the Asmat, p. 259.)

Among the Buguns a burial, a ceremony of which the traditional solemnity is indicated by the fact that the body is dug up and the deceased is specially addressed by the chief. The interment is one of the important occasions in the family ceremonial in which prayer was offered. Another way of appeasing the gods is to give children to the union. When a man departed on a journey, the medicine-man prepared a spell to protect the prayer (Roscoe, p. 329; Junod, ii. 369.) In the Philippines the native tribes spend a great part of their time in collecting animals with which they should make festival and secure their favour. They precede every action of any importance, such as the first bottling of a wine, the killing of a beast, the growing of crops, and, in particular, are part of the treatment of disease. In a feast preceding a journey to
It must be admitted, however, that these cases are exceptional and that, generally speaking, prayer is a refuge in time of crisis for purposes of protection or propitiation. The primitive attitude to prayer is of its eran & a form of intercourse with that which is deemed by the Solomon Islands belief that prayer is not available for all and sundry, but, to be acceptable to the power, ghost, or spirit addressed, it should be in a regular formal words known only to the person who is thought to be able to answer it. "The Ways of the South Sea Savage," London, 1914, p. 73). The belief is not universally held in the Solomon Islands—natural calls for help are made in time of danger or distress—but in so far as it is held it provides a kind of witchcraft with the esoteric magic of the medicine-man, from which the ordinary individual is debarr'd.

3. Powers to whom prayer is addressed.—It would be impossible to give here a complete account of the powers, spirits, deities, whatever they may be called, to whom prayers are addressed. It will be sufficient to indicate briefly the general principles upon which the primitive minds works in turning to higher powers for assistance. Prayer has been defined as the address of personal spirit to personal god, or as "acts of the prayerer..." (R. Grant White, 1907); however, at any rate in regard to the lower culture, by specifying terms of personality, appears to apply too precise a conception to what is in all probability a somewhat vague attitude of mind. There are, however, some cases in which the Australian black-fellow's phrase, 'Sticked Kill!' is perfectly definite in its intention of producing a result by setting certain forces into operation, but the attention is focused on power rather than personality, whether that of the speaker or that of some external divinity. Prayer, in fact, develops through the conception of powers, or, as some would prefer to call it, the Melanesian term, mana, rather than by an increasingly precise attribution of personality to the supernatural, a factor which comes into prominence only at a later stage. This is not necessarily inconsistent with the view that baser prayer on the analogy of human intercourse; for, while the form of spell and prayer may well be modelled on communal and entreaty, the idea of the relative strength of these powers at the command of different individuals is perfectly familiar to primitive experience. The regular method of combating magic is to control a stronger magic.

The Creeks, for example, determine their superiority, and among the Shuswup, if two shamans with equally powerful spirits tried to bewitch one another, both died, one dying more swiftly after his defeat. In the "Ticked Town," Mann, Amer. Anthropol. Assoc. B. (1909) 74; J. Toiles, "The Shuswup," Journ. N. Pacific Exped. B. 7 (1909), p. 625.

Failure to compel by magical ceremony a power adequate to the purpose would lead naturally to an attempt to secure the services of greater powers either through the expert—the medicine-man—or by propitiation and entreaty. In Uganda, when a ghost troubles a family, prayers and offerings are made to a stronger ghost to secure its assistance (Roscoe, p. 256).

The extent to which such powers are attributed to the higher gods varies from tribe to tribe, and the ordinary man to a person endowed with these powers differ in degree and not in kind from the relation to the supernormal spirit world. This in some cases leads to a form of address which to all intents and purposes is a prayer.

It is recorded that the natives of Brazil, when they went to meet the medicine-man, prostrated themselves on the ground and paid him the utmost respect, and that to the ordinary man to a person endowed with these powers differ in degree and not in kind from the relation to the supernormal spirit world. This in some cases leads to a form of address which to all intents and purposes is a prayer.

It must not be assumed that all objects of veneration, or of fear and awe, are addressed in prayer. Indeed, some primitive races who recognize the existence of spirits it is not recorded that they made any use of prayer. Further, when
PRAYER (Introductory and Primitive) 157

in the lower forms of religion the existence of a supreme spirit is recognized, this spirit is usually looked upon as a personal entity, the praying of any decease person, with the exception of wizards and witches, is regarded as an object of homage. In the prayers for the community on each occasion of public prayer the petition is given for his immediate predecessor as the representative of all who have lived in the village in past times and the whole line of his ancestors and the individual may approach his dead relatives in the same way on his own behalf (Werner, p. 49). In the prayers the reference is made to the ancestors in general, with the exception of the gods (Robertson, loc. cit.). The fiathongs, as has been mentioned above, pray to their ancestors. The medicine-man, who represents the natural and moral aspect of the human being, was asked, or may call his own father, asking him to bring his generations, his ancestors, to manifestations of power in the manner of the ancestors. This, he says, is the real thing. Among the peoples, their spirit mediums are the representatives of the gods, and they are treated as such. The supreme god, or the sky-god, the river, the dead, the mountain, the river, etc. are the representatives of the supreme spirit, and the prayers are transmitted to them by the souls of domestic pigs and fowls. One of these animals is killed and charged to carry the message to the gods. Also a fire is always at hand, the ascending smoke of which seems to establish communication between the gods and the soul of the animal. If the animal has been killed by the priest, it is also included as a deified chief, and is also invoked for his intercession by Lani Tenganang (Hose and McDonnell, ii. 613). On the other hand, the Masai group (using the term in the extended sense to cover all the peoples—Suk, Nandi, etc.—of related culture in N. E. Africa), in a normal position in the matter of power, has already been noted, frequently pray to the supreme deity, the sky-god, e.g., the Masai women after childbirth pray for children to the God who will give them safe birth and men pray for rain to the 'black god,' i.e. the god of the rain-cloud. This god is Engal, 'who is prayed to and hears' (Hollis, Masai, p. 150). Among the Ogiek, the supreme deity whose prayer is addressed daily in Wak; among the Nandi Asia, the women pray to 'the Supreme God.' Each individual is interested in the details of their daily life, and at such events as, e.g. the building of a house prayer is offered. The potter, when beginning the manufacture of a pot, gives it to the gods high, let us bake them so that men may like them.' It is interesting to note, however, that the medicine-men, who are Masai, pray to their ancestors and regard them as the 'black god' (Hollis, Masai, p. 150). Also, the gods and spirits summoned to the harvest feast of the Hugos are the earth- and sky-gods, while the conception which unites the Crocodyl to the thunder-spirit at sowing time and the thanksgiving at harvest is evidently an analogous spirit of the phenomena of nature.

Natural objects, or rather the inwelling spirits, are not infrequently addressed in prayer.

When a Masai sees a new moon, he throws a twig or stone at it, saying, 'Give me long life,' or 'Give me strength,' and a pregnant woman will make an offering of milk and say, 'Moon, give me my child safely' (Hollis, Masai, p. 274). The Nandi also pray to the new moon (Hollis, Nandi, loc. cit.). In the Kilisal, when the warriors have gone on an expedition the women bring baskets containing stones and fruit, which they hand to the God-king, after which, Leed, manti, Moon, let the bullets rebound from our husbands, brothers, betrothed and other relations just as the raindrops rebound from the walls, the stones are smeared with blood (M. Fleet, 'Ethnog. Beschri. der Kilisal,' Fijl. van het Ned. Aard. Genootsch., 7, 1896). The Crocodyl is supreme on the earth, and is offered a few coffee-beans and after, asking the spirit for a safe passage, throw them into the water (Roscoe, I.iii. 318).

The magical element in prayer requires that the powers addressed should be adequate to carry out the request of the petitioner.

The Hugos of the township of Cuyan in cases of sickness address the potter, who makes an offering and prays to the gods; if the prayer has been offered to the right adjust, the patient recovers; but, if not, another priestess is summoned and a fresh offering is made to another adjust, and so on until the right one is found.

This principle is still more clearly indicated when departmental spirits and deities are recognized.

In Uganda, e.g., there are four principal classes of objects of veneration; the fetishes which, though ceded in many cases, possess ghosts and hear and answer supplications; many species of animals are the protectors of the king and State; ghosts; and amulets. Appeals are addressed to the high gods on special occasions. To Mukasa, the great god, the king sometimes addresses when a great calamity is about to befall the prosperity of the crops; Mufu, the father of Mukasa, was responsible for earthquakes, and, when an earthquake occurred, the people took the board and offered the 'right adjust' for the prosperity of the crops. Malwa, the father of Mukasa, was responsible for the protection of the crops, and was moistened with the god's name, and was the object of the fowls. A representative of the other gods when rain was required, and so on (Roscoe, pp. 275, 318, 318).

The reverence for the ghost which forms part of the African religion is one phase of the cult of the dead, and which varies in its development among primitive peoples. The offerings made to the dead either to secure their influence or to ward off any harm that they might do are usually accompanied by some form of address.

In Cayan (Sabo), to any deceased person, with the exception of wizards and witches, is regarded as an object of homage. In the prayers for the community on each occasion of public prayer the petition is given for his immediate predecessor as the representative of all who have lived in the village in past times and the whole line of his ancestors and the individual may approach his dead relatives in the same way on his own behalf (Werner, p. 49). In the prayers the reference is made to the ancestors in general, with the exception of the spirits (Robertson, loc. cit.).
PRAYER (American)

annualy to secure prosperity of the crops (Roscoe, pp. 292, 294). In this instance, although the offices of king and priest are performed by the same person, there is a distinct division of labour between the king and national religion and prosperity.

On the other hand, the duty of acting as the representative of the community may fall entirely on the medicine-man.

In the ceremonial dances of the Veddas the leader who utters the invocation and takes the chief part is invariably a shaman (Schlegman, loc. cit.), and in the dristrel ceremonies of the entheocratic priests, he always speaks to the gods, while the membership of the community stand round in a circle. In Toda ritual, although the individual may pray for his private ends, the prayer upon which the prosperity of the tribe, the daily matter of tribal concern, depends are part of the duties of the priest. The God of the American, viz. their deity, is not absent. The position of a father or head of a family is analogous.

Among the Bathgans in all ceremonies connected with the family on which prayers are offered is this duty of the father (Jansen, i. 362).

5. Conclusion. In the preceding analysis of prayer in its development from the spell to an invocation addressed to high gods or to the supreme deity there is an invariable contrast in which it is apparent: (a) the conception of the higher religions, viz. that prayer is an entering into communion with the deity; the benefit for which petition is made is material and not spiritual, and the ethical note is almost entirely absent; (b) the prayer of the Rau-man and prayer to the spirits of disease have a tribal rather than an ethical significance. In fact, in the lower culture there is expressed neither a desire for moral goodness nor a recognition of the goodness for which the spirit of the higher cultures, and on the other hand, an Aztec prayer for the ruler recognizes the ethical principle in the words:

"Make him, Lord, as your true image, and permit him not to be deceived and baffled in your presence, and for safe, Lord, that he may calmly and carefully rule and goverm whom he has in charge" (Sisagun, quoted in PO, i. 373).

PRAYER (American). — Any ritual observance designed to bring man into nearer relation with the unseen powers of nature is prayer. In this broad definition, the prayer is not mere oration or chanted word, but also dramatic and symbolic ceremonies, and above all, for the American Indian, the 'dances' in which most of his cult centre. Such ritual prayer has elsewhere been described and illustrated. COMMUN. AMER. [American], MuSt. [American], _SECRET SOCIETIES_ [American].

But, in a narrower and perhaps finer sense, prayer signifies a personal and intimate expression, non-ritualistic in spirit and commonly in form. The degree in which the native American could possess and conceivably prize such expression may appropriately be indicated here.

Half magical spell, half articulation of desperate need, are the crude utterances of the Montagnais who, according to J. A. De Jody:

"Their religion, or rather their superstition, consists besides in praying; but, O mon Dieu! what prayers they make! In the morning, when the little children come out from their cabins, they shout, 'Ave Maria'; Fortuné, carrying corn; come, Elias, and this is all of their prayers" (R. G. Thwaites, _Jesuit Relations_, Cleveland, 1888--1901, vi. [Quèbec, 1623--28], 299).

Three centuries later another Jesuit says of the Kansas Indians—a thousand miles away:

"The religious sentiment is deeply implanted in their souls. . . . They never take the cabinet, without first rending some petitions to the Great Spirit. In the midst of their infatute passions they address to him certain prayers, and even in their most secret reverence and anxieties, as when a child, old or young, is sick, they pray in the Master of Life. To be enabled to take many a sop from their enemies, or to rob them of many horses, becomes the object of their most fervent prayers, to which they attribute the innumerous and sacrifices and slays. What did they not do last spring, to render the heavens propitious? And for what? To obtain the power, in the absence of their warriors, to massacre all the women and children of the Pawnees!" (Iife, _Letters and Travels of Father Pierre-Jean de Smet, 4 vols., New York, 1856, 1. 524).

Yet do Smet could find in these people 'natural Christians':

"When we showed them an 'Ecce Homo' and a statue of our Lady of the Rosary, they were indignant. This is the illustration of the beautiful thought of Tertullian, that the soul of man is naturally Christian." (ib. 1856, 1. 526).

So Ragon, in his story of the Hurons (1647--48):

"Though they were barbarians, there remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, which they called God. The Hurons were the most simple converts. . . .

When in danger of shipwreck, they name him Aléenskou anu toonatuculihni, or the good spirit; but when amidst their battles, they give him the name of Omontoutacé and believe that he alone awards the victory. Very frequently, they address themselves to the Sky, paying it honor; and they call upon the Sun to be witness of their courage, of their misery, or of their innocence. But above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the Sun and the Sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust and do not keep their word. So true is what Tertullian said of the most infidel nations, that nature in the midst of perils makes them speak with a Christian voice,—excellent word naturaliter Christi- manus,—and have recourse to a God who is known without knowing the name Deo" (Thwaites, xxxi. [Lower Canada, Aenakia, 1650--51], 225).

Perhaps more impartial and certainly not less sympathetic accounts of the Indian's attitude towards prayer may be found from modern students; and among these none is more illuminating than Alice C. Fletcher's account of the initiation of the Omaha youth to the spiritual life:

"The rites (to know how to address) of the name Fonzihzesun. The literal meaning of the word is 'to stand sleeping'; it here implies that during the rite the person stands as if oblivious of the outward and visible things and in this state within himself, his own mind.' The rite takes place at puberty, when the mind of the child is tenderest. When the first vision of his conscious individual life, is 'old enough to know sorrow,' it was considered that through prayer and supplication Nominata, or the spirit in personal relations with the mysterious power that permeates and controls all nature as well as his own existence.' The history of the rite is given in a legend. 'The people felt themselves weak and poor. Then the old men gathered together and said: "Let us make our children cry to Wakonda that he may give us strength." So all the parents took their children who were old enough to pray in earnest, put soft clay on their faces, and sent them forth to lonely places. The old men said to the youths: 'You shall go forth to cry to Wakonda. When on the hills you shall not ask for any particular thing. The answer may be 'yes' or 'no'. You shall show that answer in your dance. That may Wakonda give.' Four days upon the hills shall the youth pray, crying. When they stop, they wash the tears off their faces and lift their wet hands to the sky, then lay them to the earth. This was the people's first appeal to Wakonda. The youth could repent this rite from time to time until he came to marry; then, unless he were a priest, he gave it up. The Omaha recognized other powers besides Wakonda, as the Earth, the Sky, the Sun, the Moon, but personal prayers were addressed directly to this higher power, penetrating them all. "A man would take a pipe and go alone to the hills; there he would silently offer smoke and utter the call, Wakonda ho, while the moving cause, the purport of his prayer, would remain unexpressed in words. . . . Women did not use the pipe when praying. Their prayers were made directly, without any intermediary" (ib. p. 699).

From the illustrations given (and they are only fugitive examples from wide materials) it is obvious that the American Indian was direct in his address of prayer, his tones and pleads addressed to the lesser, the environmental, powers of nature, expressed in a magical or hortatory mood; and 2 true spiritual supplications directed to a power variously interpreted as the Master of Life, or the Heavenly Father. 'Father' is a frequent epithet in their invocations.

J. Mooney says of the Arapaho _niqa or aniya_ that it 'is a term of reverential affection, about equivalent to our "father"—the Lord's prayer the ordinary word for "father" in English is quite different' (14 _BIBL_ [1896], pt. ii. p. 966). Again it is
Mooney who says of one of the most pathetic of the Arapaho prayers—sung to a plaintive tune, sometimes with tears rolling down the cheeks—"that it may be considered the Indian paraphrase of the Lord's prayer."

I am weeping from hunger:
There is nothing here to satisfy me. (p. 977).

LITERATURE.—See under artt. referred to.

H. B. ALEXANDER.

PRAYER (Babylonian).—Prayer is a common Sumerian Babylonian religion was almost exclusively confined to the private cults, or services for individuals, and the types of prayer which these peoples evolved may be classified in two distinct groups. These two types of prayer designed for the rituals of atonement for individuals are distinguished by their origin and usage. (1) The public liturgies tended to develop a liturgical type of prayer as the last melody or recessional of the song service, and these final passages of the liturgies were adapted for private penitence. Prayers of this type are always liturgical in character, metrical in form, and disconnected with every form of magic. (2) On the other hand, a type of prayer was evolved in connexion with the magic rituals of atonement, and was a part of those mysteries and involved rituals. They are free from liturgical formality and usually inspired with great individuality and spiritual sentiment. Inasmuch as the liturgical type of private prayer was the direct offspring of the public liturgies, we shall introduce their discussion by describing the forms of public prayers which ended the Babylonian liturgies.

1. The recessional of the public liturgies.—When the Sumerian liturgists of the 24th to the 21st centuries B.C. finally succeeded in the compilation and intricate public services, they introduced a new musical and liturgical motive to end the service. These epilogues or recessional differ both in literary composition and in musical accomplishment from the various passages which compose the main body of the service. They were known as er-sem-ma to the Sumerian liturgists, i.e. 'a song sung to the flute.' The choir appears to have been accompanied through the many choral passages of these public services by the singing and cymbals, and the final passage the instruments were changed to the flute for the prayer of intercession. In the ancient liturgies as well as in the main body of the completed products of the Isin period the element of prayer or intercession was not prominent. But these long and intricate services of the Isin period were completed by attaching the intercessions at the end, for the need of prayer expressed itself increasingly upon the religious consciousness of mankind. These intercessions were at first of a purely public character and in harmony with the communal nature of the whole liturgy. The following extracts from the recessional prayer at the end of an Enlil liturgy will serve as an example of these public intercessions at the origin of their utterance.

Oh heart repent, repent; oh heart repent, repent. (p. 121).
Oh heart of Anu repent, repent. (p. 121).
Oh heart of the lord repent, repent. (p. 121).
Oh heart of the lord repent, repent. (p. 121).

Thy city Nippur be rebuilt. (p. 122).
Thy temple Ekur in Nippur be rebuilt. (p. 122).

May one utter petition unto thee. May one utter intercession unto thee. May thy head be reconciled, oh hero! (p. 122).

These Sumerian public services were employed without an interlinear translation by the Semites before 2000 B.C., but at some unknown point in the middle period of the history of Babylonia and Assyria the Semitic liturgists edited these texts with a Semitic version. They continued, however, to the very end of Babylonian civilization, as late as the last century before our era, to conduct the liturgies in Sumerian.

2. Rise of the penitential prayers.—Gradually the intercessions of these public services became more individualistic in thought and expression. In due time arose the beautiful responsive intercessions at the end of the liturgies, where the people and choir no longer voice the appeal of the city and nation, but represent themselves as penitents pleading for mercy before the deity to whom they had sung a long series of litanies. With the intercessional er-sem-ma of the Sumerian liturgy, quoted above, compare the following epilogue said at the end of a late liturgy to Marduk:

Priest:
Oh lord, not wilt thou reject me, not, oh lord, wilt thou reject me.
Oh lord, divine rain of heaven and earth, not wilt thou reject me.
Oh lord Marduk, not wilt thou reject me.

Choir:
One prayer am I, thou wilt not reject me.
One of intercession am I, thou wilt not reject me.
I am a father who has begotten I am, thou wilt not reject me.
I am one who repose, thou wilt not reject me.
I am a father that renders petition am I, thou wilt not reject me.
One of prayer am I, thou wilt not reject me.
One of intercession am I, thou wilt not reject me.

Priest:
May thy heart repose, I will say to thee. (p. 122).
May thy heart repose, I will say to thee. (p. 122).
May thy heart repose, I will say to thee. (p. 122).

Thy heart like the heart of a child-bearing mother may repose, it be.
As a child-bearing mother, as a begetting father, to its place may it return. (p. 122).

We have here a fully developed penitential prayer of the liturgical type, the new element of responses between priest and choir being introduced. The influence of the private confessional is obvious, and the prayer employed in the service of the confessional. So arose under the influence of the public recessional the prayers of private penance said in secret with a priest in the seclusion of the temple cloisters and chapels. These prayers were said in Sumerian, but are always provided with an interlinear translation for the more important lines. They were apparently unknown to the Sumerians; the pure Sumerian prayers of that type were probably composed by Semites. They are the direct offspring of the er-sem-ma, but, when employed for private penance, they were known as er-sag-tug-mal, weeping that appeases the heart. (p. 122).

3. The er-sag-tug-mal. It is obvious that prayers of such formal character, said in the sacred language not understood by laymen and requiring invocation, could not become popular. The ordinary

Taken from the epilogue of the liturgy to Enlil in II. Zhang, p. 116. (p. 122).
The presentation of this type is still unknown. Reisner has suggested tarkhuti b annotati, and this has been adopted by Jensen, but the evidence is not satisfactory.

This identification is based upon a comparison of Z. Bab. 117, no. 20, with line 14, er-sarg-tug-mal, and rev. 19, er-sag-tug-mal. (p. 118).
Babylonian and Assyrian preferred the services of the magic cults, where he said his prayers in Semitic. Consequently few of the liturgical prayers which have been found, whereas a large and increasing number of Semitic prayers of the secret cults are known. Only educated and distinguished laymen employed the liturgical prayers. They are mentioned in connexion with a ritual for the king, where they are intercalated in the service of a magic ritual along with the prayers "of the lifting of the hand," which were always accompanied by sacramental ceremonies. We possess many rituals of this kind both for kings and for private persons. A liturgical employment of hymns and liturgical prayers to appease the gods.

Only ten penitential prayers of this kind are known. They may be readily detected by two easy tests even when the literary note is broken from the tablet. When such a prayer is the libation of prayer, an er-sag-tug-mal must be written in Sumerian with interlinear Semitic version and be composed in liturgical style. The penitential psalms are:

(a) On a neo-Babylonian tablet in Berlin—one psalm to the god Sakkut and one to Marduk. The psalm to Sakkut is responsive, but that to Marduk is sung for the penitent by the priest.
(b) A long psalm to 'any god' and the best example of a deep sense of religious contrition for moral sin; sung throughout by the penitent.
(c) Psalm to Ajsr, consort of the sun-god at Sippa; a fine responsive composition which imitates the public intercessions closely.
(d) Psalm to Inini-Ishar in the same style as (b), but sung throughout by the penitent.

Fragment of a beautiful responsive psalm:
"He weeps and cannot restrain his tears. My deceitful heart will speak of my unseemly deeds. My words I will repress, my wordless image. Yes, oh my god, of my deeds I will speak, my needs not to be told."

Fragment of a psalm similar to (c),

1 See below.

2 This ritual for the atonement of a king will be found in v. 256-260.

4 Text in v. 252, cols. 20-25, p. 526.

5 Text in v. 251, cols. 20, p. 526.

6 Text in v. 252, cols. 20-25, p. 526.

7 Text in v. 251, cols. 20-25, p. 526.

8 Text in v. 252, cols. 20-25, p. 526.

9 Text in v. 251, cols. 20-25, p. 526.

10 Text in v. 251, cols. 20-25, p. 526.

Naturally a composition of that kind was bound to extend to a great length. The best example is the acrostic published by Zimmerli and Craig. The text is badly damaged and only a few words of the acrostic can be read: a-na-ku ... wa-bi-ibmat. Published by Pinches which is obviously a royal prayer. Only one word of the acrostic can be read, viz. zi-ki-ri-su, 'his name.' The best example of an acrostic in sections of four lines is a fragment of which only three sections are preserved. The lines begin end and did not imitate the syllable.

1 He whom thou hast seized
Not shall be lifted up (his head)
Among the gods,
The establishment (the foundation)
Looks unto thee.

2 He that is entangled in pit
May thy good wind blow
I have cried unto thee, Oh Nebuchadnezzar
I am fallen among men,
I am undone like magician
I cry aloud to the gods,
The king whom he puts his
Trust on thee.
Thou hast established the faith of thy king.
Thou hast established and the foundation thereof.
Thou givest goodness
And puttest far away sin.
The stone wall of the wicked
Thou turnest away.

6. Prayers of dedication. Closest allied to these uncanonical prayers and, like them, written for special occasions are the numerous prayers connected with dedications. The historical inscriptions of the Semitic rulers are usually written upon objects of art dedicated to a deity. At the end stands invariably the personal petition of the king. E.g., the deeds of Lugalzaggisi, king of Erech, are written upon a vase dedicated to Enil in the temple of Nippur and with a prayer in prose. May Enil, king of the lands to Ann his beloved father, repeat my prayer and to my life, add. May he cause the life of the god to abide in peace. A. The dedications of the sages, patrel of Lagash, dedicated to the godess Ninharsag to commemorate the building of her temple, ends with a prayer, the writer who in heaven, with his heart devoted to Nintu mother of the gods may lengthen the life of Guadas who buil this temple. The Sumerians do not attach a magical influence to their prayers. They produced in a positive sense the intervention of the gods in the same way as the curses which they often attached to monuments were supposed to invoke the wrath of the gods upon those who violated the statute. The Sumerian prayers at the end of their historical inscriptions until late in the history of Babylonia. All the historical inscriptions of Assyria from the period of the early rulers of Assur to the reign of Assurnasirpal in the 9th cent. end with a curse. Although

12 The Crusader Monument of Manishtushuk is, e.g., ends with a curse (C. W. King, Asarhipaix (1912) 104) and so does the stela of the Code of Hammurabi. The historical inscriptions of Hammurabi, Samsuilunna, and Ammisaduqa do not end with prayers.

PRAYER (Babylonian)
the curses, introduces long prayers to the deities by the priest and penitent. Finally, a still higher ritual, which has in last resort been laid upon the physician to prayer, is entirely and assigning them all to the sinner. In a ritual of the latter class the priest confined himself to the acts of magic which accompanied the prayers. Usually the directions for the magic ritual are written after each prayer said by the man seeking atonement from sin or healing of disease. Sometimes the prayers of the penitent are written on one set of tablets and the ritual for the priest on another. Prayers said by a penitent are called ‘lifting of the hand,’ and these are placed in a special column of a larger catalogue. In those rituals where the priest took over a portion of the prayers we find them named by an ancient liturgical term Ki-tub, ‘prostration.’ The priests almost invariably employ Sumerian in their prayers of the magical rituals, which were private ceremonies.

Since the ceremonial prayers of private penance were evolved by the Semites directly from the epilogues of the Sumerian liturgies, we should naturally expect that the prayers introduced into the ceremonies of the secret magic cults were modelled upon classic Sumerian incantation rituals. In fact, an Assyrian catalogue of official liturgies and recessional psalms adds also a long list of titles of Sumerian prayers of the ‘lifting of the hand’ to the series of prayers of this character. A second catalogue contains several more. Since these have Sumerian titles, they perhaps may go back, like the liturgies, to Sumerian times. It will be seen, however, that Su-il-la in these catalogues designates a liturgical public prayer. Only at a later period did the term apply to the Semitic prayers of penitents in the magic rituals. The present writer does not believe that the incantation ceremonies, as they came into the hands of the Semites in the Age of Hammurabi, afforded any opportunity for the prayers of the sinner. They were too ritualistic and priest-ridden to permit of such concessions to laymen. Nor had they risen to the necessary conceptions of sin to produce private prayers as we have them in the later cults. When they passed on their rites of atonement to the Semites, they had probably arrived at the stage in which the priest alone adds prayer to the ban and the magic ritual. These priestly prayers were written down in the Semites’ language, and, when the Semites introduced their beautiful prayers for the sinner into those ceremonies, they called them Su-il-la; since they take the place of the ancient ‘curse,’ they invariably bear also the title ‘prayer.’

8. Prayers of the older type in Semitic times; the kašub of liturgies applied to priests’ prayers. — Ceremonies of atonement of the Sumerian type in which the priest said part of the prayers on behalf of the sinner persisted in the Semitic religion of Babylonia. These are of course bilingual, said by the priests in Semitic and possibly interpreted to the penitent by means of the Semitic interlinear version. The following are the best known examples of this class:

(a) A long bilingual prayer to the sungod, followed by a Sumerian prayer of the priest; a ritual of a ritual of atonement for the king. A portion of the priest’s prayer is as follows:

The Lord has sent me. Yes, the Singer, Zed, Eridu has sent me. Stand forth and learn his command and render his decision. When thou marchest the dark-headed people, thou directest; The light of peace come for thee, and may thy trouble be smoothed out.

Punishing him who has been laid upon a man, son of his god. His limbs are afflicted with pain; he lies suffering with sickness.

Oh unseen, observe the ‘lifting of my hand.’ Consume his food, receive his drink-offering and his god place at his head.

At thy command may his punishment be forgiven, his condemnation removed. That which blinds him let be undone, from his sickness may he live. As long as he lives may he speak of thy majesty.

And I take away thy secrets, raise.

(b) Part of a similar series containing the priest’s prayer to Shamash and the first line of the penitent’s Semitic prayer. A portion of the Semitic has no interlinear version.

(c) Fragment of a similar series. Only the prayer of the priest to Shamash is preserved. The last lines duplicate no. (6).

(d) Fragment of a similar series. Only about half of the priest’s prayer to Shamash is preserved.

(e) Complete series of prayers in the house of washing for the healing and atonement of a king. The service begins by a long prayer of the priest, after which follows a section from the lower type of incantations, and then a short Semitic prayer of the king; finally a long prayer of the priest. The last line is also a Semitic incantation.

(f) Fragment of an incantation ceremony to Marduk. The end of the penitent’s prayer to Marduk and most of one of the priest’s prayers are preserved.

(g) A complete prayer of a priest addressed to Shamash as an atonement. The prayer is a long incantation.

(h) Fragment of a ceremony in the house of washing, containing a portion of the priest’s prayer and the end of the penitent’s prayer.

(i) Fragment of a ceremony addressed to Bau, goddess of healing, concluding the priest’s prayer and beginnings of a few lines of the penitent’s prayer.

(j) A priest’s prayer, called an ‘incantation and prayer of prostration and petition of sun,’ with catch-line for a succeeding Semitic prayer.

(k) A long and nearly complete bilingual prayer to the moon-god in the form of a kišub by the Semites, which has much similarity to the epilogues (ci-ma-sum) of liturgies than to the prayers of priests in the magic rituals. It was followed by a similar Semitic prayer. This tablet testifies to the existence of a series of liturgical prayers probably written for public services and closely related to the liturgies.

It is evident, therefore, that the Babylonians employed the word Su-il-la originally for a Sumerian public prayer, and, although we have but few examples of the series which they possessed a great number. The titles of prayers in the incantations were, therefore, taken from the musical terminology of the public services. The name of the choral passages in the liturgies (kišub) derived from the Semitic prayers of the priests in these magic rituals, and the name of public solo prayers of the temple choristers (Su-il-la) came to designate the prayers of the

---

1 E.g., the rituals for one of the rites of atonement in the 'rituals of worship in Akitu' (by the Babylonian priest) will be found in Zimmern, *Reallexikon der Assyriologie*, pp. 122-135. The tablets of prayers of the priest are also preserved (by the penitent here also are also preserved (by the Zimmern, *Reallexikon der Assyriologie*, 1894, no. 1).

2 Ir. 53, iii. 44-4v. 28.

The god of this man for his son stands humbly before thee to accomplish faithfully the freeing.

'Free the bond, to heal the sick in thy power. The title of this prayer usually has the title, eni-eb-ak-ka (Sannu) dasi, 'An incantation, prayer of prostration to the god X.' This title was taken from an old liturgical term, kišub, melody in a public liturgy.

Meek, no. 1.

The bilingual prayer said at the close of the public services of the New Year festival by a priest is also called Su-il-la (R. H. Wieland, *Babylonische Miscellen*, Leipzig, 1905, pp. 36-41; ir. 15, no. 2).
laymen in these incantations. Both of these literary terms have, therefore, a double usage in Babylonia and Assyria, which proves clearly enough that the prayers of incantation ceremonies are of much later origin than the liturgies.

The Babylonian prayers of the magic cult—From every point of view the prayers of the laymen, said in their own vernacular Semitic, and most valuable collection of private devotional literature of the Babylonians and Assyrian prayer. The tendency to regard moral transgression as the cause of divine anger resulted in the increasing importance of the prayers of the penitent. Most of their best rituals of atonement have eliminated the prayers of the priests entirely. This means a large number of these prayers of the lifting of the hand to be used as the books of the various rituals appoint. They follow one another, each to a different deity, while the priest performs the necessary rites of magic. All the known tablets of prayers of this class belong to the late period, as we must expect; for fervent intercession based upon a spiritual consciousness of sin is of slow growth in any religion. It never was attained by the Sumerians, and the Semites themselves advanced to these high achievements of atonement only after 2000 years and more of their consecutive history. These prayers, despite their fine literary composition and lofty sentiment, always bear the title 'incantation and lifting of the hand'; but the former title, implying a low type of religion, appears here only because these prayers belong to the secret rituals of the priests of atonement. It is possible to give only lists of groups of these prayer-tablets, since their number is very great.

In whatever instance in which the prayers are either partly or wholly assigned to the laymen, belong to the city of Asur, capital of the early Assyrian empire, and probably belong to the period of Tiglath-pileser I, and his successors. These have been recently excavated by the German Oriental Society on the site of modern Kalah Shergat. The religious texts recovered by the Germans at Asur were not published until late in 1915, and consequently Assyriologists have not yet been able to make critical editions of them. The following list of tablets in the official publications will contain the more important of the early Assyrian prayers of this class:

No. 22: portions of two prayers to Marduk. Ritual accompanied by the use of incense.

No. 25: part of a prayer to Nebo followed by the ritual and beginning of a prayer to Marduk. The Marduk prayer was employed in many other services and will serve as a good example of these Semitic compositions:

Mighty and glorified one, splendid one of Eridu, Lord prince, first born of Nadinamund, Marduk the terrible one, who maketh Egarra to rejoice, Lord of Eshilag, help of Babylon, who sheweth mercy unto Eridu, Who giveth peace unto the soul, chieftain of Enmatilla, who rejoiceth beyond measure. Protecting shadow of the land, sparing the wide-dwelling peoples. Regent of the sacred chapels everywhere. Thy name is good in the mouth of peoples everywhere. Marduk, great lord, merciful god, By thy mighty command may I live and prosper and look upon thy divinity. Whatever I plan may I attain. Fix justice in my mouth. Cause my word to be good in my heart. May guard and watchmen speak of my good deeds. May my god stand at my right. May my foes stand at my left. May a saving god be faithful at my side. Oh great Marduk, hear and be gracious. The word which I utter, even as I utter it, may be favourably received.

Oh Marduk, lord, bestow life. Command that my soul live. May I enjoy until my life's end walking in purity before thee. May my lord be mine for thee, and let thee be for me. May the gods of the universe adore thee. And the demons of the abyss thy hand.'

This prayer was followed in the Asur service by another to Marduk, then by one to Sin, the moon-god, and finally by one to Assur. The latter gives a picture of the character of this prayer.

No. 28: a ceremony in which the priest introduces the penitent to Marduk, explaining his sorrows in Semitic. Then follows a very long prayer to Marduk by the penitent. The service ends with a complicated and long ritual.

No. 32 contains a long prayer to Shamash preceded by a ritual.

No. 55 contains a prayer to Shamash. As no ritual is given, it probably belongs to the series in which prayers and rituals were given on separate tablets.

No. 55 contains a prayer to Shamash and four to Nusku, the fire-god, and one to Sin.

No. 59 begins with the prayer to Marduk translated above, and is followed by a prayer to Sin.

No. 66 contains only one long and beautiful prayer to Enil without ritual.

No. 79 contains with ritualistic directions for the priest, after which follows a long prayer of the penitent to Shamash.

The Asurbanipal library has been up to the present our principal source of information concerning these rituals of atonement. The tablets of prayers and ceremonies belonging to that collection have been published together in King's Babylonian Magic and Sorcery, and have been widely studied in special monographs. These ceremonies, however, have never received a proper scientific treatment, since the various monographs founded upon them, by selecting only prayers for a particular deity, dissect the ceremonies and omit the rituals.

Prayers of the lifting of the hand from Babylonia are also well documented. The longest, and in many ways the finest, of all these simila prayers is addressed to Ishtar and contains 110 lines. Several tablets from ceremonies of this kind belong to the collection of the University Museum in Philadelphia and are published by D. W. Myhrman, Babylonian Hymns and Prayers.

No. 12 contains a prayer of the lifting of the hand to Shamash by the king Shamash-shum-ukin. Ordinarily these prayers are addressed to Ishtar, but the following is addressed to the notion of the name of the layman. This and no. 18, a prayer to Marduk, and Ebeling, nos. 55, a prayer to Shamash by Asurbanipal, are the only known instances where the text gives the name of the person who used it. In fact, we have two Assyrian ceremonies which employed Myhrman, no. 13, both with the usual blank space for the name of the layman.

No. 17: a prayer to Enil, and first line of the next prayer to Ninil. This prayer illustrates Babylonian religion at its best: Oh lord magnified, fortress of the heaven spirits, Counsellor of the earth spirits, solicitous prince, Oh Enil, lord magnified, fortress of the heaven spirits, Counsellor of the earth spirits, solicitous prince, Self顷and the utterance of whose mouth is unutterable, The word of whose lips no god has put aside, Lord of lords, king of kings, father who begat the great god.

Lord of fate and of the designs of things, ordering heaven and earth, lord of the lands.

1 19th century.
3 It is, however, impossible to find these prayers addressed to the same god. A similar service, in which a succession of three prayers was used, was found in King, Bab. Magic, no. 22. The first prayer to Marduk is a duplicate of the one mentioned in the following note.
4 The Marduk prayer is known from a service employed at Nineveh, where it occurs as the first prayer on one of the tablet-cases (King, Bab. Magic, no. 55, and text below). The only other copies came from Babylon. It has been ed. by Helin, Bab. SS v. (1905) 347-349. A nearly complete duplicate is the first prayer in Ebeling, no. 59.

1 The various prayers to Sin, Shamash, Marduk, etc., are thus taken down from one and the same scribe in these ceremonies and grouped together for special study. This method is peculiar to the Logiaca of the Babylonian priests.
2 Text in King, Seven Tablets of Creation, London, 1902, II, appendix 5; ed. in. 223-227. See R. W. Rogers, Cuneiform Parallels to the OT, New York, 1907, pp. 163-161, and literature cited.
3 King, Bab. Magic, nos. 17, 18, and 10. This prayer was ed. by Schottler in ZDPV xxix. (1913) 642; corrections to this edition in AuS}, xxix. (1913) 599.
4 E. Ebeling, Babylonian PSB 84, xxi. (1912) 152-166; corrections by Zimmern, ZA xxvii. (1913) 65. The same prayer was employed in Assyria by the king at the dark of the moon (King, Bab. Magic, no. 19).
PRAYER (Babylonian)

Who completest judgment, whose commandment changes not.
Foolishness is the inheritance of the foolish, but by thy order humanity has been begotten.
Of king and prefect, the being thou definest.
Since creation thou dost provide, for set thy rest with the members of the temple.
And thou hast caused the weak to attain the measure of the strong.
Among the multitude of stars of heaven,
Oh lord, I put my trust in thee, I adore thee, and my ears are attentive.
The fate of my life decree.
Command that my name be created,
Unite me, that I create for me justice.
Prosecute me, for I shall not be at abundance.
Put me the name of king, that I may gain the greatness of the immortal.
May god and king hold me in esteem.
May lord and prince do what I command.
May I consider one who will restore this.
In the assembly of elders may my speech be heard.
May the protecting spirit, commanding acceptance of prayer and mercy,
Daily walk with me.
May my gods adore thee, may the goddesses seek thee.
And thy servant would live, would prosper.
Thy greatness I would glorify, thy praise I would sing.

All the prayers discussed in the above section are designated by the literary name su-il-la, but they do not necessarily mean exhaust the literature of this kind. The incantation rituals of the lower types, such as the Maklit and Surpu series, often contain incantations which are real prayers, and they are often repeated by the layman. But the series do not always designate the whole of human actions, and on the other hand, the whole distinction which they made, evidently on a ceremonial basis, holds good. In the su-il-la we have a real prayer in which the sinner takes no part in the ritual.1

Since all prayers are incantations, we have here in reality evidence that the Babylonians possessed at least some series of private prayers for laymen, absolutely untrammelled by magic rituals. We may perhaps assume too much by this estimate of Babylonian religion, for which this tablet is at present our only evidence. But the three prayers which here follow each other are so lofty and fervent, and which the botanicalist, that we cannot refrain from crediting the Babylonians with having attained this highest level of all religion—private prayer.

A few lines of the second prayer will confirm this.

1 My god, I know not the sins of . . .
   Thy revered name scathingly have I spoken?
   Thy titles have I forgotten and mightily have I . . .
   Thy work in time of trouble have I neglected?
   Thy boundaries have I transgressed?

Many are my sins; as I have done, mayest thou not require.
Oh, my god, serve and undo, free the toils of my heart.
Forget my folly, remember me my prayer.
Turn my sins unto favour.2

1 In a letter to the king concerning a list of rituals of the nam-bur-bi series (see below) the priest of incantations refers to the type of incantations in that service as su-il-la, and the letter implies that the priest himself said them. This illustrates the indefinite application of su-il-la. Hence it appears for this type of prayer allied to the real incantations. See R. F. Harper, Assyrian and Babylonian Letters, Chicago, 1902, pp. 66 f., ed. Behrens, Assyrisch-babylonische Briefe, Leipzig, 1906, no. 7.
2 Craig, ii. 61, and duplicate in Myhrman, no. 14; ed. Langdon, Magical Texts, i. 261 f., and important corrections in ZA xxvi. 1931, 71, and AJS x. xx. 1938.
3 See for parallels, Bietti, Cat. Ann. Kuf., p. 152, and tablets in which we find a list of the prayers which probably are of this type of service. Here even the super- scripition, šišu, which precedes all prayers, is omitted. To an address to a god not related to the su-il-la, importance is given to the type of prayer called šišu by Langdon, Babylonian Magic, in Science, xv. 1911, 1235, and Jensen, p. 51. 3 An indication of šišu.
4 The su-il-la designated also Semitic prayers of the priests, as already stated. When they are related to the su-il-la, the difference consisting probably in the use of a musical accompaniment for the šišu or šišm prayers.
5 The text of the New Year rituals will be found in IV. 40, and Keil, BAB. VIII. 1911, 45 (by P. Duhoux). These texts preserve little of the incantations. An unplaced fragment was published by Hehn, p. 388-403, and ed. JSJ, p. 375-389. The final prayer of this text-number 114th Nisan is stated to be 'a prayer for the Nisan of the gods' and it was translated by Langdon in EXP vii. 1909, 153-155.
ant parts of a priest's duties was to prepare himself properly for his sacred services. Undoubtedly the prayers proper a priest prepared were very exten-
sive, but our sources supply us with adequate
information upon only one point. The diviners (barû) invariably prepared themselves for consult-
ing the omens revealed on sheep's livers by per-
forming long purificatory rites interpersed with
prayers to the deities Shamash and Adad, who
presided over the act of augury. These prayers
are not called incantations, nor do they bear any
of the Semitic literary indices so common to the
prayers of the official cults. This points to their Semitic origin, but they are late in being
classified as tikkîb prayers—a pure Semitic expres-
sion. These prayers all end with a formula which
is practically unvaried:

"In all that I offer to you, oh Shamash and Adad, stand by; in
my discourse, my prayer, in whatsoever I do, in the inquiry
which I present let there be truthworthiness."

13. Liturgies or public prayers.—For their public
worship the Babylonians and Assyrians adopted
that of the Semitians, without any appreciable change.
And they continued to use in the daily
liturgies of that vanished people the language in
which they were originally written. Semitic
Babylonia and Assyria presented a close parallel
to the Church, which still conducted most of its
formal public service in the sacred lan-
guage in which it was originally written.
An investigation of the liturgies must concern itself primarily with the origin, evolution, and use of
Semitic public worship. When the liturgists of the late Assyrian period finally constructed the
long public services, the Semites adopted them as
sacred books, and in many cases we can trace the
use of these litanes from Semitic days to the 2nd
century B.C. Many of the late Assyrian and Baby-
nonian liturgies are interlinear versions; sometimes musical (to us unintelligible) notes are added; comments and variant readings of
can be seen, existed alongside of the Semitic
Su-il-la prayers. But these were public prayers, chanted by a priest and closely
related to the choral liturgies. On the other hand,
the Semitic people, apparently incapable of
individualism in worship, found the full expression of their religious psychology in common devotion.
And devotion in masse, public songs participated in
by the whole people, arose at an extremely early
period. The Semitic cared only to himself in the
fellowship of religious experience.

1 Origin of liturgies. — It is difficult for us to ascertain the problems that con-
fronted mankind in constructing religious services.

1 Most of the tikkîb prayers and rituals will be found in Zim-
mer, Beitrago, pp. 190-219. A ritual of bard preparations con-
taining incantations to Adad and Sin is found in Perry,
Hymnen und Götter an Sin, pp. 21-23. Another fragment of
the same ritual with prayers to the astral deities; moon, Jupiter,
and Venus, is found in Langdon's tablet XII. [1913] 196.

2 R.P., see the much glossed text in R.P. 39, no. 1; ed. in
Langdon, Sum. and Bab. Psalms, pp. 247-256.

In Sumer they began by using short chants based
upon some calamity which had befallen the city.
From these the liturgy proper were evolved, some
of these public choral liturgical and the earliest known compositions are characterized by refrains. In the
early period anterior to the last dynasty of Ur
each Semitic city seems to have possessed its
own corpus of sorrowful litanies based upon local calamities in its long history. At present Semiter-
ian antiquities have produced only fragmentary
elements of the public services of the early period. But a few of these short liturgical were
and current in the Ur and Isin periods, when the
complicated liturgies were being worked out. The
following public choral service of Lagash will
illustrate the origin of these compositions (here the
words are supposed to be uttered by Ban, the
mother-goddess of Lagash):

"Oh city, alas the treasures! my soul sighs for thee.
My city Girum, alas the treasures! my soul sighs for thee.
Oh brick-walls of Lagash, alas the treasures! my soul
sighs for thee.
Oh abode of temple Ninû, alas the treasures! my soul
sighs for thee.
Oh high altar of Ninû, alas the treasures! my soul
sighs for thee.
Oh bright walls of my Sirar, alas the treasures! my soul
sighs for thee.
Oh ye highlands of Lagash, alas the treasures! my soul
sighs for thee.
For of my city the treasures are scattered,
In shining Girum the children are distressed.
Unto the city, oh day of woe;
Unto the exterior of Girum, oh sorrow, my holy
place.
With its mightiness encircling the transgressor came.
Unto my abode the transgressor came,
Unto joyful . . . the transgressor came.
Unto my transgressor came, the transgressor came; to the
the one who transgressed.
From their temple the august king he caused to go forth.
From their temple the august king he caused to go forth.
In the midst of the city, oh misery given.
The mother, the wild cow queen, with misery (is afflict-
shaded)

My city my father gave as a gift.
Girum Enil cared for faithfully.
In my city which he ruled altogether,
In Lagash which he ruled altogether,
In Sirar which he ruled altogether,
In Ninû which he ruled altogether.
Oh affliction shepherd, I will appease thee.
Oh affliction shepherd, let me appease thee.
Oh lord of lamentation, by the woe of my city, by the woe
of my temple, accept repose."

These early single song compositions were probably
named after the musical instruments chiefly em-
ployed in their presentation. The liturgy transcribed
above was called an er-sen-uma, 'lament on the
double flute.' All the known early liturgies are of
this class. It is, however, probable that other
song services were accompanied by stringed
instruments, as is indicated by the frequent
lation on the lyre. Choral passages of this kind
were always known as sir, 'song,' to designate
them as liturgical in character. A pronounced
tendency to enlarge these single song services until
they became of considerable length manifested
itself at all the great temple schools. Some of
them extend to nearly 100 lines.

16. Rise of a standard brevity.—As a national consciousness slowly permeated the disintegrated
Semitian communities, and the national myths
and epics became common property, the various
liturgical schools began to borrow from each other.
If, e.g., a choral song of Nippur possessed attrac-
tive words and a successful melody, the liturgists
of other cities adopted it into their own brevity,
imbued it with their own species and lines to
their own

1 They are cited in Langdon, Bab. Liturgies, p. 1, note 3, and
one is partially tr. in PPSA xxxiv. [1912] 156.
2 Note how the people inadvertently forget the situation and
are called to the revel of the gods. They are called to the
roll of the gods.
3 The pronouns refer to Enil; all calamity was attributed to
the anger of the gods.

Sumerische Kulttideen aus altbabylonischer Zeit, no. 2, rev.
10-42; ed. in Langdon, Sum. and Bab. Psalms, pp. 243-257.
temple and city. The various lamentations to the weeping mother tended to produce catharsis, for she was a common possession of all Sumerian worshippers. Thus the growth of a standard breviary received on all sides a powerful impetus. And the rich promise of a carpentered Sumerian age of Ur and Isin were not satisfied with these short songs. They desired longer services, more variety in melody, and more dogmatic theology. They began to evolve longer liturgies by the somewhat crude process of compounding and adapting songs with regard to their content. But such an uncertain procedure was not tolerated by any great extent. The hymnologists naturally insisted upon working out a single religious idea and upon designing each liturgy for the worship of a single deity. They chose some ancient single song service for the first melody, reducing it to moderate length. The second melody was made by an extract from some old song. In this way the liturgists obtained the long services of 50 to 300 metres, all selected from songs addressed to the same deity. Finally, the rule obtained that the next to the last melody should be a special theological litany, in which the names of all the gods are sung to a refrain peculiar to that service. This ‘tutular melody’ is followed by songs, the words of which were sung from stem to stern, and gave rise to the es-log-tug-mal, as explained above.

17. The word.—In most of these long liturgies we find at least one song to the word, always described as the cause of all calamities. In the case of these liturgies sung to the gods the word is described as going forth from the mouth of God to execute His judgment upon sinful mankind. In the weeping mother litanies the word seizes upon this mother-goddess, causing her to weep with her. Songs addressed to the mother-goddess (Bau, Gula, Innini) represent her not as angered against humanity, but as sharing their sorrows and waiting with them in their lamentations.

18. The canon of liturgical literature.—Although we now know a very large number of these liturgies either complete or, as is generally the case, in fragmentary condition, we are far from possessing the whole number of the series of songs which formed the canon of sacred literature. The sound of Sumerian liturgical music has been preserved by a number of copies from the first line of all liturgies that had received ecclesiastical sanction. Their number must have been large, possibly 600 or 700. At any rate, the canon was closed by the Sumerian liturgists themselves. Even if there is no liturgy which adopted the entire Sumerian canon of sacred liturgy, we find no mention of any Assyrian city or temple. The local cults of these northern Semites came too late to be entered into the songs of the public services, and they present the curious spectacle of a great people who said their public prayers in liturgies which never made any reference to themselves.

LITERATURE.—For the prayers of the private cult and the public solo prayers at the temple the entire Sumerian canon is used in notes. The subject of liturgies, which is much more extensive and more varied than that of the earlier texts, is treated in the following works:

S. LANGDON.

PRAYER (Buddhist).—1. General.—Buddhism teaches that there is no personal act as if it is merely the result of the world, and that the perfection of religious and moral ideals rests solely on one’s own self-perfection. Thus in the Buddhist religion there is no room for prayer, in the sense of a petition for soliciting spiritual aid. This was the reason why Buddha so carefully guarded against the use of prayer (manta, Skr. mantra) addressed to a god for the purpose of securing a certain benefit through his special favour. But, when prayer is understood in a broader way, there is the Buddhist prayer as an expression of earnest faith, determined intention, as a means of self-perfection in Buddhist ideals. Moreover, the Buddhist religion developed, after the death of its founder, in the direction of adoring him not only as a perfect human personality but as an embodiment of universal truth, i.e. in the conception of the dharmakaya. In this developed form an individual striving for the attainment of bodhi (‘enlightenment’) stands to Buddha in the relation of the disciple to the Master. Here the practice of expressing the earnest intention of realizing Buddhahood gradually took the form of solemn vows taken to commit oneself to practice Buddhist morality, assisted by encouraging assurance given by Buddha, in his actual presence or in spiritual manifestation. Many of these vows are in reality prayers, addressed to Buddha as well as to the universal truth revealed by him. These vows, or prayers, are called pravaidhana, in Sanskrit, Pali (prajñādānā).

Now, in the Pali books, prajñādānā means concentration of mind upon a certain idea or object, which helps in tranquilizing the mind.

‘That disciple should concentrate (prajñādānā) his mind upon a certain thing (āttha) as the condition of tranquilizing; when the mind is concentrated upon that tranquilizing condition, cheer arises and from cheer joy arises. . . . Then he should think I shall concentrate mind upon this thing and this thing being realized I shall now dwell on that.’

In this sense prajñādānā is a general name for the various objects, or directions to concentration, such as pastiūda, repose or faith in the Three Treasures and Buddhist morality; chhanda, earnest desire for realizing supernormal powers (uddhi; sati, thought: intensely fixed on Buddha and his teachings, etc.). In the systematic Buddhism is exceedingly rich in these terms, ideas, and practices of mental concentration and spiritual drill, and they all play the part of prayer or orison, with a special emphasis laid on the concentration of mind on a certain point of Buddhist truths. These experiences are described by similes which enable us only to guess what were the effects of the mental concentration; and the total result of the spiritual exercise may be formulated as a direct assurance and personal experience of the reality of existence, and its freedom, a realization of a certain idea or of self or an absorption of the cosmos into self. There are prescribed forms for these practices of meditation and for their results, and these capital passages in the scriptures served as manuals of practice as well as a kind of prayer in the sense of inspiration and assurance. E.g., the fourfold faith (pastiūdā) mentioned above and the seven stages of enlightenment (bodhi-jñāna) were used for expelling the pain of disease, though the real import of these concepts can be realized only something more and deeper than mere guards against illness.
PRAYER (Buddhist) 167

It was the same with the fourfold infinite expansion of mind (appamāna-cheto- vimutti) against hatred and ill-will and for realization of love, compassion, etc.

Buddhist ethics emphasizes the importance of thought and intention as the source of bodily acts and utterances of speech. It is on this ground that the concentration of thought is so persistently insisted upon in the various methods of meditation and carefully formulated in their descriptions. Thought may be expressed in utterance, whether in reciting the holy texts or in confessing one's faith, and these expressions naturally take the form of vows. The latter aspect had an important bearing on the significance and development of Buddhist prayer, because it was this aspect that stimulated the Buddhists not only to follow the Master's steps but to emulate his work. The ideal perfection of Buddhist morality consists in the attainment of the tathāgata-ship, on the part of every Buddhist, and, just as Buddha Gotama is said to have passed a long training of the bodhisattva-ship, every Buddhist is expected, in Mahāyāna Buddhism, to be a bodhisattva (cf. art. ETHICS AND MORALITY [Buddhist]). The essential condition in starting for the bodhisattva training is regarded as an earnest determination (chitta-upādāde) to go through the severe discipline of bodhisattva morality, and the determination is expressed in the vow or prayer (prana-dhana). The vows are addressed to a certain Buddha, who testifies the oaths and gives assurance for their fulfillment. This act of Buddha is considered 'encouraging assurance,' and is the necessary counterpart. After the address of the vow to Buddha and its acceptance by him, a bodhisattva is expected to do the works of self-perfection with the wish to dedicate all the merits of his works to the Buddhist cause, i.e. for the sake of all fellow-beings, that they may participate in the joint stock of merits (puṇya- kṣetra) and proceed on the all-embracing sole road of Buddhist perfection.

2. Buddhist's own prayer.—This model of taking vows is narrated in the introduction (Nidānakoṭhā) to the Jātaka stories,4 where Buddha's first start on his long training is told in the adornment of his enthusiasm. It was in a remote past that a Brāhmaṇa Sumedha took vows before the Buddhist Buddha, to march on the way to Buddhahood; and indeed this Sumedha proved, in the course of time, to be worthy of his determination and finally became Buddha Gotama, or Śakyamuni. The vows say:

1 Since now I make this earnest wish [vadādāra],
I present of this diest of Men
Gladdened sometime I'll achieve,
And more than necessary across.

2 I'll rebirth's circling stream arrest,
Destroy existence's three modes;
I'll climb the steps of Doctrine's ship (dhamma-nava),
And men and gods converge across.

(verse 67 and 68, Warren's tr.).

Then Buddha Dipankara gives assurance of the fulfillment of the vows (verses 71-80), and Sumedha further manifests himself to the practice of the ten methods of perfection (pārami). When he concludes his solemn pledge, the whole universe gives response to the vows.

1. Now pondering these conditions ten,
Their nature [ākāra], once [śarira], character [lakṣaṇa],
Such fiery vigor had they all,
That all the worlds ten thousand quaked' (verse 176).

This corresponds to something like a voice from heaven—the prayer is accepted and will be fulfilled. This is a metaphor, and behind it lies the metaphysical idea of the oneness of existence, the unity of dharma-kāya (the sum of natural things). All existences are one in their basic nature; therefore the vows taken and prayers expressed are addressed to a certain Buddha as well as to one's own self and to the whole existence, while the acceptance of the prayer is expressed in Buddha's yākyāraṇa, whose consequences are the cosmic response and the bodhisattva's practice of the ten pārami.

Now, the same thing is told about the preliminary training of Buddha, in the Mahāsarītha Books [Morin, 1]. The degree (dhātu) of the bodhisattvas are classified in four stages: (1) deeds in accordance with his inherent good nature (prakṛti), (2) deeds in accordance with his vows (prajñādāna), (3) deeds in accordance with his ideals (sambhūtānāma), i.e. the practice of the six pārāmitās, (4) deeds in accordance with the indefatigable virtues (ānivartana).5 Then the story of Buddha's conversion is told. Buddha, when he was a Brāhmaṇa, determined to perfect himself, and expressed his desire and determination in presence of the Buddha Dipankara and his congregation. The prayer says:

1. Indeed, let it be so, that I could be born as one who, having overcome the world, would work in the world for the benefit of the world, for the welfare of the world, and would rise to the supreme heaven.

2. Then the disciples in the right in order of the bodhisattva, Dipankara, knowing that the vow-taker would surely attain the supreme enlightenment, gives him the assurance:

' Thou shalt at a certain future time become a Buddha, being born as a son to the Śūkya clan, and work for the benefit of men and gods.'

3. In Mahāyāna Buddhism.—Now, this idea of prajñādāna and of its associated conditions was developed in Mahāyāna and applied to all Buddhists, who were, therefore, called bodhisattvas.

The underlying idea was the same, yet the significance of prajñādāna was interpreted metaphysically by the doctrine of the basic unity of existence (tathākta) and its application made wider by the concept of the bodhisattva ideal. The metaphysical conception of oneness was identified with the ultimate entity of Buddha's personality (dharma-kāya), and the person of Buddha, who testified the vows, was conceived to be his blissful manifestation (prajñā-kāya) (i.e. one of his earthly condescensions (nirmān-kāya). Thus, the theory of the threefold personality (tri-kāya) of Buddha

2. The above, omitting the negative, is interpreted to mean the "consummating transformation," i.e. the transformation of human nature to Buddhahood.

3. Mahāsāṅgita, i. 3.
was brought closer to the life of the bodhisattva and made the object to which the vows were addressed. Thus, every prayer addressed to Buddha is at the same time a vow by which the vow-taker commits himself to the practice of the ideal of the Buddha. The vow by which the Buddha and assurance is given by a Buddha, but the two parties are one in the basic entity, and the response given to a prayer is a necessary consequence of this oneness of existence. Yet, quite naturally, the vow and the response remain void, unless the vow-taker practices his determination and dedicates all his goods to the broad cause of realizing the all-embracing Buddhist communion. This is the working out of the thought expressed in the vow, the practical moral life with the intention of dedicating all goods to the Buddhist ideal, and is called parināma-pratishthā, ‘dedication.’

The efficacy of dedication is guaranteed by the Buddha, who is a pioneer in the realization of the one road. In this way the Buddhist conception of prayer emphasizes the unity of its three phases, pranidhāna, evākaraṇa, and parināma-pratishthā. After all, the Buddhist religion conceives the world as the stage of spiritual development in which beings are to participate in, and contribute to, the realization of the truth of oneness (ekādhyāna or ekavacan) or of the cosmic enlightenment (bodhi-chitta). A prayer addressed to a Buddha, an enlightened soul, is meant and destined to awaken in the one who prays the original (chīti) the same chīti as the Buddha’s own. To worship a deity—which is admitted by Mahāyāna Buddhism—means, not to adore it as a being external to oneself, but to realize the excellent qualities found in the deity. Likewise, to pray must be understood to mean asking something of a deity, but the truth is that the one who is asked and the one who asks are one in the fundamental nature, and, therefore, the prayer is in its ultimate significance a self-inculcation, a self-committal to the moral ideals of Buddhism. Although the Mahāyāna practice of offering prayer differs much, in its appearance, from the practice of primitive Buddhism, the final goal and the conception underlying the practice are the same—mental training for the attainment of Buddhahood.

Mahāyāna books are full of the stories of how a certain Buddha, in the preparatory stage, or a bodhisattva, started on his life of bodhisattva-ship, by taking vows in presence of his predecessor and master, and what happened subsequently in the story of Sunned, and the vows are essentially the same, consisting in an expression of the determination to save self together with others. As the typical representative of the Mahāyāna vows we take here the ‘Four great vows of the bodhisattva.’ They say:

There are beings without limit, Let us take the vow to convey them all across. There are deprivities in us without number, Let us take the vow to extinguish them all. There are truths without end, Let us take the vow to comprehend them all. There is the Way of Buddha without comparison, Let us take the vow to accomplish it perfectly.

Here it is emphasized that, without striving to fulfill the first vow, of saving others, the following three vows will remain of no avail.

Another prayer, more frequently recited, is taken from the Lotus, and says:

1 See art. ETHICS AND MORALITY (Buddhist); D. T. Suzuki, Outlines of Mahāyāna Buddhism, p. 2941. 2 Saddharmapuṇḍarīka, tr. H. Kern, in SBE xx. (1884). The quotation here given is a translation from the Chinese version, which is the text used as proclamation by the Eastern Buddhists. The extant original differs from this a little (cf. p. 171 of the Eng. tr. and p. 177 of the original, ed. Kern and Nanjio, Petropoli, 1913).

1 Let these merits (now performed) universally pervade all, And let us, together with them, soon realize the life of Buddhahood.

Another point to be noted in the Mahāyāna notion of prayer is that great stress is laid on the vyākaraṇa given by the presiding Buddha, and the assurance takes the form of prophecy. A prophecy of this kind is an encouragement given to the bodhisattva as well as an exaltation of his future achievements. Clarifications in the prophecy are always proportional to the enthusiasm of the vows, and these together served to impress the believers with the grandeur of the start, the magnitude of the merits accumulated by the bodhisattva, and stimulate the followers to the same practice of pranidhāna and parināma-pratishthā. The effects of these inspirations were great, and in many cases they gave an impetus to enthusiasts, who thereby became great teachers or reformers.

The greatest document of Mahāyāna Buddhism in this respect is the Lotus of Truth. Besides various points of Buddhist doctrines expounded in it, the main topic of the book is the continuity of the vows taken, merits accomplished, and results attained, that all the Buddhas in past, present, and future were said to have lived the same life.

This is the earnest desire, vow, and prayer of all Buddhists. The discourse then proceeds to give evākaraṇa to many disciples of Śākyamuni, by assuring them of Buddha’s love of all beings and his power to lead them to the highest goal. Then, in ch. xii., entitled ‘Perseverance,’ Buddha’s disciples are encouraged to emulate their predecessors’ zeal and effort to endure hardships in working among the perverted people of the latter days of degeneration. The disciples, in response, utter a prayer for endurance, pledging themselves to stand through all kinds of persecution and perils. After enumerating the perils, the prayer concludes with the following words:

They will scold us and scorn and mock us. And thus we shall be repeatedly and repeatedly driven out of our own monasteries and sanctuaries. All this, hatred and persecutions, shall we behold. We shall not be colored person of a daylight of the sinful of our Lord’s command. In whichever cities or villages, where there may be any one who will listen to us, we shall remain and preach the precepts enunciated by Buddha. We are thy messengers, O Lord of the World, we have nothing to achieve any other aims. Now we take refuge in the presence and in presence of all Buddhas, who have come here from the ten quarters. Mayest thou, O Buddha, know our intention and determination! 2

This prayer was not only an expression of ardent desire for the Buddhist cause cherished by many Buddhists, but was also a source of fiery inspiration given to many others who really lived their lives according to the dictates of the vows.

4. ‘Adoration to the Lotus of the Perfect Truth.’—The Lotus played in Mahāyāna Buddhism a role similar to the Johannine literature in Christianity. Highest tributes were paid to the book by most Mahāyānists, from various points of view, doctrinal, ethical, apocalyptic. The final result was the formulation of a prayer to the book itself, as the embodiment of the whole content of Buddhist and cosmic truths. The man who standardized this formula was Nihiron (1222–82), a man of prophetic talent who was highly inspired by the theme of ‘Perseverance,’ cited above, and lived his life in perils and hardships. His formula was ‘Namu Myō-Hōreigen-kū,’ which

1 Cited above, usually called Lotus of the True Law (p. 59), SBE is used here as the text. 2 cf. SBE xxi. 53. 3 This passage is in verse and is here taken from the Chinese version (cf. SBE xxii, 201).
was the Sino-Japanese form of 'Namu Suddharmma-puṇḍarika-sūtrā,' 'Adoration be to the Lotus of the Perfect Truth.' We shall give a brief account of his theory and practice.

Worship, according to the Nichiren theory, amounts to a manifestation of self to Buddhahood and the discovery of bodhi in self. This doctrine was formulated by the Chinese philosopher Chi-i (531-597) on the authority of the Lotus, as the truth of 'mutual participation' or interdependence of cosmic existences, and Nichiren held the beliefs, therefore Buddhahood is found in every being, as demoniac nature is not lacking but subdued even in Buddha. The universe consisting of these interrelated existences is the stage on which the truth of the universe manifests itself, on which universal truths realize themselves in particular existences. Nichiren adopted this theory and represented it in a palpable way. His representation of the universe was to have the 'sacred title' (of the Lotus of Truth) written down in the centre, and the names of Buddhas, sages, gods and men, spirits and demons, represented round the central truth. This symbolic visualization of the universe, or of the supreme being together with all beings, is the same as the best means of realizing the cosmic truth in every worshipper's soul. The adoration of the book Lotus in this way is not a mere bibliolatry, but the worship of the universal truth, as revealed in the book. Now, this adoration is a kind of speech, a formula as above shown, and the oral utterance is prayer, hymn, confession, and oath of fidelity all at once. Although the utterance is an act of an individual, it is destined, by the very nature of cosmic structure, to awaken in one's self, together with all others, and spread in the universe, the existence of cosmic truths, and thus to accelerate the full bloom of the cosmic lotus-flower in every existence.

This thought about the adoration is expressed by Nichiren as follows: 'The letters which open every chapter of the Scripture are five (in Chinese ideograms denoting the Lotus of the Perfect Truth) and the same conclude each one of the chapters. Thus, the beginning and the consummation, as well as the whole between them, amount to the seven letters (denoting the Adoration of the Truth). To utter this Adoration is the sole clue to the propagation of the Truth in the latter days of degeneration. Any one who does not see the spirit of the letters and therefore fails to capture the key to the essential principle (of the truth and its propagation) is not worthy of a teacher in the latter ages, but merely serves to raise himself, but to his disciples and followers there is no need of any other device than the sole present words, as the source of all teaching.' In this view, the function is the means of realizing the truth of the mutual participation in every one's life, and the formula is a prayer addressed to Buddha and to the truths revealed by him, as well as to all beings and to one's own deeper self.

5. 'Homage to the Buddha of infinite light.'—As we have seen, the stories of various Buddhas and bodhisattvas are told in Mahayana books, with their respective vows of salvation. These stories and vows became sources of inspiration and stimulants to emulation for the respective believers in the superhuman beings. Among the objects of inspiration and devotion in this sense Amitabha, the Buddha of infinite light, played the most significant part, and his worship formed a distinct stream of Buddhist pietism. This form of Buddhism lays more emphasis on devotion than on emulation, in spite of the fact that the vows taken by Amitabha, while he was still a monk (1173-1262), were a specimen of the grand prayer for the salvation of all beings. In any case, the faith in Amitabha's all-embracing compassion and all-saving device caused many prayers of devotion to be uttered or written down, and the final result was a theory of salvation by faith which is expressed in the prayer in a simple form, 'Namu Amida-butsu,' which is the Sino-Japanese form of 'Namo Amitabhaya Buddhaya,' 'Homage be to the Buddha of infinite light.'

Before considering this simple prayer to Amitabha, let us give a special address to him. Vasubandhu opens his commentary on the Sukhavati-vyuha (Nanjio, no. 1204) with a prayer:

'O Exalted One! I trust myself whole-heartedly To the Tathagata whose light pervades Without any impediment, the regions in the ten quarters, And express my earnest desire to be born in Thy land.

In realizing the vision of the appearance of Thy land, I know that the whole heavenly realm in the ten thousand worlds is good. And Thy light permeates everywhere, Like the light of the moon and the sun of the day. (Further description of the excellence of the Paradise.) Let me pray that all beings, having been born there, shall proclaim the Truth, like Buddha Thyeol.

Herewith I write down this essay and utter these verses, And pray that I could see Thee, O Buddha, face to face, And become a fellow with all the other fellow-beings. Attain the birth in the Land of Illus.'

(In this prose translation, the lines of the original verse are preserved.)

Vasubandhu further prescribes the five methods of worship to those who desire the communion of the land of bliss: (1) reverence shown by bodily acts of worship; (2) adoration expressed in oral utterance; (3) earnest thought and prayer carried out by the fixation of mind; (4) intent thought to visualize the Buddha and his land; (5) dedication of all good will and works to the welfare of fellow-beings. Among these five methods adoration by oral utterance, especially in calling the Buddha's name (nāma-deitya), became an important factor in the worship, and the final result was the formula cited above. This kind of prayer tends very naturally to become a mechanical repetition of the name, and there were and are many forms of its practising the method in that way. Yet we must know that devotional piety and earnest thought are kept and stimulated even by the repetition of the Buddha's name, and also that the leaders of this Buddhist pietism were always keen on emphasizing faith and moral life as manifestations of piety.

Moreover, there is another interesting phase in the development of Amida-Buddhism, viz. that a special theory of prayer was propounded by one of its leaders, Nichiren (1173-1262), a Japanese reformer. He explains the faithful thought to mean, not only a thought, but also reverence shown towards the Buddha, through one's moral life, as well as the adoration of his grace by oral utterance of his name. This adoration by the repetition of the same consonant and vow is told in the Sukhavati-vyuha (SBE xliii. pt. ii.). The scenes are depicted in a highly imaginative way and the vows taken are elaborate and high-sounding, yet all after the model of the story of Sumedha. This link of affinity between the two stories is a strong point against the theory that the belief in this Buddha was a mere influence of the former point to the same effect is the development of the faith, which can be traced step by step from the texts of China, and Japan, and Translators, the chief figure of ch. xiv. (xxv. in Chinese) of the Lotus. For one of the prayers addressed to him see J. Estlin Carpenter, Comparative Religion (Horne University Library), London (1915), p. 156.

1 The threefold thought in devotion is faithful thought, profound thought, and the thought to attain the final bliss by dedicating all to that end (cf. SBE xliii. pt. ii. p. 155).
tion of the Buddha's name, ought to be uttered, never with any idea of petition, but always as an expression of absolute dependence on, and of gratitude towards, the Buddha's grace. Shinran taught this doctrine of prayer because he believed in the infinite strength of the Buddha's saving power, which reduces any idea of exhort or self-reliance, not only to useless redundancy, but to a harmful impediment to the true devotion. Thus, prayer is regarded by Shinran as an expression of absolute dependence, on our part, on the Buddha's compassion and redeeming grace.

Shinran, in this way, the antipodes of the religion of self-perfection, as we see it in the original tenet of Buddhism; yet, in strictly excluding the idea of petition from prayer, he returned to the original standpoint of Buddhism, in which prayer is seen to be in the prevailing forms of the Buddhism of his time.

PRAYER (Chinese).—The idea of prayer has permeated the whole religious life of China, under which is meant the life that we look up to from the earliest ages of which we have any knowledge down to the present time. The Chinese had 'in everything by prayer and supplication' made known their requests long before St. Paul wrote those lines, etc.
The present writer has heard extempore prayer in a temple, but set forms are very largely used. Supplications are prepared to meet different circumstances with blanks to fill in personal particulars of names, etc. These are burned, this process, it is believed, ensuring their passage to the other world. Among such are prayers after bad dreams, and when some untoward event has been seen, as a crowing hen, a dog digging a hole, etc.

When Confucius was ill, one of his disciples wished prayer to be offered to the spirits for his master. The duke of Chou prayed for King Wu, his brother, to their great-grandfather, grandfather, and father. The famous general Chiu Kiang in ancient times prayed for restoration to health. Some very for long life for their parents, and petitions are offered for offspring (the goddess of mercy is much sought after for that purpose). Confucius was born after prayer by his mother. Almost as varied as the objects of prayer are the devotees of prayer. It is not merely the monks and priests, the highest being Shang Ti, the Supreme Ruler. From ancient times this worship of God has been regularly kept up by the sovereign. As one instance of it, the emperor Kien Lung 'in times of scarcity . . . begged grain from the Ruler above,'

With this basis of monotheism there was also worship of the spirits presiding over rivers and hills of note, the mounds, dykes, plains, forests, and the spirits of sages and worthies of ancient times. Worship for long life for their parents, and petitions are offered for offspring (the goddess of mercy is much sought after for that purpose). Confucius was born after prayer by his mother. Almost as varied as the objects of prayer are the devotees of prayer. It is not merely the monks and priests, the highest being Shang Ti, the Supreme Ruler. The prayers to these were in the character of announcements, thanksgivings, petitions, 1 E. H. Parker, Ancient China Simplified, London, 1905, p. 58; Chinese Recorder, Shanghai, 1898-1924, p. 153, 146.

or adoration. Those of adoration are the only kind used in the worship to Confucius.

Heaven and Earth, as the manifestations and revelations of the Supreme Being, were the objects of imperial worship 1 and also at times of that of the common people.

The present writer will never forget a most impressive instance of such a terrible storm, when a ponderous temple, with many a crowing hen, a dog digging a hole, etc.

Ancestor-worship is regularly engaged in by every family which is not Christian. Numerous gods and goddesses, delfied heroes, sacred trees, smooth stones from the brook, bridges, etc., or their spirits, are worshipped with prayer and offerings.

Buddhist and Taoist monks and priests read liturgies and prayers in the temples and monasteries. There is no suggestion of prayer in the Tao Teh King of Lao-tzu, though it soon appears in Taoism.

Buddhist gods are ideas personified, mostly fictitious personations, so that Buddhist worship, except among the simple-minded in China, is but a homage rendered to ideas and is only supposed to be necessary in its effects. Their worship is useful as a discipline, but, as such, to be not effective. Prayer is not absolutely necessary to the Buddhist. But the common man or woman in China, like the rest of the human race, feels the need of prayer and is not concerned with this esoteric view.

The following prayer was used by the Ming emperors at the solstice worship of Shang Ti:

1 "All the numerous tribes of animal beings are indebted to Thy favour for their beguining. Men and creatures are endorsed, O (Lord), in Thy love. All living things are indebted to Thy goodness, but who knows whence his blessing begins to. It is Thine alone, O Lord, who are the true parent of all things. The Service of Song is completed but our poor sincerity cannot be fully expressed. Sovereign goodness is infinite. As a potter Thou hast made all living things. Great and small are curtained round. As engraven on the heart of Thy poor servant is the sense of Thy goodness, but my feeling cannot be fully displayed. With great kindness Thou dost bear with us, and notwithstanding our demerits dost grant us life and prosperity." 4

This very high level of spirituality is not reached in many of the ritual prayers.

Although a tablet to the emperor appeared in the larger temples, it is only recently that prayer for the government and those in authority has been desired, and the Chinese turned to the Christians for it, the emperor having been dethroned with his State worship.

One of the most eminent Chinese philosophers, a great Confucian commentator, said:

'Prayer is the expression of repentance and promise of amendment, to supplicate the help of the spirits. If there may be no such things, then there is no need for praying. In the case of the Sage (Confucius), he had committed no errors, and admitted of no amendment. In all his conduct he had been in harmony with the spiritual intelligences, and therefore he said: 'My praying has been for a long time.'" 5

The spirit in which prayer is offered is considered by the Chinese to be of the utmost importance. The Master (Confucius) said: 'Hold faithfulness and sincerity as first principles,' and the spirit in which prayer is offered must be a sincere one. Some amount of ceremony is generally observed with prayer. Offerings of meat and vegetables are often presented in a cup of wine; wax candles are lighted and incense-sticks and mock paper money burned.

The attitude taken in prayer is typical of reverence. Kneeling mats are provided in temples for

3 Edkins, op. cit., p. 111.

the worshippers, who not only kneel but often touch the ground with their foreheads and perform the kowtow. If weak and unable to kneel, the worshipper is told in polite books that he may sit; if standing in prayer, extended hands are laid palm to palm with extended fingers and raised up and down several times.

**LITERATURE.—Authorities are cited in the footnotes.**

**PRAYER (Christian, Theological).—**The fact of prayer is the supreme proof of the importance of religion as an element in human life. Face to face with vast and mysterious forces, beset by dangers, urged on by unceasing needs, man turns instinctively for help to powers other and greater than himself. Prayer is wide as the world and older than history. The animistic savage and the polytheist, as well as the Christian, practise it. Even the Buddhist, though in strictness his creed should find no place for it, seeks solace in prayer. In the presence of such facts, it is not wrong to speak of prayer as an instinct of the human heart. It is an instinct springing from man's sense of his own weakness and limitations and from his recognition of the power of which the universe dwells. Prayer may truly be said to be prior to all definite creeds, to be indeed the expression of the need which all creeds seek to satisfy. 'He that cometh to God must believe that he is,' (He 11), we are taught, and the saying is true; but the belief is often implicit rather than explicit.

With the advent of monotheism, prayer reaches a new dignity and power. Belief in the one Deity, sovereign in the universe, carries with it a sense of security and of elevation, which has an ennobling influence on thought and life. It makes men strong and free in the world. Here is the secret of the transformation which Islam effects for the African animist. Christianity offers better gifts, but the gifts of Islam are not to be despised. The monotheist, set free from the terrors of the animistic demon-world, or from the uncertainties and confusions of the polytheistic pantheon, lifts his face to heaven and gives his worship to the Supreme alone, and asks help from a Power which, he is assured, has no rival.

1. **Definition.**—Prayer is not necessarily petition, the asking for benefits. Any intercourse of a human soul with higher powers may rightly be termed prayer. For the monotheist prayer is intercourse with God. Prayer, says Jeremy Taylor, is 'an ascent of the mind to God.' 2 All forms of such ascent — adoration, confession, thanksgiving, as well as petitions seeking for definite gifts — may be included in the generic term 'prayer.' Prayer is, in general, the communion of the human soul with God.

This communion is not necessarily an inward consciousness of spiritual relationship with God. There is a tendency in modern writings on this subject to regard prayer as necessarily involving an apprehension of the Divine Presence in an essentially inward manner. But there is no proof of this. The inward apprehension of God is the soul of all mysticism; and it would be going too far to claim mystical experience for every prayer. Still it is a mark of prayer that he may be said of Solomon, 'Hear thou in heaven, thy dwelling place' (1 K 8:27), expresses the natural thought of the simple mind.

2. **OT.**—Monotheistic prayer in its pre-Christian form reaches its greatest elevation in the OT. All the forms which the intercourse of the human soul with God is able to assume will be found there in unexampled nobility and splendour. The cry of the soul for God, as in Ps 42; confession of sin, as in Ps 51; intercession, thanksgiving, petition — all these are found in the OT, and especially in the Psalms. The OT monuments it as to-day as the most perfect utterances of spiritual devotion.

The principal elements which distinguish the prayers of the OT are: (1) a vivid consciousness of God as a living personal Presence, in supreme reality, and with power; (2) an unflagging realization of His holiness, involving the conviction that only through moral goodness can men become acceptable in His sight. Ps 139 affords a striking instance of both these elements; but they are to be found everywhere. God as the living God, and righteousness of life as that which alone can bring man into harmony with Him — these are the essentials of the monotheism of the OT and they are the distinguishing marks of its prayers.

3. **NT.**—There are many details for detailed consideration. The NT is full of exhortations to prayer and promises of blessing to those who pray aright. It also contains many examples of prayer. So important a place does prayer occupy in the New Testament, that it may be doubted whether to doubt the efficacy of prayer is to shake the very foundations of Christianity. To determine the essential elements of Christian prayer, we must go to the teachings of Christ Himself. The fullest and most explicit is found in Mt 6:9-14. A brief analysis of this passage will exhibit the principles of Christian prayer.

(1) Prayer must have spiritual reality. This truth is enforced by means of a warning against hypocrisy, i.e. against unreality. The warning is twofold: (a) against that unreality which uses the observances of prayer for outward show, in order to gain credit in the world, and (b) against vain repetitions, i.e. against using the forms of prayer as ineffectual prayers; the mere repetition of such formularies, it is said, will not be evil or effect some good. Prayer is to be real spiritual intercourse between the soul and God: 'When thou hast shut thy door, pray to thy Father which is in secret' (Mt 6).

(2) We are taught to approach God as a child drawing near to a father, with perfect simplicity and directness, in confidence and love. 'Pray to thy Father;' and remember that 'your Father knoweth what things ye have need of, before ye ask him' (Mt 7). He is a Father whose knowledge of your needs is infinitely greater than your own.

(3) Christ gives a form of prayer which is to serve as a pattern. The Lord's Prayer teaches us what to pray for. It also teaches us how to pray. In we are taught to pray for the supreme end which God Himself seeks, and also for temporal and spiritual good for ourselves. Most remarkable is the order in which the petitions are arranged. The prayers for God's glory and Kingdom come before anything personal is asked. From this we gather that all private and personal ends must be subordinated to the higher purposes of the Divine Will. All our prayers must be offered up with the condition that the supreme end, which is the universal good, must overrule all particular ends. There must be no selfishness in prayer. The greatest instance of the application of this principle is to be found in the life of Christ Himself. When confronted with the last great temptation, He prayed, was delivered, but added, 'nevertheless not my will, but thine, be done' (Lk 22:42).

---

"The Rule and Exercises of Holy Living, London, 1668, ch. iv. § 7., Identical with Aquinas's 'ascensus intellectus in Deum' (Summa Theol. i. q. xiv. art. 18, 'de Oratone')."
This is the same principle as that which Christ sets forth as the supreme rule of all true living: ‘Seek ye first the kingdom of God, and his righteousness’ (Mt 6:33). In this principle also we find the significance of the characteristic law of Christian prayer that is offered in this the marvellous grace of God. The mission, sacrifice, life, death, and resurrection of Jesus Christ form the means by which the Kingdom is established through the overcoming of evil and the perfecting of humanity. In and through these means the world is brought into accord with the supreme Divine purpose. ‘If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you’ (Jn 15). Prayer which is truly ‘in Christ’ can never be in vain.

It is not going too far to say that, when these principles are grasped firmly, the difficulties which have so frequently troubled the minds of thoughtful people on the subject of prayer will be found capable of solution. Our purpose here is to exhibit this fact as clearly and simply as possible and to deal briefly with the deeper scientific and philosophical problems which are involved.

4. Two main difficulties.—Two great objections have been made against the efficacy of petitionary prayer.

(a) The moral, or theological, objection.—This difficulty has troubled devout minds in all ages. It assumes many forms, but, in its commonest shape, may be presented thus: God knows, better than we do, all that is good for us. Trusting in His supreme wisdom and power, we may rely upon Him to do what is best without any request on our part. To ask Him for gifts is really an effort to get Him to do something for us which we fear He may not be disposed to do. An exercise of faith, it is in truth a manifestation of doubt, perhaps even of selfishness. It is, in effect, an attempt to induce God to change His mind. Hence it is concluded that the only justifiable prayer is the prayer for resignation or, more properly, for submission of the will to God. The intercourse of the soul with God, it is said, should never be the asking for definite gifts, but always the bringing of the human will into harmony with the Divine.

In all this there would seem to be an element of truth and an element of error. The element of truth will be found in the final words in which the objection has just been stated: true prayer must always involve the bringing of the mind and will of man into harmony with the mind and will of God. This is another way of expressing the third condition of Christian prayer as given above: all private and personal aims must be subordinated to the higher purposes of the Divine Will. The element of error will be found in the supposition that this bringing of the human will into harmony with the Divine renders impossible the asking and the receiving of special benefits. The true inference is quite opposite. When the will has been brought into harmony with the mind and will of God, this is another way of expressing what the whole argument is: it is to leave out of account the incessant action and reaction of the spiritual world. The unchangeableness of God does not mean that the universe is a perfectly articulated machine, without any powers of choice or reaction. The history of the human evolution has been the history of the development of the human soul, and prayer is a further step in the progress of this development. It means, rather, that the principles and purposes of the Divine Providence are eternal and unchangeable. If God be a living God—a personal Life with whom our souls are in relationship—it follows that to every movement of the human will there is some corresponding Divine reaction. When, therefore, the will of man is brought into harmony with the Will of God, the soul is rendered capable of blessings which were before impossible. The moral condition on which those blessings depend is the condition of prayer. Prayer is essentially the fulfilment of this moral condition. True prayer is the movement of the human soul into a new relationship with God. Every true prayer, therefore, renders some blessing possible. This is the conviction which has become clearer. The forgiveness of sins is granted in response to the prayer which expresses true repentance. Confession of sin which has no spiritual reality behind it, which is a mere form of words, cannot call down pardon. Only when the soul moves into harmony with the Divine Will—a movement which finds its inevitable expression in the prayer of contrition—is the blessing bestowed. This insistence is that selected by Christ Himself. Commenting on the petition, ‘Forgive us our debts as we also have forgiven our debtors,’ He says: ‘If ye forgive men their trespasses, your heavenly Father will also forgive you; but if ye forgive not men their trespasses, neither will your Father forgive your trespasses’ (Mt 6:14). Here the connection is clear. The great gift of salvation is the bringing of the mind and will of man into harmony with the mind and will of God. When that movement of the soul has taken place, the gift becomes possible. True prayer is the expression of a spiritual change which brings a new capacity to receive blessing from God. Nor is there any reason why this capacity should be relative only to spiritual gifts. The principle involved applies to the whole range of blessing, temporal as well as spiritual, in a moral and spiritual universe where all the possessions and capacities of moral and spiritual beings must be morally and spiritually conditioned.

The whole force of the moral, or theological, difficulty in relation to prayer is derived from an erroneous—indeed impossible—view of the nature of the spiritual universe. This view attributes to the spiritual a mechanical rigidity which is altogether alien from its true nature.

(b) The logical objection.—This is the one which has pressed with great weight upon the modern mind, for it derives its force from modern scientific conceptions of the universe. It depends upon the scientific principle of natural law. The advance of science, so wonderful in the modern world, has introduced the doctrine of the discovery of what are termed ‘laws of nature,’ i.e., a great order according to which events happen. Cause and effect are linked together in the natural world by certain unvarying uniformities of sequence. When one of these uniformities has been determined, it is found to be constant and unchangeable. And, the further science advances, the more fully does it appear that things and events in nature are subject to the sway of such uniformities. From this it seems to follow that the whole course of nature is a perfectly determined system. Everything that happens is the result of the previous state of things, in a relationship which is absolutely necessary.

The effect of this of course is that any devout minds has been such that prayer for benefits involving material elements has been regarded as meaningless. How can we pray for fair weather if we believe that the weather is determined by natural law? How can we pray for recovery from sickness if we believe that sickness and health depend on the physical condition of the organism, and that that condition arises from certain antecedent causes in accordance with unvarying laws? Some of those who have been...
influenced by this reasoning divide the world of human experience into two parts, spiritual and material. In the former, they think, prayer is effective, and blessings may be obtained by it; in the latter they believe prayer to be wholly unreasonable and ineffective. Such thinkers, regarding the laws of nature as the expression of the Divine Will, hold that, when we pray for material results, we are guilty of the folly of asking God to abrogate His own laws.

It is not surprising that a conception of natural law which has had so great an effect upon sincerely religious minds should have been even more influential in relation to the common opinion of the modern world. Materialism, founded by H. Huxley, and popularised by H. Spencer, has admitted the existence of a spiritual realm in which events occur which are not subject to the laws of physical causation. It has been argued, however, that change in the physical order seems impossible, but in the spiritual realm the intercourse of a soul with God may well be a means of great and varied blessing.

In considering this mode of thought, it is necessary first to take account of the sharp distinction which is so frequently made between the material and the spiritual. In regard to the latter, it is admitted that prayer may have results; its efficacy in relation to the former is denied. And hence the language of the prayer itself must be made. There are some who believe in a real response of God to the cry of the human soul seeking for spiritual blessing; there are others who think that the spiritual value of prayer is to be accounted for only by its subservience to the development of the properties of the soul, or the attainment of higher things; it brings peace, resignation, trust; these are its real benefits. None can deny these subjective effects; but, if prayer be no more, it loses even this value; for it becomes an impossibility for the enlightened. Who could seek peace in prayer, knowing all the time that his cry for help could bring no real response? This doctrine is but another form of the cynical view which regards religion as a useful superstition—an illusion which gives comfort to those whose ignorance permits them to enjoy it. More important is the view of those who hold that there is a real Divine response in the spiritual sphere, as distinguished from the physical. Many great religious thinkers of the 19th century have made this distinction. Their reason for doing so has already been explained. It was a mode of thought characteristic of the time. More recent movements of science and philosophy have been showing that this sharp division between the two realms of being cannot be maintained. Psychology has been proving the greatness of the influence of mind upon matter, and physiology has been revealing the fact that the brain is an organ which subserves the direct agency of intelligence (see W. McDougall, Body and Mind. London, 1911). The brain has been compared by Bergson to a telephone exchange. It is the instrument by which the response of the organism to a stimulus from without is controlled.

In relation to all such forms of thinking, however, our common sense supplies a ready solution of the problem which we are now considering. And here common sense is most perfectly expressed in the formula of the Christian: "Pray to the Father." When a child asks for some gift, he never pauses to think whether the gift is material or spiritual. His prayer expresses his need with the utmost simplicity and directness. As to material benefits, he knows perfectly well that his father, whose benevolence can intercede to help one another. A man drowning in deep water cries out for help because he knows that human power may be often able to arrest the progress of disease. We are all aware that there are limits to human power in its intervention in the course of natural events; but that, within those limits, its ability to produce changes in that course is shown by the course of human experiences. The mind and will of man can subordinate the course of nature to human purposes.

Further, this power is not inconsistent with the perfect fulfilment of the laws of nature. Man is able to employ natural forces in many different ways, and in many different ways, for his own ends; but every force so employed operates in accordance with its proper laws. Thus it is that all human works are accomplished. Thus almost the whole surface of the globe has been covered with fleets, the earth penetrated in pursuit of its hidden wealth. So it is that man can rise high in air in opposition to the force of gravitation, speak to a friend miles away, and send his messages round the world.

And not only is all this done in accordance with the laws of nature, but its very possibility is dependent upon the existence of natural law. The laws of nature are only another name for the trustworthiness of natural forces. When we find that natural forces are subject to mutations, that we can answer to prayer involving change in the physical order seems impossible, but in the spiritual realm the intercourse of a soul with God may well be a means of great and varied blessing.
Forgetting to consider this, and regarding nature in an abstract theoretical way as a system of laws, we form a purely fictitious conception of it from which all spiritual initiative is excluded. We then apply this conception to God’s relation to the universe and to the individual, and thus ascribe to God should first be ascribed to ourselves. Thus arises the illusion which has darkened so many souls.

Far clearer in thought and truer in principle is the faith which paves with simplicity from the common earthly experience to God in relation to human need. The earthly father can and does help his child; how much more must the Heavenly Father be able and willing to answer the prayers of His children?

It may be urged as an objection against all this that, in the case of man, we can trace his intervention in the succession of natural causes; we see him at work, selecting and combining the elements with which he deals, and so bringing about the results which he has in view. The drowning man cries for help; his shout is heard; and, by means of a rope or a boat, he is pulled out of danger. But we see no sign of similar interventions by Divine agency in response to the inventiveness of souls beneath whom their prayers are answered, it will be found that the desired results have come about by means of the apparently undisturbed operation of natural causes. If this be, in truth, God’s work in answer to prayer, His method must be different from that employed by man when he controls the succession of events. This is an important objection, and, up to a certain point, perfectly sound. It is not to be supposed that God’s response to prayer takes place in the superficial way characteristic of the natural world. Whatever conception we may form of the Divine relation to the forces and laws of nature, we cannot believe that the Almighty works as man works. Man by constant and painful trial has borrowed a little beneath the surface of things and so made useful discoveries which enable him, in a manner which is marvellous for him, to guide the course of nature for his own purposes. But God’s control of natural forces must be very different. Man works upon the surface, and it is not the thing that he understands best. What we call forces and laws of nature are but fragments abstracted from the whole and presented in forms which have been shaped by our human needs and methods. It is absurd to suppose that they are the Source and Support of the universe in the same limited way. But the objection assumes that there can be no other way in which to approach it—an absurd supposition. The whole meaning of the argument which has been presented above is just this: if man with his very limited knowledge and power is able to control natural forces for the satisfaction of human needs, how much more must the Eternal God, with His infinitely larger and deeper grasp of the material universe, be able to use the laws and processes of nature or the forces of things, through the spiritual relationships into which He enters with His human children! Neither in the human sphere nor in the divine is it necessary to suppose any violation or suspension of natural law.

The difficulty which so far have occupied our attention are by far the greatest and most formidable of all in connection with the subject of prayer. Some minor objections deserve a brief consideration.

(a) Prayer inconsistent with science.—The habit of thinking, it has been said, tends to weaken character. Men should learn to exert themselves, and so win, by their own efforts, what they require, and not look continually to some great power above them for help. The records of Christianity afford sufficient evidence to the effect that man is too small a being to claim the interest and attention of the Almighty. The vastness of the physical universe as revealed by astronomy, and its immeasurable history as disclosed by geology and biology, teach us that man is of very little account in the whole scheme. It is sheer presumption on his part to ask God to attend to his petitions. And how much more does this apply to the individual human being, who is but one out of many hundreds of millions of beings of the same sort?

In a similar spirit, it has been said that it is inconceivable that God can give serious ear to individual consideration at all and the multitude of petitions, ‘wise and unwise, selfish and unselfish, which are addressed to Him daily and hourly by hundreds of millions of human beings’ (C. Stewart, in HJ ix. 366).

In answer to such objections, it must be observed (a) that, no matter how small and weak man may be, he is yet a spiritual being, capable of knowledge, goodness, and love, able to enter into communion with God; and (b) that such arguments, instead of attributing greatness to God, really detract from His greatness. A worthy conception of God’s greatness will discern that nothing is little, nothing insignificant, in His sight. He is not like a collector who prizes a thing because it is rare, nor like a megalomaniac who admires only the gigantic, nor like a tired official who finds details wearisome and not worth the trouble of attending to them. In the universe the midge is as perfectly formed as the whale, the snowflake as harmonious as the solar system. But, above all, God’s supreme greatness is His spiritual perfection. To Him spiritual ends are supremely important. The end of every human being possessed of personality must be a matter outweighing all material considerations.

(b) The inconsistency of human prayers.—It is often said that petitions addressed to God are so bewilderingly conflicting as to the diversity of human, that it is impossible to suppose that they can be rightly offered, or can call down an answer. One farmer prays for rain, another for fair weather. In every war both sides pray for victory.

It is indeed astonishing that this objection has been seriously entertained by some reasonable people. Every true prayer must be offered up, as we have seen, with the condition that the granting of the petition is in accordance with the Divine Will. ‘Not my will, but thine, be done’ must express the spirit of every prayer. Further, every true prayer, recognizing the fact of human ignorance, must invoke the ‘if it be thy will’ (Mt 14:36). And it is surely true that no Christian soul ever expects the answer to his prayer to take precisely the shape fashioned by his own desires and imagination. On the contrary, he is convinced that, whatever the appearance may be, the God who knows ‘our necessities before we ask, and our ignorance in asking,’ will always give to His children more and better than they can ever ‘ask or think’ in response to their petitions.

(c) Prayer inconsistent with science.—The habit of thinking, it has been said, tends to weaken character. Men should learn to exert themselves, and so win, by their own efforts, what they require, and not look continually to some great power above them for help. The records of Christianity afford sufficient evidence to the effect that man is too small a being to claim the interest and attention of the Almighty. The vastness of the physical universe as revealed by astronomy, and its immeasurable history as disclosed by geology and biology, teach us that man is of very little account in the whole scheme. It is sheer presumption on his part to ask God to attend to his petitions. And how much more does this apply to the individual human being, who is but one out of many hundreds of millions of beings of the same sort?

In a similar spirit, it has been said that it is inconceivable that God can give serious ear to individual consideration at all and the multitude of petitions, ‘wise and unwise, selfish and unselfish, which are addressed to Him daily and hourly by hundreds of millions of human beings’ (C. Stewart, in HJ ix. 366).

In answer to such objections, it must be observed (a) that, no matter how small and weak man may be, he is yet a spiritual being, capable of knowledge, goodness, and love, able to enter into communion with God; and (b) that such arguments, instead of attributing greatness to God, really detract from His greatness. A worthy conception of God’s greatness will discern that nothing is little, nothing insignificant, in His sight. He is not like a collector who prizes a thing because it is rare, nor like a megalomaniac who admires only the gigantic, nor like a tired official who finds details wearisome and not worth the trouble of attending to them. In the universe the midge is as perfectly formed as the whale, the snowflake as harmonious as the solar system. But, above all, God’s supreme greatness is His spiritual perfection. To Him spiritual ends are supremely important. The end of every human being possessed of personality must be a matter outweighing all material considerations.

(b) The inconsistency of human prayers.—It is often said that petitions addressed to God are so bewilderingly conflicting as to the diversity of human, that it is impossible to suppose that they can be rightly offered, or can call down an answer. One farmer prays for rain, another for fair weather. In every war both sides pray for victory.

It is indeed astonishing that this objection has been seriously entertained by some reasonable people. Every true prayer must be offered up, as we have seen, with the condition that the granting of the petition is in accordance with the Divine Will. ‘Not my will, but thine, be done’ must express the spirit of every prayer. Further, every true prayer, recognizing the fact of human ignorance, must invoke the ‘if it be thy will’ (Mt 14:36). And it is surely true that no Christian soul ever expects the answer to his prayer to take precisely the shape fashioned by his own desires and imagination. On the contrary, he is convinced that, whatever the appearance may be, the God who knows ‘our necessities before we ask, and our ignorance in asking,’ will always give to His children more and better than they can ever ‘ask or think’ in response to their petitions.
PRAYER (Christian, Theological) 175

prayer. "Give us this day our daily bread" [Matthew 6, 11.]. We the recognition wards [1872] can the rewards were moral Tyndall from the difficulty He soul to the one. It has been urged that the effects of prayer, if it has any, must be of such a nature as to be open to proof by ordinary scientific methods. Tyndall proposed that two wards in a hospital should be selected; in one the patients should be treated by medical science, in the other they should be made the subjects of prayer only (CR xx. [1872]210). Others suggested tests by observation. Sovereigns and royal princes are prayed for more constantly than other people; can we, in the records of such prayers, find that they have enjoyed longer life and been endowed with greater blessings, spiritual and temporal, than those who have not been so much prayed for? (F. Galton, Fortnightly Review, new ser., xii. [1874].)

The crudeness of these suggestions is perhaps more obvious now than at the time when they were made.

(1) It is now known that the influence of suggestion upon mind and body is very great, and there is clear evidence that suggestion can act unconsciously. Also there is good evidence for telepathy, i.e. the influence of mind upon mind at a distance and independently of material and sensational methods of communication.

(2) It would have been more difficult to determine the real conditions of such an experiment as Tyndall proposed. It is obvious also that royal princes, in their relation to their mental and moral environment, are in a position very different from that of ordinary men. Further, it is impossible to isolate any human soul from the influence of prayer.

In addition to these considerations, it should be remembered that Tyndall's proposed experiment would have been the first attempt of its kind. It would have been altogether lacking in spiritual reality. It would have been an exhibition of doubt rather than of faith. It would have been treating the Almighty as if He were a chemical reaction.

(c) Intercessory prayer. — There is a peculiar difficulty involved in prayer of this kind. We have seen that, when a soul turns to God in sincere prayer, the spiritual movement which the prayer expresses establishes a new relation of the soul to God which makes possible blessings that would otherwise be impossible. Thus the prayer of con- trition fits a soul to receive the Divine pardon. This consideration enabled us to perceive that true prayer is not inconsistent with a perfect submission to the unchanging purposes of the Divine Will. But here, it will be asked, can the movement of a soul towards God be efficacious for the benefit of another?

The problems involved in this question are very profound, and to consider them with any fullness we must return to the latter part of the previous chapter. The simplicity on which we have laid down which will be found to give help. (1) Modern psychology has shown that one mind can influence another in other ways than by speech and sight, and therefore can alter to some degree the impressions which it is capable of transmitting to the mind. (2) A soul which yields itself to God in prayer may become the channel through which Divine influences can flow to others as well as to itself. As the influence of goodness in a human being can spread from soul to soul, so much more can a far greater degree, can the influence of Divine goodness pass through one human soul to another.

6. Deeper problems. — (a) Conception of God. — Prayer assumes the being of God. But in what sense, if any, the existence of God is proposed in monotheism. The essence of this doctrine is that God is one, holy, supreme in the universe, and standing in a moral relationship with His creatures. All our arguments so far have gone upon this postulate. But this doctrine is capable of several interpretations.

(1) God is sometimes conceived as altogether transcendent. He is a creator who called the world into being, giving it a certain definite constitution. This thought of God is founded on an analogy from human work. An engineer makes a machine, fitting its parts together, so constructing an instrument by means of which certain desired results can be accomplished. So God, having a great purpose in view, created the universe. To this conception a very great difficulty is apt to arise. It is only a very imperfect machine which requires to be continually set right. If the universe needs constant interference in the shape of answers to prayer, or intercession, it must be a very imperfect machine. On the other hand, if God foresaw and ordered everything from the beginning, what place can there be for changes in answer to the petitions of men? To this question there can be only one possible answer, viz. that prayer, and the theologians have not hesitated to give: both the prayer and its answer must be parts of the original Divine plan (J. McCosh, CR xx. 777).

It must be confessed that this solution seems to make prayer unreal; the spontaneity of human initiative has disappeared, and we are left with a sort of self-generated social mechanism, which nearly all the theologians have hesitated to give: both the prayer and its answer must be parts of the original Divine plan. (J. McCosh, CR xx. 777).

It must be confessed that this solution seems to make prayer unreal; the spontaneity of human initiative has disappeared, and we are left with a sort of self-generated social mechanism, which nearly all the theologians have hesitated to give: both the prayer and its answer must be parts of the original Divine plan. (J. McCosh, CR xx. 777).

(2) Our thoughts on this subject can be to a great degree corrected by introducing another conception. We can think of God as the immanent Life of the universe. This conception brings our thoughts into very suggestive relationship with modern ideas of evolution. It also enables us to think of God as a very great power which is in every other living being, and every element in nature, is in continual intercourse and contact. We are thus lifted out of those purely mechanical ideas within which the former conception confined us. At the same time, the idea of immanence is in constant danger of drifting into pantheism, and therefore of losing belief in that moral relationship between God and man which is the very life of a monothelite creed, and the foundation of all faith in the efficacy of prayer.

(3) There is a higher conception of Divine transcendence which is not inconsistent with belief in the immanence of God. This conception is founded on a full recognition of all the data of experience. Discerning in the principle of personality our nearest ground of human feeling, it takes account of the moral freedom of the human individual. It therefore thinks of God as the supreme personal Life, within the sphere of whose being there is room for the free interaction of the whole of his subhuman and sub-divine, through the Infinite in whom we live and move and have our being, and the Father of spirits on whose love and providence we depend. The difficulty of making this conception perfectly consistent is simply that we have only been able to think in one scheme of thought the diverse elements of the world of our experience. The true value of this view of God, as at the same time immanent and
transcendent in this higher sense, is that it takes account of all the facts and holds fast to that fundamental monotheism which is the ultimate justification of the position that the moral aim is supreme in the universe. 

(b) The unchangeableness of God.—The conception of God which has just been set forth gives us the true solution of this problem. When we speak of God as unchangeable, we do not mean that the whole universe is fixed by His fiat in a complete rigidity. That is the mechanical conception which, as we have seen, is wholly inconsistent with the facts of life and morality. God is unchangeable in the sense of being absolutely trustworthy, purpose cannot be altered. That purpose is the realization of the moral ideal. It is the good of all and the good of each. It is the Kingdom of God, or Kingdom of Love. In its application to the infinite variety of human and moral situations, this unchangeable purpose must take the form of an unfailing Divine response to every element and tendency of good in the character and life of finite personalities.

(c) Conception of law. — Much confusion has been caused by the failure to distinguish between the various meanings of the word ‘law.’ We speak of the laws of nature, and also of the moral law. It has sometimes been asked, Are we to pray to God to abrogate His own laws? The reference is to the moral law. The law of nature is a discovery by science; but the whole force of the question resides in the connexion of the word ‘law’ with God, and our reverence for the great moral laws which we have been taught to trace to Him. A law of nature is merely an observed uniformity, a manner of physical cause and effect, a certain order in the way in which events follow one another. Such a law is not, in itself, capable of effecting anything. It is even wrong therefore to speak of nature as being governed by laws. A law of nature, in fact, simply our way of grouping our observations. It is a description and nothing more. Nor are we at all sure that such descriptions of grouped natural processes as have been so far ascertained, and labelled laws, are anything but provisional statements. There are indications that even such vast generalizations as the law of gravitation or the law of the conservation of energy may some day be merged in larger descriptions of the sequences which they include.

The science of today is showing good reason to believe that these laws of nature, which are essentially the description of natural processes in terms of human intelligence, are relative to our mode of grasping our experience of the physical world with a view to the satisfaction of our needs (see Bergson, Creative Evolution, Eng. tr., London, 1911, ch. ii.). They have, that is, been shaped by the practical aims of human life. It is altogether in harmony with this doctrine that the knowledge of these laws is the very means by which man employs in order to control natural processes for his own purposes. His amazing success in this work is revealed at every turn in our wonderful modern world. The absurdity of supposing that the discovery of these laws makes it improper for us to pray to God for benefits which such changes in the physical sphere is therefore manifest.

The most notable expression of the doctrine that the laws of nature forbid prayer is Tyndall’s famous attempt to show that the principle of the conservation of energy invalidates all possibility of Divine intervention in the physical world.

The principle," he writes, "teaches us that the Italian wind gliding over the crest of the Matterhorn is as firmly ruled as the sun rising from his bed in the East, that the fall of its vapour into clouds is exactly as much a matter of necessity as the rise of the seasons. ... Without a disturbance of natural law, quite as serious as the stoppage of an eclipse, or the rolling of the St. Lawton up the Falls of Niagara, no act of humiliatiou, individual or national, could call one single atom, or deflect t free beam of the sun (\"Fragments of Science, p. 335, \"Prayer and Natural Laws.").

This argument, enforced as it was by the authority of a distinguished man of science, had an enormous effect at the time when it was first presented (see Stopford Brooke, Christ in Modern Life, p. 132) and is not without influence even now. But as Oliver Lodge points out, it is open to objection—

'Even from the strictly scientific point of view: the law of the conservation of energy is needlessly dragged in when it has nothing really to do with the matter. We do not ask of God that we have no power, nor hint of any power, to override the conservation of energy, are yet readily able, by a simple physical experiment, or by an engineering operation, to deflect a ray of light, or to dissipate a mist, or divert a wind, or pump water uphill (\"Man and the Universe, p. 7, see also chs. i.-iii., and Life and Matter).

George Stokes deals with objections of this kind in a similar manner and with equal clearness and decision (\"Natural Theology, p. 220). These utterances of competent scientific authorities are in perfect accord with what has been said on this subject. The principle which they express is just this: natural law is indeed unfailing, but all experience proves that this constancy does not prevent human intelligence and skill from making use of physical forces and so effecting results which the nature of those forces would make it impossible ever to bring about. If human power can do so much, why should Divine power be helpless? As we have seen, the existence of those constant uniformities which we call the laws of nature is the very foundation of all human power in dealing with the forces of nature. Therefore we have reason to believe that, in a far profounder way, the order of nature subserves the operations of Divine Providence.

(d) Prayer and miracle.—Objection is sometimes made that prayer is in essence the request that God should interfere miraculously for our benefit. Fundamentally, it is said, answers to prayer and miracles, if such things happen, are indistinguishable. This is not the place to discuss the great and intricate question of the miraculous (see art. MIRACLE). Let it suffice to say that those who believe in miracles do not, in our time, suppose that a miracle is a violation of law. It is usually held that it is a manifestation of an exception to a group of laws, which do not enter into our ordinary experiences. But, while all this is admitted, it must be remembered, as上述 above, that natural laws, as we apprehend them, belong to abstract realms of experience and are probably relative to our mode of apprehension. There is a sense also in which it must be said that the miraculous is relative to our mode of apprehension. As the control which civilized men exercise over natural forces appears, or might appear, miraculous to the intelligent savage, so a superhuman control of natural forces may well be the true nature of what we call miracle. There is therefore no objection to miracle on the ground of scientific principle. But this is not a sufficient account of the matter. The Christian miracles, as recorded in the NT, are not mere wonders. They are not even mere displays of superhuman power. Their distinctive quality is to be found in the fact that, while exhibiting superhuman power, they also reveal the Divine event by man's immediate recognition of it as a 'acts of revelation.' Here is the force of the term 'signs' (miracles) by which they are designated. This consideration at once makes clear the distinction between a miracle and an answer to prayer. It may well be that, at the very beginning of the operation, there is no difference between them. But the former is intended to reveal the operation
of one who is able to exert superhuman power and, in exerting that power, to manifest His character. The last and greatest of these is the power of divine life. For in the former the Divine element is manifested startlingly in order to attract attention. In the latter we must expect that the Divine direction of events takes place secretly, in the inmost heart of things, producing results which are as obviously marked by the operation of a spiritual force as a louder current by the flow of a river. The difference between the two is to be found rather in the purpose which guides the operations of Divine Providence than in the nature of the method by which the results are effected. Much more is included in the phrase, 'God doth not happen,' to quote a famous phrase, in our ordinary experience. Answers to prayer occur every day.

7. Summary.—The result of our whole investigation is this: to a believer in a living God the efficacy of prayer is capable of ample justification. None of the objections which have been made against it on scientific or philosophical grounds can be sustained.

C. F. D'Arcy.

PRAYER (Christian, Liturgical).—If prayer is the natural and necessary outcome of belief in God, it is most natural and most necessary to the Christian believer, for the Christian dispensation was far off from mankind, unknowable, far above man and the needs of man. The incarnation of the Son of God brought man as it were into touch with God. God revealed Himself in the Son in the Incarnate Christ, and the Son of God, by the immediate operation of His own spirit, came into close communion with God. God was no longer far away, beyond the ken of mankind, no longer so far beyond man as to seem unable to comprehend the needs, the longings, and the understanding of His people. The Spirit, seeking the welfare of the believing in highest heaven is also Son of Man, understanding and knowing by virtue of His incarnation man's needs and man's weaknesses, loving man not only with a love divine, but with a perfect love, as we have in the Incarnate Son of God. He is of the same substance as man. Prayer, therefore, since the Incarnation, became something infinitely more real than ever it could be before—a real and intimate connexion between heaven and earth, between God and man. Our spiritual aspirations are for both God and man, and the Son of God, as Eternal Father by the mediation of Him who lived and prayed and died among us, and ascended to the right hand of the Father to be our Mediator and Saviour.

Our Lord made us pray, and Himself in this as in all things sets us an example. First there is individual prayer, which concerns the needs of the individual, whether spiritual or temporal. But there is another aspect of prayer. Our Lord teaches us above all things the brotherhood of man, that the whole race of humanity is one great family with a common Father. So prayer must also be collective, consisting of worship which is due from the whole family alike to God the Father, the Son, and the Holy Ghost. We find in it necessary to our religious existence, the worship of both of the one and the other. Such a prayer as 'O God of the crosses that are laid upon us, help thy servant Apollhous,' which has survived in a 4th century fragment (Ox. Prap. vii. [1010] no. 1058), may be taken as an example of prayer to God in times of intense personal need—such a prayer as has been prayed millions of times.

Collective prayer is public, the common prayers used when the family of God gather together to give Him the worship due from all. The history of common prayer is to be found in the liturgical service of the Church. Christ came to fulfill the law, not to destroy it. The Christian Church regarded itself as the fulfillment and the perfection of the Jewish Church. Christ Himself taught in the synagogue to be taken in the synagogue worship. He went up to Jerusalem and took part in the Temple worship at the great feasts. The Eparchist was instituted by Him at the Passover Supper, and is the Christian Passion, the Suggon of the Church. So it was that the Apostles in Jerusalem after the Ascension still frequented the Temple and taking part in its worship. The Eparchist only seems to have been their own distinctive act of worship. St. James the Lord's brother frequented the Temple till the day of his death. Even St. Paul used the synagogue worship as long as he could, and it was not the Church that cut the connexion with Judaism, but Judaism that cast off the Church.

Thus, when we come to consider Christian prayer in its public forms, we should naturally expect to find that it is a Christian development of Jewish forms of worship. Unfortunately there exists very little Jewish liturgical material of the time of Christ, but none the less it seems, from that which is extant, that the elements of Jewish worship, sources, that Christian worship is based upon the worship so familiar to the majority of the first generation of Christians before they came to the faith of Christ.

Jewish worship consisted of the synagogue worship and the Temple worship. The synagogues were served every Sabbath day, and there were also services on the third and fifth days of the week, Tuesday and Thursday. The synagogue worship was the public worship done by the Mishnah of what it consisted. It began with the Shemah ('Hear, O Israel'); then came a lection

VOL. X.—12
from the Law and a lection from the Prophets; then came the blessing, followed by the Targum, an explanation in the vernacular of the Hebrew lections, and a discourse or sermon on what had been said, but not service or broken continuity from the Gospels, was not only present at on Sabbath days, but frequently took part in as reader and preacher.

The Temple service existed of course only in Judaism, and it was probably in the morning and the evening sacrifice. In connexion with these was the singing of psalms, and the eighteen benedictions or ascriptions of praise to God were made daily. Then there were the great annual festivals, at the chief of which, the Passover, many thousands of Jews gathered together from all parts of the world. The ritual of the Passover Supper we know partly at least from the Mishnah, which probably represents the use of our Lord's time. The liturgy of the Paschal Supper begins with ritual question and answer, and then the celebrant recites the Hagaddah, the story of God's mercy to Israel, speaking of the bitter treatment of the people in Egypt, and of their wonderful redemption from slavery, and closing with a burst of enthusiastic hope and prayer.

1. The Eucharist.—It is almost a certainty that the Eucharist was instituted by our Lord at this Passover Supper. The Hagaddah is doubtless represented by the expression, 'when he had given thanks, then followed the giving of the bread, and the Cup to the disciples, with the charge that they should always do this in remembrance of Him.' Thus we see how closely Christian worship is bound up with the older worship, how true was the feeling that there was an unbroken continuity between the old and the new dispensations, and how the new dispensation of Christ was but the fulfilment and perfecting of the old. For the Eucharist was the central act of Christian worship from the very first.

Of the early ritual of the Eucharist we know very little. In the Acts the Sunday reunions of Christians for 'the breaking of bread' doubtless imply the Eucharist, whether in connexion with the grace of 'reading' and prayer, or in the expression 'breaking of bread,' as, e.g., in the Didache, simply implies an ordinary meal. In St. Paul's references to the Eucharist in connexion with the abuses at Corinth (1 Cor 11) we are told nothing definite; that he had 'I have received of the Lord that also I delivered unto you' (v. 2)—seem to imply some recognized outline, at least, in the form of thanksgiving used, which would apparently include some reference to, or perhaps recitation of, the account of the institution. The Didache gives forms which are most certainly Eucharistic prayers, but the date of the Didache is so uncertain, and the authority of the work so doubtful, that it is not safe to build too much on these forms. They seem to be a form of the grace of 'reading' and prayer especially adapted to the Eucharist. These forms of grace are found again in the tract of St. Athanasius On Virginity, but simply as graces.

The first actual description of the Eucharist is found in St. Justin Martyr (c. A.D. 150) in his First Apology (65), and there are several references to it in his Dialogue. According to the description in his Apology, the Eucharist begins with the kiss of peace, then the offering of bread and the mixed cup is brought and the celebrant proceeds to offer praise and worship and thanksgiving, to which the people answer, 'Amen,' and then follows the communion. Elsewhere he speaks of the ex observation, or thanksgiving prayer, as including thanksgiving for the gift of the peace and prayer that is in it, for our redemption, and for the breaking of the power of evil (Dial. 41). His reference to the words of institution perhaps imply that they were included in the thanksgiving. But there were as yet no forms fixed except in outline. Justin's description certainly fits very well the Eucharist which would be celebrated in the same way, but, on the other hand, he states definitely that the actual wording of the prayers was left to the celebrant.

But, according to Justin, the Eucharist proper was preceded by another service, the common meal, with it (Apol. i. 67). This consisted in lessons from the Gospels or Prophecy or both, then a sermon by the bishop or celebrant, and this was followed by prayers. Closely on this followed the Eucharist proper, the celebrant reciting the formula, with the similarity between this service, which is the later Pneumaphora of the liturgy, and the synagogue Sunday service, and we are drawn to the conclusion that this first part of the Eucharistic liturgy is based upon the synagogue worship just as the anaphora, or Eucharist proper, is based upon the ritual of the Passover Supper.

St. Clement of Rome, St. Irenæus, Tertullian, and St. Cyprian also refer occasionally to the Eucharist. In Cyprian the beginning of the Eucharistic prayer is already before the 'Preface' (proefatio). Also in certain non-orthodox works of the end of the 2nd cent. or the beginning of the 3rd, the Acts of John and the Acts of Thomas, we are given partial descriptions of the celebration of the Eucharist. It is when we reach the era of the Church Orders, however, that we first come to definite accounts of the actual Eucharistic ritual. The Church Orders seem to have been almost authoritative, or certainly were a very wideogue, and are certainly based on the writings of Hippolytus. There seem to be two recensions of the Church Order, the first about A.D. 250, existing now in various versions, Latin, Coptic, Ethiopic, Arabic (including the so-called Canons of Hippolytus), and Syriac (embodied in a work called The Testament of our Lord, and in its present form of about A.D. 350). The second recension seems to have been made in the 4th cent., and in this the original Greek survives, with versions in Latin and Syriac.

In addition to these there is what is known as the Didascalia, a work which forms the basis of the first six books of the Apostolic Constitutions, the 8th book of which is the latest recension of the Didascalia. The 7th book of the Apostolic Constitutions is based on the Didache, the whole work belonging to the second half of the 4th century. In this extremely valuable collection of documents we have a detailed description of the Eucharistic liturgy of the 3rd and 4th centuries.

The two divisions of the Eucharistic liturgy are still clearly marked. First comes the Pneumaphora, consisting of a series of lections from Law, Prophets, Gospels, Acts, and Epistles, apparently unixed in number, interspersed with psalms which survive in the ancient Euchologion, and communion of the Latin Church. These are followed by the sermon, and then, as in Justin, comes the prayer for all estates, after which catechumens and those under penitence depart. Then follows the anaphora, beginning with the kiss of peace. The anaphora begins with the Susrsum corda and Preface. The Preface, or thanksgiving, contains thanksgiving for all God's mercies to mankind, leading up to the Passion and an account of the death and resurrection of the incarnate Son of God, a formal act of remembrance, and the invocation of the Holy Spirit, the whole concluding with the Lord's Prayer. After the communion come the act of thanksgiving and the dismissal.
ing developments. Thus in the earlier Church Order it is still definitely left to the celebrant to use his own words, the forms provided being apparently a model, or for the use of those who had not a ready flow of words. It is in the invocation of the Holy Spirit that the most interesting development took place. The invocation was originally an invocation of the Holy Spirit on the act of consecration, with the suggestion that the celebrant receive the full virtue of the sacrament. This idea extended gradually to the idea of the invocation of the Holy Spirit on the elements that He might make them the Body and Blood of the Lord. The invocation of the Holy Spirit was a half-way point between the two; that of St. Cyril is definitely on the elements, as is the invocation in all later Eastern liturgies, which, however, retain some signs of the earlier idea. In the liturgy of Sarapion, bishop of Thunus in Egypt (c. A.D. 300), we have perhaps the first example of a liturgy used as it was written. This liturgy consists of the anaphora only, and is interesting, moreover, in the fact that the invocation is of the Word and not of the Holy Spirit. The liturgy generally tended to become more and more fixed and written service about the end of the 4th century.

In the East the extant liturgies are all of the same structure as that of the Apostolic Constitutions, and have developed only in length.

In the West the history of the liturgy is not so clear. In the work once attributed to St. Ambrone, the de Sacramentis of c. A.D. 400, there is an account given of the liturgy. This liturgy is apparently that underlying the later Roman Mass, and is the one which is often called the Roman. The later history in the West is obscure. In Charlemagne's time there were two types of liturgy extant in the West, the Roman and that called the Gallican. The latter type, less formal and much more verbose than the Roman, was displaced by it, and survives only in the Mozarabic rite and in the Ambrosian Liturgy of Milan, though the latter has been very much Romanized. It is from the Roman that all other Western liturgies have derived. Thus the Greek service-books, the Sarum, York, Hereford, and Bangor—are all Roman, with the exception of certain prayers peculiar to the use added. This is due to the very many Continental uses, all of which had their own peculiarities, and of which that of France secured the better chance in the 19th century when they were displaced by the Roman rite. All alike are fundamentally Roman. The English Prayer Book is based on the older pre-Reformation uses, and is thus Roman in type. See also art. Litany.

2. The daily offices. The Euchist was from the first the central act of Christian worship, but alongside of this other forms of additional worship very soon sprang into being. We have seen, e.g., that the liturgy is formed of two parts, the anaphora and the Anaphora, and that the union of these two was at first very loose. In fact, it seems that the former could be and was used separately with a sermon. So it was used, in certain places—e.g., Alexandria—on the station days, Wednesday and Friday. But the growth of other services was very early, and this too seems to have been a Christian development of Jewish devotion. In the book of Daniel there is a reference to three set hours of prayer, and perhaps the same is implied in the liturgy mentioned above at noonday, will I pray. Again in the Acts we find the three hours—the third, sixth, and ninth—observed as times of prayer. In the Didache the Lord's Prayer is ordered to be said three times a day. The growth of additional devotions came in the form of the morning prayer, which at the third, sixth, and ninth hours, but these were private devotions only and said at home. There were, however, apparently, when it was possible, morning and evening prayers said publicly, and forms of these prayers are given in the Liturgy of St. Basil. The Testament of the Twelve Patriarchs contains a collection of sacerdotal liturgies, consisting of psalms and prayers. Gradually the three hours began to become times of public service, and this was perhaps largely due to the rise of monasticism, by which these hours were conducted. In the case of men and women living in communities. In addition to these there was the night office, which originated apparently from the vigil of Easter, which in early days was strictly kept, and was extended to the eve of less holy days, and then became a definite night service. The night service seems to have originated as a regular observance in Syria, and it was introduced into the West by Cassian—the matins of the Breviary. In the Postulaio of Etheria (612) we are told that the hours observed at Jerusalem were matins, the sixth hour, the ninth, and vespers, and that in Lent was added the observance of the third hour. Eventually the offices in the Breviary amounted to eight, with matins, lauds, prime, terce, vespers, and complines. Originally monastic, they were enjoined on all clergy, and the laity were expected to (and did) attend at least some of them.

3. Popular devotions. But the hours tended to become more and more a cult of the clergy, and devotion became that of the laity from the 10th or 11th cent. is the Little Hours or the Primer. The 'little hours' were originally additional devotions in honour of the Blessed Virgin, and were generally called 'the Hours of the Virgin.' But they speedily became the popular devotion of the laity, and as such tended to develop so as to meet the needs of lay folk. Thus the 'little hours' contained a series of hours of prayer, sometimes several such series—e.g., 'the Hours of the Virgin,' 'the Hours of the Cross,' 'the Hours of the Holy Ghost.' To these were appended the gradual psalms, the penitential psalms, sometimes the whole Psalter; also the offices of the dead, the commendation, generally a litany, and various prayers for various purposes. These Hours were very popular, and very common, both in Latin and in the vernacular. They are frequently mentioned in wills, and a considerable number of them survive to the present day. Other popular works there were, such, e.g., as The Pater Noster. These Hours were very popular, and contain the hours of prayer, dirge, and the commendations, but with an admonition against praying for the dead. It also contains a good deal of instruction and exposition of a reforming type. This book appeared in 1534, and was printed in France on at least twice. In 1539 the Primer of John Hilsby, bishop of Rochester, appeared. This contains the hours and dirge, but many of the lessons are changed to new ones, the litany with many of the sections omitted, and the morning Mass, and other matter of a devotional and instructive kind. Both these primers were superseded by King's Primer in 1543 and its Latin form, the Orarium (1546). These were non-Dionysian in origin, and contained the hours, penitential psalms, litany, dirge, and commendations, the psalms and devotions of the
Passion, and a few private prayers. *The King's Prayer* was reprinted in the reign of Edward vi., and again in 1551 with some omissions—e.g., the 'Hail, Mary,' and the names of the saints in the litany—and again in Mary's reign. In 1553 appear the *Prayers and Sayings of the Blessed Virgin*, differing, however, in an entirely different character from the preceding books, and is simply a book of private prayer for each day of the week, followed by the collects and 'sundry godly prayers,' omitting entirely the homily and benediction of the book.

In Elizabeth's reign the *Primer* of 1551 was reprinted in 1559 and a very similar edition in 1566. The *Primer of 1553* was reprinted in 1560 and 1568. Also in 1560 she published a Latin form of her *Primer*, the *Orantia*. Differing, however, in some respects from the English book. In 1564 appeared her *Preces Privata*, containing a Latin order for matins and evensong similar to but not the same as that of the Prayer Book, with hymns, and a large collection of various forms of devotion. This was reprinted with some additions in 1573. *A Book of Christian Prayers* appeared in 1569, and was several times reprinted (with some alterations from the original edition) in Elizabeth's reign. The *Prayer Book* of James I. consists of many devotions for various occasions, and has the litany as an appendix.

By this time the English Book of Common Prayer seems to have become to lay people what the *Primer* was in the Middle Ages at the end of the Latin services. Devotional books henceforth were put forth only by private enterprise, and were simply intended to be used with the Prayer Book. One exception perhaps may be instance, and that is *The Book of Devotions*, which he published in 1627, and which was based on the *Primer of Elizabeth of 1550* and follows the old arrangement of hours. Later devotional books which had a great vogue may be instance, such as Bishop Andrews' *Praxis Privata* (Oxford, 1675), Jeremy Taylor's *Holy Living and Holy Dying* (London, 1686), Bishop Wilson's *Sacra Privata* (London, 1900), and through the 19th cent., the Prayer Book was commonly bound up with a *Companion to the Alter*, containing devotions, sermons, and prayers, and forms of communion, and forms of thanksgiving. In the 19th cent., this immense number of devotional books has been issued—too many to deal with here.

**R. K. JOHNSTON.**

**PRAYER (Egyptian).—**Of forms of prayer in Egyptian ritual little is known. Among the magical formulæ, addresses, statements, and adorations in the daily ritual of the temples there are few passages associated with this subject. As a matter of fact, when the officiant in the temple of Amen-Re explains, 'Come unto me, Amen-Re, open for me the gates of heaven, throw open for me the gates of earth,' etc., the demand seems directed to carry into execution the objects of the officiating priest on behalf of the deity rather than the direct benefit of any one (cf. A. Moret, *Le Rite du culte divin journalier en Egypte*, Paris, 1902, p. 81 [several prayers in this tr. would be better interpreted as direct statements]). The funerary ritual is similar, but late copies contain a short prayer to all the gods for the welfare of the dead (E. Schiaparelli, *Il Libro dei Funerale*, Rome, 1882–90, i. 108).

While attitudes of adoration, submission, etc., are represented frequently on the monuments, there are few passages of prayer. Of times and places for prayer also little can be said; sunrise and sunset appear to have been the special hours for adoration of the forms of Re, the sun-god; the griffits on temples and sacred places belonging chiefly to the late ages of paganism show that prayers were offered in and about them.

From the Old Kingdom very little is preserved in the nature of prayers beyond the funerary formula (see below); this applies even to the enormous body of the Pyramid Texts in which ritual charms and hymns are brought together for the welfare of the dead king. The texts of the Middle Kingdom are more productive in this respect. In the New Kingdom, especially after the days of Akhenaton (the enthusiastic monotheist and heretic at the end of the XVIIIth dynasty), an age of personal piety began in which the worshipper turned naturally to his god for protection and help. But the remaining utterance in combined hymns and prayers, was never lost, though formalism and magic reassured their sway with greater strength than ever in the lives and writings of the ultra-religious Egyptians in this era.

The *Funerary formula.—*A form of prayer for the comfort of the dead, beginning with an obscure phrase, 'Grace that the king grants, grace that Anubis (or other gods) grants,' is seen everywhere from the Old Kingdom onwards, and continues almost to the end of paganism. In the Old Kingdom the prayer, as prescribed on the great tombs, usually for a good burial after a good old age, for food, etc., daily and on the feast days, and 'to travel on the roads on which worthy travelers travel,' etc., is addressed to the funerary gods; later it was addressed also to local and other deities and often greatly developed according to individual taste. TOMBKILLS request the passer-by to repeat it, adorning him by his love of life, hatred of death, and devotion to his duty; his will was bequeathed to his office to his children, and remind him that it will cost him no more than a little breath.

SALUTATION. In speech and in writing these were prayers. After the name of royalty or of one of superior it was proper to add, 'May he continue living prosperous and in health.' Letters of the Middle Kingdom end, 'May your hearing (of this) be fortunate.' In the New Kingdom a letter addressed to a king begins with prayers for his prosperity and long life (Griffith, *Hieratic Papyri from Kahun and Gurob*, London, 1898, pp. 67 ff. and 91). In later times a petition or letter to a great man commences, 'May Ammon cause his life to be long.'

In early times to 'lift up the voice' (probably wanting shout ing) in the tomb chapel was considered a gross offence, and doubtless both tomb and temple were places of solemn silence during the greater part of the day; hence religion tended to be incarnated with silence. On the vivid realization in the New Kingdom of personal relationship between the individual worshipper, however humble, and his protecting deity, we find insistence laid upon the value of secret prayer and contemplation, and the relatively secret and contemplative nature of the divine services of silence.
hear thy speech and receive thy offering.' (Maximna d'Av. 3, 1–4; see J. H. Breasted, Development of Religion and Thought in Ancient Egypt, New York, 1912, p. 350).

At Funen, and also in Lapp regions, human ears and stones sculptured with ears were dedicated in the temples to the succouring god or goddess, ‘who heard the prayer of the traveller afar off’; and in a group of little shrines in the necropolis of Thebes the stèle were set up in honour of various deities. The shrines were laid out to resemble the pleasures inflicted on the sinner and his goodness to the repentant who sought their aid.

The goddess is a lion; she smiteth as a fierce lion smiteth and she alighteth from heaven on the main with a strong voice; she doth call to her mistress and found that she came to me with sweet breath. She was gracious to me after she had caused me to see her hand. She turned again to me in favour, she let me forget the sickness that was on me.' etc. (Erm., ‘Denkstene aus der thebaischen Grabesstätte,’ in S.B.W., 1871, p. 3080).

LITERATURE.—An elaborate examination of the funerary formula by Gardiner, who explains it as a statement rather than a prayer, is printed in N. de G. Davies and A. H. Gardiner, connected with the cult of the dead, p. 176. Hymns and prayers prefixed to the Book of the Dead are tr. by E. A. Wally Budge in various ed. of this text.

F. L. Griffith.

PRAYER (Finns and Lapps).—1. Ancient Finns and Lapps.—The ancient Finns and Lapps attributed to every natural object a living spirit. The Lapps prayed for aid to the spirits in the rocks, water, etc., men, water-spirits, e.g., were known as coccce-olmaki, ‘water-men.’ Indeed the relations between men and spirits were at first, as Castrén has pointed out, like those between men and men. As a man would naturally call a neighbour to his assistance rather than a stranger, so the ancient Finns and Lapps would pray to familiar spirits, like those of well-known trees and streams, rather than to remote beings, like sky-spirits, whom they did not know and could not expect to control. But spirits came to be thought of as good or evil, and thus the relations of beings, able to move about and occasionally visible, whose existence was not entirely dependent upon the objects of which they were the spirits and guardians, so that the spirit of one object might guard also other objects. In the course of time (before A.D. 600) they were named haltilt (Finnish) or holdle (Lappish), a Scandinavian word meaning ‘rulers’ or ‘guardians.’ The most important spirits were undoubtedly those of the dead. So avater—spirits of the natural objects in the forest or by the side of lakes and rivers, and so much more full of power than any other spirits of land or water, that they were credited with the guardianship of animals and fish, which could be reached only by those who knew the passwords. Thus, when the Lapps prayed for help in hunting, as we are told they did every morning and evening, to Leib-olmai, ‘alder-tree-man,’ the spirit to which they prayed was a forest-god, who was probably, like Yápico and Hili, the forest-gods of the Finns. It is known that the Finns believed in the spirits of the dead, and who was the tutelary spirit of the bear, the most powerful animal that they knew. Again, when they prayed, as they did constantly, to ‘water-men’ to aid their fishing, they were addressing themselves to local spirits of the dead who guarded different fishing-places. Moreover, the spirits of the dead were thought to be still in very close relationship with the living, whom they could either help or injure, so that their favour was in every case desired. The prayers were several methods by which they might be approached, viz. through (1) idolatry, (2) reincarnation, (3) shamanism, and (4) the use of special means and instruments.

(1) Among the ancient Finns spirits were located in pillars of stone or wood, in rocks or trees of peculiar appearance, and in pebbles, twigs, or rude images. All the Finnish tribes seem to have possessed as household gods loose stones or faggots, images which almost certainly embodied the spirits of dead ancestors. The Lapps too worshipped idols of stone or wood called sometimes by the Scandinavian name störjurkante, ‘great governors,’ sometimes sesitos, sometimes posegel. Every Lapp family and clan had their störjurkante standing for the forefathers, and, and private persons sometimes had one or more of their own. Prayers were offered to these idols with both communal and private oblations.

The Lapp Fjeltner described to von Düben a communal sacrifice of which he had been an eye-witness, where the wor-

shippers knelt down and prayed after a sacrificial meal. A man, before going to hunt or fish, kissed his sesito three times, and promised it some of his prey. A Lapp told Fullman that his sesito helped him as long as he kept it in a good humour? If it sesito did not help, they were often whipped or abandoned.

(2) Spirits of the dead might also be embodied in the person of a living man. They then became his guardians, and he could make a bargain with them that they should help him whenever he called upon them. According to the Lappish mythology several persons named after them by obtaining the names of several ancestors a Lapp could obtain several guardian-spirits.

(3) Dotti Finns and Lapps at one time made use of intermediaries between themselves and spirits. These were the shamans (Finnish noita, Lappish noitides), men who, owing to their exceptional nature and training, could communicate with the spirits of the dead, and through them learn the wishes of remote gods. The Samoyed shamans who lived among the Lapps in the period of their connexion with the sky-god Num to ask his will,9 various Finnish tribes practised divination for a like purpose, and Esthonian and Karelian shamans are sometimes described as ‘diviners.’ The Lapps divined through their magic drums, but they retained the primitive mysteries of shamanism; for, when their divination failed, as often happened, it was still necessary for the noitide to make a journey to the world of the dead, to appease the spirits or to obtain their help.

(4) In all the Fennos-Caucasian tribes, those could not hear men’s feeble voices. But, if ordinary words and tones could not reach them, they might perhaps hear strange shouts, mysterious whispers, or the noise of a drum. Two special means were used by the Lapps to attract the spirits’ attention: (a) juojen, incantation, and (b) mynum, magic action, especially magic drumming.

(a) Juojen.—This was a sacred chant, ‘the tenor of which no Lapp has ever been willing to confess.’ It was taught to every Lapp boy, so that he, before he could speak distinctly, had mastered the elements of this rude melody, or rather, if he pleased better, this howling.’ Averbé described it as the most

1. C. E. Lencrivst, De superstitione veterum Fennorum, Abo, 1735, p. 32.
4. Their connexion with the saito-cult, or worship of the dead, was first established by Carstén, p. 297 f.
5. It should be noted that the Finns were rigidly excluded from this worship. They paid their devotions apart to certain birth-goddesses.
6. From Düben, p. 228.
10. C. von Lappen, Lappisk lexicon och forskningar, Helsingfors, 1852, l. 207.
hides of kind yelling. In E. Lindahl and J. Ohrling's *Lexicon Lapponicum* (Stockholm, 1789, p. 60) juonuri is defined as "a kind of spell, singing, or incantation." The words of such incantations are not known. 4 Fölster said that some prayers were pronounced in a whisper with words not used in ordinary speech. 5 The omission of one word would render the chant ineffective, and might cause a shaman's death. 

5. **Shamanism.**—Shamanism is a cult that, to the best of our knowledge, has the aboriginal peoples of the whole world, though with much more strength among Finno-Ugrian peoples. 1 As a result of this reformation the shamanism was first taken to themselves the power of approaching spirits which had been restricted to an initiated class. Personal supplications, and such other charms as are used with incantations, were gathered mainly from the common stock of European magic, entirely superseded the crude mimic actions and unintelligible incantations by which the official shaman tried to enforce his will. The prayers and spells of the Finns were not like the Acanadian formula to which Lenormant compared them, 2 priestly incantations in a secret tongue, nor, like the Lapp juonuri and myrur, mere mumbling by the Lapps, in Kalevala. 3 But the prayers were aids to popular religion belonging generally to mediæval and comparatively modern times, when a man had learnt to approach the spirit world on his own account either with spells or with genuine prayers. 4

6. **Finnispr Finland.**—It seems certain that the Finns of Finland, like other members of the Finno-Ugrian family, formerly used shamanistic methods of coercing spirits similar to those of the Lapps. But they soon left the Lapps far behind, partly because the lands of the Finns were under Christian influence since several centuries earlier, but chiefly because their higher intelligence led them even before that time to assimilate the culture of more advanced neighbours. The Finns must have received their old religion loose as the rest of Europe. There are still traces of this influence. For instance, the rivalry between Finnish and Lapp wizardry which is expressed in the strife of Viinämöinen and Joukahainen in *Kalevala*, vi. 5, is a contest not in *kkaonanie* but in the singing of spells. Divination is practised by rhabdomancy 6 or by the sieve. 7 The magic drum has been forgotten and is never mentioned. 8 The rude incantations which accompanied the shaman's performances have given place to those magic songs which are so prominent in Finnish literature. The larger part of these songs were published by Lönnrot in 1880 under the title *Lätorauraja* 9 most seem to be later than the 12th century. 10

The "prayers" generally bear out Lenôv's remark that the Finns pray only for material benefits. 2 Nevertheless, they reveal the kind and simple heart of the Finn, his warm love of nature, and his peculiarly primitive poetic imagination. We may quote a short sailor's prayer: 11

**PRAYER** (Greek).—**Expressions used to denote prayer.**—The normal expression in Greek for 'prayer' is εὐφραίνεσθαι, for 'to pray,' εὐφραίνοντας, with the genitive or accusative.

4. **Sarcophagus prayer.**—The prayer is used in the sarcophagus of a woman, 1570. It is found under the name *Plegia* or *Plegie* in the *Lithuanian Prayer Book*.

5. **Talisman prayers.**—These are prayers which are used instead of charms to ward off evil. They are written on amulets or talismans, and are recited over them.

6. **St. Gregory the Great's prayer.**—The prayer is used in the *Lithuanian Prayer Book*.

7. **Petitionary prayer.**—These are prayers which are addressed to God for the relief of certain definite needs.

8. **Eloquence.**—The word is used in the sense of 'eloquence.'

9. **Oratorical prayer.**—This is a prayer which is recited over a ceremony.

10. **Prayer of the publicans.**—This is a prayer which is recited by a person who is in public office.

11. **Private prayer.**—This is a prayer which is recited by a person who is in private life.

12. **Collective prayer.**—This is a prayer which is recited by a group of people.

13. **Public prayer.**—This is a prayer which is recited by a public official.

14. **Prayer of the publicans.**—This is a prayer which is recited by a person who is in public office.

15. **Private prayer.**—This is a prayer which is recited by a person who is in private life.

16. **Collective prayer.**—This is a prayer which is recited by a group of people.

17. **Public prayer.**—This is a prayer which is recited by a public official.

18. **Prayer of the publicans.**—This is a prayer which is recited by a person who is in public office.

19. **Private prayer.**—This is a prayer which is recited by a person who is in private life.

20. **Collective prayer.**—This is a prayer which is recited by a group of people.

21. **Public prayer.**—This is a prayer which is recited by a public official.

22. **Prayer of the publicans.**—This is a prayer which is recited by a person who is in public office.

23. **Private prayer.**—This is a prayer which is recited by a person who is in private life.

24. **Collective prayer.**—This is a prayer which is recited by a group of people.

25. **Public prayer.**—This is a prayer which is recited by a public official.

26. **Prayer of the publicans.**—This is a prayer which is recited by a person who is in public office.

27. **Private prayer.**—This is a prayer which is recited by a person who is in private life.
PHRALY (Greeks)

compounds προσευχέως, ἐνευχέως. Another word, used chiefly by the poets, is λατρ., or rather λατρ., with its corresponding verb λατρεύω.

In Homer the regular verb of prayer addressed by men to the gods appears but once. Neither προσεύχεομαι nor λατρέω occurs in Iliad or Odyssey. It is, however, an old and frequent verb in Attic prose, particularly in the works of Thucydides (e.g., i. 106) of propitiation, supplication, or mediation. Thucydides has no example of λατρευμαι or λατρεύω, nor do the words προσεύχομαι, etc., appear.

Εὐγάλα, then, is the normal Greek word for prayer; λατρεύω are in the nature of penitential or propitiatory prayer; προσεύχομαι is normally “thanksgiving” (e.g., Aristoph. Plut. 841, 583, Bion, 891, Pind. 500), though also used (e.g., Plato, Crit. 166 A) as practically synonymous with λατρέω.

Other expressions for ‘prayer’ and ‘curse’ are ἀποδέ袖 and ἀποδέχομαι.

There is no clear distinction in Homer between ἀποδέχομαι (occurring some 38 times) and ἀποδέαμαι which is frequently expressly equated, as, e.g., i. 114, 121, x. 295 f.; and the same is true of ἀποδέχομαι (occurring six times)—e.g., ii. xv. 309 f. But the words are quite distinct. The notion that it could mean ‘curse’ the Erinyes is utterly wrong, being consonant neither with the Homeric use of ἀποδέχομαι nor with that of ἀποδέχομαι in non-Greek authors. The latter word, in the non-Greek sense, should rather be translated as ‘prayer.’

Pindar has ἀποδέθεν only (never ἀποδεχόμενοι) in i. v. 45, where it ‘curse.’ But in the dramatica ‘curse’ is the normal word, and is the usual word in the future subjunctive, as, e.g., Soph. 70, 685, 833, 954, 954; Eur. 417, Ch. 406, 553; Sophocles, Oed. Tyr. 265, 744, 783, Oed. Col. 132, 159, 1370, 1340, 1285, 501; Ant. 857; Soph. 633 (the only examples); Soph. 751, 1201, etc. Yet Sophocles has the verb in the sense of ‘prayer’ three times (v. 501, Oed. Col. 147, 114. In later Greek the sense of ‘curse’ prevails completely.

2. Attitude in prayer.—The most striking character
development in the Homeric prayers is the increase in address. The worshipper endeavours to be, so far as possible, literally in touch with his god.

Thus, in Pindar, OI. vi. 85, when Bacchylides prayed to Poseidon, he went down into the midst of the sea. Then, in Bacchylides, 176, Ovid, Med. viii. 651; Hor. Carm. iii. 23, I.) Of the veiled head (caput velatum) of the Roman worshipper (Verg. Enni. i. 545; Cic. de Nat. Deor. ii. 10, etc.) there is no trace in Greek, nor of the turning of the right (east) face when they prayed. Yet Verg. Aen. vii. 7, 45, 251; Plaut. Marcell. 6; Plaut. Curc. i. 69; Val. Flacc. viii. 246; Suet. Vitell. 2; Stat. Theb. vi i. 215; Livy, v. 21). Prostration was regarded as Oriental and un-Greek. Normally the Greek worshipper stood up right. Yet a form of kneeling, with a bus-relief from the Asklepion shows Asklepios standing upright and a woman on her knees before him, touching his ἁδρόμενος with her right hand (ReEd xix. 1916) 314, p. 78).

If the Homeric worshipper stepped forward, he stroked his hands towards the sea (Hom. ii. i. 351), then Polyphemus, praying to Poseidon (Od. ix. 527), raises his hands to the starry heaven. In prayer to river nymphs the worshipper fixes his eyes on the water (Hesiod, Works and Days, 737 f). Achilles in Troad, addressing his home
PRAYER (Greek)

river Spercheios, looks over the sea (H. xxviii. 143 f.).
In prayer to a chthonian deity the hands were held down on the ground,
'Come now swear to me by the inviolable water of Styx, and with one of thy hands grasp the fertile earth, and with the other the shining sea, that all may hearken to this way. And when on my way through the island I had avoided my comrades, I washed my hands whereon I prayed to all the gods, if it haply some of them that keep Olympus,' So Pind. o. l. 71 f: "Peleus 'went up to the prayer sea in the darkness' (d.us ʃav tO) to pray to Poseidon for the safety of his son Helen' (Ἀνασκώπηθη), is said of one who prays (H. 35, Od. ii. 350).

(downwards)

It all illustrated

Therefore, to reinforce his prayer to a chthonian deity, the worshipper would beat the ground with his hands:
Althaea, 'grieved for her brethren's death, prayed instantly to the sea, for her hands she beat upon the fertile earth, rolling on Hades and dreads Persephone, while she knelt upon her knees and made her bosom wet with tears, to bring her son Orestes, Agamemnon's son, and Erinna whose walketh in darkness, whose heart knoweth not compassion, heard her from Erebus' (Hes. fr. 34). 'A grey-eyed lady Hera prayed, striking the earth with the flat of her hand, and spoke saying, 'Hearken to me now, O Earth and the wide Heavens beyond,

Similarly, his prayers on his face at the greatest mysteries, and smites the Underground Folks with rods—I mean the Doves, a typical example of such solicitousness. "And, if, dear Pan, thou dost those things, may the Arcadian boys not smile thee on sides and shoulders with equal disdain!" (Clem. iof. iv. 100, 6).

3. The utterance of prayer.—Normally prayer was not merely saying, but uttered aloud. The same was the case among the Jews, as is well illustrated by the prayer of Hannah (I S 122):

And it came to pass, as she continued praying before the Lord, that Eli marked her mouth. Now Hannah, she spake in her heart (נשיך ידך: LXX, ἵππῳ τοῦ κόσμον αὐτοῦ); only her lips moved, but her voice was not heard: therefore Eli thought she had been drunken.'

It would be impossible to illustrate this practice from all periods of Greek literature:

Hom. ii. i. 450, iii. 275: μεγάλης εὐχαρίας, 'prayed loudly'; so μεγάλα εὐχαρίας in Od. xvii. 239.
Prayer is overheard (H. xxi. 253, Od. xvii. 248; Hom. Il. iv. 55: καὶ προφητεῦε ὑπὸ τοῦ θεοῦ καὶ τοῦ ἄνθρωπος τῆς θεοῦ).
The loudness of the voice increased with the fervour of the prayer. It may rise to a ρογ, or loud cry:

Αὐλοῦ ἄρειν καὶ τοῖς ἄρεσις, ἄρειν τῷ θεῷ ἄρειν (Od. vii. 142, xxii. 769, in a moment of great peril, Nestor βραχύτατος εἶναι ᾿Αργοῦν (Pind. Pyth. vi. 26).

Similarly, among the Romans, the mother prays more loudly for beauty in the case of her daughters than in the case of her boys, according to Juvenal, x. 259 f.:

"Formam optat modico puero, mauresque pueris," (v. 250).

When prayer is not uttered or is uttered in a low voice, the motive is generally expressed or implied. And the motives are several.

(a) In Hom. II. vii. 194 ff., the motive is apparently the fear that the knowledge of the prayer might enable the enemy to know a plan of attack or to trace any more potent spell; it might be in fact 'give useful information to the enemy.'

Alax is about to fight with Hector in single combat, and he asks his mother to pray to the gods:

'Yet, save me, my mother, in silence by yourselves that the Trojans may not know, or even openly, since we fear no one' (ἐφιλείς ἐμοί, ἔμοι δὲ μηκρύνοι, ἵνα μηθάληται ταύτῃ διὰ τῶν θεῶν, ἀλλὰ κακοῦ προειπεῖτε τῷ ἀχλασίῳ, παντὸς δὲ ναυτάκου, διὰ τὸ ρογ ἐντολή 

(4) External circumstances might make a spoken prayer impossible.

Thus Odysseus, swimming for his life, 'prayed in his heart' (προν' ἐμοῖ καὶ τοῦ ναυτάκου) (Od. v. 144); and this is the motive of I. xvi. 769, where Odysseus in the crisis of the footrace prayed to grey-eyed Athena in his heart,' (c) Another stage, the motive might be a natural desire for privacy—a desire, as we say, to be alone with God.

Thus, in Od. xii. 335 ff., Odysseus says: 'Then I went away through the island that I might pray to the gods. If it haply some of them that keep Olympus,' So Pind. o. l. 71 f.: 'Peleus 'went up to the prayer sea in the darkness' (d.us ʃav tO) to pray to Poseidon for the safety of his son Helen' (Ἀνασκώπηθη), is said of one who prays (H. 35, Od. ii. 350).

The opposite of μέγας εὐχαρίας is ψεύδορι, ‘whisper,’ and doubtless this explains the cult-title of Αἰείθαυρος, to whom prayers were whispered (cf. Tibull, ii. i. 83; Catull. liv. 104).

A leading motive is that the prayer is a salutation to the gods, and an appeal:

Pythagoras (Clem. Alex. Strom. iv. 26, § 173) enjoined μετὰ φωνής εὐχαρίας. Seneca, Ep. x. 6, quotes from Athenodorus: 'Know that when you are in a critical state, and you enter a stage where you ask nothing from God except what you can ask openly,' and he goes on to explain: 'An honest prayer is the prayer of the gods; if any one hearkens, they become silent, and they tell to God what they do not want man to hear' (cf. Hor. Ep. ii. 16. 17, "The prayer, or Juv. x. 291. Cf. the 'loud voice' of the Prayer Book.

The prayers or incantations of the magician are naturally spoken in a low voice. So in the Ode of Alcman, we are told that he 'had familiar spirits and unto the wizards, that chip and that muttered' (I.XX ἀληθῆς τοῖς ἑγκατημένοις ... ἀλλὰ τοῖς καλλικράτεις).

4. The relation of the suppliant to his god.—In the earliest times the suppliant compelled his god to do his will—traces of which may be found in the beating of the ground and the flagellation of Pan mentioned above, and the smiting of the πλυτός in Paus. loc. cit.

The next move is to be one of bargain, which is the typical form of prayer in Homer. This bargain-theory of prayer may assume different forms.

(a) If ever I did that for thee, so do thou this for me.

Thus Hom. ii. i. 35 f. of the priest Chrysas: 'Then went that old man apart and prayed aloud to Kich Apollon, when Leto of the fair looks bare: "Hear me, lord of the silver hand, that standest about Chryse and holy Killa, and rulest Tenedos by thy might, O Smintheus! If ever I build a temple pleasant in thine eyes, or if I ever burn to thee of flesh of the thighs of bulls or of bulls, fulfill thou this my desire."' So Od. iv. 108 ff., Il. xv. 372 ff.

(b) If thou do this for me, I will do that for thee. A typical example is Hom. Od. iii. 300 ff., where Nestor prays to Athene: 'Be gracious, O queen, and give me fair fame—for myself and my children all; and in turn I will sacrifice to thee a heifer,' etc.; cf. ii. vi. 115.

One form of this is the explicit assertion that it is for the advantage of the gods to protect their worshippers.

Thus Theopompus, 773 f.: 'Ο Lord Phoebus, thyself didst build the High City, doing a favour to Alcathous son of Pelops; thyself keep from this city the joy and remain with joy the people may send thee glorious Hector out when spring comes round, rejoicing in cithara and decidable mirth, and at thy pleasure change the might of the enemy.' Similarly and still more frankly, Ephesylus, in Sept. 761, makes Eteocles pray to the gods to save Thobes: 'If we escape. And I think I speak for our countrymen, if we save a prosperous city honour the gods.'

(c) The third is that which J. Adam (The Religious Teachers of Greece, Edinburgh, 1906, p. 46) has compared to our 'God of our fathers, be the God Of their succeeding race,

i.e., even as thou didst of old, so do also now.
PRAYER (Greek)

Thus Hom. II. i. 450 f.: 'Then Chryses lifted up his hands and prayed aloud for them: "Hearken to me, god of the silver bow, leader of armies: from thy holy hill in heaven didst thou look upon the honour and greatly afflicted the people of the Danaans, even so now fulfill me this my desire."' Cf. II. i. 433 f., v. 115, f.; Esch. Ag. 940 f.; Soph. Col. Tr. 157 f.; Demosth. de Cor. i., and passim.

It is to be noted that the personal piety of the worshipper—esteemed was considered by the Greeks to make his prayer more likely to be answered.

5. The ritual of prayer.—The simplest form of prayer is little more than an ejaculation, and is typically expressed in Greek by the name of the god in the vocative case, followed by an infinitive (desire, wish, etc.) for which they may have 'or 'grant' understood) expressing the request.

Thus Hom. II. ii. 175 f.: 'So he spoke and each marked his lot, and they cast them into the helmet of Agamemnon, son of Atreus, and Agamemnon prayed, and they prayed for the gods; and thus would one say as he looked into the wide heaven:

ζεύγος ηλιών λατρεύω, η δόξη τινός, η αυτοί βασιλιάς πολλωροις Μικροίς!' Cf. Herod. v. 165, where Darius, hearing that Sardis had been burnt by the Athenians, 'called for a bowl, and, having received one, he put an arrow into it and shot it into the air, with these words: δάει τοιενετον μου άνθρωποι τηνασσα.'

A still shorter form of the ejaculatory prayer is the intonation of the vocative alone—e.g., άγαλμα ἀγαλματίδος (Aristoph. Av. 61, etc.); Herodas, vii. 74: ἦμερι τε κεφαλῶν καὶ σέ κεφαλή Πιθών; cf. such expressions as 'Anacreon,' 'mehercule,' 'medius fidius,' in Latin. The ejaculatory prayer is commended by Marcus Aurelius, v. 7.

The more elaborate ritual will be best explained by definite examples.

(a) The account of the Argonauts starting on their voyage in quest of the Golden Fleece:

Now when the ships were manned and everything with which they were to set sail on board, the signal for silence was given by the trumpet and they made the customary prayers. Now the ships were thought to have been joined together by a herald (εργόπο) throughout all the army, marines and generals alike making libation with cups (κηριάλα) of gold and silver which they brought, and there joined also the general crowd on shore, not only Athenians but any other friendly person who was there. And when they had sung the paean and finished their libations (κηριαλάτων καὶ κηριαλατομέας τοιούτας) they put to sea' (vi. 32).

(b) Compare with this the famous passage in which Thucydides tells of the start of the Athenian expedition to Sicily in 415 B.C.:

When the ships were manned and everything with which they were to set sail on board, the signal for silence was given by the trumpet and they made the customary prayers. Now the ships were thought to have been joined together by a herald (εργόπο) throughout all the army, marines and generals alike making libation with cups (κηριάλα) of gold and silver which they brought, and there joined also the general crowd on shore, not only Athenians but any other friendly person who was there. And when they had sung the paean and finished their libations (κηριαλατομέας καὶ κηριαλατομέας τοιούτας) they put to sea (vi. 32).

(c) Or, again, take what is really a Greek view, though it refers to a Carthaginian—the story of the conduct of Hamilcar during the battle of Himera:

'The following story is related by the Carthaginians with great probability, that whilst the Carthaginians were engaged with Greeks of Sicily at Himera, which began early in the morning and lasted to the twilight of the evening, Amilcar, continuing in the camp, sacrificed entire victims upon a large pile: and when he saw his army flying, as he happened to be pouring libations on the victims, he threw himself into the flames, and thus perished with all his army.' (Aristoph. Acharn. 435 f.)—an excellent example of the Stesichoros.

(d) Precisely the same ritual meets us in the account given by Herodotus v. 54 of the prayer of Xerxes as he was about to cross the Hellespont for the invasion of Greece:

'The rest of the day was spent in disposing all things in order to their passage: and on the next day they waited for the sun, and in the middle of the day they offered sacrifice and poured many sorts of perfumes upon the bridges, and strawed the way with myrtle branches. When the sun was risen, Xerxes, pouring a libation and laying an offering on the altar, called a godly man (φιλεληστήν την τινα δείνειν), addressed a prayer to the sun, that he might not meet with any impediment so great as to prevent him from a safe passage. And he then followed the sacrifice:

'After which he threw the cup into the Hellespont with a bowl of gold and prayed for the safety of Hellespont (vii. 26), and as a compensation made that gift to it.'

The normal ritual of prayer is: (1) the hands and mouth washed; (2) if this be omitted, libation and prayer; (3) if this be omitted, libation and prayer; (4) in all cases the pouring of libations.

Thus Herodotus, ii. 145, mentions that he offers prayer for the god the holy hecatomb about his well-built altar; next washed their hands (χρυσάνθετα και τεκεμένα) and took up the barley corns (ολικάλα). He says also that when Cleomenes the son of Nearchus handed over the city to the Persians they had prayed and sprinkled the barley corns, first they drank back the victims' libation; next they took the victims, and with as much of the meat as they could from the thighs and wrapped them in fat, making a double fold, and laid raw collops thereon, and the old man burnt them on cleft wood and made libation thereon of gleaning wine. Next they feasted, and then, 'when they had put from them the desire of meat and drink, the young men crownetl the bowls with wine, and gave each man his portion after the drink-offering had been poured into the cups. So all day long they worshipped the god with music, singing those beautiful and sweet verses at the name of the sons of the Athenians, which was making music to the Archer-god; and his heart was glad to hear.'

6. Mode of addressing the deity (εὐπλησία).—It was a matter of importance in the possession of the deity invoked should be addressed by his right cult-titles.

Thus Achilles (II. xvi. 235 f.) at Troy invokes Zeus as ζεύς άριστος, άλακτος, διάμαντις, δοκίμων, επίσημος ταμίας, ισθίων θυσίας. Apollo is invoked by Chryses in II. i. 375 f. as αὐρατόφορος καὶ ταμίατις. Especially noteworthy is Αἰακίσιος, Α. γ. 169 f., where we find the curious expression 'Zeus whoever he be, if it please him so to be called, by that title I address him,' on which the commentators refer to Plato, Cratig. 400 f. 'One excellent principle, which as sensible men, we should follow: that with regard to the gods we know nothing, either with regard to their themselves, or to their actions. Which it is evident that they call themselves by their true names. The second best principle of correctness is, as it is customary in our language, to address the gods by the titles by which we are accustomed. The same with which they are best known. And it is evident that they call themselves by their true names. The second best principle of correctness is, as it is customary in our language, to address the gods by the titles by which we are accustomed. The same with which they are best known. But there are many titles, whatever they may be, by which they like to be named (τοιοῦτοι τε καὶ επόδον χαρακτησμένοι γνωστά, the words of Plato, Cratig. 400 f.):' Hymn to Zeus, 4. 1: 'How now shall we sing of thee? as Diktytos or Lykaon? Hymn to Apollo, 47 f.: 'O Apollo, many call thee Beoristemos and many call thee Klarios, but I call thee Karellos'; cf. Hymn 67: 'Φαληρ καί Νεαρός, and Pind. Fl. ix. 60: 'Αχρεύς and Νομός and by some called Aristates'; cf. Eur. frag. 734 i. 114.

7. To whom prayer is addressed.—The general phrase for offering prayer is 'pray for the gods (ένθροις θεών)'—εύπλησία. The particular deity addressed varies with the situation: the poet prays to Apollo or the Muses, the hunter to Artemis, the farmer to Demeter, and so on. Not an unusual thing is to pray to Zeus and Apollo. And more than one god may enter into the prayer. In Hesiod (Works and Days, 463) bids the farmer pray to Zeus and Demeter. Again, a god may be invoked under a special cult-title in reference to the particular boon desired—e.g., Zeus 'Οὐρανός for rain, Zeus 'Ορφεύς for a favourable harvest. Hence the following prayer of the Acharian farmer as he holds up his tattered garment to the light:

'Ζεύς θεός καί Ναυτός του λιώτουδε ποντικίων.' (Aristoph. Acharn. 435 f.—a good example of the Stesichoros.)
Particularly interesting is the case of prayers made by special classes of people to minor deities or semi-divinities, in whom they have a, so to say, "supernatural" interest. Thus, e.g., the Druids would pray for the Phœnix, but not for the Sun; and the "Samothracian gods," i.e., the Cabeiri or the Dioscuri (Callim. Ep. 47; Dion. iv. 43; Theophrast. Char. xxiv. [XXV.]).

5. The dead and the chthonian gods.—Prayers to the dead and the chthonian gods form a special class, of which we cannot speak at present, but which cannot be altogether excluded from the accompaniment of a recital of its contents.

Thus in Exe. Ap. 220 B we hear a prayer made to prevent h gatherers from coming near a certain course. Similarly, in the Phœnix (815) Electra does not know what words to utter as she makes an offering to the divinity's tomb, but her nurse can hardly do it without some spoken prayer; to do so would be just like throwing out refuse:

Στο ἰείνη, οὐράρ σοι ἰείνη
οὐρά, τέκτανα, γάπαν χύνα
στείχος, καθώρητον ἴς τις ἵσταται
τοῦν τοῦ θεοῦ, τοὺς τινάν ἐμὲ

Prayers referring to all solemn occasions are inscribed in the following:
• at the opening of the ecclesia or the law-courts, on the new moon (Demost. Aristoph. 90, etc.; at sunrise and sunset (Hesiod, Works and Days, 3281).

For prayer at sunrise cf. Plato, Symposium, 220 D, where Socrates, having asked Euthydemus how he thought the prayers could be rendered to the rising sun and went home (εὐθυδεμὺν ἡμῶν καὶ πρὸς ἀνεύρη τὴν ἐνεργεῖαν ἡπείρον δυνάμεις ἐκείνης ἑγερτῷ ἄριτον προσπέμεθα τὰ δύναμεις); the next, or at most in the morning, would not be true to say that the Greek prayer was never a prayer of thanksgiving. This conception is more a question of language than anything else, and πορεύεσθαι gives more nearly what we generally include in "prayer" than ὁμογένες. But it is undoubtedly true that prayer in general, as we find it in the Greek authors, is essentially a petition for blessings of a utilitarian kind—health and wealth, children, success in business and in battle. The general import of these cases make it at least possible to quote Simonides, frag. xxii. 17 ff., as an example of the prayer of a contrite heart.

The refinements of the philosophers perhaps hardly concern us here.1 Socrates emphasizes the efficacy of the prayers (and the curses) of parents in the Lysias, 321 C 3.

He himself 'prayed to the gods simply that they would give him good things, believing that the gods knew best what sort of things they could grant. For evil was no other than silver or a tyranny or such like, he believed that was just as if they prayed for gambling or battle or any thing else the issue of which is uncertain' ( Xen. Men. i. 3. 2).

1 See Max. Tyr. xii. 8 (πράσον ἡμῖν καὶ διδακτέον πρὸς τοὺς θεοὺς τῷ θάνατῳ τῶν πατέρων, πότ' ἂν γίνητε τοὺς τοῦ πατέρων); Marc. Aurel. iv. 23, iv. 40; Philostor. iii. 7. Parn. iv. 40 (πρὸς ἀγάπην, δόσεως μαν ἡ δίδακτεον); Stob. Ep. x. 32. 1.
PRAYER (Jain)—It is extraordinarily difficult to discover the exact place that prayer holds in the Jain system. Every Jain is on the defensive lest his creed should be considered atheistic, and is unwilling to make any admission that might seem to point in that direction. Again, Jainism, like every other Indian faith, is so influenced by its environment and, in especial, by borrowing so much from other faiths, that the prayer and petition of the Jains in actual practice do many things not really in harmony with the principles of their religion; the difficulty is further enhanced for the investigator by the inexplicable ignorance which prevails as to the prayers and petitions of the survivors. The most satisfactory way, perhaps, of arriving at any conclusion is to divide the subject of prayer into various elements, such as petition, intercession, adoration, confession, worship, and thanksgiving, and to note under each head the actual practice and the sometimes conflicting opinions of the Jains.

1. Petition.—As the Jain system is based on the root-idea of previously acquired karmas automatically conditioning every incident of a man's life, past, present, and future, there is no subject which could logically be affected by petition. If a man is strong, happy, and wealthy in this life, it is owing to the merit that he has acquired in previous births; but no petition can prolong his fortunate condition, for if he be ill, unhappy, and poverty-stricken, it is due to his separate sins in a previous existence, and, as long as the accumulated energy of past bad actions lasts, his lot is evil and continues to be so until the moral wrongs are atoned for. In this atoned condition, the mechanism stops, the clock runs down, and the man, having worked out that particular sentence, passes on to endure the good or evil effects of the succeeding karmas that he has acquired. But if petition can affect the mechanism of karmas, no prayer mitigate his sentence of lives-long imprisonment.

and now he begs Mazda to continue to uphold this order of salvation and to keep his followers in the truth:

'Oh, pray for Thy Fire, O Ahura! strong through Righteousness, most swift, [most] powerful, to the house with joy receiving It, in many wonderful ways our help, but to the hate, O Mazda! It is a steadfast harm as if with weapons hurled from the hands' {ib. 4}.

2. Petitions for personal enlightenment.—Petitions for mental enlightenment take up a great deal of space in the Gathas; not a few of the holy truths were communicated in the form of questions and requests addressed by the prophet to Ahura Mazda or Vohu Mano. The whole of Yasna xiv., dealing with the theory of creation and cosmology, is in this form:

'This I ask Thee, O Ahura! tell me aright—what, as a skilful artisan, hath made the lights and the darkness?' {ib. 5}.

Such questions assume the typical character of prayer when the worshipper asks for special instructions necessary for his own personal salvation:

'(Come Ye) and show me the worthy aims of our faith, so that I may approach and fulfill them with (Thy) Good Mind, the offering of O Mazda! of the One like You, or the words of prayer offered with Righteousness. And give Ye, as Your offering (of grace to me) the shining gifts of Your Immortality and Wellness; as You have prescribed therein' {ib. xxxii. 2}.

In most of the Gathas the prophet continues in the same idealistic but intellectualistic way. As the Zoroastrian believer must know—and receive—the truth in order to be saved, Zoroaster, as an example to his followers, must pray for his own and for their enlightenment.

3. Prayer for the dying and dead.—Another form of praying for salvation is seen in the prayers for the dying and the dead who belong to the religious community, the offering made for their salvation:

These prayers, which are still made among the Parsis after the death of a beloved one {see J. H. Moulton, Early Zoroastrianism, London, 1913, p. 315, n. 2}, are called ofr̄ényan and sroš darān in Avesta. Their aim is to secure for the dead eternal bliss and happiness in heaven and in the future world, and they consist in sacerdotal ceremonies, celebrated on various occasions, but especially at the time when the dead are expected to visit the earth, and in connexion with funeral festivity. These ceremonies the priests invoke many gods and genii, especially the angel of death, Sroš (Sraosh), the psychopompos of the Iranians, who carries the dead to heaven and protects them from demons. In this dangerous task Sraosh must be prayed for in order to obtain for the survivors the following benefits: 'Now shall the Sraosh Yasti Hastakhosk in Ys.,' expresses a direct request for bliss for the deceased:

'Give unto that man brightness and glory, . . . give him the bright, all-happy, blissful abode of the holy Ones!' {Yt. xii. 2}.

4. Prayer for material gifts.—Material gifts are desired and asked for in the Avesta as in other religions, particularly as the general aim of the Zoroastrian religion is the conservation and renovation of the material world. Such petitions occur more frequently in the later Avesta than in the Gathas, whose abstract and solemn character forbids them to descend to personal and private desires. The earthly bliss that the Gatha-singer longs for is more the general state of material happiness than any single advantage. A typical strophe in this respect is Yas. xxxii. 10:

'All prosperous states in being which have been enjoyed in the past, which men are now enjoying, and which shall be known to our posterity in the future, shall be enjoyed in Thy (Yea), cause (our) bodily and personal life to be blest with salva-

The paraprases of the commentators are usually far more concerned with concrete and individual happiness—e.g., Nerosiagh comments on this strophe:

'Let them continue to live well, and be prosperous in all things, those females who are born thus,' etc. {SEE xxxii. 7, n. 7}.

They breathe the spirit of the later Avesta, which is more realistic in tone and is always seeking for the material help of the gods.

An example is found in Yasna, Ashi Vargnghi, and the other gods of the Yasna for bringing 'swiftness to our teams, strength to our own bodies, and that we may watch with full success our enemies, subdue our foes, and destroy at one stroke our adversaries' {petition to Mithra, Yt. x. 94, Yt. x. 95}; I beseech you for workers, for the home and for an offering self-dependent whom multitudes will bless' {to Artri Saman Ashitaka, Yt.xiv. 11}. In the Fravardin it is demanded of the gods such blessing on the people as will bestow wealth and fertility on our kindred, when they make offerings to them, saying: 'May my country grow more flourishing, and for a long, long time, and for all hours and remedies . . . to withstand the evil done by opponents' {ib. iv. xxxiv. 2}.

The piety of the Zoroastrians was more realistic in the later Avesta, but not more personal or devotional than in the times of the Gathas. On the contrary, in these hymns of old we meet with strophes of a very noble tenor, where the prophet tells of his sufferings and hopes and ardently beseeches his Lord and Master for help and consolation in his strivings:

'How shall I console Thy (grace) O Lord! . . . There is no answer to prayers! I, Lord of all, beseech me for me, as friend bestows on friend. . . . Thee, for mine exhalter and commander, Living Lord! I choose' {Yt. xvi. 1-3}.

LITERATURE.—There is no general discussion of the subject; for details are the introductions to the ritualistic hymns in J. Darmesteter, Le Zend Avesta, 3 vols., Paris, 1892-95, esp. his general introduction to the Yasna. K. F. Goldner, GLAH ii. (1896-1904) 23, gives a short description of the prayers (§ 20). The ritualistic hymns are translated by L. H. Milis and Darmesteter in SBE xxxi. (1887) and xliii. (1895).

E. LEHMANN.
PRAYER (Jain)

The Jains therefore hold that logi-
cally it is of no use to pray for health, wealth, or fame,
since all are inexorably fixed by karma.

Again, not only is there no subject that could be
affected by petition, but there is no one to whom
prayer could be addressed, since the Jains acknow-
ledge no supreme God, not knowledge (jñāna),
Father, or Friend. Nor would it, logi-
cally, be of any avail to pray to the deified men
who have passed to the still land of endless in-
action; for they take no more interest in worldly
affairs. Of what use, for instance, to their
previous belief for forgiveness?—a grand, sana-
ta's saying. Jain gentleman to the present
writer, 'he would no more hear us than would a
dead animal.' Consequently, though the Jains
perhaps lay greater stress on the duty of forgiving
others for all personal slights, injuries, and offences
than the followers of any other religion, one great
subject of petition—for forgiveness for sin—is, they
hold, logically excluded, since there is no one to
forgive the sin, no one greater than the mechanism
of karma, no one who has never experienced its
sway.

2. Intercesse.—In the same way there is no
room in the Jain system for intercession. As the
belief in karma dries up all sympathy for the
suffering of others, so it impedes any intercession
for their deliverance. A child-bowler is merely
expiating the sin of adultery committed in a
previous birth; a leper is only serving his sentence
for some former, though unremembered, crime;
and no intercession could mitigate or shorten their
penalty.

Indeed, not only is intercession ineffectual, but
to Jain ideas it is tainted by actual sin—the sin of
spiritual bribery. If (since human need and
human longings are greater than any creed) a prayer
is wrung from an anguished soul in likeness
of a scratch beside the sick-bed of her little
cradle, she is told that she has committed
the grave sin of lakottara mithyävā, 1 under which
would also be included a childless woman's vow
that, if a son be born to her, she will offer a cradle
at some saint's shrine.

No people in India are prouder than the Jain
community of their loyalty to British rule, but it is
impossible for them logically to offer up prayers
for the success of the Allied cause, as the Muslim-
maharajahs and their followers do; all that is per-
missible for them is to hold meetings to express
their ardent good wishes and fervent desires for a
victorious peace.

Some well-instructed Jains account for the
fact that some of the members of their community do use such phrases as 'O Lord (Prabhu), give me
wealth,' 'O Lord (Prabhu), forgive me my sin,'
by saying that the prayer is addressed neither to
a supreme God nor to a deified man, but to their
own inner consciousness, to stir themselves up to
greater efforts; others, again, say that such phrases
are metaphorical; a third explanation sometimes
given is that they are due to the pervading influ-
ence of Hinduism.

3. Adoration.—A Jain said to the writer: 'We
are not beggars, and we cannot petition for boons
like beggars, but by remembering our Tirthankar,
we can pluck up heart to follow their example.'

To this extent one element of prayer—adoration—
is found in the Jain system. A Śāhānakārā
(śāhānakārā, an important term) comes forth into
radio in the morning, adores the great saints and the great principles of the Jain
creed; but, when the meaning of his devotion
is fully explained, one realizes that the act is saluta-
tion rather than adoration. The attitude of the
worshipper seems (to quote an illustration which
all the Jain friends consulted by the writer have
accepted) nearer to that of a French soldier paying
his homage at the tomb of Napoleon and saluting
the memory of a great hero than to the warm,
personal adoration and loving faith connected with
būddhist bhīmō, 2 the word for the bhūmika, 3
for it is the writer that the vital distinction between the
two creeds seemed to him to lie in the fact that
the Jain system had no room for bhātī. The Jain
telling his rosary of 108 beads would salute
the Five Great Ones (Aḥanta, Pyājana, Uṣāhāyaṇa,
and Sādhu) and the great principles of knowledge,
faith, character, and austerity. Then,
repairing to the monastery or to some quiet place
in his house, he would perform śūnyādyāk, 4 during
which, after begging forgiveness for any injury
done to the tiniest insect on his way to his devo-
tions, he would promise to commit no sin for the
space of forty-eight minutes, and then praise the
twenty-four Tirthankarā, saluting each by name
in a set form of Māgadhī words, and would conclude
by a salutation of a director (guru) if present; if
not, to the north-east corner of the building.

4. Confession.—This is followed by the con-
fusion of sin, or paśkoṇarningh, which is an essen-
tial part of Jain worship. The object of this con-
fusion, the writer has heard explained, is to
the sins of removal of the guilt, but, by confessing
and carrying out the penance imposed by the
director, to perform an austerity, in the fire of
which it is hoped to burn up some of the karma
acquired by sinning. A difficulty has occasionally
arisen in the minds of students of Jainism owing
to the use of such expressions in Jain prayers as
'I crave forgiveness,' whereas the accepted Guja-
rāti comment or translation of such words appears
the better to be the phrase 'be free from the fruit of
such sin.' 2 In this formal confession, however, the worshipper acknowledges
his sins in the most careful way, confessing if he
has sinned against knowledge in any of the
fourteen special ways, or against faith in five ways,
or if he has uttered any of the twenty-five kinds of
falsehood, or committed any of the eighteen classes
of sin, or in any way sinned against the Five Great
Ones of the Jain faith, being specially careful
to confess any sin against animal life, the
taking of which is considered one of the greatest
sins in Jain. This is followed by a repetition of
the salutation to the Five Great Ones, and this, in
turn, by another form of confession of the sins of
that particular day, by a vow to fast in some way
or other, if only for an hour (for the Jains lay the
greatest stress on fasting), and the whole is con-
cluded by an act of general praise. A devout Jain
will repeat these religious exercises (which gen-
erally take about forty-eight minutes) in the
evening. It is illuminating to notice that the director never
seems to pronounce an absolution: he imposes a
penance, generally concerned with fasting in some
way or other, and the penitent simply goes away
and performs it to the satisfaction of his own con-
science.

No Jain is content with the austerity of a con-
fusion of sin night and morning; it is also incum-
bent upon him to examine his conscience still more
scrupulously every fortnight, even more thoroughly
at the four-monthly confession, whilst the most
important part of the monastic life is the annual
confession Sevāwātāri (see art. FESTIVALS AND FASTS
[Jain]).

After the evening confession the Jain, before
sleeping, sings the praises of the Tirthankara, and

1 Cf. Śūnyādyāk (in Māgadhī, with Gujaṭāri tr.), p. 11: 'May
what I have done wrong be without fruit to my fire.'
tells his beads, again making salutation to the Five Great Ones.

5. Temple-worship. — Besides meditation and confession, the daily devotions of a Svetāmbara Jain include a visit to the temple, which he circumambulates three times before entering (as he crosses the threshold he touches it and utters three times the word "chakṣu," which puts on one side all sins and worldly cares). The morning ritual has eight parts—bathing the idol, marking it with the auspicious mark, offering it flowers and garlands, waving a lighted incense-stick in front of the images, waving a lamp before the image, offering rice, offering sweetmeats, and offering nuts. The first part, bathing the idol, can be performed only once, so only one worshipper can do that, but any man who has time to bathe at the temple and to don the special dress may mark the idol, offer flowers to it, and wave the incense-stick. All the worshipper would perhaps go to the temple again and perform the evening worship, which consists in waving a lamp before the idol. On great festivals and at pilgrimage resorts the worship is of course much more elaborate.

3. For whom offered. — The norito were addressed sometimes to one or several individual gods, sometimes to a class of gods (e.g., in 866 to the deities of all the provinces of the Nankaido district), and sometimes to all the gods (see Magic [Japanese]). An interesting point to notice here is that, with the coming of the Imperial palace on one hand, and ancestor-worship under Chinese influence on the other, the custom arose of addressing prayers to deceased Mikados. These prayers are not mentioned in any of the norito of the Engishiki, but only in the later norito (9th cent. onwards).

Prayers for rain were made in 841 to the emperor Jimmu and the empress Jingu; in 859 Jimmu was again besought to cure an illness of the reigning Mikado; in 861 and 865 prayers were offered to the emperor Ojin, whom, under the name Hachiman, was destined to become one of the favourite figures in the Japanese pantheon.

3. For whom offered. — Prayer was made for the emperor, his court, and his people (see Magic [Japanese], vol. viii. esp. p. 296, rituals 1–3, p. 297, rituals 4, 8–10, p. 298, rituals 12, 15, p. 299, personal prayer, e.g., Kojiki, tr. R. H. B., 25, 27). But if this very simple conception there is none of the moral ideas that lead us at various times to pray specially for the just, or for sinners, or for infidels, and so on. Similarly, there were no prayers for the dead in the soul's afterlife, and even in another world being very vague among the primitive Japanese (see Ancestor-Worship [Japanese], vol. i. p. 459).
PRAYER (Japanese)

prays for whatever will help him to attain his final goal, viz. happiness in the future life; when he asks for grace, virtue, or other spiritual blessings, it is with this ideal in view; and he does not pray for bodily or material blessings, and hence success, except means to this end. The primitive Japanese had no such ideas. Their norito have no conception of moral progress or eternal salvation; they simply seek for earthly goods—for the emperor health, long life, and a happy term of his stay on earth. Under conditions of destruction, especially fire, safe journeys for ambassadors to foreign lands, and internal and external peace for his empire (see art. Magic [Japanese], vol. viii. p. 296, ritual 8.), p. 298, rituals 11 f., 141 f., p. 299, p. 295, for the people a good harvest, protection of the crops from inclement weather or floods, rain in times of drought, safety from epidemics, and general prosperity (ib. p. 290, ritual 1, p. 297, ritual 4, p. 298, ritual 13, p. 299, ritual 25). The idea of purification, which often appears in these texts (ib. p. 297, ritual 10, and pассив), is confined mainly to ritual purity, though the moral element is not quite excluded. Sometimes the norito is meant to appease the anger of the gods, when the community feels that sufficient precautions for the purification necessary for their worship have been neglected. Finally, besides petitions and expiatory, the norito are sometimes a means of announcing some important piece of news to the gods—an accession to the throne, a marriage, the return of a victorious army, an enemy invasion, the nomination of a prince as heir or of a vestal of imperial blood, and so on. The most interesting among these announcements are unquestionably those advising a deity of his promotion, e.g., to a higher rank in the celestial hierarchy (based on the Chinese system of official ranks, in the 7th century).

In 672 three deities supplied some useful military information; as the result of the norito, the emperor, upon the report received from his generals, raised these deities to higher rank. In 838 a similar distinction was bestowed on a young god in defiance of seniority, and a jealous goddess showed her anger by pouring a volcanic shower on the eastern provinces. In 840 the great deities of Ise sent a shower of stones, and the emperor conferred the second grade of the fourth rank on her, with congratulations on her marvellous power. In 851 Susa-no-wo and Orihoko-bashii (see Narihira [Japanese]), vol. iv. lines 535 to 536, for Hasso and Hasso-Gos (Japanese), vol. vi. p. 629), obtained the second grade of the third rank, and, eight years after, the first grade of the second rank, on which basis, however, were based no higher than an important minister or a successful chamberlain. In 860 a volcanic eruption of Satsuma was placed in a lower subdivision of the fourth rank. In 875, Inuyama was raised to a main deity, and Ikuta caused seismic shocks, and were immediately presented with a third grade, and, in 885, 230 gods were raised to the rank of an emperor Daigo as a bounty, at his happy accession. In 1076 and 1173 promotions were made en masa.

These samples show the essentially positive character of the norito and the distance that separates them from the lyrical outbursts that we think of when we speak of prayer properly so called. Even in those norito which approach most nearly to normal prayer the formula is more of the nature of a contract with the gods; gifts and veneration are supposed, the gods, in return, to bestow blessings on their benefactors, and they are promised further rewards, if necessary, should their services turn out satisfactory (see Magic (Japanese), vol. viii. p. 296, rituals 1–3, p. 297, ritual 4).

5. Nature of prayer.—We must distinguish between the basis of the form and the moral dispositions and the material conditions. As regards the inner feelings, a reading of the norito shows that the primitive Japanese, though they felt sincere regard for the sacred gods (see Narihira (Japanese), vol. ix. p. 233), never had that implicit confidence in addressing them which is generally considered, especially among Christian peoples, an essential quality in prayer. On the contrary, it is clearly seen that the gods were approached on terms of equality.

6. Place of prayer.—The place for offering prayers naturally depended on the ceremonies with which they were connected. It was often the palace itself (e.g., to mention only some of the important rituals, nos. 1, 8, 10, 12, etc.), the great temple of Ise (e.g., nos. 10–24), or other sacred places, and sometimes the temple of a local god (e.g., no. 5, at Hirano, a village in the province of Settsu). In many cases the chief ceremony took place at Kyōto and was repeated in the province. There were also domestic celebrations, as at the Niki-konan (see Magic (Japanese), vol. viii. p. 296, ritual 14), which, besides its public rites in the temple, was performed privately in the family, and to which no stranger was admitted—for fear of pollution, no doubt. The texts never mention whether it is seated or standing, in the inner chamber which the gospel recommends (Mt 6).

7. Times of prayer.—Sometimes prayers were monthly (the title of the 7th ritual, Tewakami no Motsuri, shows that originally at least it was a ‘monthly’ celebration), sometimes twice a year (e.g., 10th ritual), sometimes annual (e.g., 1st ritual), at certain appointed months and days (e.g., 1st ritual on 4th day of 2nd month; 10th ritual, on last day of 6th and 12th months), or at fixed times (e.g., 3rd ritual, at sunrise; 10th ritual, at sunset). Others were used only when the occasion for which they were suited arose (e.g., 14th ritual, at the accession of a new emperor). The priestly functionaries, especially the highest ones, had to have prayed much more frequently; we know, e.g., that a high official called haku, who presided over the Jingikwan (‘Department of Religion’), took the emperor’s place whenever he was prevented by illness from saying his daily prayers. But here again the texts make no mention of daily prayers, far less of prayers twice or thrice daily, among the people, and it is probable that they were usually content to leave that duty to those whose professional function it was to offer prayers.

8. Typical example of Shintō prayer.—As a
typical example, in which the general features of the rituals are combined under the recognized form, we may quote the 3rd norito, which is neither among the finest nor among the poorest, but is a good average, and is short. It is addressed to the god of the harvest-fields at the Mikados (see NATURE [Japanese], vol. ix. p. 239), last graph, and p. 240), and, secondarily, to the gods of ravines who send water to irrigate the imperial farms.

As (the nakatomi, in the name of the Mikado) declares the august name of the sovrin god whose praises are fulfilled at Kahahi in Hirose [a village in the district of Hirose, where the god of the harvest-fields has his shrine, her child]. Declaring her august name at the Young-food-woman's augustness [Waka-o-hono-no-miko mikoto, one of the alternative names of the goddess of the harvest-fields over the late, her skill in the august presence of this sovrin deity. He says: "Hear all ye kami and hofuri the fulfilling of praises, by sending the princes and councilors to lift up and bring the great august offerings of the sovrin august child's augustness."

He says: "Delight to declare in the presence of the sovrin deity that as great august offerings which are set up, he deposits in abundance and offers up, as to august clothing, bright cloth, glittering cloth, fine cloth, and coarse cloth, five kinds of things, a mantlet, spear, and august horse; and as to august offerings, the best, [the best] high thing filling and ranging in rows the bellies of the beer-jars, in soft grass, in coarse grass. [I.e. bulled rice and paddy]: as to things which dwell, the things sweet that appear round the hair birds and beasts]; as to things which grow in the great field plain, sweet herbs and bitter herbs; as to things which dwell, with the things wide, the grasses narrow of fin, down to the weeds of the olive and weeds of the shore."

He adds: "Sovereign lord, this day that the sovrin deity has the sovrin sovrin virgin with the peaceful and tranquil heart accepts as peaceful august offerings and sufficient august offerings the great august offering, and if the time for the offering is over, he will declare how to perfect and bless in many-banded ears the sovrin deity's harvest-fields in the first place and also the late-reaping august harvest which the august children (princes of the blood) bring. The princes, councillors and great august people of the region under heaven shall make it dripping to the front from the arms of the august deity, drawing the mud together between the opposing thighs, in order that it may be taken by the sovrin august grandchild's augustness with his four and eight hands and distant august food, he will draw thither the firstfruit both in liquor and in husk, even to a thousand plants and many thousands plants, and piling them up as a range of hills, will offer them up at the autumn service." He says: "Hear all ye kami and hofuri."

He sets up the great august offerings of the sovrin august child's augustness, bright cloth, glittering cloth, soft cloth, and coarse cloth, the five kinds of things, down on the mantlet and spear, in the presence of the sovrin gods who also dwell in the entrances of mountains of the six august farms of the province of Yama to. As to the setting up of offerings in this region which the god has set up on the sovrin god, the bellies of the beer-jars, filling down the ravines from the entrances of the mountains which the god has set up as sweet, as sweet, as sweet, as sweet the gods of the mountains) will deign to bless the late-reaping harvest which the great august people of the region under heaven have made, and will bless it in that he will wind the offerings, the princes, councillors, functionaries, down to the male and female servants of the six august farms of the province of Yama to, norito, to the mouth of the main (number month of this year, to set up the firstfruits in juice and in husk, raising high the beer-jars, filling and ranging in rows the bellies of the beer-jars, piling up the offerings like a range of hills, and plunging down the root of the neck coronetwise in the presence of the sovrin gods, will (fulf) praises as the morning sun rises in glory! (Hirose o-hono no matsuri, tr. E. Satow, in TAJJ VI. pt. IV. p. 483).

9. Modern prayer.—Later, when the nationalist spirit took up the sovrin Shinto, in opposition to Buddhism and Confucianism, the most devout of them, Hirata, composed in 1811 a book of prayers called Tanada-tanuki, which, unlike the ancient norito, was meant for private worship. It is a great interest how prayer was conceived by the chief theologian of modern Shintoism. Hirata's views are as follows:

As the number of the gods who possess different functions is so great, it will be convenient to worship by name only the most important of them, the rest being left in a general invocation. The whose daily affairs are so multitudinous that they have no time to observe the details of the four thousand prayers, if they content themselves with adoring the residence of the emperor, the domestic kami-damu (the shelf on which the household gods are placed), the divine ancestors of their local palaces, the god, and the deity of their particular calling in life. In praying to the sun, the blessings which each has in his power to bestow are to be invoked, a few words are not to be annoyed with greedy petitions: for the Mikado in his palace offers up petitions daily on behalf of his people, which are far more effectual than those of his subjects. Rising early in the morning, wash your face and hands, rinse out the mouth, and cleanse the body, and then, turning towards the rising sun, strike the palms of the hands together twice, and worship, bowing the head to the ground. The proper posture is that of kneeling, with the body held erect, giving a superior.

Here follows a specimen prayer: 'From a distance I reverently worship with awe before Ame no Mi-hashira and Kun no Mi-hashira, also called Shina-tsu-hiko no kami and Shina-tsui hiko no kami, the nature goddess and the nature god,' (see NATURE [Japanese], vol. ix. p. 239), last graph, and p. 240), and, secondarily, to the gods of ravines who send water to irrigate the imperial farms.

Without emphasizing the artificial nature of these prayers, which, in spite of the express aim of their author to the contrary, are patentely inspired largely by Buddhist tendencies and especially by Chinese Buddhism, who many questions whether they were ever used by the wari-sambei for which they are intended, for the first five volumes of Hirata's book were not printed till 1829, and the following four not till some time after his death, which occurred in 1845.

Official norito are composed to this day, for all special occasions (e.g., the conferring of posthumous honours on early Mikados, invocation of the gods of war, etc.). On the other hand, the common people offer informal prayers to various familiar gods (e.g., to Inari, originally the protector of agriculture, then a kind of Japanese Providence, when they are sowing rice or beginning a commercial enterprise, etc.). The worshipper who may be seen standing in front of a temple, pulling the white cord that rings a bell to attract the attention of the god, and then praying for a moment with clasped hands, is usually offering a personal petition of the most paltry kind. The more general type of modern prayer asks for peace to the land, safety to the household, and abundant harvest.

But modern Shinto prayers, like those of twelve hundred years ago, are always essentially positive, inspired by human wisdom alone; and, whenever a somewhat elevated moral or mystical idea appears in them, it is the result of Buddhist influence.
we meet for the first time with forms of prayer, which are to be uttered on the occasions of offering the firstlings and the tithe. Among the prayers of the earlier time, those of the Exile and the time of the Prophet Jeremiah are of the highest order (Smend, *AT Religionsgeschichte*, p. 263 f.).

1. The prophets.—The work of the prophets in making religion more of an inward thing, which found expression in the new forms of prayer, was chiefly in the manifold and varying forms of the sacrificial cult, did not have its full effect among the mass of the people till the time of the Exile, when it found its natural expression in the prayers of the Jews. Towards the end of the Exile the prayer-form was established. Gradually the sacrificial cult, which had been a part of the future as a ‘house of prayer for all peoples.’

2. The Psalms.—At a later date the prayers known as the Psalms took their rise, but, owing to a tendency of a still later period, they were referred back to remote antiquity—to the time of David. They are far more probably the fruit of the religion of the prophets, giving in prayer-form the thoughts that had entered into the consciousness of the people from the teaching of the prophets. After the return from the Exile, and when the second Temple had been erected, the Psalms became the Temple liturgy, in spite of the fact that, to a considerable extent, they formed a protest against the sacrificial cult of the Temple. The psalms demand and needs no sacrifice, but only the pure heart and the good deed, is a constantly recurring theme of the Psalms. Besides the moral teaching of the religion of the prophets, the Psalms deal chiefly with the sufferings of the people—particularly of the righteous—the sins of the nation and of the individual, memories of the nation’s past, hopes of the final mercy of God, and His justice and power in nature and in history.

The collecting of the Psalms, which was gradually accomplished between the Exile and the Maccabean period, was undoubtedly made in the first place for liturgical purposes; still it is very questionable, in the case of many Psalms, whether they were originally composed as songs for the congregation, while, in the case of others, the titles themselves as well as internal evidence point to their liturgical use. In form the Psalms are very varied and differ much in value, but, as far as their contents are concerned, they represent the highest product of the religious poetry of all nations.

*After reading the prayers of other nations, no unreduced critic would deny that the Hebrew Psalms stand out unique among such prayers of the whole world, by their simplicity, their power and the majesty of their language, though, like all collections of prayers, the collection of the Psalms also contains some which one would not be sorry to miss*’ (Max Müller, ‘On Ancient Prayers,’ in *Semitic Studies in Memory of Rev. Dr. Alexander Kohut*, Berlin, 1897, p. 40).

3. The synagogue.—The Psalms, which indeed still presuppose the sacrificial cult, and more in connexion with it, symbolize the transition to the new form of worship which we find in the synagogue. The origin of the synagogue is hidden in obscurity, but it is pretty certain that the work of Ezra, in introducing the Tórah as the law-book and book of devotion for the people, led to the establishment of the institution of the synagogue (beth hokkí'neath, ‘house of assembling’; then translated Gr. ἱερός ἱεραρχία), the first mention of synagogues seems to occur in a Maccabean Psalms (16:29), who possessed at least place the synagogue served the purposes of religious instruction, and was the means by which the Tórah entered into the flesh and blood of the people—a result which we see clearly in several Psalms (19:9–119). In the reading of the law and of the Psalms, the congregation, whether unprejudiced, interpreted, or interpreted in the light of the Exile and the appliance of the Aramaic dialect of the people, which took place on all the Sabbaths, feast-

days, and the market-days (Mondays and Thursdays), the people were at first entirely passive, merely listening to the reading. Gradually as the Tórah was added—at first only in the form of several important sections of the Tórah, which bore the character of a devotional or edifying reading, and which were repeated by the people as a sort of confession. This is the Tórah, which was read in the Syna- 

gogue. It was regarded by Josephus (Ant. iv. viii. 13) as an institution that had long existed. Gradually the Sh'márı'asher was provided with a framework of intro-

ductory and concluding pieces, which were no longer taken from the Tórah, but were original compositions that, as far as their contents were concerned, were prayers in the real sense of the term.

Besides these, there arose, perhaps at the same time, a quite independent prayer, which was designated as the prayer z'wró b'nei yisrael, as z'wró b’nei yisrael. This prayer, which has gone through a consider-

able historical development and in its later form was called Sh'móni'’e Ḥévréi (i.e. ‘eighteen,’ because it contains eighteen benedictions), seems to be influenced in some way by the Hebraic Psalms of Sirach (51). The oldest part of the prayer is composed of the first three and the last three benedictions. The Sh'móni'’e Ḥévréi remains to the present day the real congregational prayer of Judaism. It was well adapted to this purpose, as it unites in simple speech the four chief kinds of prayer (thanksgiving, praise, petition, and con-

fession), and gives expression to them from the standpoint of the people as a whole.

4. Family prayer.—Along with the synagogue the home also became a place of worship. It is doubtful whether the praying three times a day mentioned in Ps 55 and Dn 6 was a standing institution. In any case it is certain that at an early date family prayer, with a special liturgy for the evening of the Passover and for the beginning and end of the Sabbath (Qiddiṣh, Ḥabbálátá), was customary. Then, too, prayer was offered at the beginning and end of every meal; and, later, on the occasion of every enjoyment whatever, at the commencement of every important work, at every outstanding event or experience, a special b'rakáh (blessing) was spoken. Thus in course of time every activity of life, every place, and every portion of time were permeated with thoughts of God. The demand of prayer every morning, every evening, every night (sh’máрей gáyn, ‘to the name of God,’ consecrated to God) was thus literally fulfilled and the whole of life became a Divine service with interruptions (M. Steinschneider).

5. Rivalry between synagogue and Temple.—This new form of worship in the synagogue and in the home constitutes perhaps the greatest and most radical reform in the whole history of the Jewish religion. For, although we possess no historical support of any revolt against the intro-

duction of this worship, there naturally existed from the beginning a deep-seated opposition between the ancient Temple cult, which presupposed only one central sanctuary, and the synagogues, which existed in countless numbers and could be erected wherever the Jewish community, wherever Jews were to be found. In the Temple a hereditary priestly aristocracy conducted the service, while the new form of worship was based on a purely democratic foundation, and any one of those possessing sufficient knowledge, either written or transmitted, who wished, might officiate. In the case of sacrifices, which at least in part were of a sacramental nature (e.g., the sacrifices of atonement and purification), the chief part of the service, while the Temple clergy had the monopoly of the Temple, the synagogue, on the other hand, the model of a purely spiritual service was seen for the first time. Here
there was to be found nothing mystical or symbolical—only prayer and instruction, without any ritual accompaniment. In this respect the synagogue differed from the temple and the people's religion. It made Judaism entirely independent of the Temple, and prepared men's minds for its overthrow.

6. Use of the popular dialect.—It is also worthy of mention that everywhere the dialect of the people was used in prayer along with Hebrew. In fact, in many important prayers the popular language was prescribed for those who did not know Hebrew. The Egyptian Jews in particular, who had left Egypt so long ago and had no connection with their original homes, continued to use the local dialects of the land of their sojourn. From the 3rd century on they, in preference to the Hebrew of the Talmud, used the Egyptian dialect in their prayers and other public services. The Egyptian dialect is the most representative of Jewish religious life, became the only centre for the formation of the Jews of the Dispersion. From this time onwards the scribes sought more and more to establish, as far as possible, uniformity in the services. With the exception of a few ancient prayers in the Aramaic dialect (e.g., the Qaddish), Hebrew alone came to be used in public prayer.

The language of the prayers also became more fixed. In the Tosephta, for example, we know what was at the time for at least a final revision; new prayers for the service of the congregation were composed; the time and the outward form of the service as a whole were more and more fixed with painful exactness. While at an earlier date the element of instruction held the chief place, now prayer came to occupy an equally important position. The reading, translation, and explanation of the Scriptures on Sabbaths and feast-days constitutes an integral part of the service. In addition to the reading of the Torah, lessons were also read from the Prophets, to which the name haphtarot (i.e. "closing") was applied, because they concluded the service, or because they concluded the reading of the Torah. The explanation of these lessons was called midrash, and developed gradually into lectures based on a Scripture text and embracing the whole body of Jewish religious and national ideas. These lectures formed the model for the Christian sermon.

The classical work of Zuna, Die gottheitsdienstlichen Vorträge der Juden, gives a critical history of the Midrash and at the same time of the synagogue service, while it brings out clearly the intimate historical connexion between prayer and sermon, which mutually completed and enriched each other.

The content of the prayers was widened after the destruction of the Temple, when the desire for the restoration of political independence, the rebuilding of the Temple, and the re-introduction of its worship came to occupy an important place. This desire was connected with the hope of a messianic connection with the Messianic hope, which is found in prayers from the time of Sirach, but first obtained decisive significance in the consciousness of the people after the great national catastrophe. This hope appeared not merely in the Temple, but in the purely external conception that an earthly and spiritual kingdom of God would free the people from misery and servitude, now in a deeper and more spiritual form in the vision of the coming of the Kingdom of God (Malkhuth shamayim), i.e. the time when God shall be acknowledged and worshipped by all peoples, and when righteousness and peace shall reign on the whole earth.

This thought finds full expression in the prayers appointed for the New Year Festival and for the Day of Atonement, partly composed at the beginning of the 3rd century A.D.

As an example we may refer to the prayer ascribed to Rabbi (175-247) based on Sirach 56 (22R): 'Lay then Thy fear on all Thy creatures, that all Thy creation may know that all whom Thou hast created are before Thee, and that all may make one only covenant to do Thy will with all their heart, as we have long known that the power and the might belong unto Thee, and that Thy name is exalted over all that Thou hast created.'

In the liturgy associated with these two festivals the creative religious genius of Talmudic Judaism was specially manifested. It was regarded as a New Year's liturgy in beautiful and thoughtful prayers was really the first thing to lend a religious significance to this festival, and to give it the place which it has since held in the popular consciousness alongside of the festival of the Day of Atonement as one of the chief festivals of the year. These prayers, in which the national element recedes into the background, ascribe to God the dignity of the world's Judge on the one hand and that of the Father of all peoples on the other, giving us a clear view of the whole Jewish system of doctrine regarding sin, repentance, and forgiveness.

II. TALMUDIC AND MEDIEVAL.

1. Prayer and Services of the Talmud.—The predominating place which the synagogue service came to occupy in the religious life finds outward expression in the fact that the Mishnah, the official law-book (closed about A.D. 200), begins with the treatise Brakhot, which deals with prayer in all its aspects. The wealth of material contained in this treatise, as well as in the treatises Megillah and Ta'anith in the Mishnah, and in the contemporaneous but unaccepted collection Tosephtha, was materially increased in the following three centuries in the high schools of Palestine and Babylon, and its religious and historical significance has never been sufficiently appreciated. In spite of the scruples entertained among Jewish scholars about reducing prayers to a fixed form, and regarding them even as those who could not vary them, and opposed the writing down of prayers ('Those who commit prayers to writing burn the Torah' (Tos. Shabbith, xlii. 4)), the necessities of life brought about a uniformity in the synagogue service and a partial canonisation of the service. This was the ease among the whole people, the individuality of the worshipper being disregarded. It required several centuries, however, before congregational prayer really assumed a fixed form. Within the prescribed prayer rooms was of course left at various places for the individual needs of the worshipper.

This stated synagogue service was of the greatest importance in the religious training of the people. Prayers were offered three times every day (shaharit, min'ah, ma'ar'eh); on Sabbaths and feast-days a fourth supplementary prayer (ma'ar'eh) took the place of the earlier sacrifices. By means of these services the most important religious duties, the chief doctrines of Judaism, and the most important bonds which united the people ever afresh brought home to the consciousness of the worshipper, so that he never was actually freed from the atmosphere of prayer.

On the other hand, there was a danger in these prayers that they should sink purely and simply into a form as to hour, content, and form. They tended, among the masses of the people, to make prayer a purely external and mechanical affair. Hence the scholars who were the framers of the public liturgy constantly emphasized that prayer was not as an obligatory service, but as a 'worship with the heart'—that 'God desires the heart.'
Accordingly, short prayers were frequently recommended, and as early as the beginning of the 3rd cent. a short extract was taken from the Sh'monah 'Eser (Habbinon). In this connexion the writer, however, naturally deviates somewhat when he states that we have no term in any other ancient language—not even in the NT—namely, kawwainah, 'devo-
tion' (more exactly kawwainath kalath, 'direction of the heart'). The kawwainah is, in numerous passages, associated with a meal, and denotes the requirement for every prayer. These passages have been collected by Maimonides (12th cent.), who has expressed the demand for contemplative devotion in the following form:

1. **One who prays with devotion shall pray once more.** He whose thoughts are wandering, or occupied with other things, shall not pray. . . . If he then is devotion? One must free his heart from all other thoughts and regard himself as standing in the presence of God. Therefore, before engaging in prayer, the worshipper ought to go aside for a little in order to bring himself into a devotional frame of mind, and then he must pray quietly and with feeling, not like one who hurries, and throws it away and goes farther. Then after prayer the worshipper ought to sit quiet for a little and then depart. This plies folk of old waited an hour before prayer and an hour after, and engaged in prayer for a whole hour. . . . One ought not to go to prayer immediately after jest or frivolous talk, or continuing to engage in some task, or any sort of discourses of a religious tenor (Mishnah Torah, Hilchoth T'phillith 4:1).**

2. **Social significance of the service.**—Since in the prayers of the congregation the individual's private interests had to take a second place, the public services constituted an important social factor. In the synagogue there was no room for egotistical prayer, and even in the prayers for the congregation requests for material good were subordinated to petitions for the enlightenment of the spirit and for moral power. As these prayers did not satisfy the individual needs of the worshipper, personal prayer is formally and in practice, for private devotion which differed in outward form from the prayers of the congregation by the use of the singular, while the latter invariably use the plural. These personal prayers were said at the end of the public prayer (cf. Eliezer, Studien, p. 41). They are characterized by a special tenderness and inwardsness and only a few of them have been included in the Jewish Prayer Book. As an example of these private prayers we may quote the prayer of R. Yehuda, the redactor of the Ma'环卫, who is still preserved in the daily morning prayer:  

'May it be Thy will, eternal God, our God, the God of our fathers, to keep us [in the Prayer Book 'me'] from insensibility [tubilah], to exalt in [habanim] and to enlighten our spirit [kalath] and to save us. In the midst of our enemies, of man, an evil fate, an evil instinct, an evil companion, an evil neighbour, from the tempter who brings destruction, from a cruel judgment-seat and a cruel enemy, be he a son of the covenant [i.e. a Jew] or he be a stranger' (Dirlichth, 165). A number of other private prayers are found translated in the present writer's Boussesit. lit. des Juventuts . . . kritisch untersucht, p. 89.**

The basic thoughts on prayer are to be found scattered through the whole of the Talmudic literature, and they testify to a sound moral judgment as well as to keenness in psychological insight. We may here quote the most interesting sentences:

'I can be discovered from the prayers of a man, whether he be a talivath hokham (i.e. a man of culture in the moral and religious sense) or an uncultured person' (Tos. Dirlichth, l. c., and parallel passages).

3. **External form of the service.**—Regarding the external form of the service, we can gather very little from ancient sources. The reason for this seems to be the unnatural simplicity of the service, which was devoid of anything like ceremony. Owing to the lack of any written prayer-book in the age of the Talmud, the prayers had to be spoken by a reciter (shlitchah sabb). It is duty of the congregation—later, bechattan, and the people took part in them, repeat-

ing in many places 'Amen,' but often expressing their agreement in longer responses. Any full-
grown male Jew might act as leader in prayer, but the duty was preferably entrusted to the most learned of the congregation—the leader was often chosen by lot, i.e. according to the way of the Stoics. Of the positions of the prayer-goers during the Sh'monah 'Eser, which thus came to be called 'Amirath. At other parts they bent their heads, and at some portions sank down on their knees. During prayer the worshippers were covered or seated, and during the t'philah which was provided with fringes (gittith). On week-days the phylacteries (t'phillim) were also worn on the head and the left arm. The use of these was based on the literal interpretation of the two passages contained in the Sh'mud (viz. Dt 6:4 and Nu 15:37). The t'philah and t'phillim were supposed to serve as memorials (lot), but not as amulets. Neither to any of the customs mentioned nor to prayer at all (contrasting with Christianity) was there any kind of material influence. The impetus, and the form, and the use, did the bene-
diction of the priest have any external effect, 'as God but not the priests can grant blessing' (Siphah, § 43, on Nu 6:25). Moreover, the strict mono-
theism of the Jews permitted no kind of mediation in prayer by higher beings. Only in a few places (and in none of the official prayers) do we find the angels called on to intercede, while eminent scholars protested emphatically against the custom. It was not till the Middle Ages, when, owing to external pressure and internal ignorance, a darker spirit took possession of Judaism, that the expression 'the angel of mercy' was introduced into the Prayer Book by the Kabbalat. Even the names of the angels invoked in prayer—Sandalphon and Metatron—show that we have here to do with ideas introduced from without.

The close of the Talmod (c. A.D. 500), when all Jewish traditions were reduced to writing, did not by any means give the liturgy a stereotyped form, although certain books can be traced back to the 7th century. On the other hand, we have now, much more than formerly, alongside of the statutory prayers, to reckon with the minhah, i.e. the local usage which not only decided on the form and length of the daily prayers, but also often directly opposed the Talmod. In consequence of the dispersion of the Jews in the different lands, climate and external circumstances exerted quite as strong an influence on the minhah as the language, customs, and civilization of the neigh-
bouthing peoples. In order to restrict the variety that thus arose in the ritual, the G'onim, or heads of the Babylonian high schools, whose authority was recognized by all Jews, gave reasoned decisions, in answer to questions addressed to them. Some of these decisions were so soundly and are preserved to the present day. We have to thank the G'onim for the first ordered form of prayer with reasons for the same, called Siddur of which the eldest extant is that of G'on 'Amram, with certain modifications in the so-called Siddor of G'on Na'ady (10th century). The later and more complete collections of this kind were called Minhah (lit. 'year-cycle')—an expression which came to be used for prayer-books generally, and particularly in connexion with the feast-days.

In spite of all decisions and ordered forms for prayer, in spite also of all endeavours of the great codifiers (among them Maimonides [q.e.]), the attempt to obtain uniformity of service was not successul. In fact, there came to be two groups
PRAYER (Jewish) 155

of sharply contrasted liturgical services which were further subdivided into many smaller groups: (1) the Palestinian group, which permeated the nations of N. Europe, and thus came to be called the 'German'; and (2) the Arabic group, which drew its adherents from the Jews dwelling round the Middle East (i.e., the countries of the Near and Middle East) of the 9th to the 16th century (Egypt, Arabia, Persia and Italy), and, as it was in use principally in the Peninsula, was called the 'Spanish' group. These two groups, which still exist alongside of each other, differ particularly with regard to the poeticical prayers which, since the 9th cent., it has been the custom to recite on the fast-days and on certain Sabbaths to insert in the principal prayers.

4. The synagogue poetry.—Little can be discovered with regard to the origin of the synagogue poetry—piyyut, as it was called.

It is not at all improbable that the Syrian and Greek hymns of the Church had an influence in the matter. The term applied to the poet of the synagogue—piyyut or piyyut (from πιαυος) points at once to a foreign origin. Zunz rightly emphasizes the fact that the Jews had in their Psalms an ancient foundation, that is, the old and the new trouble the same materials. Any account of the history of the piyyut must be based on the work of Zunz, Die synagogale Poesie des Mittelalters.

The oldest poetic compositions were without rhyme or metre, and for the most part with alphabetical arrangement of the lines and sections. Rhyme is found as early as the 9th cent., while verse measure was introduced by Spanish poets after the second half of the 10th century.

Zunz traces the origin of synagogue poetry to the tendency 'to give a historic and sacred reminiscence of Israel a form embodied by art and beautified by song, and (by changing the commanded service into a spontaneous homage) in this way to make the prayer to the Jew what the Homer and tragedians had been to the Greek—a place where the national genius was embellished and spiritualized, where it was seen and felt that a poet was wondering the compositions of the every individual' (Literaturgesch. der synagogalen Poesie, P. 1). The authors of the oldest synagogue poems are unknown to us. These were composed, no doubt, for the most part by the leaders in prayer themselves, and were, to begin with, only listened to by the congregation but not repeated. Before long, however, these poems were also sung, so that also a voice of song in divine service, which had been silent since the destruction of the Temple, was heard once more, and the leader in prayer became the preacher. Poetical sections were first inserted in the Psalms and later poems were composed to them by the choristers, and hence their names (צאַר, צאַר, צאַר). But the main endeavours of the piyyutim were directed towards adorning the first blessings of the vphil- lāh. The compositions belonging to this class were called qimnatim (cf. Syr. ḏāḵrebī, 'inances'). Further poetical compositions were provided for the Day of Atonement (Cahbatōmel, a description of the Temple service at that day in old times), for šabbāḥ (or šabbāḥ, enumerations of the precepts of the Tórah), for the 9th of Ab (the Day of Mourning), for the last day of the Temple (the Temple called qimnā, 'lamentations'), and for the seventh day of the Feast of Tabernacles, called hšhānā. i

In course of time the piyyut found its way into every part of the religious life and every portion of the service. Nor was it confined to the synagogue. It entered into the family, and had its place there at the Sabbath meals, at the close of the Sabbath service, and as in the days of the house of births and at funerals (Zunz, Die synagogale Poesie des Mittelalters, P. 115).

Material for the piyyut was found in the inexhaustible wealth of ideas contained in the Midrash, whose place was gradually taken in the course of the centuries by the piyyut, as the ever-increasing number of poetical compositions quite displaced the Midrash. A specially important kind of synagogue poetry is the ślōh, prayer for forgiveness, penitential prayer. The service for the Day of Atonement was the first to be enriched with special prayers, which belong in part even to the age of the Talmud. The length of the service, which lasted from morning till evening, and the special significance of the day led to the expansion of the liturgy. Thus Bible verses referring to God's forgiveness were collected, and poetical prayers dealing with the same subject were composed (Spain and Italy), and, as it was in use principally in the Peninsula, was called the 'Spanish' group. These two groups, which still exist alongside of each other, differ particularly with regard to the poeticical prayers which, since the 9th cent., it has been the custom to recite on the fast-days and on certain Sabbaths to insert in the principal prayers.

The piyyut gives history and Midrash, the ślōh feeling and presence; the piyyut tends to become prophecy, the ślōh is prophecy and history. While in the piyyut the element of teaching is in the forefront, the ślōh is in form and content more the expression of the feelings with which the people were filled, and thus more a prayer in the strict sense of the term. The chief theme, which is treated in endless variations, is sin and suffering. The unceasing affliction which a thousand years of persecution brought upon the Jews finds as touching expression as does the believing humility with which they face the reason of the punishment, and make themselves rather than in the injustice of God. We also find the undying hope that God will finally put an end to their sorrows. Thus the ślōh are the most valuable testimony to the piety of the Jewish people during the Middle Ages, and along from this point of view be regarded as the continuation of the Psalms.

See, further, for the synagogue poetry, LITERATURE, (Jewish), III. 5, Ibn GABIROL, Ibn EZEAI, HALEV.

5. Influence of philosophy.—In spite of the fact that we possess synagogue poems from almost all the Jewish philosophers of the Middle Ages, from Sa'adya onwards, and although the greatest poets were also philosophers, we have comparatively only a few philosophic prayers (e.g., 'the King's Crown' of Gabirol). The reason for this striking phenomenon is probably to be found not so much in the difficulty of clothing philosophic thought in prayer form as in the fact that prayer was an attempt to reach the purest of the pure, the grandest of personal outpourings, which the coldness of philo-

6. Influence of mysticism.—If there are few traces of philosophy proper in the prayers of the synagogue, on the other hand, there have exercised a most harmful influence, since the end of the 12th cent., on both the conception and the content of prayer.

Although the more respectable mystics did something for spiritual religion and for devotion as opposed to thoughtless formalism, yet the liturgy lost more than it gained by their influence (Zunz, Die liturg., p. 94).

Since the beginning of the 16th cent. the liturgy has hardly been enriched except by additions from the Ḳabbālā, which only burdened the form and content of the service. On the other hand, the mystical sect of the Ḥasidim, which arose about the middle of the 18th cent., originated a most important movement among the people. This movement directed itself chiefly against the rigid codification of all matters relating to prayer brought about by Joseph Karo's ritual code, called Shulḥān 'Arukh (1565), and has been held up to the present day. Unfortunately this important move-

ment, which at first seemed likely to be so fruit-

ful, soon exhausted itself, owing to the opposition of the rabbis and to internal degeneration.
he furnishes us with numerous examples of Aztec devotion, of a public and ritual as well as of a private character. As he lived and worked in the sixteenth century, when the Spanish conquest of Mexico, and had abundant opportunities of meeting and speaking with natives who well recalled the times of Aztec paganism, there is no reason to believe that these productions are not the genuine outpourings of the Aztec mind or that they have in any manner been sophisticated.

The ritual and public prayers consist for the most part of appeals made to the various gods on the occasion of religious festivals, war, sacrifices, marriages, and the like. They are more or less baneful if the deity is addressed in the most exalted terms, it is impossible to judge the relative importance of the gods from the prayers offered up to them.

Private prayers, which appear to have been of a ritual character, are not officially prescribed. The necessity of having the means to obtain the necessary of life, for agricultural reasons, and, indeed, for heavenly assistance in every activity of life. The exhortations to parents to children, which have frequently been called prayers, and are so characteristic a feature of Mexican life, are, in reality, advisory sermons embracing codes of conduct for young people. The whole body of matter has been brought together in the sixth book of Sahagun's work mentioned above. LEWIS SPENCER.

PRAYER (Muhammadan.—1. The ritual of the daily salât.—The most important part of the Muslim liturgy was, from the beginnings of Islam, the ritual prayer, or salât. It was Mahomed's intention in prescribing this ceremony as a religious duty to his followers was undoubtedly to imitate the ritual prayer of the Christians and Jews in the Orient, at least as far as it was known to them. Like this prayer, the Muslim salât consisted chiefly of standing in a particular posture, the reciting of formulae, etc. The name salât is not originally Arabic, but borrowed from the language of the Eastern Christians and the Jews (viz. the Aramaic σεβαστα'). The Muslim law prescribes in great detail how a Muslim must perform his salât. A considerable proportion of these regulations may really be based upon the old synax (the common practice) of the Prophet and his contemporaries, but many of the rules concerned with details, as to which there still existed different opinion, in the first centuries after Muhammad's death, must be of later date.

When performing a salât, a Muslim stands, raises his open hands on either side of his face, and says: 'Ali ashuk akbar!' ('God is most great!'). This ejaculation is called takbir (or takbira). Then, still standing, he recites some verses of the Qur'an, especially the Fātīhā (i.e. the opening chapter, 1-17). After this recitation the various inclinations and postures follow (dastūr), viz.: (1) S. of Lane, Al-Hiṣn, p. 23; (2) the Modern Egyptians, London, 1855, ch. iii., with figures in the text; (3) Smith, Early Mohammedan Inclinations in Islam, 1855, 1956; (4) Sanhedrin, i. 41; (5) the Samaritan liturgy; (6) the Samaritan liturgy, i. 1, Oxford, 1913. FELIX PERLES.

PRAYER (Mexican) —The great repository of Mexican aboriginal prayer is the Historia General de las Cosas de Nueva España (3 vols., Mexico, 1829), in which
through the same again (the recitation of some verses of the Qur'an, as the two sujud) before and after each wuṣūd of every rak'ah he recites the takbīr; and after the last rak'ah he recites: (1) the bāḥādīḥ or (as the Prophet, may the peace and blessings of God be on him, used to say) the last of the (most of) the eight formulae and (2) a second salutation (the taslihah, i.e. the invoking of a blessing, saying 'al-ṣalām 'alākhum'), which is considered by most Muslims to be addressed to the guardian angels who watch over the worshipper.

At first—i.e. immediately after the hajrāh—the Prophet used to turn his face towards Medina during the salāt, i.e. the prayer prescribed during the second year after his arrival at Medina a revelation (Qur'ān, ii. 136-136) changed this, Muhammad having quarrelled with the Jews in that town. Ever since that time the Muslim must turn his face towards the Ka'bah in Mecca, to perform the salāt.

While performing the salāt, the worshipper is in a state of consecration (iyākhum) and must observe special prescriptions. According to the primitive conceptions, every worshipper was supposed to be exposed to particular dangers from evil spirits when he was adoring his Lord. Many of the religious observances of the salāt may originally have had no other purpose than to protect the worshipper from the presence of the evil demons. 

Thus (1) he must take care that his body is sufficiently covered; according to the Muslim law-books, a woman must cover her whole body during the salāt (except her face and her hands) and at least part of his body between his waist and his knees; the heads of both men and women are also supposed to be covered.

(2) He must say before reciting the Qur'ān verses: 'I seek my refuge near God from Satan' (cf. Qur'ān, xv. 59) and in pronouncing every takbīr in order to avert the evil spirits that may be present (or, according to the Hanafites, he must do so only in pronouncing the first takbīr, the takbīrat al-ḥārām; cf. Goldziher, 'Zauberelemente im Islamischen Gebiet,' in Festchrift-Niedler, Glessen, 1906, i. 320-322). (3) Special emphasis is laid on ritual abstinence before the salāt. It was a general custom of the ancient Arabs to employ water as a charm against demonic influences (see Goldziher, 'Wasser als iyyākum,' in JR Alt., 1910, 20-46); some of the earlier Muslim scholars held that an abstinence was necessary before every salāt (cf. Qur'ān, v. 8), but this view was rejected by other authors (see Goldziher, Die Zaubersprüche, Leipzig, 1927, p. 15). Moreover, the two schools, a ritual abstinence (wdādah or ghulūd) is required before the salāt only when the worshipper is in a state of ritual impurity. It must be observed, however, that this ritual abstinence is usually considered simply as a purification (see art. PURIFICATION [Muslim]; the original purpose of this ceremony may have been forgotten by the Muslims. (4) Further, it is desirable for a Muslim to recite the formule of the adhān (i.e. the call to prayer; see below) before beginning a salāt—at least when he is not alone—by the ḥaḍān that is chanted from the mosque. This usage must also be regarded as a kind of charm; the demons are supposed to flee when they hear the sound of it; the same is true

2. Obligatory and supererogatory daily salāts.

—Some of the earlier verses of the Qur'ān (see xi. 116, xvii. 80, xxx. 161, lxxiii. 1) require Muslims to perform the salāt thrice every day,—in the morning before sunrise, at the close of day, and during part of the night. On another occasion, he added after the hajrāh, the 'middle salāt' (salāt al-mustatil), mentioned in Qur'ān, ii. 239, probably an imitation of the Jewish mid-day prayer (the minhāj). Moreover, the Prophet, may the peace and blessings of God be on him, prescribed and continued other salāts on various other occasions. In the first generations after his death it was a subject of discussion which of the daily salāts must be regarded as obligatory, and there was also difference of opinion as to the exact times of day at which the Prophet had usually performed his devotions. But gradually it was recognized in the whole Muslim world that the five following salāts were obligatory for every Muslim: (1) the salāt al-ṣunah (at daybreak); (2) the salāt al-ghur (at noon, or rather about one hour later, when the sun has begun to heat the earth); (3) the salāt al-‘asr (in the afternoon, about half-way between noon and nightfall); (4) the salāt al-maghrib (at sunset, or rather about five minutes later, for it is forbidden to perform a salāt just at sunrise or sunset, because the heathen Arabs used to do so); and (5) the salāt al-iḥšā’ (at nightfall, when it is quite dark). Each of the five prescribed periods ends just before a new one begins, except that of the salāt al-ṣunah, which ends just before sunrise. Thus it is only possible to perform every salāt at the beginning of the prescribed period as possible.

The salāt at daybreak must consist of two rak'ahs, that of sunset of three, and each of the others of four; it is meritorious to add an odd rak'ah to the beginning of each of the five daily salāts. The four fiqh-schools disagree as to the exact number of these voluntary rak'ahs.

The five following daily salāts, though not prescribed by the law as obligatory, are regarded as commendable and meritorious: (1) The salāt al-tahajjud (the night-salāt) mentioned in some verses of the Qur'ān (see above).—This salāt has evidently been greatly increased by many Muslims. At Medina; not all the members of the continually increasing Muslim community had time enough for the whole ceremonial. Hence in many Muslim lands a sign is given in the mosque about midnight to announce the time of the tahajjud.

(2) The salāt al-witr.—It is meritorious to make odd the even number of rak'ahs of the last salāt of the night (i.e. the salāt al-ṣunah), by adding one rak'ah (or, for 5 rak'ah, or at least one rak'ah). Usually the salāt al-witr is added to the salāt al-ḥaṣā’a (since most people neglect the tahajjud), and the Muslims therefore a certain respect towards the Prophet. According to the Hanafites, the salāt al-witr is even obligatory.

(3) The salāt al-ṣaḥā’ah (salāt in the morning) at the time between sunrise and noon, consisting of two to twelve rak'ahs.—This ceremony also is not obligatory, though some of the earlier Muslim scholars thought it was. According to some traditionalists, it was a custom of the Prophet to perform this salāt every morning, but this is denied in many other traditions.

3. The mosque and the daily public service in the mosque.—The so-called mosque of the Prophet at Medina was an open enclosure, adjacent to his dwelling. On one side there was a kind of portico, open only on one side, supported by four pillars. This was where Muhammad usually performed his salāts, either alone or with some of his followers. But this masjid was also used for various other purposes; it was, e.g., the place where Muhammad received the news of Arabia's submission and where he gave banquets to his guests. We may assume that the houses of other men of rank at Medina had also a masjid of the same type.2

the mosque in Muslim society took the place of the old heathen miqta, the open space near the tent or dwelling of the head of the tribe where all deliberations of the tribesmen took place (see H. Lammens, 'Ziad ibn Abi,’ in *Rivista degli studi orientali*, iv. [1911-12] 240 ff., and L. Caetani, *Arabia*, Leipzig, 1879, p. 482 ff.; C. H. Becker, 'Zur Gesch. des islamischen Kultus,' in *Der Islam*, iii. [1912] 394 ff.). Once a week the Muslims were convened to an assembly in Muham-
mad’s *masjid,* a mosque probably originally introduced by the Prophet (see below) for the weekly congregations of the Christians and Jews. But the Muslims assembled on Fridays—at least at Medina, some time after the *hijrah.* One Friday, just before the service, a caravan with merchants and be
dealed among the believers forgot their religious duty, being occupied in buying and selling. Then Qur’an, ii. 9, was revealed:

> When the call to prayer sounded on Friday (or on the day of the congregation), then go to praise the Lord and abandon business, etc.

About a.h. 7 or 8 a *minbar,* a sort of wooden throne or stepladder, on which two steps, was placed in Muhammad’s *masjid,* and the Prophet always sat upon this when presiding at the meetings (see Becker, 'Die Kanzel im Kultus des alten Islam,' in *Festschrift-Nöldeke*, pp. 331–351). On special occasions Muslims would assemble and his head chamber of Meccan to the *muqalla* (the place where the *salat* and other ceremonies were performed in the open field). Later, a lance was carried before the Prophet as an emblem of his authority; on the *muqalla* this lance was stuck into the ground before him, marking the direction of the Ka'bah. After Muhammad’s death the Muslim liturgy remained very simple. In the great encampments of the Arabs in the conquered countries each of the tribes had its own *masjid,* where the tribesmen assembled. There was also a general *masjid* near the dwelling of the *waqf,* the head of the place or the governor of the province. Originally this head mosque was very simple, often being only a large open square, surrounded by a ditch or by walls and with an open porch in front facing towards Mecca, supported on stone pillars and covered with a roof (see, e.g., Tabari, i. 2450). It was a general place of meeting, not reserved for the Friday service and other religious purposes. With Muhammad, however, the believers were convened to a public *salat* before the further transactions, and the *waqf,* or, in the residence, the *khutbah* himself, presided at these meetings (see Goldzweig, in *ZDMG* s.v. [1895] 313; Belzendorf, ed. M. J. de Groot, Leyden, 1886, p. 228, 3 [Fragenstück. Arab.], ed. E. Goeje and P. de Jong, do. 1869, p. 217 s.]; al-Bayān al-Mughrīb, R. D. Dozy, do. 1848, p. 55, 16; al-Fahdi, ed. W. Ahlwardt, Gotha, 1860, p. 85, 11; Belzendorf, in *Der Islam*, iii. 395 s; and Caetani, *Rivista degli studi orientali*, iv. 242 ff.). The Unayyid *khutbīh* and also many of their high functionaries in the provinces used to sit on a *minbar* in these assemblies just as the Prophet had done before them. At first, however, this was regarded by some people as improper for a *waqf,* the *khulafa* ‘Amr forbade ‘Amr, his governor of Egypt, to sit on a *minbar.* It was only gradually that the mosque became a place exclusively dedicated to congregational *salat,* when its ritual was instituted, and the Muslim were nine *masjids* at Medina besides that of the Prophet; see also the traditions concerning the *masjid al-qubur* (mentioned in *Marib*, iii. 1182).

At a later time it was still a custom in some Muslim countries to indicate the direction towards Mecca by means of a *fāna* (the roughly triangular flag or standard which the leader of the community held himself. The *salat* was then performed *alā l-*ʿum (i.e., in the direction of this staff).

Liturgy began to develop and take fixed forms. The service of the Christian churches and Jewish synagogues may have influenced this development (see esp. Mittwoch, 'Zur Entstehungsgesch. des islam. Gebets und Kultus,' in *Gesch. der islam. Gesch. des Kultus*). It became a general custom to announce the times of the daily *salat* from the minarets of the mosque (the origin of the minaret is discussed in detail by H. Thiessen, *Pharas: Antike, Islam und Orientalter: Beitrag zur Architekturgeschichte*, Leipzig, 1909). The *adhān,* which is chanted from the minaret by the muad-
din, consists of the following formulæ:

> God is most great! (this is said four times); I testify that there is no god but Allah; (twice); I testify that Muhammad is Allah’s apostle! (twice); ‘Come to prayer’ (twice); ‘Come to security’ (twice); ‘God is most great!’ (twice); ‘There is no god but Allah.

The public *salat* in the mosque requires a leader, since all worshippers must perform the prescribed ceremonies together and at the same moment; every mosque has its own *imām,* who officiates over all who may be present at the times of the daily *salat.*1 It must be observed that the position of this *imām* is very different from that of a priest, since he does not perform an act of *salat* or *iqamah,* but to act as the leader of the *salat,* and, according to the theory of Muslim law, he may even cede his place to any other member of the congregation who is competent for the office. The beginning of the *salat* is announced by a second call to prayer, the *iqamah,* which consists chiefly of the same formulae as the *adhān,* though the most of the formule of the *iqamah,* however, are recited only once, and the words, ‘The time of the *salat* is [now] come,’ which are twice repeated, must be recited after the formula, ‘Come to prayer’ or ‘Come to security.’ The *imām* then places himself before the *mibār,* the niche that indicates the direction to Mecca,2 and performs the *salat* with the congrega-
tion. Only the voice of the *imām,* who recites the prescribed formule, may be heard during the *salat.* In the great mosques, however, where the congregation is usually so numerous that the believers cannot all see and hear the leader, the *nikbah* of the *imām,* marking the various postures of the *salat* (see above), is performed by persons especially charged with this office (the *mubālighīn*).

4. The Friday service and the public *salat* on feast-days and other occasions.—On Friday the *salat* *al-jummah* (the sabbath, or the ordinary noon-prayer). It is a service celebrated by the whole community in the head mosque (jāmi‘) of the place, consisting chiefly of two parts: the *khutbah* (‘sermon’) and a *salat* of two *rakāhs.* In later times the khutbah pre-
ceded the *salat*; but this was not the original usage. According to Muslim tradition, it was an innovation introduced by the first Unayyad *khulafa,* Muʿawiyyah. Before the beginning of the sermon the *adhān,* which has already been chanted from the mosque, is repeated in the mosque. The preacher (the *khutbah*) then delivers his sermon, standing on the *minbar,* and holding, as prescribed by ancient custom, a staff or wooden sword (or a bow) in his hands (see *Preaching* [Muslim]). When the *khutbah* has finally concluded, he descends from the *minbar,* then the *iqamah* is chanted, and the whole congregation performs the two prescribed *rakāhs* of the *salat al-jummah.* It is considered meritorious to perform, before and after this, the *salat* on Friday evening, the *salat* sup-
eratory *rakāhs* of noon.

The Friday service formerly required a general

---

1 Other persons perform the lower offices in the mosque—lighting the lamps, sweeping the mosque, reading the law of the daily prayers, the ‘Adab, etc.

assembly of the whole community. Muslim law therefore forbids that this service should be celebrated in different mosques of the same town, unless the place is so populous that it would be practically impossible to assemble in one mosque. Moreover, the Shiiites, and the majority of the orthodox among the Sunnis, think that the jum'ah is valid only when at least forty persons join in it; the Hanifites, on the other hand, hold that no fixed number is required, and that the Friday service can be validly celebrated by an imam and only three persons.

Twice a year, on the two Muslim feast-days (at the end of the fasting month and on the 10th of the month of Dhi-ul-hijjah, in connexion with the sacrificial feast of the pilgrims in the neighbourhood of Mecca) a special service, the qabah al-id ('feast-qabah') is celebrated which resembles the Friday service in many respects. There are, however, some points of difference: (1) the time recommended for the qabah al-id is the morning, about half-way between sunrise and noon; (2) it is supposed in the lawbooks that this service should take place not in a mosque but in the open field; (3) the service consists of a khutbah and a qabah of two rak'ahs like the Friday service, but there is an addition of two (4) the al-muqadha and iganah are omitted; the muqadha before the service only calls: 'Al-qabah jum'atun!' ('Now perform the qabah together!'). We may assume that in all these respects the feast-qabah is still nearer to the ancient form.

Another religious assembly takes place on each evening of the fasting month. It is counted meritorious to perform the qabah al-tarabh ('the qabah with pauses') after the daily qabah al-azr in this holy month. This ceremony consists of twenty rak'ahs in the course of which is separated from the rest by a taslimah (see above). Though this qabah is not obligatory, many persons usually take part in it. This great zeal for the qabah al-tarabh can only be explained by its particular connexion with the holy fasting month.

When there was a great drought, the pagan Arabs tried to induce rain by enchantments. These heathen practices were replaced in Islam by the qabah al-istiwa (the qabah for invoking rain). But this qabah is not celebrated on the feast-day service on the two feast-days. It is still characterised by the following ceremony: after the qabah the imam and the other worshippers who are present move about and shake their upper garments in order to clear away the dust from their body; and this is followed by a survival of Arabian heathenism (see Goldziher, 'Zauberemehle im islamischen Gebet,' pp. 308–312). During an eclipse of the sun or moon a public service is celebrated which resembles the feast-qabah in most respects. As regards details of the liturgy on these and other occasions, the opinions of the different high-schools disagree.

PRAYER (Roman).—As in many other phases of religion, the religious life of the Romans offers an exceptional opportunity for the study of prayer. Between the prayers of Cato and those of Marcus Aurelius, we have, as it were, a complete gamut of religious experiences, and, though these two landmarks are less than 400 years apart, Cato represents many centuries before his time, and Marcus Aurelius is the prototype of many centuries to follow. Prayer, as distinguished, on the one hand, from magic and, on the other, from mystical absorp­tion, is the orthodox communication between man and those powers outside of him which are called God or gods according to circumstances. Upon the orthodoxy of the act depends this distinction, and it is this element of orthodoxy alone that makes magic and primitive prayer distinguished in the one case from religious prayer in the other; magic and primitive prayer are mystic and mystical, and advance prayer to religious absorption. But, before we begin even this outline study of Roman prayer, we should make ourselves fully aware of three facts: (1) that the actual number of Roman prayers transmitted to us is relatively small; (2) that many prayers, so called, especially those in the poets, do not represent trustworthy evidence, and are apt to be either fanciful or under Greek influence, and therefore not available for our present purpose; and (3) that there is scarcely an operation in the world more delicate, and therefore more difficult, than the attempt to deduce the religious attitude of the individual from the formal experiences handed down to us.

1. Primitive prayer.—Here it should be noted that this title includes not only prayer as practised by the most primitive people, but also prayer as practised in later times by persons of primitive intelligence, but also many primitive forms of prayer retained by religious conservatism and practised by all orthodox persons. This obligation of observance is very necessary owing to the peculiar conditions under which the religious life of ancient Rome had its development. This development represents a series of accretions—a mechanical rather than a physiological growth. Man's spiritual development has branched out itself not nearly so far as the transforming of the old formulae as their absolute conservatism and the adding to them of outer coatings, new tree-rings of more modern thought. This was possible because of the absolutely formal character of all Roman religious concepts; and the only exceptions to it are found in the more spiritual cults of the Orient and in the impotent enthusiasms of a spiritual philosophy. The success of primitive prayer depended principally upon two things—the scrupulous exactness of expression and the correctness of the name and title of the deity addressed. Exactness of expression is an absolute requisite. This idea, of course, common to both prayer and magic, and the orthodoxy of the one and the illegiti­macy of the other are unchangeable verities, and a test of distinction. The question whether all primitive prayers were of a rhythmical character—the eurhythmic, common to both prayer and magic—is a difficult one to answer, but certainly very many primitive prayers were, for we have instances of them.

Every effort was made to obtain the strictest verbal accuracy, on the theory that whatever was said had legal validity. The formulae themselves were collected and preserved in the books of the priests. The formulas were never changed, even though the language was so archaic that the priests themselves scarcely understood it. This was true, e.g., of the prayers of the Salli, of which Quintilian says:

'The Salli were loosely understood by the priests themselves, but religious conservatism forbade the changing of them, and the consecrated forms must still be used.'

Deor. ii. 10, and Paul, p. 88, s.e. 3 Eurythmic. 4 Cf. Festus, p. 173: "As the tongue has spoken, so is the law." and Cie. de Oro. i. 245. 5 Gell, xiii. 23. 1. 6 Inst. Or. i. 6. 40.
PRAYER (Roman)

In the cult of the Arval Brothers a similar state of affairs existed, and as a safeguard against mistake the people sang as they danced, as they danced. In other cases the worshipper repeated the words of the prayer as they were said by an assistant. The penalties for an error were indeed great, for a trifling mistake rendered the whole performance null and void. In the case of the Arval, if the words of a prayer were wrongly pronounced, the worshipper might possibly the secret names were so secret that they never existed, but the principle underlying the whole discussion is a genuine one.

Practically all the writers on Roman religion, with the exception of Wiedemann, have emphasized the magical and the legal bargaining aspects of Roman prayer. These two aspects were indeed prominent, but alongside of them existed. If only in rudiment, the concept of the prayer as the power and fulcrum of the decrees of the divinity, the goodness, or else the misanthropy of man. "The language is the language of prayer, not of compulsion or even of bargaining." We see this most clearly in the famous four prayers in Catu's "Farm Almanack"—prayers which are some of the most unique documents that the quoting of them in full is better than many pages of explanations.

PRAYER at the flowering of the pear-trees (Cato, de Re Rust. 131 f.). "At the flowering of the pear-trees make sacrifice for the continuance of the good weather. Give to Jupiter Dapalis a measure of wine, as much as you see flourishing on the trees. [On the morning of the day who is to make the sacrifice] you milk the cow, receive the milk of the goat, and the milk of the sheep to a wine in which I make thee in my house and in my family, mayst Thou be graciously increased by this sacrifice. Then wash your hands and the sacrifice be the wine, saying, 'O Jupiter Dapalis, mayst Thou be increased by this sacrifice which I make unto thee, mayst Thou be increased by this wine which I offer Thee.'"

PRAYER before the harvest (Ch. 136). "Before commencing the harvest, it is necessary to sacrifice a pig in the following manner: The sacrifice of a female pig should be made to Ceres before harvesting the following—spelt, wheat, barley, beans, and turnip. Before sacrificing the pig, invoke with incense and wine Janus, Juno, and Juno. Present the pig to Janus and Juno. With this prayer: 'Jupiter, the gods, be propitious to me, to my sons, to my household, to my house, to my family. Be Thou increased by this offering.' Then offer the pig to Janus and Juno, saying, 'I offer this pig to thee, O Jupiter, I pray that Thou wouldst be propitious to me, to, my sons, to my house, to my family. Be Thou increased by this offering.' Afterwards give wine to Janus as follows: 'O Father Janus, just as in offering the pig to Thee I prayed good prayer to Thee, for the sake of this thing, mayst Thou be increased with the wine which I offer Thee.' And thereafter pray to Jupiter as follows: 'O Jupiter, mayst Thou be increased with this offering, and mayst Thou be increased with the wine which I offer Thee.' Thereupon slaughter the pig.

PRAYER at the lighting of the oil (Ch. 139). "According to the custom of the Romans, thus should a clear be made. Make an oil lamp and take a very little oil. You have said: 'Whether Thou be god or goddess to whom this wood is sacred, be there peace to Thy thy due, the expository sacrifice of a pig should be made to thee. But if it is not to me that whether I perform the sacred act or others do so at my command, may it be well done, even as if has been done. With this intention with this pig sacrifice to thee, O Jupiter of mine pious prayers that Thou shouldst wish to be kindly disposed toward me, my house, my dependents, my sons, Therefore mayst Thou be increased by this pig of expiation which I am offering to Thee.'

PRAYER at the instillation of the fields (Ch. 141). 'Thus should the instillation of the fields take place. Thus shall you order the suovetaurillae to be led about them: 'With the consent of the gods and with every favourable omen, I commit you, O Manius, the task of leading the suovetaurillae about my farm, my fields, my coverts, in whatsoever part you should think best, for they should be led about.' Then make libation with wine and invoke according to formula Janus and Juno, and speak as follows: 'O Father Mars, I pray and beseech of Thee that Thou wouldst be well willing and propitious to me, to my house, to my dependents; and for this reason I have ordered that the suovetaurillae should be led about my farm, my fields, my coverts, that the earth should hold back, hinder and drive away sickness visible and invisible, desolation, ruin, devastation or storm, nor should the fruits of the soil, the grain, the vineyards and the thicket; that Thou wouldst keep the field in full bloom and the farm prosperous, and shouldst give prosperity and health to me, to my house and to my dependents. For these reasons and because, as I have said, I am about to make this sacrifice, I pray that thou wouldst be propitious to me.' Therefore in my name and in the name of my family, mayst Thou be increased by this suovetaurillae which is being offered to Thee.'

2. Prayer as a votum. — Prayer in the religion of the Roman State was virtually a bargain

1 Bel. Exper. of the Roman People, p. 182 f.
2 Ib. p. 159.
between man and god, whereby man, the party of the first part, agreed to pay to the gods the party of the second part, such and such things if the god, the party of the second part, performed certain acts for man, the party of the first part. Such prayer was called a votum, a 'vow,' because the promise and binding itself was this general promise to pay if service was rendered. As a rule, payment was not made until the deity had performed the desired acts. But there was one important exception to this general rule, the dedications, by which case the deity was paid in advance. It is not at all impossible that such payment in advance may have been intended as a means of binding the god and thus exercising a species of compulsory magic. The devoto is the vow uttered by a Roman general in the moment of battle whereby he agrees to give up his own life in order that his army may be victorious. If he succeeded in this act of self-destruction, it was felt that the gods had accepted his death, and that, having accepted it, they were compelled to grant the victory to his ingo. This curious religion was carried one step further, and it was thought that the gods were free from any obligation if the enemy succeeded in opening their ranks and letting him pass through unpunished. This strange form of prayer before described as in a certain sense forming the link between the magical and the legal point of view, for all ordinary vota were a strictly legal performance. The favours demanded of the gods were as infinitely various as were the promises to pay in case of fulfillment. These promises included votive offerings, games, sacrifices, the building of an altar or of a temple.

3. Outward characteristics of Roman prayer. — The worshipper faced the image of the god, and, as the god usually faced west, so the worshipper usually faced east in the moment of devotion, as a rule, was standing, though occasionally he walked round the altar. 1 During the actual prayer itself the worshipper often held the altar. 2 Generally the hands were raised, but sometimes special positions were required; e.g., in a prayer to Neptune the hands were stretched out towards the sea, 3 while in praying to Tellus or Ops the suppliant touched the earth. 4 We also find references to kneeling. 5 At the end of the prayer there followed the mumification (adoratio) by which the worshipper put his right hand to his mouth. 6 Prayers were normally said in a distinct and usually a loud voice. This was the natural method in antiquity, just as all reading was done aloud. This fact makes possible many scenes in the drama when prayers are overheard. 7 Silent prayer was sometimes motivated by modesty, 8 and sometimes by shame; 9 but whispered prayers were not orthodox, 10 and he who indulged in them fell readily under the suspicion of practising magic.

4. Spiritual prayer. — Philosophy and the spiritual cults of the Orient, which entered Rome at the beginning of the empire, tended to introduce gradually an entirely new concept of prayer.

It was no longer a formal process by which man obtained the promises of the gods binding the deity to give a reward by compulsory magic or by legal bargaining. It became instead an effort of adoration, a communion with God, a moment of spiritual exaltation; 11 and it was into this atmosphere that Christianity came.

PRAYER (Teutonic).—1. Prayer to the gods. —Our knowledge of heathen prayer among the Teutonic peoples is very scanty, and comes almost entirely from Scandinavian sources. From the prose Ædda we learn that prayer was a regular part of the worship of the Asur and Asynjur. Njörr is to be invoked for seafarers and voyages and for hunting (Gylfaginning, xxiii. [Die pros. Ædda, ed. C. W. Heimbach, 1881, p. 292 ff.]). Frey was particularly well-disposed towards those who pray to her for help in love affairs (Gylf. xxiv. [p. 34]). In the sagas we frequently hear of men who have a special devotion to Thor, whom they invoke in dilemmas in which they are in dire need of personal or important undertaking. In these cases it is hard to distinguish between prayer and divination.

'Thef Roarof Mostraverson made a great sacrifice and went to consult with Thor, his beloved friend' (V. Holkham, Allteids. Lesebuch, Weimar, 1896, p. 64). 'Helgi was very much in his faith. He put his trust in Christ and named his homestead after him; indeed he would pray to Thor on sea-voyages, and in hard stress, and in all those things which he thought were of most account to him' (Eddnahandbok, n. xiv. 3, in V. Sigfusson, The Historical Documents of the Nort. Sagas, 1896, p. 119). 'Then Anr-ly called upon bishop Patrec, but as for Call he called upon Thor' (ib. i. vii. 2).

In Vignygam’s Saga, 9, there is an interesting example of prayer to Thor.

'Thorolf had been compelled to sell his land to Glimm. But he departed from Thveri he went to the temple of Frey, leading thither an ox, and said: 'Frey, who long hast been my patron, and hast accepted many gifts from me and rewarded me well, now I give this ox to thee, so that Glim may leave Thvalerand as monuments of thy will as I do now; or may accept whether thou acceptest it from me or not.' At this the ox bellowed loud and fell dead, which Thorolf liked well, and he was lessened, and sturdier, and thought his ox was heard' (R. du Chatill, The Viking Age, London, 1890, i. 322).

There are several stories of Earl Hakon’s devotion to Thorger Ólafsgárdur (also Hörnsicr, Horgansdr) and the earnest prayers that he was wont to offer in moments of crisis. On one occasion Hakon desired her help for his friend Sigmund, whom he led into her temple.

‘Hakon and Sigmund with a few others went into this house, where there were many gods; it had also many glass windows so that there was no shadow in it. At the inner end was a woman magnificently dressed. The Earl threw himself down at her feet, and lay there a long time. Then he rose up and told Sigmund that they should make her some offering, laying the money on the seat in front of her, ’we shall have this token,’ said he, ‘it is the only thing that I have wished for thee to give the ring that she has on her hand. From that ring you will have good luck.’ Then Sigmund then laid hold of the ring, and it seemed to Sigmund as if she closed her hand, so that he could not get it off. The Earl lay down again before her, and Sigmund was astonished that he had not noticed that it was in his power. Again he stood up, and laid hold of the ring, and this time it was loose. He gave him the ring’ (Flateyjarbok, 144, quoted in W. A. Craigie, Scandinavian Folklore, London, 1898, p. 41).

An instance of prayer addressed to a stone occurs in Hórr’s Saga, 37:

‘Hórr’s brother-in-law Ælfræð wished to stay the bound Thórir and Gwas (p. 351) from the way to his sacred house, whither he was wont to go. When Thorstein came, he entered the sacrifice house and fell on his face before the idol, a sign of worship (which stood there, and then he spoke to it) (du Chatill, i. 358).

PRAYER (Teutonic)
PRAYER (Tibetan)

K. Hildebrand, Paderborn, 1912, p. 50), 'Dutra's obëcit an sëophobic,' may perhaps be translated, 'It is better not to pray at all than to sacrifice overmuch'; and prayer and sacrifice are here contrasted or considered as practically synonymous. Certainly in Tengtanic as in other religions the two modes of worship were closely connected.

This describes a prayer offered up with gifts. And wherever there was occasion for prayer, there was also for sacrifice (Grinn, Text. Mythol. I, 29).

Gives a detailed account of the worship of the Scandinavians:

'As soon as the ship arrives in the haven, each one of them goes aboard, taking with him offerings of gifts and intoxicating drinks, and makes his way to a tall piece of wood set up, which has something resembling a human face and is surrounded by small stones behind which he erected, and other tall pieces of wood. He goes up to the great wooden image and throws himself down before it, saying: 'O ye lord, I come of thine hands, bringing with me such and such a number of maidens, and such and such a number of noble skins. When he has counted up all his stock, he proceeds: 'I have brought this gift to thee,' and lays down what he has brought before the wooden statue and says: 'I desire that those who shall concern one with a merchant who has plenty of gold and silver and will buy from me all that I wish to sell and will challenge nothing that I say.' He then goes aboard, and the boat does not proceed forward until the stay is too protracted, he comes again, bringing a second or even a third offering. The difficulty in correctly interpreting this refers to the fact that he brings a gift to each of the little images and asks them for their intercession, saying, 'These are the wives and daughters of the inhabitants of this forest. Give wisdom and eloquence to two of the images, and hands of healing during their lives.' (Signif. Wurden, h. 3 [Hildebrand, p. 317]).

When Earl Hakon and Guthred were pursuing Harpp, who had plundered the shrine dedicated to Thor, Thorgerðr Holgabjôr, and Erp, the earl went aside by himself, away from the other men, and praying piously addressed them: 'Queen Erp, queen Holgabjôr, if you hear me, come to me. If you do not hear me, I shall turn the castle over your heads, and so he stays awhile. He fell down on both his knees, and held his hands before his eyes; after that he went back to them.' (The Story of Skjong, tr. G. W. Dasein (Everyman's Library), London, 1911, p. 150).

During his flight with the Jomsborg Vikings Hakon prayed to Thorgerðr Holgabjôr, but his prayer proved unavailing until he had sacrificed his son Erling (cf. Craige, p. 33).

3. Manner of prayer.—Little is known of the form and manner of heathen prayer. Tacitus (Germania, 52, 5) says that in Germanic heathenism the divination was practised by a priest or pater-familias, ‘having prayed to the gods and glanced up to heaven.’ In the sagas we hear frequently of worshippers protraying themselves before images of the gods.

The island was thickly wooded, and Hakon went to a clearing in the forest, where he lay down, looking to the north and prayed in the way he thought best, calling upon her in whom he put all his trust, Thorgerðr Holgabjôr (Craige, p. 33; for the heathen custom of turning to the north in prayer cf. Grinn, I, 34).

PRAYER (Tibetan) Prayer prayer is more prevalent among the people of the Lamas than among any other nation perhaps in the world. This is owing partly to the extreme devotion fostered by the hierarchy which wields the temporal rule of the country, and partly to the intense pious feeling of the generation long associated with it and exalted by allusion from the rest of the world, amidst environments where Nature in her severest moods tends to inspire a superstitious dread of malignant spirits, who can be appeased or coerced only by prayer and sacrifices. The Lamas are thus almost always of the laity in all spare moments, apart from the daily priestly services in the temples, and in the houses of the well-to-do, which generally possess a small shrine with miniature altar, before which domestic prayer is rendered.

1. General character of the prayers.—The prayers are generally genuine petitions addressed to one or more bountiful Buddhas or Buddhist divinities, whose spiritual or material succour is entreated; or they may be the prayers uttered in praise of the particular deity or deities invoked; and, in nearly all, one or other Buddha, human or celestial, is referred to in addition to the other deity invoked. The frequent repetition of such formal prayers tends to degenerate into a mechani- cal routine of soundings, although usually of formal litanies and other rituals extracted from the Indian and Tibetan Buddhist canonical scriptures, spontaneous private prayers are not uncommon. The present writer has often heard Tibetan votaries, after making an offering of lamps on the altar of wayside temples, address God for spiritual and temporal blessing, for prevention of bodily peril or ailment, and for provision for daily wants, very much after the manner of Christian worshippers at this present day—prayer for the sick, for rain, for war, for the emperor and the great men of the state, for good weather, for victory at war, and the like. The class of canonical works furnishing these prayers is generally the same as that employed by the 'Southern' Buddhists of Ceylon, Burma, and Siam for the purpose, under the name of peritta or perl (＝ 'protection'), and are translated from the Pali canon specially composed and prescribed by Buddha himself 1 to be recited as prayers to avert malign influence, for recovery from disease, to remove physical difficulties, and to procure happiness and a good rebirth. They are addressed to the moon, sun, and various other divinities, especially the yaksba—a general term for the orthodox Buddhist gods on Asoka's monuments (250 B.C.), though latterly viewed as more or less malignant. While the Tibetans thus use for prayers the corresponding canonical texts to the Hinayana Pali canon of the Southern Buddhists, 2 they have the advantage over the latter in that they have translated these texts into the vernacular so that the people can understand the meaning of the prayer or incantation, whereas in the Southern countries the texts are in the foreign and long dead Pali, which is unintelligible to them, making the 'prayer' an unmeaning mummary. Even the ingenious Bon religiousists in the remoter districts have now generally assimilated their prayers to the type of the dominant Buddhists.

3. Deities and saints invoked.—The gods chiefly invoked by the Tibetans are found by the present writer to be orthodox Buddhist gods. For, contrary to the statements of Western writers on primitive Buddhism, 3 he finds that gods enter very largely into the religion of Sakyamuni himself, as evidenced in the earliest Pali canonical books, and into that of his greatest propagandist, the emperor Asoka, not only in his inscribed monuments at Bharhut, but also in his objects. Thus the latest authoritative reading of the Sahasrâk rock-inscription states:

Men in Jaunh-dvipa (India) who up till this time had been unassociated with the gods, have (now) been made associated with the gods. 4

2 For list of the Buddhist canonical texts used as prayers in Pali, and tr. of several, see Gogerly, p. 389-393.

3 E.g., T. W. Rhys Davids and H. Oldenberg, p. 1135.

The first deity or divine saint to be invoked is Buddha himself, though not the most frequently addressed by the Tibetans. This is also paralleled in Southern Buddhism, in which the Bodhisattvas, especially the Pāramitā-bhūta, are invoked as a still existing divinity, and not merely pious memories:

1. bow my head to the ground and worship
2. The sacred dust of his holy feet
3. If I have sinned against Buddha
4. May Buddha forgive me my sins.

He is also invoked daily in the refuge-formula: ‘We go for refuge to Buddha, to his word or law (Dharmas), and to his order of monks (Sangha),’ in Tibetan as in Southern Buddhism, as if he were still existent.

More frequently than the quondam human Buddha are invoked the celestial Bodhisattvas of the Indian Mahāyāna Buddhism. They are regarded as everlasting gods, and are reflexes of the Hindu gods to whom the title of ‘Buddha,’ or Buddha's other favourite title, ‘Jina,’ or ‘the Victor,’ has been transferred. Of these the purely personal self-existent Bodhisattvas, or the late Brahmānist creator-god Brahmā, is Adībuddha, and he bears various titles according to different sects of Lānas. Thus he is the ‘Thunderbolt-Holder’ (Dev., ‘Rākṣasātaka), ‘Receptacle of Light’ or ‘Ever-shining’ (Nam-paśaṇa-nsāda), a form of the popular solar Buddha, Amitābha, or the ‘Boundless Light,’ the god of the Western Paradise, though nominally different from the latter, of which there was a fivefold division of these celestial Bodhisattvas according to the five directions, namely the four quarters and the zenith.

Much more frequently invoked are the celestial Bodhisattvas, or nominally potential Buddhas among the gods, most of whom are everlasting gods of an energetic order and invoked for their active aid. One of these, common to Southern Buddhism and Indian Mahāyāna, is the Buddha-Messiah Manuṣya-Muṇi, whose image was placed by Sākyamuni in the heaven of Indra or Sakra. Gotama's (or Sākyamuni's) frequent references to him and to his abode in Indra's heaven offer another confirmation of the statement so frequently made by the Pali school of writers that Budhism was atheistic and did not recognize the Hindu gods in his system. Of this Buddhist Messiah, many colossal images are carved on cliffs along roads in Tibet, and are the object of prayer to passers-by. But the most frequently worshipped and invoked of all is the Indian Buddhist goddess the ‘Saviours’ (sGrol-ma, pronounced Dö-mi, the Skr. Tārā), who is the primonial Mother-goddess, Māyā, which was also the name of Buddha’s mother; and, under the Tibetan title, Tārā is worshipped by the Burman and other Southern Buddhists. She is the special patron of women and children, and succourer in distress on land and sea. She is the Queen of Heaven, independently on her own account as well as in the form of protector to the Indian Avalokita (sPān-ras).”

zigs, pronounced Chā-rā-si), the ‘All-Seeing One’ (Vishistā, according to its Tibetan translation). The latter as the god of transmigration is the special favourite and patron-god of the Tibetans, and is associated with two others, as the defenders of Lāmān, who also are of Indian origin, the Thunderbolt (Dzö-pa, Th. Yoga-bhūta, Skr. Vajrapāni), the Saivistic Jupiter Pīrvu, and the ‘Sweet-Voiced’ god of wisdom or Buddhist Apollo (Jam-dran, Skr. Mājñūn)—all three of whom are in great request, though Avalokita, to whom the ‘On the pre-eminence of the Bon sects. But the Saivistic forms of the Thunderbolt-Holders are not technically regarded by the Tibetans as devils, are really demonical and are identical with the demonist forms of the Hindu god Siva as the spirit of destruction and death. These demonist forms were not inventions of the Tibetans, as generally asserted, but were all borrowed by the Tibetans ready-made from medieval Indian Buddhism, which, to maintain its popularity, had been forced to adopt these depraved elements from the degenerate Indian Brahmanism, and to assimilate them to the local philosophy. But they were all right, as they imported them from the home of Buddhism at Both Gaya. As a result, each Tibetan monk has to select one of these demonist Sivas as his tutelary, and each morning he privately invokes him for his protection throughout the day. But the unsophisticated laity now invokes for this purpose the deified saint Padmasambhava, and the women invoke Dö-mi, or Tārā, when they proceed beyond the self-sufficient ‘On marpad kyi."

4. Prayers in celebration services.—The priestly arrangement of prayers for the worship of each Buddhist divinity among Tibetans is usually divided into seven stages, and the text is printed or written in separate little pocket manuals or prayer-books for each deity, all in vernacular Tibetan. The stages are these: (1) the invocation—calling to the feast or sacrifice; (2) inviting the deity to be seated on the altar; (3) presentation of sacrificial offerings—sacred cake, rice, water, flowers, incense, lamps, musical instruments; (4) the invocations; (5) the special spell of the deity in Sanskrit; (6) prayers for benefits, present and to come; (7) benediction. When demons have been worshipped, they are ‘invited to depart’ before the benediction.

5. Examples of ritual prayer.—A good example of the formal prayers is seen in the following:

2. For details see ibid., p. 424 ff.
ing extract from the ritual of Tārā, the Queen of Heaven, which has been translated in full by the present writer. It is composed in metre.

Invocation.

' hail! O verdant Tārā! The Saviour of all beings! Descend, we beseech thee, from thy heavenly mansion at Potasa! With all thy host of gods, titans, and deliverers. We humbly prostrate ourselves at the lotus-feet! Deliver us from all distress, O holy Mother!'

Presentation of sacrificial offerings.

' We hail thee, O revered and sublime Tārā! Who art adored by all the kings and princes. Of the ten directions, of the present, past and future. We pray thee to accept these offerings of flowers, incense, perfumed lamps, precious food, the music of cymbals and the other offerings! We sincerely beg thee in all thy divine forms to partake of the food now offered. On confessing to thee penitently their sins

The most sinful hearts, you, even the committees of The ten rites and the five boundless sins

Will obtain forgiveness and

Reach perfection of soul, through thee!

If we have amassed any merit in the three states,

We to the hint od good fortune, when we consider

The unfortunate lot of the poor (lower) animals

Still piously engulfs in the ocean of misery,

Un their behalf, we now turn the wheel of middleness.

We implore thee by whatever merit we have accumulated To kindly regard all the (lower) animals.

And deliver them, when his merit has reached perfection, Let us not, we pray thee, longer live in this world.

Ippana in Tārā's praise.

(The hymns are in verse, the metre of which is not here reproduced.)

'Hail! exalted Tārā-the-Saviouress! Heroic mother, the Messenger Of the three-world Lord. Rich in power and compassion. Hail to thee whose hand is decked By the golden lotus, Eager soother of our woe, Ever tireless worker, thou! (and so on for 21 verses).

Repetition of the spell and prayer of the deity. Here is repeated 108 times on the rosary, or, if time presses, as often as possible, the special mantric spell of Tārā in Sanskrit, namely:

'Oha! Tārā tu Tārā tu! Tārā Svā-hā!'

Prayers for blessings.

'We implore thee, O revered Blessed One, O Victorious and Merciful Mother! purify us and all other beings from the two evil thoughts.

Wherever we dwell, we beg thee to soothe there disease and power, fighting and disputes, and increase the true religion.

Let us obtain the favourite tutelary angels of our former lives and entry into the paradise of the Buddhists of the past, present and future.'

Benefaction.

'Now, O mighty Worker, speedy Soother and gracious Mother, Holding the vipāla-lotus flower, may thy glory come and all happiness!

One of the ordinary hymns to Buddha opens as follows:

‘Om! Hail to the Omniscient Ones: Buddha, (His) Law, and (His) Order of Monks!

Hail to the blessed Buddha, the victorious and all-wise Tathā-gata Arhat, who has gone to happiness! He is the guide of gods and men. He is the lord of virtue, the mountain of treasure. He is adorned with perfect endowments and all beauty. He is the greatest flower of all the race. He is admirable in all his actions, in the eyes of all. He delights in the faithful ones.

He is the Almighty Power, the Universal Guide. He is the father of all the Bodhisattas,

1 See Waddell, Buddhism of Tibet, p. 435. 2 k'hara’s circle.’

That is the four cardinal points, the intermediate half-points, the northwestern or the southwestern.

4 This goddess has different forms and names as incorporating all aspects of the primordial divine mother; see Waddell’s tr. of Tibetan Dhārani, in J.A.S.I. (1914) 27-56.

5 The three mystic worlds of Brahmānism: desire, form, and formlessness (bhūta, bhūtāna, and amṛta).

6 Bhagavat, the feminine of bhagavat, the ordinary title for Buddha in the Pāli and often in the Sanskrit.

7 Lit. ‘spirit’ or ‘gods’ (bhūta).

The king of the revered ones and leader of all the dead. He owns infinite knowledge, immeasurable fortitude. His commandments are all-perfect, his voice all-pleasing. He is without equal, without desires, without evil. He delivers all from sorrow, from sin, from worldliness. He exerts the usefulness of the sharpest sword. He bravely cuts all knots. He delivers all from deepest misery, from earthly woes. He has crossed every danger. He is perfect in foreknowledge. He knows the past, present and future. He lives far from danger. He lives in the pure land of bliss, whence entreated he sees all beings!'

6. Rosaries.—The supposed efficacy of the mechanical repetition of prayers as devotional exercises has led in Tibet, as in the Roman Church, to the extensive use of the rosary; and nearly every layman and woman in Tibet carries a rosary to register the performance of these pious tasks. The rosaries are formed of various materials of mystical significance, and the beads reach the mystic number of 108. The leading prayer-spell formula recited on these beads are of a Sanskrit character, and are shown in the following table along with the deity or saint to whom they are addressed and the kind of rosary employed.

7. Graces before meat.—Before drinking tea, the usual beverage, the Lāmas, like the Romans in regard to wine, pour out a little as a libation to the fāres and other gods. A usual grace for tea is:

'We humbly beseech thee that we and our relatives throughout our life-cycles may never be separated from the Three Holy Ones! The blessing of the water-essence into this drink!' Then, before drinking, they sprinkle a few drops with the tips of the fingers on the floor or ground, and continue the grace:

'To all the dread local deities of this country we offer this good Chinese tea! Let us obtain our wishes, and may the doctrines of buddha be extended!'

When any flesh-meat is in the diet, 'Oha abhīra khechara, Rūha! is repeated to counteract the sin of slaughter and of cutting flesh, and by the efficacy of this prayer-spell the animal whose flesh is eaten is supposed to be reborn in a higher state of existence, and even in heaven. 8. Prayer-wheels and prayer-flags.—With the laity the panama prayer-formula is the ubiquitous

1 For details see Waddell, Buddhism of Tibet, pp. 202-210.
Oṁ mani padme hūṁ, which is the Pater Noster of Tibetans, though it is of Indian origin. In virtue of the supposed efficacy of its mechanical repetition, it is printed thousands of times on long strips of paper which are coiled inside revolving machines, and then wound on spools, which form the production hall, 'prayer-wheels' which are the most conspicuous part of the pious outfit of the Tibetans, laity and Lāmas, and are carried spinning in their hands, in the belief that each revolution of the printed sentence is an equal number of times (cf. art. PRAYER-WHEELS). On the 'prayer-flags,' which are erected on tall masts in the neighbourhood of temples and wayside shrines, and, fluttering in the breeze, cast a pictorial feature of the landscape, are inscribed various prayers of an astrological kind, especially for the good fortune of the person erecting these flags, which are really 'luck-flags.' Their name lung-rtu-ma means 'lightning,' a name to incorporate the Chinese long-ma, 'horse-dragon,' which has an analogous ritual. After several spells in Sanskrit we find written in Tibetan:

'May all the deities (Arahatas and others) prosper the year of the birth of the Buddha; may the sacred words of the Divine Vow and the holy prayer, speech, and mind of this year-holder and master of divinity (the guru)' be found and be used.'

Analogous paper banners, in the shape of dragons and other animals, are offered also by the Southern Buddhists of Burma at temples and other shrines inscribed with similar sentences in Pali and the vernacular, such as:

'May the man born on Friday gain reward by this pious offering.'

'May the man born on Monday be freed from sickness and the three calamities.'

'May this be a blessing to the oxen and the sheep of this day.'

'May the children of Wednesday be blessed by spirits and men.'

These Tibetan luck-flags are also tied to certain bushes over dangerous parts of streams and near cairns, like the rag-bushes in Muhammadan and other oriental countries.

L. A. WADDELL

PRAYER, BOOK OF COMMON.—1. Introduction.—(a) The English Prayer Book, as we now know it, was composed in 1549. A study of the title-page alone is sufficient indication of this. It runs thus:

'The Book of Common Prayer and Administration of the Sacraments and Other Rites and Ceremonies of the Church, according to the Use of the Church of England.'—together with the Psalter or Psalms of David, pointed as they are to be sung or said according to the Form of Matins, Evensong, and Compline.'

The cumbersome title of this book is not merely a relic of the days when such prolix titles to books were in fashion, but is also due to the fact that by the middle of the 16th cent. the still recent invention of printing and the constant improvements in it enabled our Reformers to begin to bring together into a single volume all the more necessary services and other matter for public worship, which had as a rule hitherto been copied out with much labour in several separate volumes. Thus 'the Common Prayer' represents the former Breviary (and perhaps we may add the Primer); 'the Administration of the Sacraments,' etc., represents the Missal and the Manual; 'the Psalter' speaks for itself; and the 'Form of Making,' etc., stands for the old Pontifical. This, of course, is far from exhausting the books in use before the Reformation, such as the Hymnals of which we now have no authorized representative, the Antiphoner, Lectionary, etc. Some of these (e.g., the Antiphoner) have been almost entirely removed from the services in the present book, the reason being thus stated in the Preface of 1549:

'For the performance of Angells, Responds, Invitatories and such like things as did break the continual course of the reading of the word.'

Others are either provided for as by the references in the Table of Lessons or printed in full as in the Epistles and Gospels of the Day, etc., while the use of hymns in numerous unauthorized collections has been almost entirely done away with, 1549, etc.

The musical notes, however, which the old books often supplied are now wholly wanted, 2 except by prescriptive use, though the rubrics in various places contain references to the clerks and their singing; which we now recognize the place of music in public worship as legitimate; and the Psalter is specially said to be 'pointed' for singing or saying 3 in churches.

In the Ordinal, which was first issued separately in March 1549-50, the most notable omission, when we compare it with the anthem, it is the absence of any provision for the consecration of churches and for the coronation of the sovereign. It is not easy now to account for this serious oversight, which, at least in the case of opening new churches for public worship, has been a matter of regret ever since. We have no exact guide as to what was the mind of the Church at that period, and the celebration of the divine mysteries as an essential of the rite has usually been almost entirely lost sight of.

(b) We may now proceed briefly to review the reasons and principles which guided the first comilers of the new book, and which have been accepted in the bulk by all subsequent revisers. 4

(1) The main reason for the fundamental change of substituting English for Latin throughout is the obvious one and is thus stated in the Preface of 1549: 'that the people might understand and have profit by hearing the same.' But it is a mistake to suppose that this was entirely an

1 A few traces, however, are left: (1) the reference to the Advent antiphon 'O Sapientia' (16th Dec.); (2) the mention of the anthem 'in Quirens and Places where they sing' at Mattins and Evensong; this rubric, however, dates from 1602; (3) old antiphons have been introduced into (a) the Litany ('O God, etc.); (b) the Bidding Service ('Man that is born,' etc.); (c) the-Vision of the Sick ('O wondrous mystery, etc.); (d) the Collect for Ascension day after Ascension day is an adaptation of an old antiphon.

2 Only one musical hymn is now contained in the Prayer Book, viz., 'Venite Creator Spiritus.'

3 Merbeck's translation (1550) was apparently to be the norm at one time; but see Procter and Freer, New Hist. of the Book of Common Prayer, 219.

4 'Sing'=recite with musical inflections; 'say'=read in cadence.

5 Obviously, if this contention is correct, the usual method of a priest celebrating the Holy Communion before the consecration by pouring the wine into the chalice, and then proceeding to the service almost to a farce. In the order of consecration provided in the American Prayer Book, Holy Communion does form an integral part of the service, though it is rather split by too much attention being directed to the wine which precede it.

1 Cf. Procter and Frere, More recent History of the Church, London, 1914, p. 129: 'There was no idea of a special liturgical language at that time [for the first 2 centuries]; people said their prayers in the vulgar tongue.'

2 For the Reformed Prayers of Henry VIII's reign see Procter and Frere, p. 431.
and thus for a considerable period the more thoughtful and religious folk had become familiarized with a certain portion of the Church services. Still the restoration of the use of the vernacular into public worship—a use which had ceased for many centuries—was a new departure of the very highest importance and was under God due to Edward VIII. and his advisors. 

The first step taken in that direction was in 1543, when the Canterbury Convocation ordered Lessons from the English Bible to be read at Mattins and Vespers. But the first service proper to English use was the Litany in 1544. 

It is interesting to note that the reason which suggested this was very similar to that which originated litanies in the West in the 5th and 6th centuries, viz. the prevalence of bad seasons and other troubles at home and of wars abroad. 

The next step in the same direction was at the beginning of Edward VI.'s reign, when—pending the decision as to the use of English in general—an order was published in English instead of Latin, in March 1548. This contained the Exhortation, Confession, Absolution, the 'Comfortable Words,' the Prayer of 'Humble Access,' nearly as we have them now, and was to be inserted in the Latin Missal to be used in public worship. The Epistle and Gospel were also to be read in English. 

Three other principles guided the Reformers in compiling the Prayer Book, as the original Preface makes clear: 

(1) They aimed at clearing away that which was only legendary and calculatved to foster superstition: 

Here are left out many things, whereof some are untrue, some unnecessary, some impossible to observe like tradition as we find to have been used ... in former times. And therefore ... we have rejected all such alterations as were ... of dangerous consequence as strongly striking at some ... established practice of the Church of England or of the whole Catholic Church of Christ. 

(2) They aimed at selecting a regular and orderly reading of the Holy Scriptures by day by day together with the monthly recital of the whole Psalter. 

(3) They greatly simplified the forms and ceremonies in vogue: 

The number and hardness of the rules ... and the manifold changes of the service was the cause that ... many times there was more business to find out what should be read than to read it when it was laid down. 

At first this process was much more drastically carried out in the case of the Daily Offices than in that of the Liturgy proper, where in 1549 a very considerable portion of the ancient usages was retained. The Liturgy in Morning and Evening Prayer were reduced to a bare minimum—suitable, as it was thought, for the busier members of the laity as well as for others. But later changes (especially in 1552) in the Liturgy itself were far less conservative and liturgically defensible. Even so the first paragraphs of the present Preface drawn up by Robert Sanderson, bishop of Lincoln, and prefixed to the original portion ('Concerning the service, etc.') so late as 1602 still profess: 

'to observe the like moderation as we did to have been used ... in former times. And therefore ... we have rejected all such alterations as were ... of dangerous consequence as strongly striking at some ... established practice of the Church of England or of the whole Catholic Church of Christ.' 

(4) They desired uniformity of use throughout the kingdom: 

... whereas before there hath been great diversity ... some following Salisbury use, some Hereford use, etc. ... now, from henceforth all the whole Realm shall have but one use. 

Yet another principle of the Reformers has so far been taken for granted rather than asserted, except as the use of the English tongue and supplication of the forms give evidence of it, viz. their intention to give the laity proper facilities for joining in the divine service. This of course especially related to the Daily Prayer Book which always had been that the people as well as the clergy should attend the day hours in the parish church, though it may be doubted if it was ever very generally put in practice. In 1549 and onwards the aim was to facilitate the practice as much as possible, though still with doubtful success. 

The Preface, as it now (since 1662) stands, bids 'all Priests and Deacons to say daily the Morning and Evening Prayer either privately or openly, not being let by sickness or some other urgent cause' (in 1549 'preaching and studying of divinity' had been particularized). 'And the Curates ... being at home and not being otherwise hindered ... shall cause a bell to be tolled in the Bishop's or other Church of the diocese in the morning and evening of the Lord's Day.' 

This emphasis was likewise given to the obligation in 1662, when the words 'daily to be said and used throughout the year' were added to the first title of 'Morning and Evening Prayer.' 

It should be observed that much of the original Preface recalls the title and tone of Quiggin's 'Preface to the Books of Common Prayer' (1555), because it shows that the Spanish Reformer's ideas had clearly as much influence on Cranmer as, if not more than, those of Luther and other less conservative Reformers on the Continent. 

2. Historical Summary. It is now matter of common knowledge that, though a great deal of the work of constructing the Prayer Book had been done in Henry VIII.'s reign, yet the first edition was not actually published till 1549, when Edward VI. was on the throne more than a year. It was to come into use on Whitsunday, 9th June. But the great and rapid progress made by the extreme Puritan party during this reign availed very soon to bring about much more radical changes, and by All Saints' day 1552 the First was superseded by the Second Book, the contents of which are much more nearly what we are familiar with in our present Book; in fact most of the subsequent modifications have been by way of addition to, rather than alteration of, its text. 

Edward died in July 1553, and during the reign of Mary the old unreformed services and ceremonies were restored in their entirety. 

When Elizabeth came to the throne (1558), she had to be content with the fewest possible improvements in the Second Book, which was then again (1559) brought into use: such as the addition of Sunday Lessons, the omission of the petition against 'the Bishop of Rome and his detestable enormities' from the Litany, and the present words of distribution in the Holy Communion, which combine the formulas of 1549 and 1552. By the end of her reign the Puritans had regained such strength that they hoped on the accession of James I. (1603) to get rid of much that they disliked, but at the Hampton Court Conference, to which both sides were summoned, hardly any of their demands were conceded. The most important change was the addition to the Catechism of the celebration of the sacraments by John Overall, then dean of St. Paul's, afterwards bishop of Norwich), which the Puritans can hardly have regarded as favouring their views. 

The next stage in revision was that the Restoration of Charles I. (1633) brought the Prayer Book back into use, after being suppressed during the Commonwealth. In 1661 a conference was held in the Savoy, at which it was again felt 

But without the Ordinal at first (see above, p. 260).
impossible to entertain most of the Puritan proposals, such as the doing away with the sign of the cross in Holy Baptism and with the kneeling posture at Holy Communion. A fair number of changes were, however, admitted into the direction of John Cosin, Archbishop of Canterbury, and they were mostly by way of distinct improvement. They came into force in the year following (1662).

Another attempt at revision made in 1659 was ineffectual, and not much has been done since then. The schedule of State services drawn up for occasions of national importance in the 17th cent. only one has been retained since 1659, that for the king's accession (revised 1901); (b) that a new Liturgical was introduced with the Act of Uniformity 1662, and Year-Convocations in 1781; and (c) that a limited permission was given in 1872 to shorten or modify the service and use hymns. Of these changes the first two must be reckoned as of advantage, while the third is of more questionable value. It is true that the time has come, or ought to have come, when yet another general revision should be taken in hand to meet modern needs on carefully considered and wisely conservative lines is obvious to many. Meanwhile, as the only available tentative proposals are forthcoming and 'ad lib. sub iudice eis est,' though a certain amount of progress has recently been made.

3. The contents of the present Book in detail. The liturgy first made known to us in the various contents under separate heads. We must be content with drawing attention to salient features as best we can.

(a) The Preface. —The first five paragraphs were prefixed in 1549 by Edward Coke, assisted by Sarum and Lincoln, and slightly altered by Convocation before approval. The next five paragraphs were the original Preface (1549) which is still the one in the Book. The 1552, when Certain notes for the more plain explanation and convenient exposition of things contained in this Book were then expunged. Besides one or two verbal alterations of small importance, three interesting sentences are now omitted. The first has been already quoted (p. 203, n. 4), the second justifies the adoption of a single use throughout the realm, and the third, which only in a general way bound to the saying of a single use by the clergy as well as by the laity in the cathedral and other churches, has given way to the present much more definite and stringent regulation (see above, p. 206). It is pretty clear that the Preface as it now stands contained a special provision for the first three months of the year, and it is to be regretted that the revisions of 1549 treated them as 1st and 29th (or 30th) Feb. respectively and the rest of the days of the month shifted forward by one (i.e. 1st Feb. became 29th), and leap years were treated as if they had 4 days (between the 25th and 26th) the Psalms (and Lessons) of the previous day were to be repeated. The order about repeating 'Gloria Patri' at the end of each Psalm, always provided for in the rubric, was not originally inserted here.

(b) The order how the rest of the Holy Scripture, etc. —The original provisions in this section were modified in 1571 to suit the New Liturgy now in use. It is impossible here to compare the old with the new course or to indicate the changes made and the principles of selection.

(c) The Calendar proper as published in 1549 contained but few commemorations and of these the only one that calls for notice is [St. Mary] Magdalen (22 July), because it was at first a date of the Masses of the Dead in the liturgical books of long standing, and was then added, brought up its observance to about once a month throughout the year. The direction that it is to be said in Memorial is given in the Rubric, and the Mass is for the dead.

(d) The Litany in its present form is perhaps Cranmer's work, and every meditation on the use of medieval litanies will appreciate the masterly skill with which he has by various devices (such as the grouping of petitions under headings and the frequent use of the formula, 'O Lord, be merciful unto me') combined wisdom both in selection and in omission. The 1549 form was turned at will into formal strings of names and short petitions into an astonishingly rich and satisfactory inventory of devotion—suitable for events for occasions when humiliation of the soul and deep penitence are timely, even if we could desire an alternative form which should be more suitable for times of uplifting and rejoicing.

As to the second part of the Litany after the Lord's Prayer, it is impossible to give here a complete description of the materials of which it is built up. The first verse, response, and collect is taken from 1 Peter iv. 13, and the other headings. However, the ancient, being 'in Missa pro tribulatione cordis,' a 15th cent. English form of the old Roman litanies, it was used in southern England. Moreover, it has its origin in a section taken from a litany for Rogation days; it consists of an antiphon and psalm with 'Gloria Patri;' only perhaps by accident it has been stripped of its original use of repeating it at will. The versicles and responses, which come next, ought properly to be sung by the clerks: they were for the Mass, finding (in July) fasting or by

1 Much that is reasonably and usefully to be said on opposing views of this rubric will be found in Mr. Macmullen's The Library and the English Habits of Prayer, p. 516 ff.
2 Not included in the English Calendar (1551), but added in 1559, the 30th Oct., it was head of Elizabeth's birthday and therefore a public holiday for some years. Similar national or even local reasons may have guided the selection in other cases (e.g., St. Andrew 30th Nov., the great E. Anglian fair-day.

3 Be that as it may, I should think the whole work of the Litany in the English Church a splendid achievement of our forefathers. 1240 (cf. 1541) Invocations of St. Mary Mother of God, the angels, blessed spirits, patriarchs, etc., were retained, but in 1549 they were dropped.

4 But this reaches the anthem is unusual, but it would be better to leave the original 'Fill Davidi,' as it was 'Fill Davides.'
PRAYER, BOOK OF COMMON

The concluding versicle, response, and collect are freely adapted from the Sarum Rubric (335) MT 1257-40 (see 205). The Form was published in 1559.

(1) Holy Communion.—We here deal only with the present order, characterizing the contents seriatim as briefly as may be.

The first Lord's Prayer and the Collect for Purity appear in the same form in the Sarum Order. (The words 'In thine own habitation,' &c., were added by the Mass; hence perhaps he is repeating the former alone, 'Amen,' and all)

The 'Ten Commandments' have been a special feature of our service since 1552. Apparently they are intended to recall or represent the Lectio Prophetica (Gen. 15:1-10); they are an exact replica of the Liberal service, with the tenfold (instead of the former ninefold) repetition of 'Kyrie eleison' (spécially applied to God alone, 'Krisi ouermon'; but not to Mary). The words 'and to which, in spite of certain difficulties of interpretation and application, English Christianity owes much of its certainty as to what is to be done." The rubric on 'answer' is unexampled. The (alternative) Collects for the King, composed in 1549, were then ordered for use after the collect of the day, not before.

The Collect proper may be divided into three classes: (1) those which belong to the pre-Reformation period, some of them as old as the 'Louvine' or 'Gethean' or 'Gregorian' books; (2) those first issued in 1549; (3) those issued in 1552. But it must be remembered that many of the older forms have received important additions or modifications in either 1549 or 1552 or at both dates.

As to the Epistle (during which the right position for the people is that of sitting), it is worth noticing that out of 30 passages used in the Sarum service only 6 are old and the rest are derived from the services of the Reformation. There are 80 Prophets (only one of these being for a Sunday, viz. that next before Advent), thirty-six of the Acts, and four out of the Romans. It is noticeable that the Ten Commandments are not used on the three Sundays following Trinity Tuesday. The rubrics concerning the people's 'presence' (which especially orders the people to stand), all that need be said is that the ascription before ('Glory be,' etc.) Inserted in 1549 was removed in 1552 and has been restored. The old rubric in the Scottish Office (1607) together with 'Thanks be,' &c., afterwards.

The rubric ordering a person after the Creed is one of the very few references to preaching during service in the Book, which makes it appear that the religious content of the service in the Ordinal is the Sermon is put before the Litany instead of in the usual place. The traditional and natural place for an exposition of the reading is the Proper or Expositionary or Oratory sentences. In 1549 one or more of these were to be sung 'where there be Christis,' but this direction was removed in 1552. The insertion of 'prayers of the day' by the priest is mentioned.

The Prayer for the Church [s Militant here in earth, 1552].—This portion of the Canon of 1549 was separated from the consecration of the elements and placed here in 1552; and at the same time the Lord's Prayer, with which in accordance with ancient use the Canon ended, was placed after the Consecration of the people as now, and the first of the two following prayers was moved from his place in the Ordinal of 1549. The Prayer of Thanksgiving now.

It is observed (1) that with the Church militant are now included 'all thy servants departed this life in thy faith and fear' (which is strictly inaccurate), and (2) that 'oblations' are removed (which is a good one), the rubric suggesting a constriction to the 'alms' for the poor; but there are grounds for holding that they more correctly refer to the vernacular offerings which follow. The 'alms' are, however, still included in the offerings in general.

The rubrics which follow are a special feature of our Book originally introduced in 1549; since then they have been subjected to many changes, and are still printed, though but seldom used, the need of them having now in a large measure gone. Nevertheless, they contain much valuable teaching and advice, though sometimes of it has given rise to unfortunate misunderstandings (e.g., as to the 'unworthiness' of those who receive). The first is for ordinary use in giving notice of Consecration, and suggests the lines on which private consecration to a minister is desirable in the English Church; the second (attributed to Peter Martyr) is to be substituted when there is negligence in attendance; the third is to be used at the Communion itself, after the communicants have been 'conveniently placed' for the reception. No rubrics are given for the withdrawal of non-communions now remains.

The exception from 'Ye that do truly,' etc., down to 'We do not, etc., came after the Consecration and immediately before the people's Communion at first (see above, p. 206). It was

1 In the Non-juror's Prayer Book (1713) MT 2257-40 was substituted for them. The Scottish Office (of 1764) allows these verses as an alternative for the Decalogue. The present Author's Note (1559) says 'Access' 'is now placed in the place of the rest of the section by the first part of the Canon.'

2 The Consecration is repeated in Latin, 'in thine own habitation,' &c., and with thy spirit,' in 1540, in accordance with ancient usage; but this was omitted in 1552. It is now much broken up, and other traces of unbiologicalism have disappeared; and the rubric which says those mentioned have been obliterated.

In the beautiful Epiphany of 1540 has gone: "With thy holy spirit and with thy power direct our hearts to that purity of life which these words of creatures of bread and wine, that they may be unto us the body and blood of Christ; and let his grace be vario directed for the man act, removed in 1552, were brought back in 1562.

The present form of words at the people's Condemnion happily combines both the forms of 1549 and 1552 and dates from 1599 (see above, p. 206).

The second form (for the prayer of thanksgiving) was composed in 1549 and then stood alone, but is now (since 1552) an alternative for the prayer of obligation (see above).

The 'Glória in Excésis' in 1549 occupied its ancient place between the 'Kyrie' and the collect, but was removed in 1552 to the end of the service; but this position is contrary to all precedent, it may justly be considered a fitting conclusion to our worship.

The 'Blessing' (1540) is likewise a distinct improvement on the rather abrupt ending of the Roman Mass ("Tiles misa est"); to which, however, since 1604 an appendix with a short blessing has been added.

1 The last six collect, of which the first, second, and fourth were taken from the Litany, were removed from use 'after the offertory, when there is no Communion,' but may now be used at other times.

(4) Holy bread and wine.—The three offices now supplied the first, as issued in 1549, was mostly derived from the ancient use. 'The form which we use for the making and blessing of the bread' and the use of salt and the Ephphatha were omitted, but the chief points then retained and now since 1552 given up are the exorcism, the blessing of the bread and wine, and the censing the service. The sign of the Cross, and the reception into the Church and, however, still kept. The novel feature is the insertion of the several exhortations suggested by Luther's Baptistery. Day and Hermann of Cologne's Consistitute (1543).

A second form of the real presence (subsequent reception into the Church, if the child survived) also appeared in 1549 and has always been retained with such modifications (esp. in 1600) as were considered necessary to safeguard the doctrine and also to bring it into conformity with the first office as altered in 1552.

The third form (for baptism of infants) was added in 1552 (George Griffith, bishop of St. Asaph, being the chief member of the committee that drew it up) to meet the growing needs of the natives in our 'plantations' (colonies) and others converted to the faith (from anabaptism, etc.). It follows the lines of the first office with such adaptations as are appropriate, and the rubric prefixed definitely recognizes (1) that the bishop is ultimately responsible for the administration of the sacrament (see p. 53), (2) that fasting as well as instruction and prayer should form part of the candidates education. (1549) is in 1549 and has not been altered since. The latter part (on the sacraments of the Gospel) was due to Overall, dean of St. Paul's, who inserted certain definitions of the sacraments, which is the whole a valuable manual of elementary instruction in Christian doctrine, so far as it goes.

(7) Confirmation.—In order the Book of Common prayer in 1549 began at 'Our help,' etc., and included the signing on the forehead as well as the laying on of hands, which for many years had been abolished at 1552 and the present prayer at the imposition of hands substituted for the older form. The preliminary exhortation, which incorporates the substance of a former rubric (and this account for its complete inappropriateness) together with the bishop's question and the answer, were not added till 1602. This addition has had the unforeseen effect of obscuring the true meaning of the rite in the minds of many.

(8) Holy matrimony.—This office has remained without any change of much importance since 1549. But the following are of sufficient interest to be noted: (1) a phrase in parentheses. 1552 ('after bracelets and jewels of gold, given of the one to the other for tokens of their matrimony;' after 'as Isaac and Rebecca' in the prayer 'O Eternal God,' etc., was omitted, in 1552, when the words in the English prayer in which suggested by the ancient form were left out, and the phrase about the robes of 'Uly Ass and Sarah the daughter of Raguel' was altered to the sending of 'thy blessing upon Abraham and Sarah' in the prayer 'O God of Abraham,' etc.) (an unimportant improvement); (2) the phrase 'living . . . husband' in the prayer 'O God who, etc., was substituted in 1602 for a quaint reference to the widows and virgins of Rachel, Rebekah, and Sarah which thither the English and the Sarum, etc., whilst another rubric required the newly-married persons to receive the Communion the same day. These indicen

1 See Fortescue, p. 392. E.
2 E.g., the rubric in the Sarum Prayer Book does not usually contain the gist of the question; the unity of God is not established, and there is no mention of the Church and its constitution.

See E P. Conflation, the Apostolic Age, London, 1909, p. 13 n.
tions of the retention of a neutal was not obliterated till 1662, when the order of prayer for the dead and afterwards it is only stated to be 'convenient' (i.e. suitable) that they should communicate at the first opportunity.

The next rubric (1) relates to the situation of the prayer in 1549 proceeded with Ps 143 (omitted 1552). The second collect, 'We ask', etc., made mention of Peter's word at the last supper, the communion was to be administered in both kinds. The third collect, 'Lord Jesus Christ', was omitted in 1549, and 'the grace of the Lord' added after 'the mercy'.

The second part begins with an exhortation and proceeds to an examination of the sick person with a view to his confession and preparation for death. The last was originally a confession with a conclusion of the celebration of holy communion and weighty matter (on the lines laid down also in the Holy Communion Office (see above). Since 1549 it has been left to his own initiative. The form of absolution here is naturally more affecting for the personal than those in the Daily Offices and at Holy Communion.

The third part consists of collect (partly altered) and Psalm 71 with anthems (sung without words) and blessings. The communication to God's mercy was added in 1602 and also the appendix containing four well written though somewhat long occasional prayers.

A service for anointing the sick was added in 1549, has been omitted since 1552.

(1) Burial of the dead.—The present form dates practically from 1552, when the definition of the 'pardon for the dead and the Holy Communion made in 1549 were omitted. The last 'collect' was originally the collect at the Communion Office: (see above), the second collect was a primitive Ps 121 (omitted 1549) and the lesson was then transferred to its present place, having previously been read at the grave between the anthem ('I have been but with thee a very few days'), Ps 116 (omitted 1552), and the blessing added in 1692.

(2) Blessing of women.—The title (1549) was 'Purification of women', altered to its present form in 1552. In the first rubric (1) the phrase 'decently apparelled', added in 1602, is thought to refer to the old custom of wearing a veil which had been discarded during the Commonwealth; (2) the words 'convenient place' had been more carefully defined as 'near unto the place where the Table standeth' (1552). Ps 121 (1549) was replaced by Ps 116 and the alternative Ps 127 also added in 1692.

(3) Washing of hands.—The form was used on Ash Wednesday only in 1549. The present title was given to the service in 1552, when it was ordered to be used at 'divers times in the year'. Its use on Ash Wednesday was again specified as well as in 1662.

The opening address advocates the restoring of the primitive church discipline of open confession and penance, which had gradually given way to private confession (whether occasional or regular). The final prayer of humiliation by minister and people was added in 1662.

The special form of Blessing (from Nu 6:24-26) was added in 1692.

(4) Prayers to be used at sea.—These were first inserted in 1549 but the composition of the original was made subsequently in 1644 by order of parliament.

The form was altered in 1662 (1) better to guarantee episcopal ordination after the lability which had prevailed during the Commonwealth, (2) to raise the reference to the death of L. (e.g., cassock, surplice, and hood) as had fallen into disuse during the Commonwealth, and (3) that it is now interpreted. In 1550 they were to wear a plain al'; in 1552 no direction is given at all. So too, in 1550 the 'Gospel Deacon' was to 'put on a tunicle' (for which see also the 4th rubric before Holy Communion (1549)). But since 1552 this direction has been omitted.

The special petition in the Litany did not actually mention either the deacons or the priest's office till 1662; in fact the petition was omitted altogether in 1552. Since 1585 the Oath of the Royal Supremacy has not been administered to deacons or deaconesses during the Litany.

The present Gospel (Lk 12:28 at the Making of Deacons) was substituted for the Gospel of the day in 1662.

In 1662 the first petition of candidates came after 'Veni Creator', which followed the Gospel, till 1602, when the Ambrosian version was made.

The present Epistle (Sph 276) was substituted for two others, which were alternative, in 1662.

The choice of the alternative Gospel (for priests) in 1552, but this was omitted in 1562 and is now one of three alternatives at the consecration of bishops.

The second petition of candidates (In all probability by Cosin) was added in 1602 and is far superior to the device of a Latin prayer (1552) almost totally untried and improved since then but is very seldom used.

The Commission 'Receive the Holy Ghost'.—The very important addition to the Office and Work of a Priest. . . . was made in 1662.

The ancient ceremony of handing the chalice or cup with the bread to the priests had been omitted since 1552.

In the Consecration of bishops the collect was added and the precise rubrics of ordination were inserted in 1552. There has been no praeludium instrumentorum since 1552; in 1549 the bishop elect received the pastoral staff and the bible was given to the deacon or sub-deacon (who was to be a good shepherd) was substituted in 1552. In 1560 he was no longer a deacon but an elder who had been ordained to the clergy of the church who had presented him (also their staffs); in 1552 no direction was given; the present rubric 'vexed with his rochet' was added in 1552.

(5) Accession service.—This is now the only survivor of four State services (see above, p. 307). The present revision, which provides three separate forms (one for 1662, and one for 1692) and a sound liturgical form. We may note in particular the careful way in which the language of pointing preserves the eucharistic character of 'Te Deum'.

(6) The Articles of Religion (1671), though usually printed in the volume of common prayer, were part of the Act of Uniformity (1552).

LITERATURE.—Of the large number of books that have been published on the subject, only some of the more practically useful (and most modern) are here mentioned:

(a) The Irish Prayer Book, 1577; the Welsh (only a tr. from the English), 1567 and onwards; the Scottish, 1577; the Communion has important differences which have undergone various vicissitudes (see J. Dowden, Annotated Scottish Comm. Office, London, 1884); the American, 1792; alterations have been made in 1865 and 1892.

C. L. Feltoe

PRAYER FOR THE DEPARTED (Christian).—1. The custom earlier than the development of doctrine.—That prayers for the faithful departed as, not a matter of history, depend necessarily on any particular doctrine of the intermediate state between death and judgment is seen from the fact that they existed long before the doctrine on which that subject were developed. Even in comparatively late times the form of the prayers for the departed was framed before the teaching was stereotyped. The only thing that the custom necessarily and necessarily the third condition of them, which make progress in holiness after death and before the Last Day.

The custom does not necessarily even assume that the departed are conscious; for it is quite conceivable that pro
ducents might be made by an unconscious soul. But it was a practically universal belief of Christian antiquity that the souls of the departed, good and bad, are conscious, the belief being based chiefly on passages such as the promise to the penitent robber (Lk 23:43), the descent of our Lord to Hades (I P 38:6, etc.), the number of Dives and Lazarus (Lk 16:19), and the desire of St. Paul to be absent from the body and at home with the Lord, to depart and be with Christ (2 Co 5:8, 2 Th 4).

This article, then, will not deal with doctrines about the intermediate state except so far as it is necessary to refer to them in order to explain the historical custom of prayers for the departed.

2. Jewish background of the custom.—It was only in the two centuries immediately preceding the Christian era that Jewish consciousness about the dead were developed. But in 2 Mac 12:30-41 we find prayers for the departed mentioned and defended. For the soldiers who had fallen, when it was discovered that under their garments were consecrated loaves of old dough, they believed this was because of their death, their companions 'betook themselves unto supplication, beseeching that the sin committed might be wholly blotted out'; and Judas Maccabees sent angels to Jerusalem to offer a sacrifice of thanksgiving for the deliverance, because of the resurrection: 'If he were not expecting that they that had fallen would rise again,
it were superfluous and idle to pray for the dead.' This book is an abridgment of a lost work by Jason of Cyrene (224). Jason wrote c. 150 B.C., and the abridgment was made between that date and the destruction of Jerusalem (A.D. 70). The passage in question (v. 14, 15) is one of the few which survived of the works of the Jews of the custom under consideration in the 2nd cent. before our era; but whether Judas extended it beyond the limits afterwards approved by the Christians (below, § 6) is another matter. This argument is closely parallel to 'Requiescat in pace,' and that in later times (as at the present day) they habitually prayed for the dead, is universally agreed; but the dates of the tombs are uncertain (for the evidence on these heads the reader may be referred to Luckock, After Death, pp. 56-65). It has often been said that the Jews would never have borrowed the custom from the Christians. This is a line of argument which history shows not to be very safe; but in this case we have the evidence from 2 Mac. for the early existence of the practice among the Jews. We must not, however, push this argument too far; the practice was, almost certainly, not universal among the Jews at the beginning of our era, for the Sibyls would not have had a service like that for which a Jewish law was required to say that our Lord approved everything in the teaching of the Jews which He did not condemn.

3. Early Christian evidence.—The silence of the very earliest ages on the subject is somewhat remarkable. The first view of the fact that the custom was in existence among the Jews. Our Lord does not refer to it. A phrase in the Pastoral Epistles (2 Ti 198) has been not unnaturally judged to be a prayer for Onesiphorus after his death (see the context); the wording is not much more than a pious wish; 'the Lord grant unto him to find mercy of the Lord in that day.' The late- discovered liturgical portion of Clement of Rome's Epistle to the Corinthians (59-61), though it contains intercessions for the living, has none for the departed (c. A.D. 96). The Didache (c. A.D. 120 ?) in its prayers at the agape (or eucharist) only prays God to remember His Church and deliver it from all evil, perfect it in His love, and gather it together from the four winds (§ 10)—a petition which is necessarily repeated when a Christian church is discussing the character of an agape, or commemorative feast, for the departed (e.g. Can. of Hipp., loc. cit.; Apost. Const. viii. 44; see also art. AGAPE). And we frequently read of alms being given for the benefit of the departed in the Testament of Our Lord (chaps. 255, 350 ?) they are taken out of the deceased's possessions and given to the poor that he may be profited (ii. 15, 23).

As the earliest written liturgies known to us are of the 4th cent. (but see below), we cannot tell whether the departed were prayed for at the ordinary eucharists before that time; and, indeed, the intercessions were probably developed into fixed forms somewhat later than the other parts of the service. The evidence of the Testament of Our Lord is not overwhelming. In the early liturgy known as the Old Ethiopic, which some believe to be a translation of Hippolytus's liturgy of the 3rd cent., there is no intercession given (Brightman, Liturgies Eastern and Western, ii. ii. 180, 181); but the departed were prayed for either in the 'Great Intercession' or in the 'people's prayers' given in the Testament of Our Lord, by Cyril of Jerusalem (A.D. 348), by Sarapion, bishop of Thmuis in Egypt (c. A.D. 350), in the Apostolic Constitutions (vii. viii.), and the Arabic Didascalia (c. A.D. 400 ?), as in all the

---

1 Origen is clear that the departed pray for the living—e.g., Con. in 2 Cor. ii. ii. 2. So the date of the Testament of Our Lord [11] is a work probably of the 2nd cent. a.d. (ed. M. R. James, in TS ii. 2 (Cambridge, 1882), p. 94).
Great Liturgies of the following ages. Sarapion also gives a prayer for the departed, to be used at a funeral (§ 19).

5. The purpose of the prayers.—In several of our authorities the language is severely restrained, the prayers being, as in Sarapion, for the repose of the departed in 'chambers (ραμποί) of rest' and for his resurrection 'in the day which thou hast overspread with mercy,' and his transition from sins not remembered (§ 18), or, as in the prayer which follows the recitation (ἐπορεύεται, lit. 'prompting') of the names of the departed at the eucharist, for their sanctification. So in the Testament of our Lord: 'Ask for a place of rest and remembrance (τεθλοιτία) for the soul of thee ... until the resurrection.' This prayer is said, and the name is written down in a copy of the fourth century (i. 23, 35). Note especially the oration of Gregory of Nazianzus on his brother Cresarius (c. A.D. 369). He prays for him that he may have an entrance into heaven, and enjoy 'such repose as the bosom of Abraham affords,' and 'behold the choir of angels and the glories and splendour of sainted men and share their joy,' etc. (§ 17). Nothing is said of suffering for sin. Compare also Gregory's oration on his deceased sister Gorgonia (§ 29). Many of the Great Liturgies have an equal value. The Byzantine 'St. Basil' and 'St. Chrysostom' (Brightman, i. 332, 388); the Greek 'St. Mark' (Egyptian [ib. i. 129]), which asks for them rest and that they be made worthy of the Kingdom of Heaven; the Coptic (ib. i. 170), which has nearly the same language, but somewhat amplified; the Greek 'St. James' (Syrian rite [ib. i. 57]); and the Armenian (ib. i. 440).

In other cases the forgiveness of the sins of the departed is explicitly prayed for. In Arnobius we find the first instance of this (above, § 4), though perhaps he means 'pardons' for the living and 'peace' for the dead. But forgiveness of sins is emphasized by Augustine (Conf. ix. 34.13; [ib. i. 230]), who is speaking of his mother Monica; and in the Apostolic Constitutions (viii. 41: 'that God ... may forgive him every sin, voluntary and involuntary'), and in several of the Great Liturgies, as in the Syrian 'St. James' (Brightman, i. 95), the E. Syrian 'Addai and Mari' (ib. i. 265); and in the West in the Leonine, Gregorian, and Gelasian sacramentaries (for the Gregorian see H. A. Wilson's ed., Henry Bradshaw Soc. [London, 1915] p. 268, etc.). Théodore tells us (ib. [v. 26]) how the emperor Constantine, whose mother, the Empress St. Chrysostom was brought to Constantinople, left his head against the bier and 'prayed for his parents and for pardon on them who had ignorantly sinned, for his parents had long ago been dead.' Augustine (Enchiridion, 29) uses the word 'propitiation.' Cyril of Jerusalem had already spoken of 'propitiating our merciful God both for them (the departed, though they be sinners) and for ourselves' (Cat. xxii. [Myst. v.] 10).

6. Who were prayed for.—(a) There seems to have been a difference of opinion in Christian antiquity as to whether all the faithful departed should be prayed for, or the martyrs and great saints should be excepted. Cyprian (Ep. xxxix. [xxxvii.], ib. x. 30) prays for faithful martyrs 'as often as we celebrate the passions and days of the martyrs in the annual commemoration.' At the end of the 3rd cent., in Africa, Arnobius makes no limitation (see above, § 4: 'for all!'). In the Apostolic Constitutions there is a prayer for the departed in the Testament of our Lord (i. 28, 35), and Epiphanius of Cyprus expressly says:

'4 We make our memorial on behalf of righteous and of sinners; on behalf of sinners praying for the mercy of God, and on behalf of the righteous, the prayers and sacrifices of apostles and evangelists and martyrs and confessors, and bishops and archbishops and all the estate (ἐπάγωμα) of men, that we may separate the Lord Jesus Christ from the order (καθαρῆς) of men by means of the honour given to him, that we may be put into the order (καθαρῆς) of men by offering the body and blood of the Lord to us, so that he may not neglect the offering of the Lord that is not to be put on the same footing with a man.' (Herr. xxv. 8.)

Already, it seems, there was a tendency to exalt the greatest saints to a superlative position.

In Syria the Apostolic Constitutions mention assemblies in the churches with lections and with psalm-singing (ψάλμοι λεγομεν) on behalf of (ὑπὲρ) the martyrs and all saints who have fallen asleep (vi. 30) and, in the liturgy of Syriac, 'for the souls of the patriarchs, martyrs, confessors, etc.' (ch. 12).

In the era of the Great Liturgies the same feeling still survived in some Churches. The Greek 'St. Mark' prays for rest and remembrance for the souls of the patriarchs, prophets, apostles, martyrs, confessors, and others, including St. Mark himself by name (Brightman, i. 128). In the Byzantine rite the Greek 'St. Chrysostom' and the Armenian liturgy have an almost identical prayer (ib. i. 387 f., 440).}

On the other hand, there was a tendency in some circles to the 4th cent. to refrain from prayers for the martyrs, or the greatest of the martyrs, Cyril of Jerusalem, speaking of the Great Intercession in the eucharist, makes a distinction:

'5 We commemorate ... first patriarchs, prophets, apostles, martyrs, confessors, etc., and pray for all the faithful, whose prayers we ought to commend ourselves.' And we see the same feeling in several of the Great Liturgies—in the Greek 'St. James' (Syrian rite [Brightman, i. 471 f.]), the E. Syrian 'Addai and Mari' (ib. i. 284), and the Abyssinian Liturgy (ib. i. 266, 298, 288 f.). The Coptic takes a middle line (ib. i. 169). It asks for rest and remembrance for all the great saints, including the 'holy Theotokos Mary,' but goes on to say: 'Not that we should pray for these to be excused for their disobedience ... but that ... they may in recompense intercede for our poverty and weakness.'

The question is one of decided much on whether it was believed that the greatest saints have already received their full reward or await it at the Last Day. That they have already received it is denied by Justin Martyr (Dialog. 80) and Irenaeus (Harr. vi. 31). Tertullian (de Anima, 55, de Res. Carn. 43) makes an exception only in the case of the martyrs. In the 3rd cent. Origen makes no exception (Hom. in Lev. vii. 2: 'not even the apostles have yet received their joy'). So, indeed, Augustine, though with some hesitation, makes the Last Day the time for all the faithful to receive their complete reward (Serm. ccvxxx. 5). But gradually in the West the view prevailed that all the great saints, whether martyrs or not, are already reigning with Christ, and ought not to be asked for intercession. This is the case, it seems, in the present subject see A. J. Mason, Purgatory, pp. 81-96.

(b) There was a general feeling that it was of no avail to pray for the heathen departed, for any but the baptized. There might, indeed, be an exception, especially in times of persecution, when the name of Christ was not, or was not known. There is a beautiful poem by Alexius Khomiakoff, asking his dead children to pray for him (Birckbeck, Russian and the English Church, p. 21).
of a catechumen who desired baptism but died before he could receive that sacrament. The *Canons of Hippolytus* (x., ed. Achelis, § 63) say that catechumens are already 'Christians,' and so the writer adduces the example of Constantine (A.D. 318). The former work (xix. [101]), the *Egyptian Church Order* (Sahidic, § 44), and the *Testament of Our Lord* (ii. 5) recognize a mortified catechumen as ‘baptized in his own blood.’ But, generally speaking, only the baptism of *water* was celebrated by Augustine; Augustine says (Enchirid. 29): ‘We offer... for all baptized departed.’ We do, indeed, read that Perpetua prayed for her brother Dionocrates, who, as we gather from her own words, was unbaptized, though, who are very bad. In the 3rd cent. Cyriac had forbidden the eucharist to be offered for the soul of a certain person who had seriously transgressed an ecclesiastical rule and had died impenitent (Ep. 1. [iv.] 2, to the clergy and people at Paesu).

7. Early objectors to the custom.—In the 4th cent. Aerus, a presbyter in Pontus, the founder of the sect named after him (it seems scarcely to have survived his death), protested against prayers for the departed. We learn about his history and his views from Epiphanius, who says that he was alive in his time (Hær. Ixxv. 1), and from Augustine (de Har. liii.). He had been disappointed at not being made bishop, and lapsed into Arianism. Among other things he said that the eucharist (or ought not to be offered for them that sleep). He adduced as the reason for his objection the danger of a man leading a sinful life in the hope that he would be saved from punishment by the prayers of his friends.

Though Aerus is the only person in antiquity known by name who objected to prayers for the departed, there must have been others. Cyril of Jerusalem says that ‘many’ held that they were profitless (OEc. xxvii. [Myrd. v.] 10); and the language of Augustine (Enchir. 29) and others seems to imply that the question was frequently debated in the 4th century. Yet the objection cannot have been much pressed, for Augustine (Ser. cxii. 2) says that the custom was universal, and Epiphanius (Hær. Ixxv. 5) traces it back to the time of Christ to prayers for the departed.

8. Mediæval Western views.—As doctrines about the intermediate state developed in the West, chiefly in consequence of the tentative suggestions of Augustine and the visions related by Gregory the Great, the prayer for the departed came to be the deliverance of souls from a penal purgatory. The schoolmen discussed the matter at considerable length. Their speculations concern us here only so far as they resulted in the particular shape taken by the prayers. When purgatory was conceived as a place of punishment whose tortures differed from those of hell only in not being eternal, it is not surprising that men’s energies were directed to the deliverance, by prayer and alms, of their friends therewith. Yet the prayers of the medieval Latin service-books show great restraint, and do not reflect popular beliefs to any very large extent. But they exhibit a sadness which is not found in earlier services. The keynote to the Sarum service for the burial of the dead is struck by the opening antiphon: ‘Circumdederunt me gennatius mortis, dores inerni circum-
dectarunt me, et auctoritatis mea mansuetit,
Monnastica ritualia Exaltatione *Anspuriae,* Oxford, 1832, i. 143.)

The popular conceptions about purgatory are not necessarily the official views of the Church of Rome. According to Roman Catholic writers of repute, the only statement which is of faith in that communion is that ‘there is a purgatory and that the souls detained in it are helped by the prayers of the faithful’ (Credo of Pope Pius V.). The Council of Trent (Concilia decretal, sess. x.xii. § 2) attacked this view, and declared that those who departed in Christ not yet fully cleansed; and sess. xxv. (decrees on purgatory, A.D. 1563) has the words just quoted from the Credo, adding ‘especially the acceptable sacrifice of the altar,’ and enacting that ‘a same doctrine of purgatory, handed down from the Fathers and of others, is to be believed and taught.’ The last words probably are meant to rebuke the extravagances of some popular teaching.

9. The Church of England at the Reformation took a middle course. In the First Prayer Book of Edward VI. (1549) there were explicit prayers for the departed. But since 1552 these have been removed from the public services; the only relics of them remaining are the petitions in the Common Service (perhaps purposely left ambiguous) that ‘we and all thy whole Church may obtain remis-
sion of our sins,’ etc., and (in the prayer for the Church militant) that ‘with them (the departed) we may be partakers of thy heavenly kingdom;’ in the latter case the title does not exactly correspond with the contents of the prayer, as it is sometimes the case in the Thirty-nine Articles. In the Burial Service there is a prayer ‘that we, with all those that are departed in the true faith of thy holy Name may have our part and portion in the world to come, and bliss,’ etc. But, while thus removing explicit prayers for the departed from its Prayer Book, the Church of England declined to condemn the practice in itself. In the original draft of art. xxi. it was proposed to do so, but the condemnatory words were struck out (see E. C. S. Gibson, The Thirty-
ine Articles, London, 1897, p. 537 f.). And the Act of Uniformity of 1552 expressly declared that the First Book of 1549 was ‘a very godly order, agreeable to the Word of God and the primitive Church.’ In the Second Book of Homilies, on the other hand, the homily on prayer repudiates prayers for the dead; and this book is said by art. xxxv. to ‘contain a godly and wholesome doctrine,’ though all its opinions are not necessarily the official position of the Church. That position of that Church is thus a mediating one. It neither commands nor condemns the practice, and leaves it, as far as private practice is concerned, to the discretion of its members.

10. The Commissioner’s Commission.—This was adopted as a standard by the Presbyterian General Assembly in Scotland, A.D. 1647. It takes a very precise line on the subject now under considera-
tion. It says:

‘Prayer for the dead made... for all sorts of men living, or that shall live hereafter; but not for the dead, nor for those of whom it may be known that they have sinned the sin unto death’ (xxii. 4).
The same statement (with a slight difference of wording) is found in the Larger Catechism of 1648 (qu. 182), but is not contained in the Shorter Catechism (qu. 42). After 1653 the Scottish National Covenant, when denouncing (in the strong language of the day) ‘that Roman Antichrist,’ had repudiated among many other things ‘his purgatory prayers for the dead.’

The exhibition of wheels for the departed in the Westminster Confession is seen in its teaching as to the state of the faithful after death. All progress after death is denied. After saying that at death man’s soul does not die nor sleep, it goes on:

‘The souls of the righteous, being then [at death] made perfect in holiness, are received into the highest heavens, where they behold the face of God in light and glory, waiting for the full redemption of their bodies: and the souls of the wicked are cast into hell... Besides these two places for souls separated from their bodies, the Scripture acknowledgeth none’ (xxxii. 1).

Very similar is the wording of the Larger Catechism (qu. 86). The well-known words of the Shorter Catechism (qu. 37) are:

‘The souls of believers are at their death made perfect in holiness and do immediately pass into glory; and their bodies, being still united to Christ, do rest in their graves till the resurrection.’

This may be taken to be the general teaching, not only of Presbyterians, but of a large number of other Protestant communities throughout the world. It is, however, quite possible that the practice of praying for the departed (see S. C. Gayford, The Future State, London, 1903, p. 58).

11. The Eastern Orthodox Church.—The teaching of this Church remains much the same with regard to prayer for the dead as that of the Greek Fathers of the 4th and 5th centuries. It is remarkably cautious in refusing to dogmatize. The eminent Russian layman, Alexis Khomiakov, remarks (Birkbeck, p. 217 f.):

‘Each person owes his prayers on behalf of all, the living and the dead, and even those who are yet unborn... We do not acknowledge purgatory, that is the purification of souls by sufferings from which they may be redeemed by their own works or those of others... Who will forbid us to pray [God] to glorify his saints and to give repose to his elect?’ (see above, § 8).

The official treatise On the Duty of Parish Priests (§ 16 [Blackmore, Doctrine of the Russian Church, p. 281]) says that we ought to pray for the departed in the hope and faith of the resurrection of the dead... and be working for them the work of Bar 3rd, 2 Mac 12th, and on apostolic and primitive tradition. The Synod of Jerusalem (or Bethleham, A.D. 1672) went farther than Khomiakov and most Eastern theologians would approve. ‘The doctrine of purgatorial fire has never been recognized or admitted in the Eastern Church’ (Duckworth, Greek Manuals, p. 63); but the Synod, which was held at a time when the Eastern Church was largely under Roman influence, pronounced in favour of some sort of punishment in purgatory for a certain number of sinners, and affirmed that ‘they are released by God’s goodness in answer to the prayers of priests and the benefactions done in the name of the departed by their kinsfolk,’ and that for this the Christian is ‘of especial expectation and hope to the increase of the time when they know not’ (ib. p. 64 f.). On the other hand, Archbishop Philaret of Moscow, the author of the Longer Catechism of the Russian Church in its present form, denies that there is such a thing as punishment after death, and holds that their torments have for their purpose to bring forth fruits worthy of repentance, but affirms that they may be aided towards the attainment of a blessed resurrection by prayers, eucharists, and works of mercy offered for them. It says of all the righteous dead that they ‘are in light and rest with a foretaste of eternal happiness,’ while the wicked are ‘in a state the reverse of this;’ the righteous do not attain to perfect happiness till the resurrection of the body.

12. The Separated Churches of the East. The services and prayers for the dead mentioned above were all performed at home. The Church has also been concerned in the worship of the dead (for the custom among the Eastern Churches see A. J. Maclean and W. H. Browne, The Catechisms of the East, London, 1885, p. 354; for the Armenians see F. C. Conybeare and A. J. Maclean, Rituals Armenorum, Oxford, 1906, pp. 54-60). This custom appears to be a curious survival of paganism.

PRAYER-WHEELS (or ‘magical wheels’).—This name is applied to wheels or cylinders which are made to revolve in the expectation of gaining some spiritual or magical profits. Sometimes they are actual wheels, hung in a temple and turned by hand or by means of a cord. To this category belong the small metal wheels fixed in the wooden pillars at the entrances of certain Japanese pagodas. Such wheels are sometimes called ‘wheels of fortune,’ suspended from the ceiling or attached to the pillars of some Breton churches. Worshippers are allowed to turn these on payment of a few pennies, and thus to obtain a so-called ‘sacrament’ of a saint whose image is placed alongside, and which bears the name ‘Soul’s Wheel’ (Santich-ar-rodd). The Japanese wheels have metal rings, which slide along the spokes and make a silvery sound. The Breton wheels produce the same effect by means of the small bells with which they are decorated. The use of these instruments is of long standing in the Church. According to the Monastic Anglicanus, St. Ethelwold, bishop of Winchester in the 10th cent., introduced into his cathedral a wheel of gilt metal, with several little bells (‘tininallitibus plenam’), which was made to revolve on saints’ days, to increase the devotion of the faithful (‘ad majoris excitationem devotionis’). Among the ancient Greeks the grammarians Dionysius of Thrace notes the wheels which were revolved in the temples of the gods. Plutarch and Heron testify to their presence in Egyptian temples of a late period. Plutarch makes them a symbol of the instability of human things, Heron an instrument of purification: ‘When the wheels of the Egyptian temples are placed movable bronze wheels which are turned by those entering, in the belief that the bronze purifies.’

4 Yuma, xiv.
Again, the instruments used may be cylinders, or rather cylindrical boxes, containing texts or sacred objects. Such are the praying-mills, which have assumed special importance among the Buddhists of the North. The smallest ones are bobbin mills, often with the wheel attached to a wooden handle, which the lamas by a slight movement of the wrist keep steadily revolving for whole days, while they repeat the invocation engraved on the surface—generally the famous formula, ॐ प्रभुमुद्रा हिम. ॐ The jewel in the lotus. Other cylinders, of a larger size, generally of wood painted in bright colours, are to be seen in the vicinity of the monasteries. Passers-by make them revolve by means of a handle which returns to the hand, making a bell ring several times. As many as 300 of these wheels may be found, placed side by side like barrels in a beer cellar.1 Some are of such a size that it requires several persons to set them in motion. The traveller Gérard saw one at the monastery of Samun which carried 108 lighted lamps. Others contain shrines, images, and prayers, and occasionally a number of manuscripts. Each revolution confers on the worshipper the same spiritual benefits as the reading of all the texts. Many of these cylinders, which were veritable libraries—circulating libraries, as William Simpson wittily called them.2 Gabriel Bonvalot mentions having encountered, in the monastery of Doton, 100 large bobbins, each containing 10,000 invocations. As a few minutes suffice to revolve the whole in succession, one may thus rapidly gain the benefit of the indulgences attached to the recitation of 1,000,000 formulae.3

In the Himalayas these mills are often erected above a rushing stream, which turns unceasingly a wheel with blades dipping into the water. It appears that the merit mechanically engendered by these applications of natural forces goes to increase the karma of those who constructed the apparatus. E. R. Huc,4 Gilmour, and W. W. Rockhill5 report that among the Mongols there are mills made of paper and hung in the tents over the fireplace in such a way that they may be set in motion by the displacement of the heated air.

Such is the fashion in which the Buddhists of the Northern school have materialized the ‘wheel of the Law,’ the Dharmachakra, the chain of causes and effects. There is no mention of praying-mills in the oldest Buddhist treatises. Nor are these instruments known among the peoples of the South. Nevertheless the symbol of the wheel was in very early times held in high esteem by the followers of the Buddha. It is to be seen on Buddhist monuments prior even to the first appearance of the image of the Master. The wheel figures in the oldest Buddhist sculptures, in the place of honour upon altars, where it receives the homage of the faithful.6 A. Cunningham supposed that it represented the Buddha himself.7 But it is more probable that it personified his teaching, the ‘wheel which he set in motion for the salvation of humanity,’ by the revelation of the Four Great Truths in his famous sermon at Benares.

We may suppose that the Buddhists have combined their symbolism of the wheel with a magical rite previously practised either by the Scythian races of Central Asia or by the Brahmins of the North. In the former, the wheel of fortune. In the latter, William Simpson has found in the Satapatha Brâhmana a text which shows beyond question that the Brahmins revolved chariot-wheels horizontally around a stake fixed in the ground, while they chanted a hymn from the Sama veda in honour of the sun-god Savitri.8

What was the original purpose of this rite? The wheel, which has a round shape, and which implies a movement of translation in space, has everywhere been one of the images most frequently employed to represent the sun. The latter is called by the Latins rota altivolans;2 in the Edda ‘the beautiful wheel’ (fangravel), by the Celts ‘the luminous wheel’ (roth fail), and the Rigveda invokes the god who directs ‘the golden wheel of the sun’ which sometimes comes the symbol of the regular course of the sun, and consequently of the celestial or cosmic order, the rita. Another passage of the Rigveda speaks of it as ‘the immortal wheel which nothing stops, on which all existence depends.’ It was this symbolism that the Buddhists applied to their ‘wheel of the Law,’ with its thousand spokes, the Dharma chakra, ‘that wheel which not by any Sahanma or Brahman, not by any god, not by any Brahmā or Māra, or any one in the universe can ever be turned back.’18 All observers agree in stating that the praying-mills must turn in the direction followed by the sun.

On the principle of imitative magic, to revolve the wheel in the apparent direction of the sun’s course is to facilitate or assure the beneficent movement of the sun, and thus to secure general luck, as in the similar case of circumambulation (q. v.). Hence the popular customs, described by Mannhardt and Gadow,9 in which the inhabitants of certain objects— in Germany and England—may be seen driving a wheel, sometimes set on fire, across the fields. As Mannhardt maintains, this is simply a solar charm, intended to secure an abundant harvest.

Finally, mention must be made of certain forms of rattles used by the inhabitants of New Mexico. In so far as they are magical instruments, they resemble in construction the invocation-cylinder, but they belong to quite a different symbolism.

Goblet d’Alviella

1 This identification is questioned by Percy Gardner, who reproduces the text in his Indian Coins and Currency. See also ‘Greek and Scythic Kings of Bactria and India,’ London, 1895, pl. xxvii. no. 12.
PREACHING (Christian).—1. The early Church.—From the accounts of Christian worship in the NT, especially in the Epistles of the primitive Christians, although there was a real praise a great row that the preaching to speak should come from the Spirit of God. As early as the Didache the prophets are mentioned as a separate class, the members of which wandered from community to community in the exercise of their gift; but already their inspiration was so far from being above suspicion that the churches were coming to be better satisfied with any authentic light they could receive from their own elders than with the illumination afforded by those wandering stars. This tendency was increased by the growing sense of the inexhaustible treasures of wisdom and spiritual power lodged in the Holy Scriptures the canon of which was gradually forming. From the synagogue the Church had inherited the practice of reserved writing and attaching to this reading the word of exhortation. When the Christian community had the whole of the NT and the OT thus to draw upon, its view would not lack the bread of life, if a moderate amount of attention or skill were paid to the application of what had been read to the life of the individual and the community. At all events the first form of preaching was homiletical, a homily being a running commentary on a passage read. This is known to have been the form of instruction given at the first college for the training of preachers, the Catechetical School of Alexandria, of which Clement and Origen were the shining lights. Many of Origen's homilies have come down to us; and they show how boundless a thesaurus it was, that he was so capable of possessing in the Word of God, though the heritage left by him to succeeding ages was sadly vitiated by the introduction of the allegorical method, which tempted nimble wits into excessive ingenuity, but, in incompetent hands, could almost any passage of Scripture mean almost anything.

During the first 300 years of its existence Christianity, in spite of the persecution to which it was subjected, made more rapid progress than it has ever done since; yet the names of outstanding preachers, after the death of the apostles, are so few that it cannot have been by this means that success was gained. It was rather by a kind of preaching which has been too little practised in subsequent centuries, but will have to be rediscovered if the world is to be fully evangelized. At the first the gospel was so intense a blessing that no one who heard it with faith could keep the secret to himself. Neighbour told it to neighbour, slave to fellow-slave; the sailor carried it to every shore visited by his ship, and the soldier communi cated it even to the enemy whom he had conquered on the field of battle. Justin Martyr, after becoming a Christian, continued to wear the philosopher's cloak, because this gave him access to those to whom he 'talked,' the gospel, and the very 'to talk' is a good name for preaching in the NT.

2. The Middle Ages.—When, at the beginning of the 4th cent., Christianity was adopted as the religion of the Roman empire, there immediately took place a great change in the method and content of preaching; for it was no longer necessary to confine such testimony to the places where the myrmidons of persecution could not find the worshippers, but, under imperial auspices, Christian places of worship, of growing size and magnificence, rose all over the empire. The first Christian emperor himself set an example of preaching, like a well known imperial figure of the present day; and, as at least one of his efforts could be seen, one can judge of their quality for ourselves. It is by no means bad preaching for an emperor. Even the apostate Julian, who attempted to restore heathenism, betrayed his consciousness of the importance of preaching by exhorting his priests to make sermons with the pagan myths for texts and by setting an example himself. But his attempt was very soon at an end; and in the courts of the Christian emperors by whom he was succeeded preachers and preaching held a conspicuous place. The more famous became as much topics of conversation at court as favourite charioteers or actors had been before; and in the sunshine of imperial favour preaching attained to a notable development. The 4th and 5th centuries contain many outstanding names, the greatest of which in the West is that of Chrysostom, in whose hands the homily was transmuted into an oration, which the hearers applauded in church, as they might a speech in a political meeting. In the West the greatest preacher was Augustine, whose sermons, being addressed to audiences of fishermen, were more simple and practical. But the first impression made by even the greatest sermons of that age is, how much the long continued exegesis of the Scriptures through the Christian centuries has benefited congregations; for, in explaining the book of Acts, e.g., the humblest preacher has now within easy reach materials far more true to the text and useful to the people than were at the command of even a genius like Chrysostom, who has left lectures on this book of Scripture.

Many other names of the period could be mentioned, such as Gregory and Basil in the East and Ambrose and Hilary in the West, to show that the 4th and 5th century was a great age for preaching; and it has another sign of distinction in the appearance of books on the preacher's art, both Chrysostom and Augustine having produced examples of this species of literature. But it was not long before the descent of the barbarians from the north, and then the pressure of Mohammedanism from the east, nearly squeezed the life out of the Church, and preaching, like the other functions of her life, was reduced for centuries to the lowest terms. Yet this was the time when monasticism arose and spread with extraordinary rapidity over the Church, occupying territory from which it has never since been wholly dislodged; and in the monasteries and nunneries preaching obtained a new sphere of influence. Monks and nuns must often, with extraordinary intelligence and sympathy, the opportunity thus opened up to a spiritual and gifted preacher may be inferred from the relation of Staupitz to the youthful Luther; for this we have, who was initiated of monasteries in the district of Thuringia, must have made use of preaching as one of his ordinary activities. A still more attractive aspect of the preaching of the Dark Ages is that of the missionaries; for, in spite of its change of level and content, the great eras of missionary progress, when, issuing from the monasteries of Great Britain and Ireland, the
heralds of the Cross not only evangelized the tribes who had occupied the countries of S. Europe, but carried the gospel to the inhospitable regions of the north out of which the invaders had come. Names like those of St. Columba and St. Patrick, St. Columbanus and St. Gall, are worthy of elevation. But the most renowned is that of St. Boniface, in some respects the greatest of them all, we can still see for ourselves the kind of message with which they operated. It was a message of realism and terror; for the conditions were very rude and chaotic. So it was that the chief theme of the pulpit, because there was an abounding iniquity in the world; and it was not for centuries yet that preaching learned to deliver in its fullness the gracious message of deliverance from sin.

It was in the reaction from Muhammadanism that the sound of a new era of preaching began to be heard in the atmosphere of Europe. Peter the Hermit 'preached' the first Crusade; and the preacher of the second was no less remarkable than St. Bernard, usually reckoned the greatest preacher of the Middle Ages, although the sermons for which he is most famous—those on the Song of Solomon—belong not to popular oratory but to the preaching of the pulpit. The task was a great one, however, to conquer the multitude, as well as the romanticism of the Crusades, a place in the movements with which the names of St. Francis and St. Dominic are identified. Preaching was one of the principal instrumentalities made use of by both of these reformers; and even in our time, in Roman Catholic countries, it is a red-letter day in the history of a country congregation when a stranger in the gracefal garb of the Dominican order rises in the pulpit, as a visitor, to occupy the pulpit for the crowded congregation. The Franciscan preachers Antony of Padua and Berthold of Regensburg are the foremost. The matter of preaching was adapted for presentation to the general mind through the labours of the Schoolmen, not a few of whom were themselves famous preachers; and, after these had had their day, the hardness of their doctrine was softened in the atmosphere of the mystics, who gave to the pulpit some of its very greatest names, such as Eckhart and Zwingli. Some of the powers of the Imitatio Christi preserve the exquisite blossom and flower of monastic preaching at its best.

3. The Reformation.—Immediately before the Reformation preaching suffered in most parts of the Church a sad decline. In many parishes there was hardly any preaching at all, the Christian religion being reduced to a mere pagan round of forms and ceremonies, pilgrimages and penances. In vain did councils summon the clergy to their duty; for the higher clergy, who presided in such assemblies, were themselves the most inimical to the discharge of this function, and the lower clergy were too deeply sunk in ignorance to be equal to the task. The description of the preaching of the time given in Thomas McCrie's Life of John Knox is nowhere more pitiful, and it may be applied without hesitation to the rest of Christendom.

'1 it is difficult for us to conceive how empty, ridiculous, and wretched those harangues were which the monks delivered for sermon. Legendary tales consecrating the saints of the religious order, his wonderful sanctity, the miracles which he performed, his combats with the devil, his watchings, fasting, flagellations of body, prayer, extreme unction, confession, exorcism; the horrors of purgatory, and the numbers released from purgatory; the supposition of some power over the land; these, with low jests, table-talk, and fireside snarl, formed the favourite topics of the preachers, and were served up to the people instead of religious discourse. (The Works of Thomas McCrie, new ed., Edinburgh, 1855, i. 11)

It is in the writings of Erasmus that we see most clearly both the ludicrous and the deplorable aspects of the preaching of the time; but, in

Ecclesiastes, one of the worthiest of his books, this great Humanist exhibited the image of what, in his opinion, a preacher ought to be. The Reformers before the Reformation, especially Wyclif, Hus, and Savonarola, revealed popular talent in the pulpit, and in the last-mentioned especially the gift rose to the prophetic strain.

The Reformation was a crowning era in the history of preaching. Innumerable abuses were pushed aside, which had been preventing the pulpit from having its chance. The Word of God was exalted above all other authorities, and it was not only heard with new fullness and force from the pulpit but put into the hands of the common man, in his own tongue, so that he could bring what he heard to the judgment of the law and the testimony. The Reformers had themselves passed through the great experiences of the soul, and they spake that which they knew and testified that which they had seen. Among the people there was the most extraordinary appetite for the new message, and the prominent among the preachers being called on to preach every day, and no limit being put to length. In Luther there were accumulated all the elements of a great preacher—learning, experience, knowledge of men, humour, home-spun spirituality. To the best of his discourses have not lost the freshness of their prime, and everywhere in them the music of free grace sounds like the tinkling of a hidden well. Zwingli was more of the orator, bringing into the new movement the treasures of the Renaissance, but his testimony to the new truth is also clear and strong. Calvin excelled in the exposition of the Scriptures, and his great dogmatic work, the Institutes, swelled, in the course of its lifetime, to five times its original size. In many editions the best things gathered from the Word through incessant preaching and lecturing. John Knox applied the examples of the Bible to the problems of the passing hour; and the English ambassador, in a letter to Queen Elizabeth's Chief Secretary of State, bore him this testimony:

'1 assure you, the voice of this one man is able in one hour to put more life in us than five hundred trumpets continually thundering in the ears of McCrie, Life of John Knox'.

In all the countries in which the Reformation took any hold there arose preachers of power, whose names are cherished to this day as household words; and in many cities and towns men of the second or the third rank arose, who directed the course being pursued by their fellows. Eben a name still identified with the scenes of their labours. The pulpit had the making of the people's convictions, the moulding of their manners, the direction of their education; and this continued for generations, in some places more and in others less visibly.

4. The Puritan era and after.—In England, in spite of such early names as Hugh Latimer, Nicholas Ridley, and John Hooper, the effective Reformation was long in commencing; but, when it had begun, it produced the same appetite for preaching; and there were not wanting those capable of satisfying this spiritual hunger. In the Long Parliament it was quite an ordinary practice to set time apart for the hearing of sermons, and days of humiliation and Thanksgiving were frequent, in which not only sermons an hour long but even prayers of like extent were the order of the day. To satisfy such a critical assembly could have been no ordinary responsibility; but, if ever there was an intellectual dynasty of preachers in England, it was in this age. On the Puritan side were such names as Thomas Cartwright, Richard Sibbs, Richard Baxter, John Owen, John Bunyan, John Howe, Thomas Goodwin, and Thomas Adams; and for
intellectual grasp, mastery of Scripture, spiritual analysis, and constructive skill these men have never been surpassed. He who is in search of the substance of Christian truth can turn to their works still with the certainty of finding in abundance that which he is seeking. But, with few exceptions, they were as defective in literary form and grace of utterance as they excelled in solidity. What, however, was less humanly from the brevity of life than those who listened to the Puritans, or whether it was due to a marked difference of natural endowments, it is undeniable that these are as exuberant in all the graces which make style and literature as the others are deficient in them: and yet it cannot be said that there is any lack of substance in their discourses. On the contrary, although the ornamentation is sometimes excessive, the Cavalier divines, as well as their rivals, were great exponents of Christian truth and experience. So dear was the name of religion, Puritanism could not be confined to the British Isles; and on the Continent the stirring of the dry bones first appeared in Holland, where the signal of the new movement was the emergence of what is called the Peeping Toff. The Toff is a name conferred on Cocceius, a native of Bremen and a professor at Franeker and Leyden; but it is certain that the conception of revealed religion as a series of covenants belonged earlier to the Puritan thinkers, as, indeed, it developed in the documents of the Westminster Assembly, which were in existence before the publication of Cocceius’ renowned treatise on the subject. From Holland the revival movement spread to Germany, where its principal representative was Philipp J. Spener, court preacher successively at Dresden and Berlin; but it is known that he was influenced in youth by Puritan authors, especially by Richard Baxter, whose Reformed Pastor has been an inspiration to preachers and pastors in all parts of the Christian world, not only by the most outstanding of many preachers of the Pietistic order, the names of some of whom, like A. H. Francke, J. A. Bengel, and J. J. Rambaud, have taken their places among the worthies of the Church universal. Our account of the movement is developed directly by the Moravian Church, whose founder, Count von Zinzendorf, and his successor, A. G. Spangenberg, were noted preachers who have communicated their inspiration to many successors in their small but active community. To the Moravian Church John Wesley owed his experience of the gospel; and the same may be said of his coadjutors, Charles Wesley and George Whitefield. These were preachers who shook not only England but America to the heart, and they have transmitted the sacred fire to innumerable successors not only in the denominations founded by them but far beyond. Though the Established Church was not able to retain their services, there arose within it many who imitated their newness of spirit; and the succession of Evangelical divines, reaching from John Newton down through Charles Simeon to the shining lights of this section of the Church at the present day, may all be looked upon as derived from this source. The Established Church was preaching in the open air; and, in the churches founded by them, lay-preaching has been a prominent feature, with memorable effects not only on the community but on the character of the preachers themselves (cf. also art. Latry, § 9).

Charles II. was not without a taste for preach-

ing, and a curious letter has survived in which, before a visit to Cambridge, he lays down the law that the University preachers should refrain from rewarding their discourses, and as the extenuations, to which he had been accustomed whilst living abroad, was more in harmony with the royal mind. But the recoil from Puritanism soon became so universal that anything like enthusiasm in the pulpit no longer compelled the fanning of the fire. Soon proceeded from form to substance, the tone of belief becoming lukewarm and the distinctive message of the gospel being forgotten. Preachers formed their style on that of the rationalism of Germany, which was represented in the pulpit at the one extreme by the vulgarity of K. F. Bahris and at the other by the eloquence of J. L. von Mosheim.

5. The 19th Century.—(a) Britain.—All historians of preaching agree that the 19th cent. has been an epoch of unsurpassed maturity and productiveness. It has been a period when the human mind has blossomed in every direction, and preaching has both enriched itself from the progress of investigation and discovery and risen to the demands coming from every side. The most native impulse has been that of the Evangelical Revival, and this has been visible in its purest form in Scotland, where, at the beginning of the century, the movement was received into the mighty mind of Thomas Chalmers, taking on there a form of singular benignity and dignity, which has never since ceased to hold the heart and mind of his fellow-countrymen. Indeed, at the end of a century there is more in possession than ever, though being hardly any preachers of note at present who do not look up to Chalmers with veneration or are not proud of the name of Evangelicals. Chalmers’ own eloquence was believed by the best judges of the time to be the true inferior of the greatest orators in the oratorical art in any age; and his coadjutors in the ecclesiastical conflict, such as R. Murray McChyney, Robert S. Candlish, Thomas Guthrie, Robert Buchanan, were all preachers possessed of popular gifts and spiritual power. The Establishment from which these seceded, however, continued to produce preachers of eminence, such as Norman Macleod, John Carlyle, George Matheson, and James Macgregor. The United Presbyterian Church, which had originally sprung from the gospel preaching of the brothers Erskine, had such outstanding names as John Cairns, Robertson of Irvine, John Ker, and W. M. Taylor, who, however, rendered his principal service in America. The Presbyterian Church in the United States, within its limited size, was rich in gifts, having such names as Edward Irving, James Hamilton, J. Oswald Dykes, and W. G. Elmslie.

In England there was much more variety. The Evangelical Church held a nursery for talents in the Church of Simeon at Cambridge; and in the Keswick Movement it has produced speakers whose messages have been carried to all parts of the world. The same views have had much more partial representation in such Congregational preachers as Thomas Binney, R. W. Dale, and Joseph Parker.
The Methodists had such distinguished names as Richard Watson, Jabez Bunting, W. M. Punshon, J. H. Rigg, and W. B. Pope. But the Baptists, for their number, were the most fruitful of all, with such celebrities as Peter McCallum, Alexander MacLaren, and C. H. Spurgeon, who held an archiepiscopal position during the latter half of the century among the Dissenters of the world. In sharp distinction from the Evangelical school rose the Broad Church at Oxford; and, although its predominance did not last long, it yielded some fine fruits in the pulpit, such as A. P. Stanley, Charles Kingsley, and, above all, F. W. Robertson of Brighton, whose sermons were probably the most widely read in the last half of the century, while in the 18th cent. they re-obtain, seems not a few of the discerning to indicate the high-water mark of Anglican preaching; and the school had a noted orator in H. P. Liddon.

Wales is a land of preachours. Nowhere else are their preachers more beloved or better remembered; and it is no wonder that the Welsh people have invented a name for the je ne sais quoi which makes preaching effective. This is the hail, which is a combination of nature, art, and grace. It is the happiness of the preacher; it is the thing that grips the hearer; and it expands and culminates like the rising tide. The present writer has heard Cyndyllon Jones, secretary of the Welsh Calvinistic Methodist Church, do it to perfection in an hour’s discourse, the tide setting in about a quarter of an hour. It is not forsaken by the preacher. It is attempted and missed, and then the preacher feels ‘deserted,’ and the people complain of the absence of the Spirit of the Lord. Among noted Welsh preachers the Anglicans have had Henry Thomas Evans and John Morgan, J. R. Dyer, and Thomas Evans; the Congregationalists William Williams, Herber Evans, and John Thomas, and the Calvinistic Methodists John Elias, John Jones, Henry Rees, Edward Mathews, Edward Magon, and many of the name of Edwards, including two principals of theological colleges, of enormous influence in their day. The Irish pulpit has had its own share of both the Celtic fire and the spiritual power of the Welsh, and among the names that are household words are E. H. Plumptre, J. H. Bernard, and William Alexander (Epi-copalian), and Henry Cooke and Fleming Stevenson (Presbyterian), while none of the smaller denominations has been without preachers of power, remembered with affection and reverence in a more literal sense.

(b) The Continent.—If the impulse of the Evangelical Revival was predominant in Great Britain, it was still more obviously so in some of the Continental countries. A visit to Geneva of a spiritual nature—of Rolle or Haldane—who would explain fully under this influence was the occasion of a revival, which spread through the churches of Switzerland and brought to the surface such preachers as César Malan, Merle d’Ambine, Alexandre Vinet, Frédéric Godec, and, much later, Gaston Frommel. The same evangelist, who was not himself a clergyman, was the means of initiating a similar movement in France, issuing from the college of Montauban and giving rise to the labours of such eminent preachers as Adolphe Monod, one of the most perfect sacred orators of all time, E. D. de Pressensé, and E. A. F. Bersier. In neither of these countries, however, was the gift of eloquence confined to men of one school, and in France especially. There was a connexion between Coquerel, father and son, must be mentioned as belonging to the less Evangelical tendency.

In Germany in the 19th cent. everything in religion and theology dates from Schleiermacher, and preaching as an exception; for this second Luther both excelled in the art and expanded the theory of preaching to such a degree that great and small have in both respects been affected by him since. Many volumes of his sermons have been preserved, and they exhibit him as an original and daring thinker, a close interpreter of Scripture, and a Christian of spiritual power. A sermon by Schleiermacher usually begins where the sermons of other preachers end; that is to say, he takes for granted all the commonplace and ordinary remarks, and then opens up a new and original type. Sometimes what he finds left may be paradoxical, and not infrequently he leads for a considerable distance through a pathway which is obscure; but it is seldom that he does not at last come out on some beat from which there is a wide and rewarding view over the fields of truth. The only German preacher since Schleiermacher who can be called a rival, as regards either the excellence of his own productions or the extent of his influence on others of his type, is A. Tholuck, who has also written, in the form of a preface to his collected sermons, an incomparable disquisition on the preacher’s art. Tholuck is as infallible as ever Robertson of Brighton in discovering something in the psychology of the hearer to which to attach the message that he brings; he has the same gift of unfailing interest; and he has an even stronger hold on the essentials of Christian truth. These two leaders have had a long and distinguished line of successors, exhibiting great variety and yet keeping the same type. Their most outstanding names may be mentioned L. F. Theren- min, Klaus Harms, W. Hofacker, K. I. Nitzsch, F. W. Krummacher, J. F. Ahlifeld, G. C. A. von Harless, C. E. Luthardt, J. K. W. Löhe, and Karl Krummacker. These men and generations have been careful to attract distinguished preachers to Berlin. When one heard Rudolf Kögel, the chief court preacher in the days of Prussia’s greatness, it seemed impossible to conceive of any one more fitted for his position and his work; yet, when one was listening to Emil Frommel, who was preaching in Berlin at the same time, this divine seemed to have more genius for the business in his little finger than Kögel had in his whole body. The Ritschilan movement in theology has not failed to produce eminent preachers giving currency to its views. Among recent names may be mentioned E. Dryander, B. Dörries, C. Geyer, and F. Hittelmayr.

In the neighbouring countries of Holland and Denmark we have been similar currents of opinion at the same time; and among preachers whose renown has passed into other lands may be mentioned J. J. van Oosterzee, C. E. van Koetsveld, and A. Kuyper for the one country, and S. F. G. Christiansen, and H. L. Martenssen for the other. For Norway may be added the names of W. A. Wexels, O. A. Berg, C. Knudsen, and J. G. Blom; and for Sweden J. O. Wallin, S. L. Oedmann, C. P. Hagberg, J. H. Thomander, and F. O. Nilsson.
America.—In no part of the world has preaching been a greater power in the 18th cent. than in America. The energy of the surrounding life has communicated itself to the pulpit also, and not infrequently have great preachers been the leaders of public progress, their names becoming so identified with the places in which they have been settled that the very city itself vies the preacher or the mention of the preacher the place. Certain bodies, like the Methodist and the Baptist, have accompanied the pioneers on their westward way, suiting their ministries to the stage of culture and the spiritual aspirations of those under their charge, and they have had their reward in the phenomenal development which these denominations have attained in the newer States. Preaching has been a very conspicuous social force, and preachers have occupied a commanding position and exercised unusual influence. Nowhere else has talent been so evident, and the demand has called for the supply. Not only has every variety of preaching been exemplified, but the art itself has been thoroughly studied and taught. The number of the preachers has increased in exceptional numbers and of high quality. At Yale University the Lyman Beecher lectureship on preaching has been established since 1872, and in successive issues every phase of the subject has been treated by the most distinguished Old World and New Worlds. A similar lectureship now exists at Union Seminary, Richmond. The countless sects into which Christianity is divided in the United States have all had men of spiritual power, who have not only challenged but also maintained a limited circle; but it will be of interest to mention here only those who have attained something like a world-wide reputation.

Here again the beginnings were Puritan and Evangelical. The Pilgrim Fathers carried to the shores of New England the convictions of the age of Cromwell, and these were powerfully reproduced in the pulpit by Jonathan Edwards and the other leaders of New England theology, such as Joseph Bellamy, Samuel Hopkins, N. W. Taylor, Samuel Harris, and E. A. Park. The piety of the country was deepened by revival movements, which emerged from time to time and in no small degree affected the character of preaching. Among the more noted revivalists may be mentioned C. G. Finney, E. W. Heywood, and Theodore Parker. Representatives of every opposite type, and the Episcopalians, besides producing many distinguished preachers such as S. H. Tyng, H. C. Potter, F. D. Huntington, and W. S. Rainsford, having in Phillips Brooks a pulpit representative of the first rank, whose Yale Lectures on Preaching may be characterized as the finest product of the kind yet given to the world by America, while the big humanity of the man, his spiritual power, and his literary charm will long keep his memory green.

The Congregationalists had many names of great eminence, and reached a supreme preacher in Henry W. Beecher, whose style and methods of speaking have all but been imitated by the Sons of Edenton, that the highest degree almost every gift of the pulpit orator, and who was the first of the Yale lecturers on preaching. Among the Baptists, while the names are very numerous, the greatest is that of James Denison, who in different forms, especially in his sermons or addresses, has treated the best qualities of the preacher in his practice, but wrote on both the theory and the history of the subject with distinguished success. The Presbyterians have not been behindhand, as the following evidence of the speculative effort of the Congregationalists, and of the more public preachers. Tuckston testify, as well as those in the south of M. D. Hoge at Richmond and B. M. Palmer at New Orleans. In Canada the Anglicans have had Bishop Baldwin and J. de Soyres; the Methodists George Douglas, Potts, and C. L. Stafford; the Baptists E. A. Crawley, Denovan, and R. A. Fyle; the Congregationalists H. Wilkes and P. S. Henson; and the Presbyterians G. M. Grant, D. H. MacVicar, and Barclay.

The English pulpit.—Protestants are apt to overlook the history of preaching since the Reformation among Roman Catholics; but these have had their own tradition and have embodied their practice both in books and in prelections on their subjects. It is from the literature that the renunciation given to the Mass and other ceremonies tends to eject preaching from its lawful place; on the other hand, the arrangements for the observance of the Christian Year afford special opportunities for preaching on the greatest themes of the Christian system, and men possessed of oratorical gifts are trained to deliver courses of sermons at Lent and other seasons, which often attract very large audiences. There has been one scene of extraordinary development in the art of sacred oratory since the Reformation in England, namely that of Louis XIV., during whose long reign a succession of orators was maintained, embracing the names of Bishop Bossuet, Louis Bourdaloue, Esprit Fleuch, Archbishop Fenelon, and J. B. Massillon. These latter rank light in the history of the English pulpit. The principal ornaments in the court of the Great Monarch; their merits and performances were compared and contrasted by the courtiers in the same way as the dramas of the poets and the books of the novelists are still contrasted in the English pulpit. The cultivated audience excited the speakers to the utmost exercise of their powers. The sermons were expected to be lengthy and to deal with great themes in a great way; and in some respects the discourse of the court and the pulpit is the parallel of the art of the time. Some of the greatest of these were on the death of princes, and the vanity of human things was a constant theme, as if the frivolity and the extravagance of the courtiers required this foil to make their enjoyment complete. The memory of this brilliant period has never died out in France, and from time to time there have been more or less successful attempts to revive it, as by J. S. Maury in the French Revolution and J. B. H. Lazard, F. A. P. Dupin, and others in the revolution of 1848, but I do not know of its development in the 19th century. In other parts of the Catholic world there have been striking personalities in the pulpit, such as J. M. Sailer and Martin Boos in Germany, Theobald Mathew, Tom Burke, and T. J. Potter in Ireland, and N. P. Wiseman, and H. E. Manning in England. In the United States such names are mentioned as Bishop Eng. Archbishops Spalding, Archbishop Kenrick, and Cardinal Gibbons.

LITERATURE.—There are books of the past on preaching which may be classed as: Augustine (1310), de Doct. Christ. iv.; Alarabus in Anulins (1203), Summa de Arte Predicatioris; Bonaventura (1217), de Compendio; Erasmus (1510), Breviarum; Melanchthon (1560), Rheterix; Hyperius (1564), De Formandis Consolaboris Sacris (published, Berlin, 1891, by E. O. Achilles and K. Sachs; as Die Hinsicht und die Rhetorik des Andreas Hyperius); J. Wilkins (1673), Rhetorica, London, 1649; F. Dodridge (1673), Lectures on Preaching and the Ministerial Office, ed. 1804; G. Campbell (1790), On Pulmonic Eloquence, ed. 1807; F. Thirerlin (1846), Die Beredamkeit eine Tugend, Berlin, 1714; A. V. F. D. F. Philoze, Preacherium, London, 1804; F. D. Doodridge, New York, 1858. But the modern books are better, as they are more in the main, and are generally written by preachers who address themselves to the tastes and requirements of the present day. Valuable to the practitioner are C. Spur- gill, New Preachers' Library, London, 1846; H. W. Beecher, Yale Lectures on Preaching, 3 vols. in one, New York, 1851; B. D. Carpenter, Preaching, 1871; A. Phleb, Theory of Preaching, 1882; H. Bassermann, Handbuch der geistlichen Beredamkeit, Stuttgart, 1855; Phillips Brooks, Lectures on Preaching, New York, 1871; W. Boyd Carpenter, Lectures, 1872.
PREACHING

K. I. Nitzsch (Prakt. Theologie, 3 vols., Bonn, 1859–63), A. E. Krauss (Lehrbuch der prakt. Theologie, 2 vols., Freiburg, 1871), J. F. K. J. van Oosterzee (Practical Theology, Ed. tr., London, 1875), as well as in series of books on the same subjects, like H. v. d. B. (schriften der evangelischen Kirche, 50 vols., Berlin, 1859–68, which includes both history and theological reflection on the subject) is included in works on Pastoral Theology, such as by K. Harms (Pastoralkunde, Riel, 1876), P. Fairbairn (Hist. Pastoral Theol., London, 1875), or J. C. W. van der Work of the Ministry, London, 1895), J. O. Dykes (The Christian Minister, Edinburgh, 1862). Choice books, worthy of mention here, are George H. Macdonald, The Temple, or the Country Parson, London, 1865; W. Leche, Der evangelische Prediger, 2 vols. (Berlin, 1873–5), John Watson, The Cure of Souls, London, 1895; and H. van Dyke, The Gospel for an Age of Doubt, do. 1899. On the history of preaching there is an excellent work by Broadus (Lectures on the Hist. of Preaching, New York, 1870) and a small but characteristic one by John Ker (Lectures on the Hist. of Preaching, London, 1870); but the best work in the English language is an American one, by E. C. Dargan (A Hist. of Sermons, London, 1897). It is dealing with the preachers of America, it is to be hoped will not be long delayed. The two volumes already published the work by John Ker is the beginning to part. If they are characterized by learning, insight, and vigour. In German there exist voluminous works on the history of both preaching and sermons. The German preacher of the great of the outstanding names being R. Roth (Gesch. der Predigt u. Predigt-Unglück, Schleiermacher's Werke, 25 vols.), and A. Nebe (Zur Gesch. der Predigt, Charakteristiken der bedeutendsten Kanzelmänner, 3 vols., Wiesbaden, 1876), K. H. Schenck, Geschichte der liturgischen Predigt und Predigtkunst (Leipzig, 1873), C. F. G. Schenk (Gesch. der deutsch, protestantischen Kanzelredner, 1814), C. G. Schmidt (Geschichte der Predigt u. Predigtler der evangelischen Kirche in Preussen, do. 1890). Of writers on French pulpits eloquence there are many. Among these may be mentioned J. A. Perret, L'Eloquence de la chair, Lille, 1894; A. de Coulanges, La Chair francise au siecle des do, do. 1891; A. Vinet, Hist. de la predication, in the Dictionnaire de la langue et de la litterature, do. 1899; P. Stapfer, La grande Prédication chrétienne en France, do. 1896. On the history of preaching in Holland and Denmark there are works by J. Harroog (Geschiedenis van der Predik- kunde in de Kerk van Neder-land, Utrecht, 1887) and V. L. Mannesma (Portraits der Kerk-Boodschap des der Kerkredes, Copen- hagen, 1890), and on the same in Italy by U. Micolli (Antologia della sacra eloquenza moderna, Turin, 1897), and F. Zanetto (Storia della Predicazione Moderna, Modena, 1890). J. E. Kempe has edited two volumes on the Classic Preachers of the English Church (London, 1877–8), and C. Ryle (The Life and Works of Last Century (Edinburgh, 1889). O. Jones has written on the Preachers and Preaching of the 18th Century, and C. while to the Scottish pulpit the same compliment has been paid by both W. G. Blackie (The Preachers of Scotland, Edinburgh, 1883), and G. W. R. Wilson (The Scottish Preachers, Under the title of Representative Modern Preachers, New York, 1884, L. O. Brastow published elaborate papers on nine preachers, and the following index exhibits the names of mentioned collections of sermons, of which by far the greatest is that of J. P. Migne (Paris, 1844–60) in four thin volumes. H. C. Fish's well-known Hist. and Repository of Pulpit Eloquence, New York, 1836–57, is modestly limited to two volumes and a supplement (Pulpit Eloquence of the 18th Century, do. 1857). Recent publications in America are The World's Great Sermons, 10 vols., ed. O. Kiefer, Chicago, 1910, and Modern Sermons by World Scholars, 10 vols., ed. A. J. Frey, and W. Stiles, New York, 1906.

JAMES STALKER.

PREACHING (Jewish).—The word 'preach,' is derived from Latin praedicare (Gr. πρόφητας, and means to foretell) or to announce something publicly. Generally speaking, the term conveys the idea of making a proclamation on behalf of God. The notion of preaching is based on many passages in the OT, such as Is 60:1, Am 5:8, etc. The Biblical prophets are described as 'prophets of the Most High,' and among these the literal sense of the word. In Dt 31:12 the injunction is laid upon the king to read the Law before the assembled people once in seven years. Such public readings are recorded in 2 K 29, Neh 8:4, and in the Mishnaic period. It is not unlikely that the kind of model sermon may also be seen in Pr 4:38–40.

During the second Temple, and some time after, preaching retained its spontaneous character. Whoever felt called upon to preach stepped forward and spoke. The Mi'nah (Temniš, ii. 1) states that in times of prolonged drought the community, in deep concretion, gathered in the open and were addressed in stirring words by the oldest member present. John the Baptist preached (ἐρημίτης) in the wilderness of Judea (Mt 3:3), and Jesus preached in the synagogues. Preaching seems at that time to have been a regular feature of the Sabbath service. It grew out of the reading of the lessons from the Torah, and consisted of the interpretation of the passages read and what was said therewith. Since the people could not be trusted to follow the Hebrew text when read out, the latter was accompanied by a translation into the Aramaic vernacular, known as the Targum. The translator (mehuthorgam) was bound to be a person well versed in the original text. As a literal translation of many passages was impossible or impracticable, the translator frequently resorted to paraphrastic rendering, introducing into it elements of the Haggadah as well as of Halakoth. Instances of homiletic translation in the so-called Targums of Onqelos are G 44–4, 5, 13, 1, 12, which contain expressions of comfort, hope of speedy delivery and the rebuilding of the Temple, also admonitions to observe the Law and to study the Torah. Broader still is the translation ascribed to the Targumim, but it seems that these were meant for private rather than public reading.

The Greek-speaking Jews proceeded in a similar way, using the Greek language for their religious lectures. By the end of the first century, there were Greek sermons and the fragments of three ascribed to Philo. He is himself credited with having acted as preacher, and Freudenthal is probably right in regarding his allegorical writings in the light of public lectures actually held in the Synagogues.

The transformation of these rather informal lectures into sermons proper, based on Biblical texts, proceeded gradually. Their promoters were the heads of the Sanhedrin, who were distinguished by the title dorashanim (interpreters). As interpretation was the main feature of the lecture, the preacher 'opened' (779) his homily with a quotation from the weekly portion, or haphar, or from any part of the Bible in some way connected with the occasion. These occasions were not only the Sabbath and festivals, but also the fasts, such as Yom Kippur, or the specified portions of the Pentateuch (Bukhari, 600) and funerals (ib. and Miqawah, 500). The specimens of introductions of funeral sermons given in these passages are in pure Biblical Hebrew, which is a sign that the preachers were highly trained persons who bestowed great care on their sermons. The ordination of rabbis was also solemnized by homiletic allocutions (Sanh. fol. 140). A large number of such introductions (sermone) are to be found at the beginning of the Midrash, the Lamentations, and the Psalms, together with the names of the preachers, each paragraph giving either a complete sermon or the nucleus of one.

As a rule the sermon was spoken in the vernacular Hebrew or Aramaic, and not in the Palestinian, Greek, Persian, and Arabic. Of the use of Arabic we have direct evidence in Muslim tradition. There existed a Beth 'Midrash in Medina, where the Jews interpreted the Torah in Arabic. The preacher (also styled the 'rashibi') did not address the people direct, but spoke to the mehuthorgam (or amord), a paid official who translated his words

3 Bukhari, Şahih, ed. L. Krelj and T. W. Jubbells, Leyden, 1609–1606, ed. ib. 1, 16; see also H.女性朋友, New Researchers into the Composition and Exegesis of the Koran, London, 1902, p. 23.
to the congregation. From this it follows that the meṭḥur gemōn himself must have been a man of some learning. He had to add explanations and to answer questions, and the latitude allowed him is probably reflected in many passages of the Targumim and Midrashim.

Whilst the ordinary sermon was delivered in the synagogue, lectures on Halikhāh, which demanded some preliminary knowledge, were given in the school hall (Beth Hamidrash). There was not, however, any fixed rule for such an arrangement, especially where the school hall was also used as a house of worship. On certain occasions, especially on Sabbaths preceding festivals, the public hall was the centre of instruction and the Sabbath day was a holiday. There, the sermon assumed a mixed form. This custom is still observed in most communities.

The natural place of the sermon was immediately after the reading of the lesson from the Pentateuch and the hophēṭrāh from one of the Prophets. We read in Maasseheṭh Sopherim, xii. 7: 'On Sabbath the Targumim or Preacher (טמר) recites the hophēṭrāh from the Prophets.' A passage in the Middrash Taḥpiṭ (92a) states that, when a person was appointed to deliver the Gemōn, the Sopherim read the Shērūd and the Tophēṭhōr (Eighteen Benedictions), and listened to the Tōrāh and to the elder (preacher). There are many passages in the Midrashim containing similar statements. Occasionally, when no certain limit was fixed, the sermon was delivered before the termination of the afternoon service. In some places this custom is observed even in modern times.

The Taonic period saw some changes. Whilst the preacher was named by the title hākēhām, dōrān, or sagan (‘elder’), the meṭḥur gemōn became a mere precentor, and the Midrash marks the contrast between the two by applying to them the verse Ee 7: ‘The latter embellished the service by his melodious voice, but contributed nothing towards the uplifting of the congregation. The liturgy became fixed. The function of the translator was either abolished or greatly restricted. Relics of the same, however, still exist in congregations of Sephardic rite, where during the service of the arts for the morning service the hophēṭrāh is read in an enlarged Spanish version. In Oriental congregations Arabic versions of the Targum are read at the blessing of Jacob, the Song of Moses, the Decalogue, the hophēṭrāh of the first and last days of Passover, and similar pieces.

Even the function of the preacher did not escape the vicissitudes of time. During the persecution of the Middle Ages many synagogues were closed, the ‘public’ service was banned to secret places, and expulsions made an end of many congregations.

Another cause which affected the sermon, chiefly in German congregations, was the enlargement of the liturgy, by the insertion of piyugēm, i.e., unofficial liturgical compositions. The large Haggadic elements which they contained in some measure replaced the homilies, and sermons were delivered in intervals or on special occasions. The names of famous preachers in France and Germany are, therefore, comparatively few. A list of them is given in Zanz’s Gottesdiennliche Forträge der Juden (Frankfort, 1892, p. 433 ff.). Spain, prior to the expulsion, offered a more fertile soil for pulpits eloquence, probably on account of the simplicity of the rite. Only on one Sabbath in the year was the custom of singing the hophēṭrāh recited. This country, therefore, produced a large number of renowned preachers. Of those not mentioned by Zanz must be named Jonah of Gerona.1 (↑ Toledo, 1340), who was one of those who joined the movement against Malmo-

nides’ philosophy, Nissina b. Reuben Gerondi (1550),2 and Asher b. Jehiel (↑ 1340). A great preacher of the 16th century was Joseph b. Shem Tob. From a note preserved of his sermons3 we gain some interesting information. It was in June 1452, when Prince Enrico arrived at Andalustia, that the Jews of Segovia dispatched a complaint to him concerning a persecution which had taken place on Christmas day. The prince sent Joseph with a written order to the authorities of the town commanding peace, and in another letter he assured the Jews of his protection. On the following Sabbath Joseph preached in the synagogue after the reading of the lesson. Subsequently he preached three more sermons in the same synagogues. In Italy there were Abraham Farissol and Obadiah Sforno, both in the 15th century, and David Zaccruth, who left a collection of 300 sermons.4 In the 16th century we find Joseph Taysuzak of Salonica.

The following centuries were not favourable to any further development of the spiritual life of the Jews, and this circumstance also affected public preaching. There exists a rather extensive literature of sermons produced in Italy, the German lands, and the Iberian Peninsula which were written in Hebrew, it is doubtful whether they were actually delivered. In the Sephardic communities of Holland and England, where the Jews lived in comparative safety, sermons were delivered in Spanish and occasionally in German. Even with the exception of perhaps Italy, the vernacular was lost to them. In German-speaking countries the Jews could converse only in the Jewish-German dialect, whilst the use of pure German was almost regarded as reactionary. The tertatovun was substituted till Mendelssohn inaugurated a reform. The beginning of the 19th century brought the revival of the sermon. Its effect made itself felt all over Europe, and the old-fashioned dershēsh was gradually replaced by the modernized substitute. It has not died out entirely, and travelling and resident magidum are listened to by large congregations in E. and W. Europe.

Even the modern form of sermons has undergone some modification in the direction of curtailing the sermons. The rather ponderous lecture, with its three (or more) points, which was fashionable fifty years ago is now a thing of the past, and is generally replaced by an address about an hour's duration, lasting till Mendelssohn inaugurated a reform. The beginning of the 19th century brought the revival of the sermon. Its effect made itself felt all over Europe, and the old-fashioned dershēsh was gradually replaced by the modernized substitute. It has not died out entirely, and travelling and resident magidum are listened to by large congregations in E. and W. Europe.

The pulpit is designated in Arabic by the ethnico-religious word miḥna, literally ‘seat,’ or ‘throne,’ ecclesiastically the bishop’s throne, in Greek καθήμενον, whence the French chair. In early times the Arabic synonym magiṣs seems to have been occasionally employed in lieu of miḥna (Bukhārī, Soḥābī, Cairo, 1312, i. 107). Such a throne was introduced into the Prophet’s mosque at Medina before his death; it was of tamarisk wood, and

was mounted by two steps. The traditions concerning the occasion and purpose of its introduction are contradictory, but the name indicates that it was conscious imitation of what was seen in Abyssinian churches; according to a tradition, the Emperor Tewodros was said to have been so impressed that he ordered the Christian clergy to perform a similar rite. The purpose was to enable the congregation to see how he performed the ṣalāt ceremonies. Of these, however, the prostration could not be performed on the minbar, whence it was eventually used only for the sermon, which was probably delivered to him standing, though there is some doubt about the matter. In A.H. 50 the Umayyad Mu‘aṣṣiyah contemplated removing this pulpit to the mosque of his capital, Damascus, but was prevented (it is said) by an eclipse of the sun, which was supposed to mark divine disapproval of this scheme; Mu‘aṣṣiyah accordingly disavowed this project, and instead raised the height of the pulpit by six additional steps. The eclipse is apocryphal. Several of the later Umbayyads had the same idea, but they were all dissuaded (Tabari, Chronicle, Leyden, 1881, ii. 92). Peculiar sanctity naturally attached to this pulpit, which, since perjury by it was thought to bring terrible punishment, was understood; copies of sermons delivered from it were supposed to have lasted till 654, when the mosque was burned (Aun al-Ma‘bud, on the Sunan of Abū Dāwūd, Delhi, 1823, i. 421).

Pulpits were after a time erected in the mosques of the Christian churches or used by Muslim conquerors. Thus we hear of Mu‘aṣṣiyah, when governor of Syria, exhibiting the relics of the murdered Khalifah ‘Uthman on the minbar of the mosque in Damascus. The material is properly wood; hence the beam is often used as a synonym for minbar. In the mosques of the Abbasids it is richly ornamented; specimens of such manābir are to be found in the South Kensington Museum.

2. The preacher. —The orthodox law-books prescribe that the preacher shall be properly clothed, without specifying the mode; the Shi‘ite manual (A. Querry, Droit musulman, Paris, 1871-72, i. 86) ordains that he shall wear a turban and a striped Yemen cloak; the Umayyad Khalifah Wilāya ordered to be himself the preacher (Aghānī, vii. 141); but it is found times it would seem that the preacher wore a black gown (Ibn Abī Usābi‘ah, i. 274; A. von Kremer, Culturedges des Orients unter den Chalifen, Vienna, 1861, pp. 167-181); a description by Ibn Jubair (ed. M. J. de Goeje, London, 1897, pp. 222, 157) shows the preacher uncovered his head; the covering of the head was probably more usual, though the illustration cited by von Kremer (loc. cit.) perhaps refers to a special occasion. He should lean on a staff, bow, or sword, held in his left hand, ‘indicating that this religion is maintained by the use of weapons’ (Sherbini, Comm, on the Minbar, Cairo, 1308, i. 586), while his right hand rests on the pulpit-edge; and he should face the congregation, facing the minbar, not the right hand to the people (Sha‘ī‘ī). Umm, Cairo, 1321, i. 177). The sermon (khutbah) is of two parts, between which the preacher should sit down; if, however, bodily infirmity render it necessary, he may sit throughout. There are many authorities for the structure of the sermon (sha‘ī‘ī, i. 179; Jāḥiz, Bayyân, Cairo, 1282, i. 163; Ya‘qūbī, ed. M. T. Houtsma, Leyden, 1883, i. 98; Bukhārī, i. 108), but these are very clearly spurious; Jāḥiz produces others by early Khalifahs, and in the Nāṣir al-balāghah there are several supported by traditions delivered by the Khalifah ‘Alī. Outside the metropolis the preacher was the Khalifah’s representative; the historian Abūl-Ma‘āṣim (ed. T. W. Juby, Leyden, 1852, i. 81) reproduces a sermon of ‘Amr ibn al-‘Ās, governor of Egypt for the Khalifah ‘Umar, during which Khalifah continued to deliver it; ‘Abd al-Malik declared that his hair had been whitened by the fear of making a mistake in his Arabic when preaching (Fakhrī, ed. W. Ahlwardt, Gotha, 1860, p. 148). In ‘Abbāsid times it would seem that the duty began from an early period to be delegated; the preaching of the Khalifah Rā‘d in 324 A.H. is mentioned as exceptional (Miskawehi, ed. H. F. Amelroz, in the press, i. 394). As late as 987 A.H. the emperor Akbar tried to deliver a sermon at Fatehpur; but the experiment was a failure. An official called the khutbī was ordinarily appointed by the sovereign to discharge this function, and it was normally held that the sermon should be delivered at the minbar, or from the pulpit, that is, from the official mosque. Where (as was the case with Baghdad) the city was bisected by a river, it might count as two cities. In the Shi‘ite manual it is suggested that the mosques in which it is pronounced should be at a distance from each other of not less than three miles.

3. The sermon. —The occasions on which the law prescribes a sermon are before the mid-day prayer on Fridays, and after prayer on the feast-days, and in the services at times of eclipse and drought. Sermons are also delivered at weddings and on many public occasions. The language, according to the orthodox law-books, should be Arabic; the Zaidis, however, permit the use of Persian or any other language understood by the congregation (Muntazah al-Mukhtar, Cairo, 1287, i. 221), and some other authorities permit this, though use is rarely made of the leave on the prescribed occasions.

Orthodox jurists enumerate the elements of the sermon as: 1. the words, using the formula; 2. blessing on the Prophet; an adoration; a blessing on the Prophet; an adoration; a blessing on the believers; and a lesson from the Qur‘ān, not less than a complete verse. The fourth is devoted to the third and the fifth to the second. This list fails to include the function of the prayer, which is prescribed in the Zaidi law, the legitimate sovereign to be named or not according to the needs of the time. Although an innovation, the practice is so general throughout Islam that orthodox jurists advise its observation, for fear of giving offence (Alt al-A‘lāwi, Comm. on Sīdī Khābul, Cairo, 1307, i. 432); but it is not quite clear when it was introduced. Sha‘ī‘ī (c. 299 A.H.) disapproves of this practice and严禁 the prayer being addressed to an individual being made part of the khutbī (i. 190); yet by 324 the prayer for the sovereign had become so regular a part of the Friday sermon that the Khalifah, having undertaken to deliver it, required it to be delivered with greater attention (Yaqūt, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1913, ii. 349); and omission of it on the part of a preacher was at this time regarded as a sign of rebellion against the sovereign (Miskawehi, ed. F. S. Amelroz, in the press, i. 394). The practice was introduced by the Prophet’s cousin, Ibn ‘Abbas, when governor of Basrah (Ahmad Rāsan, Manaqīb Islam, Constantinople, 1326, ii. 457); the historian Ibn al-‘Āthir states that the first person for whom this prayer was offered in

1 The orator’s staff is an institution for earlier than Islam.

2 Presumably this privilege was suggested in Charlemagne’s Edict concerning the reading of Scripture (F. E. Brightman, Liturgies Eastern and Western, Oxford, 1896, Index).
Baghdad was the Buwaihid Sultan 'Abdu al-Daulah in 367 A.H.; his meaning probably is the first occasion than the Khilafah 'Abd al-Malik at many the ten 223. If the introduction of a prayer for the sovereignty was late, the practice of cursing public enemies from the pulpit was early; the second Khilafah is said to have so cursed a man who was guilty of what was thought an immoral practice (Mubāt, Cairo, 1324, xxiv. 20). In the first civil war 'Ali and Mu'awiyyah introduced imprecations on each other into their sermons. The cursing of 'Ali in the Friday discourse was continued till the end of the 9th century. A single event, which happened 'Umar II. put an end to it; as late as 321 A.H. there was a question of re-introducing the cursing of Mu'awiyyah (Miskawalī, i. 290).

On the question whether the audience should be greeted at the commencement of the discourse, as there is a difference of opinion between the schools.

The Prophet is said to have recommended brevity to preachers, and the discourses attributed to him are of 'ten words,' i.e., a few sentences. The early discourses delivered by Ja'far (ii. 25 ff.) are somewhat longer than the minimum permitted, but are still very short. Some of them are partly in rhymed prose, and this style at a later time became normal. The cultivation of the art of preaching may have been stimulated by the work of Ja'far († 255 A.H.), but the classical collection of sermons belongs to the 4th cent., and is the work of 'Abd al-Rahīm b. Muhammad, known as Ibn Nubātāh († 374). The best edition of these is that published at Beirut, 1311 A.H. They are throughout in rhymed prose, and occupy on the average five minutes in delivery. The subjects with which they deal are such as are natural in homilies; owing to the preacher's patrons being princes who fought against the Byzantines, many of them are exhortations to the sacred War. Probably from the time of their publication it became the practice of those official preachers who had no talent for their vocation to learn them by heart, and they are still largely used in the mosques of Egypt and perhaps elsewhere. In Turkey a collection by various authors is now ordinarily used for this purpose (Rashid Pasha, ii. 149; where one of these sermons is given in full), viz., the translation of a fascinating poet and sceptic Abū'l-'Alā al-Ma'arri composed several collections of homilies (see Centenario della nascita di M. Amari, Palermo, 1910, i. 230), but they had little popularity. The polygraph Shāmīn al-Rūmī (801) informs Yaqūt that his own collection of sermons had superseded those of Ibn Nubātāh in popular estimation (Dict. of Learned Men, v. 130), but this boast was not justified.

4. Unofficial preaching.—Besides the formality of the Friday service many persons felt a call to encourage their fellows to virtue and piety, to propagate the Islamic religion by exhortation, or to spread particular opinions. The name usually applied to discourses of this kind is majlis, 'sitting,' awāza majilīn 'awāza, 'he held assemblies for the purpose of preaching,' being the phrase employed to describe this form of activity. Ja'far (iii. 86) speaks of Thursday as a natural day for such assemblies. Ṭabarī (i. 507) gives a specimen of a sermon delivered in 65 A.H. by the mother of a boy killed in the infidelity of the Prophet's house; it is partly in rhymed prose, but the artifice is irregular and the language on the whole simple. Most of the famous Sufis were powerful preachers, and their effects on the audience varied greatly. The ceremonies in the meeting held by Mubātī († 245 A.H.) the company sat in silence after evening prayer until midnight; then some one propounded a question, whereon the preacher began to discourse, 'the audience listening in rapt attention, some weeping, some growing excited, some shaking their heads.' (Shafiyyah, Cairo, 1324, i. 39). The crowds which gathered to hear these orators roused the curiosity of Jews and Christians, some of whom were moved by the sermons to embrace Islam (Ayo'dr al-'Aynil, ed. V. A. Zilinskykov, Petrograd, 1899, i. 169). With the growing fashion of erecting religious buildings of various sorts which characterizes the 5th cent. of Islam the chronicles pay more attention to the presence of influential preachers. In 1802, the preaching of the male audience of the preacher Ardāshīr b. Mansūr, who came to Baghdad in 456 A.H., was 175 cubits by 120, and the female audience was yet larger (Ibn al-ʿĀthir, Chronicle, ad. ann.). The pulpit of the Nizamīyyah College in this city was occupied by famous preachers in this and the following century; the sermons of 'Abd al-Rahīm al-Qushārī († 524) delivered here led to riots between the Ashūrites, whose cause he supported, and the Ḥanbalites, in consequence of which the preacher was exiled to Nisābūr (Ibn Khallikān, tr. de Slane, Paris, 1842-71, ii. 154). The arrival in Baghdad of powerful preachers belonging to these respective sects is recorded by Ibn al-ʿĀthir for the year 518; the sermon delivered by the preacher Sulṭān al-Nāhibī himself, who presented him with the head-dress of one of the royal monasteries. For the middle of the 6th cent. we possess a volume of sermons by the famous Sīfī, 'Abd al-Qadr al-Jilānī († 561), called al-Fatḥ al-Iṣbābī (Cairo, 1320), some of whose discourses are also incorporated in the biography of him called Bahjat al-Asrār (Cairo, 1304); they were delivered on various days of the week, chiefly Sundays, Tuesdays, and Fridays (before the mid-day service) in different buildings of Baghdad, and generally occupy about five minutes. They are in ordinary prose, but undoubtedly eloquent and spiritual; he claimed to have made 500 converts to Islam, and to have reformed more than 100,000 criminals (D. S. Margoliouth, Contributions to the Biography of 'Abd al-Qadir,' JIAS, 1907, p. 304). His personal character appears, however, to have left something to be desired; and it is to be observed that the authors of the Ṭawāṣkās (a work which is not quoted here) place affecting homilies in the mouths of notorious evil-livers; and the success of the historical preachers at times led to their amassing great fortunes and maintaining harams of a colossal size. The traveller Ibn Jambur, who visited Baghdad in 580 A.H., notices the preaching of Baghdad as its one favourable characteristic:

'Scarcely a Friday passes without a discourse by a preacher, and those among the inhabitants who are specially favoured pass their whole time in meetings where such are delivered' (ed. de Goeje, p. 219). He describes a Friday service at the Nizamīyyah College, where after the mid-day prayer he could see the Qawwāl ascended the pulpit; chairs were placed in front of him for the Qurʾān-readers, who chanted elaborately, after which the sha'īkh ascended the pulpit, and the faithful discourse was addressed him on strips of paper and he replied forthwith to every one. The historian Ṣalāḥ ad-dīn Ibn al-Jazāʾi held services at this time in a public garden a little outside the city; he dressed elaborately, and impressed the traveller. The results were similar to the phenomena at times seen at revivalist meetings; many in the congregation sobbed and fainted, and crowds of penitents thronged to touch the preacher. 'It would have been worth the while to learn Arabic to hear one of these discourses.' On Thursdays this preacher's gatherings were held in a private court of the palace, from which the khālid—a court official—could see the process. Once a March of the Qurʾān which ended in night, and the preacher maintained this rhyme throughout his discourse. He sat with the sermon by the khālid to the Khalif and his mother and prayers for them; he further recited many verses, some encomium on the sovereign, others of the Sīfī, a mystic style, which affected him powerfully.

This anecdote is of interest as indicating that the difficult artifice which characterized the
sermon was at the time unusual; we find it practised in a volume of sermons by a preacher of the 8th cent., Shu'ab al-Hafirah (†801; At-Bund al-falāq, Cairo, 1280), which closely resembles the style which affected Ibn Jibārī so vehemently. These classes were based on the Sikkhā-pāda, which appear to be the preacher's own compositions, and are much more lengthy than the sermons of 'Abd al-Qādir; the time which their delivery would occupy is probably from twenty minutes to half an hour. They are very carefully arranged. They are clearly intended to work on the feelings of the audience, and to produce something resembling ecstasy. The narratives introduced are highly imaginative, though they are often attached to historical names.

The style which has prevailed since seems to resemble that of Ibn Nubāṭah more nearly, when his discourses are not actually reproduced. A collection published in 1609 by Muḥammad al-Qāsimi contains sermons extracted from volumes of 1653, 1772, 873, and 1079 A.H., intended to be delivered at the Friday service and on the feast-days; the time which they occupy rarely exceeds five minutes; the continuous rhyme is carried on through the opening sentences, but does not extend to the repetition of the entire sermon. The Majlis of the official preacher, of Baghhdād, Alūsī-Zādah (Gāhlīyat al-Mawzū', Cairo, 1111), resembles in length and to some extent in artifice those of Ūraifith; the verses introduced are not, it would seem, original. It is said that the Islamic preachers have in places where there are Christian missions modified their theory of the sermon in order to provide something as attractive as the Christian discourses; the reproductions of Ibn Nubāṭah has led to give way to a style more closely related to the spiritual needs of the time.

Literature.—This has been cited throughout the article. D. S. Margoliouth.

PRECEPTS (Buddhist) — PRECIOUS STONES. — The early Buddhists had very naturally quite a number of injunctions, precepts, short sentences on ethics or conduct, popular texts, or short verses current in the community. European writers call these 'precepts.' The Pāli term is Vinaya-pāda, Sikkhā is 'training,' pāda is ambiguous, meaning either 'foot-step' or 'quarter verse,' and both meanings were called up by the word. Hence sikkhā-pāda is either 'first steps in self-training' or 'text of training.' The basic idea is an influence from Mahābhūta, not an injunction or command from without.

An anecdote will show how such rules were looked upon by the new community. There came to the Buddha a bhikkhu of the sons of the Vijayas, and he said: 'Lord, it is more than a hundred and fifty precepts that are intoned to us every fortnight. I cannot, Lord, train myself in all these!' 'Could you train yourself, brother, in three—the higher morality, the higher intelligence, the higher wisdom?' was the reply. He said that he could. And the Doctor replied, 'By that day you will be very lazy, ill-will, and stupidity (i.e. reached nīcchā), and all the lesser matters were gained at once. So also it is related of the Buddha that after making the order that they could revoke, if they chose to do so, all the minor and subsidiary precepts.

In both of these cases the 'precepts' are for full members of the order. Another group consists of ten precepts for novices. It is often referred to in European books, but is found as a group only in the latest portions of the Sikhyas and in the Vinaya-pāda of the Pali Group. The Buddha imposed upon himself in succession ten precepts. These are: (1) not to destroy any living thing, (2) not to steal, (3) to be celibate, (4) not to lie, (5) to abstain from strong drink, (6) not to eat save at the right time, (7) not to frequent various places with dances, songs, and music, (8) not to wear garlands or to use perfumes, (9) not to use luxurious beds, (10) not to receive gold or silver. Each of the ten occurs in different groups and in different order in earlier parts of the Canon—eight of them, e.g., in a different order in the Sutta-nikāya. What is in the Buddhist is the selecting—the omission, e.g., of any precept as to obedience, or as to belief in any particular doctrine. But we need not here make any comparison between this list of 'first steps for the Buddhist novice' and similar lists for the novice in European or non-Buddhist Indian orders. Of the many moral precepts for the use of ordinary Buddhists, not members of the order, it will be sufficient to refer to the well-known Dhamma-pāda, an anthology of such precepts in verse gathered from the extant early books and other sources now lost. They are there arranged in groups of about twenty verses each on 26 selected subjects. Where the verses deal with ideas that are common ground to ethical teaching in Europe and India, often in a strongly intelligible form, they may, therefore, appeal strongly to the Western sense of religious beauty. Where any verse is based on the technical terms of the Buddhist system of self-culture and self-control, none of the numerous translations is able to convey the real sense of the Pāli. The best translation is by Silāchāra.

There is a pretty custom that was current from very early times among the Buddhists in India, and is still current in Ceylon, Burma, and Siam. A layman (or novice) may, on some occasion, in order to influence or emotion, will formally 'take upon himself,' for some definite period, the observance of the first five of the above ten precepts for novices. This is done by kneeling with clasped hands before a member of the order, and solemnly repeating after him, usually in Pāli, the words of each of the five precepts. This is called in Ceylon 'taking pan-sa,' i.e. taking the five moral precepts. It is not known when or where the custom originated.

PRECEPTS (Christian) — See COUNSELS AND PRECEPTS.

PRECIOUS STONES. — The first difficulty in considering the opinions of earlier times regarding gems is that of realizing the standpoint before modern chemistry had revealed the nature of matter. Only 140 years ago the editor of Theophrastus, Sir John Hill, was publishing entirely futile classifications, lumping together as varieties of sapphire such different materials as ruby, topaz, emerald, hyacinth, garnet, carnelian, amethyst, chrysolite, and prase, and assigning the mixture which caused the colours of each, because 'we know the ingredients which give their colour by experiments in colouring glass' (Theophrastus's History of Stones, London, 1772, p. 283). Long classifying in a random and confused way, they had no more reality than the epicycles of planets. All this was an advance on Pliny and earlier observers, yet it has been extinguished by modern chemistry.

1 This is sometimes rendered 'concerts or plays' — wrongly, for at that time in India they did not exist. See Rhys Davids, Dialogues of the Buddha, I, note 4.

so that we can hardly realize the ancient confusion of thought. To understand the ancient usages we must set aside all chemical ideas, and regard stones only in their colour and hardness. Such a position must confound together materials entirely different, and divide identical substances which differ in colour. Thus haematite (a), iron oxide; limonite (b), an oxide of iron; turquoise and malachite, a phosphate of alumina and carbonate of copper.

The questions about the ancient names and their modern equivalents are difficult to settle owing to the gradual change which has taken place. It may be that the actual ancient usage of materials must be the guide, as it is impossible to connect with ancient names any gems that were then unknown. For the equivalents of the Biblical names see art. "Stones, Precious," in IDB.

1. Egypt.—In Egypt several stones are named anciently with species, and some others are named as the material for amulets which are regularly of one material. Thus we can be certain of sef, white quartz; sef taken, amethyst; bhenem, red felspar; dhr, carnelian; dhka, lapis lazuli; gesonkh, a variety of lapis lazuli; nechenhem, jade; qo or guda, hematite; neshen or nefset neshef, green felspar and beryl; nefset of Syria, malachite; nefset of Amen, turquoise; the last two names are derived from the god Amen. An armour of some stones was almost constant for certain amulets—carnelian or sard for the leg, hand, name-badge, and serpent-head; jasper, or imitation in red glass, for the girdle of Isis and the sacrificial cow; diorite for clothing; green felspar or beryl for the papyrus sceptre and the writing tablet; lapis lazuli for figures of goddesses and the cartouche; hematite for the head-rest, square and level; obsidian for the double feather and sna sign of union. The reason for such usage can be guessed in some cases: the green stones symbolized verdure and growth; the red jasper is called 'the blood of carnelian'; the white hematite is for the repose of sleep or of levelled building; the flax-coloured ceremonies for the hand and leg. Some of these amulets are of course to be made of other materials in the directions in the Book of the Dead.

2. Italy.—Italy is the land of which we know most about amulets, anciently from Pliny, recently from Bellocchi. The ancient ideas attaching to stones are found for purple, amethyst, hematite for success in petitions or to reveal treachery; siderites (black hematite or meteorite) to caese discord in lawsuits; brown hydrous oxide of iron (limonite) for pregnancy; quartz crystal for purgation; amethyst and emerald for intoxication, against spells, hail, and locusts, and for access to kings; agate against scorpions; jasper for public speaking; blood jasper for invisibility; black jasper for taking cities and fleets; yellow quartz against jaundice; amianthus against spells, serpentine against headache and serpent-bites; white steatite for increase of milk; malachite for preserving infants; amber for throat affections, and against fevers; amonite for prophetic dreams.

In modern Italy pyrites is used to preserve the eyes; red hematite stops bleeding; black hemattite is for the evil eye; limonite for pregnancy; sapphire is for headache, and promotes contentment; quartz crystal for evil eye; white chalcedony or agate for decency for bleeding; agate eyestone for evil eye; blood jasper to stop bleeding; black jasper against lightning; starellite against witchery; nephrite for kidney disease; garnet for widows, and comfort in misfortune; serpentine for strength; malachite for the evil eye; dendrite against venom; selenite for increase of milk; amber against witchery; white coral for increase of milk; red coral for menstruation and

evil eye; madrepore against witchery and worms. Obviously the use of a large part of these is due to 'sympathetic magic,' or, as it may better be called, 'the doctrine of similars.' A considerable revival of fancy beliefs about gems has occurred in recent times among the ignorant and superstitious of wealthy classes in Europe and America. There is little or nothing collected as to traditional beliefs about stones in other lands outside of Italy.

3. Motives for use of gems.—An examination of subjects engraved upon gems throws some light on the motive in the use of the gem in ancient times. In this inquiry the number of occurrences of a subject in Purivânger's great catalogue may be taken, supplemented by a few published in Petrie's Amulets.

Strength and love seem to have been the great motives, Herakles and Eros each occurring 173 times. Far below these come wisdom, with 75 of Athenis and Minerva; Selene (60) for good living; Hermes and Mercury (60) for trade; Apollo (60) for music; and Daunus (55) for propitiation of evil; Dionysos (52) for mysteries; Nike and Victory (53) come next; and, strangely, Aphrodite comes as low as 52. Of the lesser classes are Gorgonesia and Medusa (45), Psyche (31), Artemis (29), Menad (20), Philomelos (20), Eros (19), Echo (18), Pluto (18), and the Dioscuri (15), Isis (14), Nereid (14), Ares and Mars (13), Bonus Eventus (11), Berenice (11), Pan (10), Nemesis (9), Cerberus (9), Eros (8), Hermes (7), Dionysos (7), Hecate (7), Leto (7), Malachites (6), Bacchantes (5), Ino (5), Asklepios (4), Dioscuri (4), Triton (4), Ganymede (4), Hephaistos (4), and Artemis (4). Carved in imitation of a serpentine head serpent (2), Ceres (2), Amphitrite (2), Europa (2), Thetans (2), and one each Adonis, Orpheus, Osiris, Anubis, and Set.

It is surprising how popular some deities were, nine surpassing Aphrodite; while Zeus, Asklepios, Fortuna, and Ceres were strangely neglected.

PREDESTINATION.—I. IDEA AND PARTS.

1. Idea.—The idea of predestination bulked largely in the history of religions thought. Recently it has grown in interest. It has come down to us in two connotations, the one more strictly theological, the other more purely philosophical, and these frequently demonstrate the reasonableness of its essential truth.

(a) As a technical term in theology the word stands for that voluntary act of the divine will whereby God predetermines the future events that are to occur in particular the destinies of the good and evil. The inclusion of the reprobation of the wicked has lent the term an ill savour. Shorn of this part, the dogma remains, the divergences of the schools in other points appearing less firm under the pressing practical and social needs of the modern Church. The predominant tendency is to identify this, the redemptive, aspect of predestination with election (q.v.), and to use the three terms—"predestination," "election," and "freedom"—as synonymous.

(b) In its philosophical character the word stands for a conception much more comprehensive and profound, viz. that original all-inclusive definite purpose of God and of Act of His all-holy will to manifest His glory in self-revelation, which self-revelation takes effect by stages in time, appearing not only in redemption, but in creation and providence as well. Here the idea is not given immediately in experience, but emerges in reflection upon it and thereby becomes the occasion of it and the antecedent of it. It has won favour under the ægis of the modern discipline of the philosophy of religion, its subject-matter furnishing one of the indispensable problems of that important science, where the conclusions are strengthened by several currents of the deeper thought of the age.

W. M. F. PETRIE.
the philosophy of nature and of history, comparative
religion, the higher mysticism, man's tragic
experience of life. The history of theology, moreover,
overthrows the antithesis between the invariable
concomitant of that form of religious thought, and to
be as fundamental to theism as its other
features. As theistic reconstruction proceeds, the
idea of predestination correspondingly gains.

2. Predestination. The term long
been in disuse, and for three reasons: etymologically it is
unsatisfactory, theologically it is deplored, and
philosophically it is difficult to reconcile with the word
not in the Bible. The verb and noun come from the Patriotic
period (Acts viii. 23) and are a number of words which
conveys some special sense of the general idea, for that is
how the religious consciousness works. The philosophical con-
solementation of 'predestination' has a number of terms in its
largest breadth; that is its nature. In Hebrew probably
the nearest equivalent is 527. In Greek in the NT there
is no synonym. Only a few of the so-called coiners of the idea,
as in the case of another doctrine, that of the Person of Christ,
is coined απροηγούμενος.

If 'foreordination' be interpreted in a purely religious
sense as the equivalent of election, referring to man's salvation from,
it is to be rejected as not at all the idea intended in 'predestination.' God gathered His own in His
electing will; but He has other activities in creation and prow
have a religious sense, and they also have independent relations to God and each other, and,
as such, have their ground in the divine will—a fact unrecognized in
'selected.' Nor is it even, if it is not, more than 
'predestination,' embracing the reference of the divine pretermina-
tion of the works of creation and providence to that of redemp-
tion as its preparatory stage, is still inadequate to the whole
idea of 'predestination.'

3. The philosophical demand for stricter definition is not
due simply to prejudice; there is a real need in the interests of
truth to separate clearly the facts of religious experience from
inferences deducible from them. The speculative impulse and
the religious instinct move in different spheres and speak best
each in its own tongue. The former contention is corroborated by the
history of predestinationists. The most famous and most popular
proponents are St. Augustine, Calvin, and Jonathan Edwards
(1703). All three of these theologians have, in an unusual degree the religious and intellectual powers;
they all feel the need of this term 'preordination.' It is note-
worthy that they do not use 'foreordination,' that, in those
forms of thought in which the spiritual aspect of existence has justice to
it, the word 'predestination' does not occur, e.g., in the German
succession from Kant, through Schelling, Less, Krause, to
Lotze; and that those forms of theology in which philosophy
finds a constituent place exhibit the same tendency—as, e.g.,
in the theosophy of F. X. von Baader or the ethics of R. Rothe. 2

2 Parts.—The predestination idea comprises two
parts: (a) prescience, and (b) prevenient.

(a) Prescience.—Foreknowledge (pνευμωνία) is
a part of God's omniscience. It is involved in
His knowledge of Himself and of His own will,
and the immutability of His knowledge; for He
sees all things forever in the mirror of His will,
and has never at any time been ignorant of what
He has to do. This is the consequence.

Foreknowledge of the actions of others, which
is sometimes been excluded from the idea of God's
omniscience on the ground of its alleged
inconsistency with human freedom, and
indeed the idea of explaining how actions are free yet
predetermined has been so hateful, that
has perfect foreknowledge of all events and that
man has free agency, implied in moral responsi-

bility, are truths supported by sufficient and
appropriate evidence, although we may not be
able to overcome their hard naturalism. The
word 'predestination' as such is as God has. His foresight need not
lessen man's freedom, if freedom be understood
not as simple self-will, but as the growing faculty of
co-operating with the divine purpose. That
pose is always a higher thing than can be
wrought between precise forecast and exact
fulfilment; it is rather the evolution of men's free
intellectual and emotional life, adapting them to
their environment and improving their conditions.

Accordingly, the divine influence of God embracing
His whole world, influencing its processes,
keeping living things to assimilate more and more of His
life-force, and go forward in the full tide of
progress, while they are still free to close their
poles, so to say, to His wisdom and life that
enrich them as an atmosphere.

Such a purpose etches itself out against a back-
ground of much that seems purposeless, where
much happens that is not His will but the will of an
autonomous creature not yet won by His per-
anative effort. As to this there are two opposing
tendencies, intuitive, not inferential, free, not necessitated,
we are bound to assign to it the prescence of
tables and all relations of things, of all actions
and all conditions of actions.

(b) Prevenient Grace. Again, the promotion 2 of God
is a necessity of His omnipotence. Predestination
is no mere idea in God—not simply His desire to
enter on modes of self-revealing activity; it is
also activity creative of creativity destined and
productive of His eternal purpose; it is the actual
activation upon His resolve, action whereby He is the
immanent spirit in all nature, history, life. We
note, further, that God's prescience and prevenient
exclude the delusional and naturalistic formula-
tions of His relation to the world, since both deny
His active presence in it, as certainly as they
exclude the pantheistic formulation which regards
the world as illusion, emanation, or self-evolution of
God. Thus it will be seen that in the predestina-
tion idea lies the thought that all the works of
God form one whole and move to one goal, that all
find their ground in His attributes, their cause in
His will, that all are the issue of one presupposi-
tion in the divine nature. How do we affirm this?
Religious experience postulates it as the basis of
this certain idea of the divine nature. In final
philosophical reflexion postulates it as the integral
ground of its view of the world and man's history
(predestination in creation and providence).
The word 'predestination' sums up both postulates
and witnesses to secret affinities between the
natural and revealed wills of God, wherein the
realities both of reason and of faith find their
ultimate reconciliation.

II. SOURCE AND ISSUES.—I. Source.—Here
two points require to be noted. Predestination has its
origin in the divine nature alone, and there
alone in the divine attributes. God's act
of resolving to enter upon the various modes of His
self-revealing activity is a free yet responsible act.

This excludes the celebrated distinction of scientia media,
the proper discussion of which falls in connexion with the
divine omniscience. It was invented by the Jesuits,
defended by God propagated by the Molinists, assailed by the Spanish
Dominicans, and at a conference in Rome convened by Pope
Clement viii., was condemned. The agitation continued.
The theologians of the next generation spread the idea through
Europe. In England it spread widely in the 16th century (see J. Strang,
Voluntarism, 1577; and John Selden, Natural and Divine Law, 1601; and
1657). The hypothesis of scientia media is untenable. There
can be no such intermediate knowledge, all knowledge being
other necessary or contingent knowledge. Again, any such potential knowledge
is not worthy to be ascribed to God, whose knowledge is intu-
itive. He knows, not things in the abstract, but things, but does not resolve
out those relations in the act of knowledge.

2 The favourite term in Scholasticism for 'prevenience.' St.
Thomas Aquinas discusses it with fulness. Cf. also the con-
troversy of Malebranche with Boursier.
PREDESTINATION

to which He is determined by nothing outside of Himself, or alien to His nature, and by nothing in the way of an internal necessity of His being, or of any defect in His being, except the insistence of His own gracious character and good pleasure.

There is no life outside the divine life. The life of God is a life where God is in the midst of Himself alone and within Himself alone. In the vastest area of being there are no reaches beyond His boundless being or beyond the causation and control of His will. The whole actual and possible universe is but a last and most microscopic expression in a single truth to which everything in it may be referred.

That truth is the one and absolute Being, who comprehends all being, the substance of all existence, God. God thus is not one side by side with others, whether like Him or unlike, co-equal or prepotent, relationship with whom He is bound to recognize and consider in His own action. He is God; and 'beside Him there is none other.' To be Himself is the sublimest glory conceivable.

To go further, His self-manifestation is His constant good pleasure or will. Such a Being, overflowing with the sense of His beauty and infinite blessedness, must communicate Himself in love in every form and degree possible through which the features of His life are represented. His self-exhibition and self-communication are the only and original necessities of His action, and these reside in His own nature.

From that fact it follows that those original necessities operate in accord with the divine attributes and with nothing else—power, justice, wisdom, holiness, love. God is not all-powerful in the sense that He can do anything. He does what He likes, but He likes only what is according to His character, that which is true, just, holy. There can be no caprice in His action, for His will learns from His wisdom and works out what is just. His power is at the service of an idea which gives to His endeavour stability and worth. There can be no question here of His predetermining any thing or person to what is contrary to His character. The attributes of God, since they alone regulate His action, are the basal principles of existence and the supreme categories of thought, which takes origin in their exercise. All finite existences—complete with His character and to bestowed His life, founded in the qualities of His nature, find their real principles, their ratio essendi, there, and represent each one or more of those divine qualities. All life is rooted in the divine Being, is in Him an organic whole, and includes the life of nature, of history, of humanity, in which He displays His power, wisdom, righteousness, truth, goodness, and love, and no attributes opposed to these. All these lives are independent unities within their own spheres, yet related to one another in the all-embracing whole, which is neither identical with God nor separate from Him, but in which He is so present (and it in Him) that He is not merely the cause of it and all its parts, but is its and its immanent and active ground.

The modern spirit has made many opposing views and seemingly makes this finer expression and image through a series of ascending stages in an organic process which tends to His honour and glory.

2. Issues.—Such is the divine design. The nature and quality of it must be accepted as a revelation. To their investigation nature, history, and man are all separate if related economies, susceptible of distinctive analysis—a task to which the modern spirit has addressed itself with eagerness. History—in its actual and traditional aspects—is the inclusive generalization of broad results. These would appear to be three: (1) God works towards an end through means; (2) He employs means in a graded succession in time; (3) the character of the end displays the principle of the whole and motives the effort of progress towards it. If these results be kept in view, we shall be led in the path of a true theism and a right predestination. The universal dualism deeply seated in the entire constitution of things cannot be denied; it raises the question of the process by which it is to be set aside, and which is most naturally done, not by direct methods of action, but by methods of thought. The method of action is not to be tried, but the method of thought. We overcame in the way of historical fact and moral process, such that God is seen to be all in all, realizing Himself in His attributes in finite forms through the free play and independent life of their internal forces. The steps of the proof are clear. The physical creation, operating freely within limits imposed only by its own material, is an orderly system working out its special end in man. Man is the living synthesis of nature, which in all its parts participates and is governed by what is only satisfied in Him. History is characterized by the same independent interplay of all her forces and moves on under laws which reduce the acts of the countless conscious subjects who make their way in History to the progress of which is the evolution of the spirit within each man.

He, for himself, granted that he is by nature a divided and complex being, is nevertheless in the healthy personality one. Aim, will, resolve, make Him a complete unit; as mind or will he is a whole; and the more he advances in intelligence and ethical power, the better he is fulfilling the ideal of his own life, and responding to the preparatory movements beneath the human sphere which have gradually disclosed it. Humanity is thus the final cause of the world, which, as it belongs to the nature of God to actualize Himself in humanity, the human spirit, as it descends into the depths of its own being, recognizes itself to be divine in principle. The perfect consciousness of this we see in Christ, and owe to Him. He made known to man his inborn divinity. His incarnation exhibits the unity of the divine and human. That consciousness comes first in a single individual, in isolated form, a present divine fact, preserving to man the human spirit to new life. The last consideration is of the church. It contradicts all ideas which resolve the revelation of God in Christ into a general fact belonging to the phenomenon of spirit, and implies the personal God communicating Himself in dynamic force in an organic historical form. Man has not grown into the consciousness of his own divinity; it has been revealed to him. Revelation is not simply an extension of the knowledge of God; it brings in an actual economy of grace as actively employed in the redeeming of men. Only by a sum of saving acts, unfolding His mind and will, can the living God become fully unveiled. In this sense Christianity alone is the revelation of God's redemptive love, since the whole person of Christ—His identity, His mission, His communication to the world through the church—serves to bring into actual view the will of God as concerned in the salvation of men. Not through Christ merely, but in Him, in the subdivided whole of His personality and history, as 'head over all things in the church,' God was reconciling the world to Himself. The Christian ethics that leads us to regard the will of God for our salvation not as abstract, but as personal and positive in His Son. That, however, could not have happened haphazard in the divine mind; it was essential.

1 The first thinker clearly to expound this position was the Italian G. B. Vico; cf. his "La scienza nuova," in Opera, ed. G. Ferrari, 2 vols., 1835-37; R. Flint, Vico, in Blackwood's "Philosophical Classics," Edinburgh, 1884.
to the setting forth of His glory, it was 'before the foundation of the world,' by His determinate counsel; and it determined the foundation of the way, and the bottom of it. There are, therefore, Predestination is by the will of God, in an organic process, in Christ who is its prismatic and final principle.

III. SIGNIFICANCE—1. For the idea of God.—The predestination idea safeguards three factors in the relation of God to the world: (a) His free agency and responsibility in His activities, (b) His co-operation with His creatures in their true life, and (c) His efficiency in the fulfillment of His purpose. (a) Arbitrariness has been associated with God's predestination. Yet predestination forbids arbitrary caprice on His part. The great advocates of its truth know nothing of arbitrary acts of God. The acts of God, they argue, are consistent with the character of God; the nature of God is prior to His laws, and His nature and character are of the absolute and perfect good. Insolvability has been associated with predestination, as a cover for any act of God, whatever it emerge in its issues. Now, while on any theory of freedom and necessary acts of the constitution and course of things must always be sought for in the council of an eternal wisdom which it is beyond our capacity to fathom, and therefore inscrutable, in the inscrutability there can be no injustices or partiality; for those reasons are the outcome of an eternal wisdom, righteousness, love. God's action here can never be that of a selfish man. He acts according to His glory, which cannot be dissociated from His nature as absolute good. In that character His moral perfection implies an absence of arbitrary or unjust act. Indeterminism has been associated with predestination. But God cannot act as an indeterminate power. He is intrinsically and necessarily good—not by necessity, but freely, because He wills the freedom which lends His action its ethical character. The necessity which keeps Him from evil is moral—conformity to love, goodness, holiness. In contradistinction from these, the divine predestination is an act of sovereignty, in the exercise of which God shows only mercy and goodness. Sovereignty is not simple supremacy; it is the sphere of divine freedom whence issues only blessing; for there divine procedure is not limited by conditionals, but is necessarily good. (b) God's blessing us is His co-operation with us to cultivate in us His life. As in Him, so in man, true life is attained by a combination of necessity and freedom. Man everywhere, as he ascends in intelligence, is inwardly conscious that He is able to do right. He is also convinced that God is on the side of the right. The tendency to excellency of life indicates God's will. It grows in man by his response which he makes in his freedom as he directs himself more perfectly towards God. Yet it is not simply by his desire and aspiration and the efforts born of these that he ascends, but also by their satisfaction in the answering care and recreative energy of creative love. These experiences point to the transcendent truth that creation was with God from all time, came from God, is in part turning of its own will towards God, is in part ever turning more and more consciously towards Him, and becomes at last completely, self-consciously, at one with God in will—the doctrine of the Lordship, the hope of the eschatologist, the dream of the mystic.

(c) Is it but a hope and a dream? Can God's

1 The first philosopher clearly to recognize the organic process of the divine purpose was St. Augustine.
2 Calvin terms the opposed doctrine 'frigid and jejunus' (Inst. I. 3. 11.)

purpos fail? Our conception of omnipotence must be modelled on what we know of finite power, though not limited by it. In our experience the secret of the divine power lies in the idea of the end in view and to regulate action towards that end. Those are not absent from God. For the creation of the finite He is responsible. He has chosen to create it not a passive thing, but a life with a will and power. Why should we believe that it is only the possibility, not the actuality, of evil that is necessary? If the end which God has in view is a form of life produced by the ability to co-operate with or to resist Him, it must be part of His omnipotence to be able to give the ability to resist Him. The resistance would be evil. In so far the Creator is responsible for the possibility of evil and its attendant risks. On the other hand, the divine prescience cannot be conceived as dim or vague, or the divine blessedness as uncertainly fluctuating with the uncertainties of men's choices, as Calvin asks, 'How can the contingent affect the First Cause on which it entirely depends?' The possibility of future failure on His part must, therefore, be limited. God must be credited with provisions and restrictions. The result of this is that God's predestination is to a certain extent limited. Is not fatherhood the best symbol of omnipotence? His creation must not finish in itself, but must go on to recreation—a consummation visible in Christ and Christian humanity, in whom 'the whole world is reconciled to God.'

God, then, has willed all men to be saved. He has predestined all men to be saved and things in His Son. Creation is prelude to incarnation, and was never designed to furnish occasion for irreformable sinners. In the foreordination as in the judgment God might say, 'I never knew you sinners.' He has contemplated all in Christ: He has foreknown all in Christ; He has loved all in Christ; He has elected all in Christ; and by the same act. He has taken every possible means to fulfill that act with success. Through creation, history, redemption, He has gradually exhibited and communicated His life to men, to raise men to its likeness step by step. Respecting His liberty God forces no man, yet presciently and prevailingly seeks to persuade men. He reserves to the right to intervene by His omniscience and omnipotence in order to avert thoroughgoing disaster. Both courses He takes in the exercise of His sovereignty, which is the field of His freedom. That 'preferential action of God掼than makes the resourcefulness of His nature fails—a result inconceivable.

2. For the idea of man.—The predestination idea yields two precious assurances for man's conviction along with a grave warning: (a) the certainty of his practical freedom of will, (b) the ability to attain his destiny, (c) the fact of failure as both possible and permissible. (a) Necessity has been associated with predestination. The problem that raises is perennial. His reprobate system can roll away from itself. As the divine Being is a harmony of necessity and freedom, so they run through all His handwork inclusive of man's life. In themselves they are not antitheses, and they are but rudely conceived when opposed. A theistic predestination excludes their opposition and leaves the vindication of necessitarianism to the wisdom of this world as in materialism and idealism—in men of science like Huxley, Spencer, etc., in men of speculative idealism such as Schelling and others—more properly pantheist, who assert that they see in all things the working out of an eternal necessity. Philo-

1 Martineau's phrase.
2 The foregoing includes three positions: (a) the notion that God predestinates fixed numbers, (b) the notion that God predestinates to evil, and (c) the notion that God predestinates, "by permission," eternal consequences of evil.
sophers of the type of Schelling, Lotze, and others are truer guides. History, they argue, is characterized by a union of freedom and necessity, that is, by a sum of forces. Rationally necessary, composed of the acts of countless conscious subjects which yet form a world of order. How can this be?, they ask. Only through the operation of a principle superior to both in which they are subsumed. As a matter of fact, only one principle is capable of explaining necessity, the divine. It reveals itself through the free play of individual wills, and could not be those wills not free so that they are fellow-workers with it. Free will is incapable of rigid objective power. History is rationally expedient, a process exhibited by a process corresponding to the development of freedom itself. What is freedom? It is only in terms of experience that it can have any meaning at all. So with necessity. They are two constantly alternating poles of our experience. The only solution is a repeated appeal to the subject. The freedom which we at once oppose to and collate with necessity is subordinate to the higher freedom of consciousness on which the distinction rests. Thus the metaphysical reference the difficulties arising from finite freedom may be met by the contention that, while the total possibilities, however far back we go, are fixed, yet within these, however far forward we go, freedom is such and the rest is reached only by living through the less good.

(b) Fatalism has been associated with predetermination. Calvinism is alleged to be specially chargeable with the error in Christian times. Unquestionably paganism furnishes abundant traces. There is in the historic founding of our conceptions of fate. Predetermination, however, is not fate. Fate is a conception for which there is no foothold in the Christian system. Belief in one’s fate or star or fortune is apt to characterize both great men and small, and to prompt both to trust in their strongest qualities, which may not be their best. In so far as a man is possessed by a blind feeling of being an instrument of destiny used by an irresistible force he knows not to what end, his belief is a weakness. It bears no likeness to the Christian idea, which has two features: it makes a man rationally conscious that he has a mission to accomplish, and it impels him when he learns the divine will to be humbly submissive to its dictates. "I am the servant of the house of my lord," and "my General Gordon. The Calvinistic ‘fate’ is incentive to heroic effort, a challenge to play the man. God’s predeterminations are moral inspirations. What God ordains man realizes. Yet withal there is more. Calvinism in its severer aspect embodies something additional. It is often neglected in Christian thought; it was seldom absent from the

2 This is Martinist’s solution, accepting it from Dugald Stewart; cf. A Study of Religion, bk. ili., ‘Determinism and Freewill.’ It is the position gradually but cogently won throughout the Critique of Pure Reason. Kant’s and Lotze’s are diametrically opposed to the one order, that is, of order from metaphysics, has also in recent years begun to vindicate ‘freedom’ as rational; with the activistic and vitalistic philosophies of Eucken and Bergson it has entered the Christian era.

In a recently published letter of more than ordinary interest Bergson comments on all this ‘the conditions of his theory. Essay on the Immediate Facts of Consciousness, Matter and Memory, and Creative Evolution’ there clearly emerges the idea of God as Creator and Redeemer. The world and the material in which it seeks to be expressed. That material may never move against Him in the mass, but it may in the individual; for the individual is not wholly moved by the mass and may use that freedom which is the outcome of his own operation of the force of the whole. When this is so, what then? Are there refuges, reservoirs of latent self, for the rebels? The energy of life-force which they misuse, is it transformable? Perhaps; by leaping into the fire of the sun, there is escape. At any rate, it may utterly fail in its present form.

1 Cf. the Biblical figure of God as the ‘potter.’
PREDESTINATION

Individual tragedy is too frequent here to render it improbable or impossible hereafter, 1 unless, within the reaches of the divine resourcefulness and the possibilities of the organic life of the race, there be means of conversion and renewal at which we, ceasing our work in the great world, may not so diligently as to make their calling and election sure.

IV. HISTORY.—1. Ethnic.—Predestinarian conceptions arise at a certain stage of religious reflexion of necessity; and kindred conceptions are to be found in all religions which have been influenced in their development by speculative thought. Even polytheism adumbrates them in divine personifications of Destiny.

(a) Greek.—The best instance of this we find in the Greek poets and tragedians, with whom the belief passed through a variety of forms: ὕθεσις, ἱστομένη, νέος ἔργος, Erotes. These are less intellectual solutions of the problem than delineations of experience; and they are remarkably comprehensive. At first, as in Herodotus, Pindar, and Theognis, envy and caprice characterize the Olympian gods in their dealings with men. Men are the restless rivals of the gods, and must be taught their proper place. Occasionally a righteous purpose governs the divine dealings; occasionally also defects of the gods themselves are permitted to bear on the course of events. But such features do not manifest themselves in force till we come to the great themes of Aeschylus and Sophocles, whose tone is vastly superior. The caprice of the gods is by that time subordinated in an ethical direction. Personal calamity is a judicial act pronounced by a moral governor on men’s follies and crimes. ‘Divine Justice displaces the divine Jealousy.’ 2 The mental and moral clouding gives way to the notion of events under human foresight and so leading to unconscious crimes. Even the dark power of Moira is part of the moral order, designed to incite man to resistance, in making which he may fall, but in his fall he is greater than if he had never met the challenge. Within increasingly broad limits, too, man’s freedom is recognized. In Sophocles there is the mature idea that suffering is not always final, but is foreseen in the counsels of the gods as part of the permitted evil which is a condition of a just and harmoniously ordered universe; the idea which, with perfection, epic poetry gives more prominence to circumstances and external forces in the determining of character; for such is the nature of epic as distinct from drama. Thus there is little justification for the common belief that the enterprise with which the ancients regarded their fate everything is foreknown and develops inevitably from the beginning. Tragic fate needs a tragic trait in the victim. Cf. art. FATE (Greek and Roman).

(b) Roman.—Nothing like the same subtle sensitiveness is found in the Roman early theology. The citizens of Latium and the surrounding parts were a more secular and political race; and destiny with them amounts to little more than a belief in the common bond that renders their enterprise with the world effective. The deity Fortuna embodies this faith. Destiny is seldom regarded as personal doom; it is rather racial mission. Nor does it often occur to the Roman thinker to inquire into the origin of the special genius of his people. The metaphysical and ethical implications of the belief were not canvassed. Cf. art. FATE (Greek and Roman).

(c) Teutonic.—Remarkable is the contrast in the Teutonic idea of destiny. It forms a prime ele- cence and inherent mystery. Odin and Urdr, divinity and fate. It is difficult to delimit the respective jurisdictions of these two; but the lion’s share of power falls to Urdr (Vyrdd). She is the goddess of fate, and also of the seed. She is the dispenser of life and death, with her maid the Norns (arbiters of life) and the Valkyries (arbiters of death), who dwell with her under the world-tree (Ygdrasil), which stands forever green, watered by her gold-encased fountain. The might of Odin standing behind is no relief; he wields a lawless power, with a loveless will. He stands for blind, arbitrary, elemental will—will cut off from wisdom, a brute, blundering, pitiless, eccentric will (with the single bright feature that it chooses the warriors for Valhalla), which surrounds human passion and affection with a tragic cloud against which the heroic figure is shown off. A deep pessimism pervades the Eddas. It is as if the cruel and dismally limiting character of fate, the huge shadow of the sea, the high conscious of sinless hearts crushed by the irrevocable of apathetic deity, were all gathered up in a vast and bitter gloom—that general spirit which for modern understanding has been so powerfully portrayed in the romantic operas of Richard Wagner. 3 Cf. art. DOOM, DOOM-MYTHS (Teutonic).

(d) Indian.—On a higher plane, turning to ancient India, we find a definite theistic development in the latter stages of the Upanisads, in the Vedanta, and in the Sanskrit drama. Here there is the clear idea that ‘only by the man whom he chooses is God comprehended—to him the atman reveals his essence.’ In the Buddhist teaching prominence is accorded to the law of karma (q.v.), according to which the soul in its successive transformations has each stage irrevocably determined by its conduct in the previous stage—a suggestion of ethical necessitation which even in its fullest expression remains vague. Apart from express teaching, Hinduism is theocratic and idealistic, fatalistic, unenergetic. The drama is full of desa ex machina; the actors seldom rely on their own will. The religion, largely a ritual, shows the divine writ ready to burst out on the most trivial occasions and for the most trifling offences. 4

(e) Chinese.—In ancient China there is the great law of Tao, circumscribing the course of human life in a cosmos of omnipresent order. It overrules the entire animation of the universe in both its aspects of light and darkness, life and death, good and evil. It never deviates or diverges. It metes out justly and equitably to all men, by means of the spirits or gods rewarding the good, by means of the spectres punishing the bad, with perfect impartiality. It is never to those who conform to its laws, hurt to those who violate them. The fear of the spectres is very great; there is an all-pervading condemnation, counteractive to which make up a large proportion of Chinese religious practice, of all human beings, and the discipline of virtue at any moment with human business and fate, favourably or unfavourably. These spectres are the instruments of retributive justice. Tao is the law. Cf. on this paragraph V. Kydberg, Teutonic Mythology, Eng. tr., London, 1895, p. 106.

1 Granted this, it follows that the total effect of individual tragic failure hereafter on the whole world-plan may be dealt with under a general description of the failure. The Creator’s method, righting what goes amiss, here may indicate His method in the hereafter.

2 Cf. art. FATE (Greek and Roman).

3 Schiller’s so-called reproductions of Greek drama illustrate this popular but erroneous idea.

4 F. P. Denison, op. cit., p. 255.
both the creation and the creator, the motive force of the universe and the free determiner of its agency, spontaneously working from all eternity. His favour, won by obedience to his motions, may be likened to that which is otherwise evident in the actual movement of the world and life. Having no superior or co-equal, he secures it that human destiny is neither dark nor cruel; it is clear and orderly as himself. Cf. art. FATE (Chinese).

Of the deities in ancient Egyptian religion, several conditions of character and destiny are similarly conspicuous. Egyptians are divided as to the characters of primitive Egyptian religion, whether they are those of a polytheism or those of a monotheism. But even that school which asserts its polytheistic character agrees that underneath the multiplicity of deities there is always the feeling of their unity; and, whenever that unity is at all recognized, it carries with it the further concept of the spirituality of the divinity in things—a spirituality that is righteousness. The goddess Hathor, the patroness of joy and happiness, is also the cosmic principle, the personification of the great universal power of nature perpetually creating and maintaining all things, good and evil; and further, she is the judgment a foremost figure on the bench. In 'The Precepts of Khensu-hetep' (J. Ch. Chabas, in 'L'Egyptologie, Paris, 1876-78, ch. vi.) the explicit references to serekhmer net show a clear and definite idea of divine providence, by whose goodness men subsist. To the supreme being who is thus regarded is attributed at the same time the creation of the world and all things; and, as he is righteous, his plan is righteous. We owe it to this religion that it emphasizes the fact that the guilty suffer, the penalty being exacted in the time of the wrong-doing, not deferred to a later day or generation. Cf. art. FATE (Egyptian).

2. Jewish and Muhammadan.—The OT and NT ideas are given in extenso in the art. ELECTION. There all in creation, history, redemption, is referred back to the divine sovereignty. The special features of that relationship as experienced in vital religious activity alone are set forth; the general idea never gets beyond its most general expression. The same speculative reserve characterizes later Jewish thought. Its particular interest is not high; except in the case of individual rabbis, nothing further is ventured than the statement of a comprehensive dependence of all things, of the world as a whole on the divine persona, and an insistence, always in subordination to God's sovereignty, on man's free will. Intellectual problems are evaded as beyond human solving. Of the Jewish sects in the time of Christ Josephus is responsible for making the Pharisees material predestinationists, the Essenes absolute predestinationists, and the Sadducees hostile to all forms of predestination, since they traced all events to chance. Material predestination limits the divine decree to this material life; an example from Hal. vii, 11. A. W. Toynbee, God of the Egyptians; or Studies in Egyptian Mythology, 4 vols., London, 1904, 1, 125. is set forth in the Qur'an until the doctrine has become practically pernicious. The reaction set in by the Mu'tazilites, who assailed the orthodox view with keenness, made room for free will, but was eventually overcome by orthodoxy. Cf. art. FATE (Muslim).

3. Christian.—Predestination holds a large place in the history of the Christian Church. It has fanned burning controversies, and generated popular fear; it has fostered stern ideals, and moulded strong natures. In its largest sense the finest intellects of the Church have been attracted to it, and those periods that have been most fruitful in reconciling the development of Christian ideas with the thought of the age have been indebted to it above all for inspiration. The epochs of its progress are marked by these periods.

(a) First stage.—The first stage is signalized by the conflict of the Greek Fathers with Gnosticism, the conquest of the Greek mind by Christian theology. The problems of Gnosticism are in the main two: (1) the nature of the Absolute, and the method whereby He can be the creator of matter, and (2) the origin of evil. The Gnostic solution is found in an endless succession of icons or emanations of the Absolute which serve to span the gulf between Him and creation. Gnosticism, in establishing its theory, had to deny free will. It is a solution metaphysical and necessitarian. The Greek Apologists and Fathers, addressing themselves to the problem, reached a solution ethical and personal. They knew nothing of unconditional predestination; they teach free will. Believing in the sovereign efficacy of reason and conscience, they interpret the Absolute in terms of them. Their contribution combines four points, viz. (a) the Absolute requires mediation; (b) the mediator is the Logos; (c) through the Logos the Absolute is creator; (d) freedom is the mark of man. All schools at that period held an abstract notion of God. The central quest was after an appropriate medium of communion between the Supreme Being and the world. The Gnostic attempt failed before the magnificent doctrine of the Logos (q.v.—the issue of the controversy and its end. The doctrine of the Supreme as Creator through the Logos, and the activity of the Logos in nature, history, and man, are the primary ideas of Patristic theology, set forth partially in the Apologists, with fullness and learning in Clement and Origen, and preached by Chrysostom, Augustine, and Ambrose.—2 The history of two antagonistic cities, so that he can compare the ordered series of the centuries to an antithetic hymn pervaded by an antithetic parallelism which turns on the call of God and the response of man. Is this the case of Ephesus, or is it Galata? The question is asked not in order to know the particular opinions on religious predestination we need not enter (see AUGUSTINE, ELECTION). His

1 F. Weber, System der altasynagogalen palastinischen Theolo-
gie, Leipzig, 1880.
positions are not always sufficiently consistent. But his great merits are clear. He distinguishes predestination from predestination, and aids to a better analysis of the latter. He expounds a richer idea of will than the inherited views of the Greeks and the Pelagians; and initiates a discussion from the time of the freedom of the will. He never since withdrawn, viz. that the unregenerate will is not free; freedom is in the power to do right.  

Great as these services were to the progress of truth, they are not his chief contribution to the problem of predestination—his own view of the nature of the divine purpose the motif of which is referred to above. He unfolds his ideas in his main book, de Civitate Dei, called forth by the decay of the Roman State. The underlying principle of that masterly exposition is the organic character of the divine purpose. It is pervaded by his deep sense of the continuous evolution of the divine purpose in all things. It sums up his conviction of a life's study. Throughout his life he was intent on reducing to a consistent unity the various truths of natural history and revelation, as they presented themselves in believing consciousness. So successfully has he vindicated that principle that subsequent developments have proceeded upon it, always the more clearly the more we penetrate the mystery of human freedom. The controversies that ensued, directed against St. Augustine, assail details—in particular the doctrine of predestination or evil 1 and the rejection of the imperious will. Rabanus Maurus (1014-93), Lanckor (1087), and others argued the inconclusiveness of that doctrine by Scripture proof, John Scotus Eriega 2 († c. 877) its inconclusiveness metaphysically—both legitimate corrections. The Augustinian doctrine in its general drift worked on with increasing cogency throughout medieval Christendom, quickening an extraordinary ferment of ideas, creative of new impulses in every direction, religious and disciplinary, political and social. Into the stream of religions and general culture there entered currents widely dissimilar, deriving from the study of Aristotle and of Dionysius the Areopagite, really alien to the Latin genius. The pregnancy of St. Augustine's philosophy succeeded in accentuating rich elements in both in the atmosphere of Western theology. 

The philosophical intellect was that of St. Thomas Aquinas (c. 1227-74), who quelled the maestro of medieval thought. In him we see St. Augustine pruned of his many verbal and logical inconsistencies and his view of the vocation of this world so presented with a logical thoroughness and developed on different sides as to exhibit a proper system, or summa. Of specific value is Aquinas' discussion of predestination, or the grace of natural virtues—features of Augustinianism that have obtained a secure lodgment in Romanist theology, but not in Reformed. The whole effort of Aquinas results in a fusion of the best culture and most spiritual faith of his age. The Augustinian spirit pervading it is in his work defined by the Church with no official teaching of the Roman Church. St. Thomas inspired the Decrees of Trent (1545-53), which, while affirming several Scotist positions, define a mild Augustinianism. 3 The Augustinian principles are three: 

(1) God is absolute master by His grace of all determinations of the will; 4 man remains free under the action of grace; 5 the reconciliation of these two truths rests on the manner of the divine government. The Tridentine formula reaffirms original sin and man's need of grace as against Pelagianism (sess. vi. can. 2), the freedom of the will as against the Pelagian claim of evil even before embracing faith (vi. 6. 7) as against the Protestants. Trent further, with St. Thomas, teaches the universal offer of salvation and divine provision of the means of grace. The progressive growth of grace is maintained. 6 The gift is not unlimited; the brief of Benedict XIV. (1748) gives liberty to all schemes of reconciliation—the strict Augustinian, the Thomist, and the Molinist. 7  

(d) Fourth stage.—The fourth stage came with the Reformation and the awakened moral conscience. The absorbing interest of the 16th cent. was religious, not speculative. No commanding intellect of the comprehensive order of an Origen, Augustine, or Aquinas arose to offer the new synthesis of faith and culture which the times imperatively needed. A little process was made in the growth of the predestination idea. Luther and Erasmus, Zwingli and Calvin, with minor divergences, agree in revert to St. Augustine on the main issues and in the supposed interests of the early political platoons. Calvin had adequate philosophical equipment to formulate anew the problem in consistent and convincing form. Hence Western Christendom remained divided. Its continuance in disruption was due as much to the absence of a first-rank philosopher as to the presence of a fiery Reformer; for fresh religious feeling is less divisive than stale religious dogma, and the speculative reason of the Reformers made but indifferent flights. The proper contribution of that age lies elsewhere, in the emphatic set on the doctrine of election as the believer's ground of certainty of salvation as against the Church and its machinery of grace. Polemical motives against Roman ideas of authority impelled the Reformers to give election a paramount place in their system, with the result that its philosophical counterpart, predestination, assumes, not only in general theory, where it is relevant, but also in theological construction, where it is not, the position of basal principle controlling the system. Thomas Aquinas and Calvin († 1564) is representative. It asserts the double predestination, to life and death, quite irrespective of merit. The central idea is 8 that of an independent and immutable decree of God, in which foreordination and foreknowledge are inseparable. Beza, Calvin's successor at Geneva, is the father of high, or supralapsarian, Calvinism. The common view of the Reformed Confessions, confirmed alike by the Synod of Dort (1618-19) and the Westminster Assembly (1647), is infralapsarian. The infralapsarian (infra lapsum) theory of predestination, or the decree of predestination viewed as subsequent in purpose to the decree permitting man to fall, represents man created and fallen as one object of the decrees. Calvin and his followers 9 designates the view which supposes that the ultimate end which God proposed to Himself was His own glory in the salvation of some men and the damnation of others, and that as a means to that end He decreed to create man and to permit him to fall. In this interpretation, the reformations in the Federal Theology, 9 "exemplified by Cocceius (1603-99), professor at Leyden, who introduced the idea that God's judicial charging  

1 Augustine's denial of freedom is really denial of capricious choice. It is the self-determination of one's true character.  

2 Erigena's conclusion, 'no predestination to evil' because that would imply a duality in the divine nature, or else the existence of some power above God determining His will, is accepted by, or at least the idea endorsed by, nearly all of the future the recurring idea of God as the author of evil.  

3 Louis's statement, 'the history of Catholicism is the history of the progressive dissipation of Augustinianism,' we regard as a gross exaggeration.  

4 Augustine's assertion of freedom is really denial of capricious choice. It is the self-determination of one's true character.  

5 Dittrich, Snedenberger, etc., have denied the centrality; Schweitzer proves it fully. M. Schelbel (Calvins Praeludienlehe, Aalen, 1912), criticizes the religious motives underlying Calvin's construction.
of the guilt of Adam's apostasy to his descendants was racial, and not personal; and in the contemporary Saumur school of Cameroun, Amyrault, and others in France, who attempted a combination of particular election and universal salvation (subter-

Calvinism. Bold opposition was led by the Remonstrants led by Arminius, professor in Leyden from 1602 to 1609. A year after his death his disciples, as an organized party, presented a Re-

monstrance to the States of Holland pleading for toleration, and for the sake of defining their position, presented soon afterwards five Articles expressing their views. This is the origin of the famous 'Five Points' in the controversy between Calvinism and Arminianism. Of Calvinism the 'Five Points' are unconditional predestination, particular election, efficacious grace, divine reprobation of the wicked, and final perseverance of the elect. Of Arminianism the opposed points were conditional predestination on foreseen merit, universal salvation, resistible grace with the provision of means sufficient for salvation, pre-

vention of the wicked, and possible lapse of the justified from grace. Later, Methodism came with a synergistic solution which is logi-

cally indefensible, but has proved serviceable for picking and choosing the victory of logic only; even the victors felt that, if not handled with special prudence and care, the doctrine would be the reverse of helpful to morals and piety. The Calvinistic Synods restate old positions— Dort with relentless rigour. He sets forth the Calvinistic view of the world with a masculine strength and rich insight of rare excellence, and in face of the most imposing critical antagonism which Calvinism has ever encountered—New England Unitarianism. He prepared the way for the final outburst of the pre-destination and universalism that was to come. He laid the foundation for the great task; and he did so by having greater confidence in reason than his contemporaries. Edwards was no reactionary. In the widely prevailing scorn of human reason he dived deeper into its depths and achieved two-fold resurrection of the divine decrees and free will, and the exposition of the divine motive for predestination as resting in the divine glory. Regarding the former he argued that the law of causality is universal; that, while every man is free to act in accordance with his will, his power to will is controlled by causes outside of himself, so that ultimately the will must obey the behests of a power independent of its own purposes. Regarding the latter he taught that God's freedom is exercised in self-exhibition and self-communication—a self-

communication which is creative in man of the religious affections (the form that union of man with God takes) which display the reality of pre-

destination. Here is the real advance towards overcoming the dualism in the Calvinistic position, leading directly to the idea of God as moral personality, the controlling principle of modern theology. In the Catholic theology God is construed as substance; and in Scotist, Socinian, and Arminian theology as will. The Reformers conceived God as the embodiment of the moral law, bound by His own nature to punish sin and to uphold the eternal principles of rightnesses. The conception, however, was not clear; and side by side with it we find the old conception of sovereignty as arbitrary will. Calvinism reconciles the two by distinguishing between the nature and will of God: nature is the sphere of necessity, will of freedom; justice belongs to the one, mercy to the other. In the hands of Jonathan Edwards, his controlling principle—lying behind both justice and mercy, containing them within itself. It is but a step from the divine self-love to the divine Fatherhood—the idea which fresh expérience of the redeeming love of God in Christ (the discovery of the modern Church) revealed.

(e) Fifth stage.—Under the influence of the renewed study of the life of Christ modern theology has brought into fresh prominence the ethical and spiritual qualities which were central in Jesus' thought of God. For the abstract Absolute of the earlier theology and the arbitrary will of the later it substitutes the God and Father of our Lord Jesus Christ, and seeks to show that in His wisdom, power, and loving character we have the ultimate reality of religious truth. In this attempt it receives aid from two quarters. Through a better understanding of the nature of the will modern psychology makes it possible to sharpen the convictions of the Church with regard to liberty and law, while philosophy, through its renewed emphasis upon the immanence of God, opens a way for the conception of God which shall include the concrete features essential to Christian faith. So far as the first is concerned, we are coming to see that it is not will, but character, that is fundamental for our idea of personality. That man is most truly free whose will is most completely dominated by a consistent moral purpose and whose acts—given a knowledge of that purpose—we can most certainly predict. Character denotes to us such consistency of moral purpose; and law, so far from being a limitation of freedom, is its most effective means of expression. In Christ, then, we can fill up 'the mere good pleasure of his will,' with the innermost content of redemptive love. Not less significant is the help from modern philosophy. We are seeing that the ultimate reality, instead of being the most abstract, must be the most concrete of all conceptions. Modern thinkers have regarded the Christian ideal as away all that is most characteristic in experience into a colourless residuum, but rather by studying experience to discover, amid the infinite variety which it contains, the elements of permanence. From this standpoint, the Christian ideal is not its lowest, and the qualities which Christian faith finds central in God become those most needed for an explanation of the actual facts of life. The main outline of the historical growth of the pre-

PREDESTINATION 233
destination idea is thus evident. In ethical religion, lower, we have the instinct of fatality prehending the world, an act of the dawn and gradual growth of the instinct of freedom. In Hebraism there is a definite conviction of the general idea of predestination, combining the two features of divine sovereignty and human liberty. Judaism, on the other hand, serves the same general idea. Muhammadanism reverts to fatality. Christianity, primitive and Patristic, preserves and defends predestination as received from Hebraism along ethical lines. The meaning of predestination is that God has, and will develop its definition by setting in strong relief the absolute supremacy of grace over nature in St. Augustine and the congruity of grace with nature in St. Thomas. The Reformation Church deepens the idea, and develops its definition by setting in strong relief the absolute spirituality of grace as resting in God's mercy (in the Reforming leaders) and its finality as resting in God's glory (in Jonathan Edwards). The modern Church, relying on modern philosophy, which has gathered up the results of the modern sciences, of nature, history, and man in a broad synthesis centring in the Supreme Being as moral personality, accepts the vindication of the harmony of divine sovereignty and human liberty, thus closing the most profound source of conflict concerning the idea. The two foci of the predestination doctrine are both true, and every theory exalting one at the expense of the other has had to give place to the more adequate formula. The stubborn protest of orthodox common sense, which has never in any age lapsed, has been justified. The facts of the religious consciousness have availed to beget the theory, not the theory the facts.

V. THE MODERN TASK.—The supreme desideratum of the modern age is the saving of individuality, with its enterprise, romance, ever-fresh experience, and transforming impulses. It may be secured by that enlarged conception of the divine will regulating man's destiny to which every vital pulse of the modern spirit points. It will include a larger pantheism, a freer society, a richer soul.

1. A larger theism.—The antitheses of the age are not wholly in error. They are popular because of the meagreness of the current theism. They are vague, and they are not whole. The prevailing theism does scant justice or even violence. They are not negative; their negations proceed from a positive faith; and in their positive contribution to thought they correct one another and enable us to discern the lineaments of an impressive philosophy. Superficially regarded, they all seem to lead to determinism, apparently absorbing the individual in the whole. Pantheism, materialism, socialism, secularism, naturalism—they look like the delusion of the finite world. It is only in the popular or semi-popular intelligence. Take, e.g., pantheism. It is a term to which the vaguest and most contradictory meanings are attached, the clearest being that which identifies the world with God and regards man as part of it, and only as part of it, a part of the foundation of community and, indeed, of any rational meaning. How can pantheism say that the finite world is the infinite? We may say that it represents the infinite, but not that it is the infinite; and that is the religious idea of the delusion of the finite. It implies not the divinity, but the nothingness, of the world of sense and sight. The formula which expresses it is not 'All things are God,' but 'God is all in all;' or, in the comprehensiveness of the doctrine of Being, no second;' or the Christian conception, 'There is one God, beside Him no other.' Do not materialism and naturalism, when their real significance is seen, imply the same truth? They are eager to exalt the cosmic life-force as the dominating principle. How do they interpret it? Not abstractly, but from detailed observation of the actual phenomena of the world; hence its general conception is not untrustworthy; it is the concrete content of the abstraction of pantheism. And there is another idea of the one God, that no individual stands alone, that his perfection can never accrue in isolation, that, as the attraction of physical particle for particle causes every material body to retain its form and individuality, so through the whole of the world that very same influence of other selves is on the sure path to disintegration? Together these antitheses in the essential spirit urge that God is the only reality in the universe, that the life-force of creation is one, that man's safety and perfection rest in right relation with them. God's immanence in the world is the modern understanding of the eternal reality of its process and progress. Such conceptions are as profound as they are novel. They arise directly out of the minutest investigation into the facts with which science and history deal. They appeal to the theological mind to be drawn up into the idea of God and His relation to the world and man to enrich our apprehension of His transcendence and divine purpose. They teach us definitely concerning the thought in this world that we know, and of Himself standing above it working out its ends. On the foundation of that knowledge we are summoned to build up convictions of the character and will of Him who thus acts and of the destiny of all His actions. 2. A free society.—Social theory is as multi-form as antitheism. Anarchism, communism, socialism, nationalism, imperialism, are imperfectly understood apart from the ideal and emotional impulses prompting them. They are preparing the physical basis, the material conditions of large advances in human liberty. They are adversely criticized for doing the very opposite. But surely in their broad spirit they are operating to restrain those who need restraint within the attainments of human progress already won, in order that human welfare may enter on higher achievements. Social pressure, law, is not the foe of liberty; it is its nursing mother. Life depends on environment. The mind and the body are not perfections that from the fresh growth can come. Conditions must be organized if new life is to be generated. It is from lower forms that the higher as rise the appropriate métier of their life is secured. The social and industrial unrest of the times implies the bringing to birth of a fresh life of humanity. The new quality of life cannot live except with new social advantage. Here we note two facts of modern psychology: (a) social integration promotes individual independence, and (b) personality is enhanced by progress in material conditions. The individual is conditioned by his environment; that is the basis of all sound sociology. As a machine cannot work in an atmosphere that freezes its oils, or a plant flower in beauty in the Arctic region, so must the mind and body of the world of squalor, sin, and disease. This is the modern rendering of the ancient 'fate,' yet with what a difference for human hope! A large share of man's destiny is sealed by his birth and surroundings, and the freedom of choice remains his, his moral endeavour and moral vision are due quite as much to the community which produces him as to himself. On the other hand, it is a fact as well that this is for man's benefit and for the growth of his growth. A man is, first of all, a unity; and his nature as such prevents his easy descent into

1. C. R. Flint, Agnosticism, Edinburgh, 1903, last chapter.
the mass or dissolution into weakness. The more that unity of his is preserved and pressed, the stronger rises the outflow of original force of character the self-conscious life. Is this the mode of operation of the divine will upon the human? ‘Our wills are ours to make Thine’—have we here the method of discipline? Here once more is a summons to revise that harassing perplexity of foreknowledge and free will; here too a mightier incentive than before is conceived for material progress and Christian enterprise.

3. A richer soul.—The practical experience of that old doctrine, the mystical union with Christ, has not yet died down. It is well worth revival. The time is opportune. The stream of mysticism runs with a strong current in the modern science. It will enter theology as a power for good. Modern mystics are training us in their way of experience, and teaching the sacramentalism of nature; they are renewing our confidence in the validity of both in grace. Redemption is an economy like nature and providence; its spirit can be known and felt equally with theirs. The old doctrine of union is the right rule and goal of self-knowledge. His saving acts to represent, seal, and apply their benefits, are its proper medium of communication, conferring ‘God’s essence and His very self’ on believers. There is a spirit in creation; there is a spirit in grace. There are three, not one, but the experience of the first prepares for the last, in which their partial union with the divine life is consummated in perfect union. That union feeds the spirit of man, for the other half of the 19th century nature of man is not some special faculty or out-of-the-body ecstacy, but the conversion and sustenance of his ordinary powers. It is because we confine our union with the divine Being to communion with Him by our ordinary powers that our religious life is so paltry. But the fault rests, not in the powers, but in the method of using them. We commit two blunders. We use our powers in analysis, not in synthesis; and the result is that the self is not offered to the divine life for its unification. The self is more than the collection of its faculties; and we have to realize that there is no end to the spiritual treasure latent in it when God has access to it. Then, again, we think God rather than experience God. But a thought of God is not the experience of God—actual presence and passion. We have to learn that in the infinite personality there is no end to such action and passion. These recognitions, of our own deeper self and of the divine self, open the way for inlows from God constantly increasing unto perfection. Within our self God speaks and to our self; there is no identity, for identity would close intercourse. In this—the fine principle of the higher mysticism of our day—lies the sure hope of further spiritual advance.

But now every increase of living experience of this sort brings with it an increase of power to understand what God’s will is, what it is doing, and by what method He is doing it. Those ideas, the divine immanence in the world, the social soul of the universe, the entire life of self-conscious life, have as yet no place in theological system. The divine transcendence idea and predestination idea have been drawn deductively from data that are abstract; we must now build them up by induction from what we have seen are the data alone intelligible to the modern mind. They will then assume their proper position as the conditions that make real religious consciousness. To enlist the finest sympathies of modern culture and to effect its greatly desired harmony with modern faith.

held in conjunction with belief in transmigration, but in a strict sense it has reference to a state of being prior to any incarnation. The reference is to the human soul. For the pre-existence of the divine nature of Christ see the art. Jesus Christ (cf. also pre-existing soul). But it is evident that the existence of the souls of animals and plants are treated, for the most part, in connexion with transmigration (q.v.).

2. Origin of the doctrine.—The origin of belief in pre-existence is obscure. Man has difficulty in conceiving himself as non-existent, but experience familiarizes him with the facts of birth and death. When he reaches the conception of a soul in distinction to the body, his thought turns not only to the future but to the past. What is its origin? Among the answers which suggest themselves is this, that it has already existed before its union with the body. The inquiry may not proceed beyond the thought of previous incarnations, and of this we have many examples in the more primitive religions. But in other cases the inquiry has been pushed beyond this, or has advanced independently, to the thought of the existence of the soul in a spirit-world previous to its embodiment on earth, and a definite doctrine has been formulated. It is not necessary to specify exactly the origin of the doctrine, or the precise influence which one exercised on another with regard to it, we can in some cases trace its development and observe the extent to which it has prevailed. It is found in a well-developed form in Greek religion and philosophy, in Judaism, in the early Christian Church, in the religions of India, and to a very considerable extent associated with modern thought in the West.

Greek and Roman doctrine.—Belief in the pre-existence of the soul prevailed widely among the Greeks from an early date, and at a later time became a theory of their philosophers. The influence of Greek thought in this respect was strongly felt in the early Christian Church, and is still apparent to some extent throughout the whole of Western civilization. To gain a knowledge of the subject it is well, therefore, to begin by observing its place and character in the Greek religion and philosophy. Regarding the origin of the doctrine ancient philosophers, as the highest ideal thinkers, it is probable that, in the early stages, Egyptian or Oriental thought had any considerable influence. It appears to be of native origin and to have two distinct sources: (1) the early religious ideas of the people were in many cases connected with mythological tales; (2) the philosophical principles which were gradually formulated in the schools, and from a statement of which this doctrine followed as a corollary; but, even in the latter case, religions pre-possession was not without its influence.

To the Greeks, as to many other peoples, the soul is air or breath (πνεῦμα, ψῡχή), or an essence of a similar nature. It departs with life; it comes at the birth of life. What is the essential difference between Homer and Hesiod do not give us much help, but the answer of the Orphic religion is that it is divine. The direct testimony as to what was taught in the Orphic religion as early as the 7th century B.C. is not in existence. Plato speaks of it as an ancient doctrine that the souls of men, 'having gone there from here below, and return hither again and are produced from the dead' (Phaedo, 78 C). Philolaus states that Homer and Hesiod are ancient witnesses that the soul is joined to the body by way of punishment, and was not 'formed in' (Clem. Alex. Strom. ii. 432 A; cf. Plato, Phaedo, 62 D). The statement of Plato and even of Philolaus may refer only to transmigration, but their testimony must be taken in connexion with the evidence of the Orphic tablets, on one of which the soul declares, 'A child of Earth and of starry Heaven am I; but of Heaven is my race.' There is also the strongest probability that Pythagoras derived his views on the soul's pre-existence from Orphic sources. The egg used in the Orphic ritual was a symbol of the divine egg of the universe as the principle of all life. We have here indications of an ancient religious belief that had already taken definite form. At a later time it gained precision and became the object of statements at the hands of the philosophers who have adopted it. In Plato and some other ancient philosophies the pre-Socratic philosophy prepared the way for the dogma. Some unifying principle was being sought. Thales found in water the principle of all things; Anaximander in undetermined, unlimited matter; Democritus in atoms which are indestructible; the Pythagoreans in number. The Eleatic school accounted for the phenomenal world by the principle of eternal, immutable being; Heraclitus by continual change, becoming; and the Atomists by an attempt at combining those two principles. The thought of the indestructibility of atoms involved that of the pre-existence of the constituents of the soul; and, as already in the Orphic religion, the devolution of the human body by the plurality of the gods. The correlation between thought and body is worked out by Anaxagora (c. 470 B.C.). He introduces into his philosophy the thought of a world-forming mind (οὐσία) that is absolutely separate from matter and that acts upon it. This matter-forming mind is immanent in different degrees as an animating soul in plants, animals, and men. The human soul is thus a portion of the world-creating mind, and existed in it prior to its manifestation in the body. In his treatment of the soul, however, the conception of immateriality is not yet made clear.

Plato (c. 387 B.C.), developing the teaching of Socrates, turns his attention in the first instance, not, like the earlier philosophers, to the investigation of external nature, but to reflection on the mind itself, its essential qualities, its endowments and activity, and in this way arrives at his theory of ideas. The idea is not a mere abstraction, but a real archetypal essence of the eternal. The product of the mind, the archetype of the good, the idea of the good Plato seems to identify with God who existed from eternity. Matter also existed eternally, but without quality or order. At the beginning of time God appears as the world-soul, the universal animating principle, and the germ of the material world forms the soul of the world. The chaotic matter is reduced to order and fitted to this world-soul as its body, which it animates and rules. The universe, which is the result of this creative work, is fashioned for the sake of what is good only, in beauty and harmony, after the model of the eternal ideas. Of this universe man is a part. He consists of soul and body, and in the embodied soul there are the three elements, the cognitive, sensuous, and creative. The relation of the last two to the first resembles that of two steeds to a charioteer. Sometimes Plato seems to think of the whole soul as pre-existent and immortal, but in general it is the cognitive part which is distinguished. This rational soul, as distinguished from the irrational and material elements, is of the same nature and character as the world-soul. A certain definite number of souls have been created by God, and this number is neither increased nor diminished.
Before the terrestrial life begins, the soul, with true personality, exists in a state of purity so refined that it is difficult to conceive its original estate, from beholding it, as we now find it, mured by its abode in a mortal body. It has knowledge of the divine and eternal, and enjoys a life of bliss in contemplating the ideal world. From this state of purity, for the sake of completing the world-overall scheme of things into a more integrated body. Its higher nature is still shown, when incarnate, by love of wisdom and by a yearning for the divine to which it is akin. The soul is indestructible, but in the conflict of the earthly life, the soul is sometimes taken at death into another human body, or even into a lower form of existence; if it maintains its purity, it returns to its original state of bliss, from which, however, it will again become incarnate. Through all these changes the continuity of its life is maintained. The soul in any particular body may, apparently, be undergoing its first or any subsequent incarnation. In the Phaedo a proof of pre-existence is found in the doctrine of 'reincarnation,' the meaning of which is illustrated in the Meno. It is also taught by the Stoics that knowledge of the universal is not acquired by direct experience or by teaching, but is drawn out of the soul; that the gaining of knowledge is an awakening of the memory which has become dulled through the soul's emigration, the recollection of ideas with which it was familiar before the present terrestrial life began.

Aristotle (335 B.C.) regards the soul as an organizing principle, manifesting its activity in plant, and animal, and human life. The soul is the microcosm, uniting in itself all the faculties of the lower grades of organic being with the additional faculty—reason. This reason, which is divine and immortal but not subject to transmigration, is the only element in the soul that exists before the body. His statements are, however, conflicting and his reference may be merely to the universal reason.

For the Stoics (from 310 onwards) the soul is an inborn breath pervading continuously the whole body, or man. The soul is a corporeal being separate from any particular body.

Stoic teaching, as well as Platonism, Pythagoreanism, and Oriental mysticism, had its influence on Greek and Jewish speculation at Alexandria from before the Christian era, and the thought of emanations was given a prominent place. This thought was taken up and developed by the Neo-Platonic schools which arose from the teaching of Ammonius Saccas (c. A.D. 210). Besides its influence in Alexandria the Neo-Platonic movement gave rise to Roman, Syrian, and Athenian schools.

The most notable exponent of Neo-Platonicism is Plotinus, the mystic who founded the Roman school in A.D. 224. In the system of Plotinus the Absolute One or the Good is incomprehensible, or at least, with Plato, the highest of the ideas, but not a result of all we call being, greater and better than reason and intelligence and sense, though it is that which gives them whatever reality they possess' (Enn., v. 14).

The ideas are emanations from the Absolute One, and as such are manifestations from the ideas. As the sun emits rays, the One, through its very perfection, overflows and sends forth an image of itself; and this image in turning to body and matter becomes the souls, pure or intelligible. In like manner the soul, an immaterial substance, is an emanation from the soul's of which it is an image. The ideas, endowed with true being and life, are immaterial in the soul. As the soul exists in the One, so the soul exists in the soul's of which it is an image. In the same art, the human soul is an emanation from the divine soul.

4. The doctrine in Judaism.—According to the teaching of the OT, the soul had no previous existence apart from the body. The representation of man's origin excludes the idea. In the case of the first pair there is a direct creation (Gen. 5th etc.). When the other works were finished, man was not yet made (Gen 128), and in the statement 'God created man in his image . male and female' (v. 25) the same verb is used as in v. 1, where the object is 'the heaven and the earth,' and in v. 4, with object 'sea-monsters.' The account in 2 is more in detail: the dust is fashioned and man becomes a living soul (nephesh) by the divine inbreathing. The life of the soul or of the body is not contemplated apart from regard to other individuals and race, there is nothing to suggest the view that the soul existed before the joint life begins on earth. The few passages most frequently quoted as favouring pre-existence are to be explained otherwise. 3.

In Job 14:4 I can imagine a篇 of my mother's womb, and asked shall I return thither, 'mother's womb,' on account of 'return' as an image of death. It is parallelism, a way of speaking with the soul, which will be taken in its natural sense (cf. 30:34 106:16); then in 'return thither' there may be an abbreviated comparison between this and the depths of mother earth (Sir 40:9); or, lease pre-
cibly, the state after death is thought of as being similar to the conditions in the womb whence man issues when life begins. The latter passage is in Ps 139:13, where the allusion is to the secret, curiously wrought in the lowest parts of the earth. The term 'lowest parts of the earth' is elsewhere used of the realm of Eden, e.g. in the Babylonian Talmud, where it is applied to the underworld; and the reference is explicit in B. 25b to 'my bones' ('RV my frame'). We have here, therefore, a poetical comparison of the 'mother's womb' of v. 13 with the deep, mysterious recesses of the earth. In Job 38:7 the context shows the words are used in an implied sense: 'the feeblest known; for the earth is mine; (I know then that thou hast brought forth);' i.e. Job was old as the dead and dusty. The reference of the words may be to a fanciful idea that passages like 1 S 2, 12, and 2 Chr 29:46, can be thought to have any bearing on the subject.

Outside the Hebrew canon, however, and there still early traces of the doctrine, and in Hellenistic circles, and in later Judaism we find it fully developed. The idea of a disembodied soul, with an individuality of its own, had already become familiar to the Jews through their contact with Persian and Greek thought. The question of the disciples (Jn 20 [see below]) shows that theories of pre-existence were known to the Jews of Palestine in the time of Christ. Josephus tells us that it was a doctrine of the Essenes that souls after death are only transposed to the terrestrial realm, from which they wander forth from the most subtle ether, they are drawn down by a kind of natural allurement and entangled in bodies as in prisons (BJ II. vii. 11). Whether his account is exact or not, the doctrine has been traceable through the Essene, and their traces were probably influenced by the Pythagorean views that spread with Hellenism. Parsi and Buddhist influences are also suggested.

Among the Jews of Alexandria the doctrine was held by the Qumranians, as we see from the statements of Philo and from the Apocryphal writings (Wis 3:36, 'Now, I was a child of parts, and a good soul fell to my lot; nay rather, being good, I came into a body unformed'). He speaks first as if his personality was distinct from his soul (so, too, Wis 15:3, where man at death 'is required to render back the soul which was lent him' ('RV'), but then he corrects this and speaks of the soul which pre-existed as being the real self. He implies, further, that there is a distinction between soul and body. He has therefore put the body (cf. Slav. Enoch, xxiii. 5, 'All souls are prepared to eternity, before the formation of the world'); Syr. Apoc. Baruch, xxx. 2 and 2 Es 4:24, sometimes quoted, are not to the point). Philo the Hellenist developed this idea; he took the doctrine of Plato's idealism, and fitted it into his allegorical method of interpreting the OT. Man is composed of soul and body. The soul consists of two parts, the rational and irrational principles. It is only in speaking of its functions that he adopts the Platonic tripartite division. The irrational part of the soul, like the soul of animals, rises by generation, and, being material in its origin, is mortal. The rational principle, which is the true soul, is pre-existent and immortal. It is an emanation from the Deity; and, although Philo makes a distinction between the Supreme Source of all things and the world, he speaks of the human soul as 'a ray' or a segment of the Soul of the universe (Myst. Nov. 30). It is 'an emanation or a ray' of the divine reason (De Mundo Opificio, 51). Of incorporeal souls, which are emanations from the Deity, there are two classes, and these have their abode in the air and the heavens. The higher class consists of 'angels' in the Scriptures; they do not descend into bodies and are incorruptible; but the other class, viz. the souls of men, being nearer to the earth, are attracted by the body, and by their union with it become corruptible. The soul finds in the body its prison-house or tomb, from which it escapes at death to enjoy its true life.

In the Talmud and the Midrash the pre-existence of souls is clearly taught. They are created before God and given a distinct existence as beings. There are variations in the statements regarding details such as the time of their creation and their abode. In Briskh Kallah, 8, God is represented as taking counsel with the souls of the righteous before He created the earth. According to Tannhâin, 3, all souls which were to enter human bodies were formed during the six days of creation and were in the Garden of Eden. Before their descent to earth the souls are kept in the seventh heaven. In the Zohar they are kept in the 'house' (Sîrê, 143b), and it has been said that the Messiah will come when all the souls in the gîph have passed through the earthly life ('Abodâh Zîrâh, 5a; cf. Yôhûmîth, 62.1).

It is not settled whether the soul comes to earth at the time of conception or after the embryo has taken form (Sanh. 90c). The doctrine appears in great detail in the Kabbalistic literature. According to the book of Zôhâr (13th cent.), the soul in its essence is derived from the Supreme Intelligence, the Universe and the Heavens. He purposed to create the world, it was brought before Him in His will, and He formed all the souls that were to be given to men; they were there made in the exact form in which they were afterwards to appear as children of men on the earth; they were created pure, but He saw that some of them would afterwards corrupt themselves in the world (Zôhâr, i. 90b). They are sent into their bodies that they may be educated by taking their part in the universe, and then contemplates creation. The doctrine was further developed and rendered popular by Isaac Luria (16th cent.) and his school. All souls destined for the human race were created together in Adam. They had their place in different parts of his body—the brain, the eye, the hand, etc.—and, as there are superior and inferior organs and members, there are corresponding differences in the qualities of souls. As every human soul is a spark from Adam, all bear the taint of his first sin. These theories of the Kabbalists have therefore been misunderstood. Perhaps the most elaborate system of transmigration (cf. Luria, Sîfer Haszâidîñ;). At present the doctrine, as taught in the Talmud and the Midrash, is part of the creed of the Jews (cf. Prayer Book, passim), and the mystics, whilst they may deny the doctrine of the race, adopt in addition the Kabbalistic views. In the Morning Prayer in the Synagogue the form of expression, 'the soul which thou hast given me,' is similar to that used in Wis 3:8, but it is understood in the sense made explicit in v. 39 (cf. above).

5. In the Christian Church.—Pre-existence is not taught in the NT. When the disciples asked the question, 'Who did sin, this man, or his parents, that he was born blind?' (Jn 9), they probably had the doctrine of pre-existence in mind; but this would merely show that it was current in Palestine at the time, and that they may have still held it at this stage of their discipleship. Through the influence of Hellenistic and Buddhist religions, it soon made its appearance among certain sects who derived part of their teaching from Christianity, notably the Mandaeans (q.v.), originating in Palestine in the 1st cent. There is a considerable amount of material in the Gospels according to St. Mark. One passage from Antioch and Alexandria in the 2nd cent. ; and the Manicheans (q.v.) from Persia in the 3rd. It is involved in their theories of emanation and of the inherent evil of matter, by association with which spirit is defiled. An illustration may be given from the
speculations of the Valentinian Gnostics. From the dust of the earth and the pneumatic seed which Achamoth had conveyed into it the Demiurge formed man and breathed into him psychical life. He placed him in the lower heavens, but in consequence of disobedience banished him from his abode in the light of material body. Men multiply and the best of them—those with pneumatic natures—have an innate longing to return to the Pleroma. With the Manicheans the soul is a particle of the heavenly light imprisoned in matter, from which it may, at death or after further purification, return to the realms of light.

Under the influence of Greek philosophy many of the Church Fathers made a theory of pre-existence part of their system of doctrine. As early as the middle of the 2nd cent. it was taught by Justin Martyr, who, being a Platonist before his conversion, allowed his philosophy to colour his views of Christian doctrine; but its most in- fluential advocate was Origen, who worked it out in a clearly defined form in his great abridgment de Principiis. Origen was familiar with the Alexandrian philosophy, being a fellow-student of Plotinus at the school of Saccas. Fundamental to the system of Origen is the thought that God is immaterial and indestructible and that the spirits which God has created from all eternity are the spirits of men, and these were made in the image of God. All created spirits are endowed with freedom, and in the exercise of that freedom the spirits of men have fallen. The material world was subsequently created for the discipline and purification of spirits who have misused their freedom. The fallen spirits of men are banished into bodies in this material world. Man has a threefold nature: body, soul, and spirit, the material body and the rational soul or spirit being united by the animal soul. The rational soul is the immortal and eternal part which has suffered the premundane fall. Origen was followed in this teaching by Pierius, John of Jerusalem, Hylmus, Nemesis, and others. Jerome at one time believed in it, and Augustine acknowledged himself in doubt. It was opposed by Methodius and Gregory of Nyassa, and condemned by a decree of Justinius A.D. 529, and by the Council of Constantinople in the same year; but in the Western Church it maintained itself in some quarters till the time of Gregory the Great at the end of the 6th century. Since that time it has been common held that the existence of all men was present to the foreknowledge of God and that it is part of the divine purpose; but a definite statement of actual pre-existence has not had a place in the acknowledged creed of any of the great Christian Churches. Still, individual theologians are to be found who have explicitly maintained it.

A particular phase of this doctrine occurs with regard to the person of Christ. It was taught by Origen and held by his followers that, like the soul of Adam, the soul of Christ was pre-existed by God from eternity. It did not, like the others, suffer a premundane fall. The divine nature of Christ united with this undeified soul and through it with the body. Among modern writers Isaac Watts (1674) adopted this theory. Cf. also Julius Müller.

6. In Indian religions.—The doctrine of pre-existence has a place in some form or other in most of the religions of India—Buddhism and Islam being but a few of the exceptions. Whether it was brought there by the Aryan invaders or afterwards originated among them, or was adopted by them from the pre-Aryan inhabitants, has not yet been determined. The significance of the doctrine is conditioned by the varying conceptions of the Deity which have been current in different periods and in different religious systems. The prevailing mode of thought is pantheistic, but in the Vedic hymns it sometimes shades off into polytheism; and sometimes—as is the case also in the later Buddhist literature—it denounces pantheism. Thus, in Buddhism it becomes practically atheistic; whilst the pantheism of Brähmanism becomes blended with polytheism in Hinduism. In the Rigveda the mother Aditi, 'immensity,' is conceived of as having created all existents, and she is 'what has been born, and what will be born.' The teaching—a already a part of Brähmanism—becomes clear in the Upasnisadas (c. 500 B.C.) and in most of the systems of philosophy founded on them, as well as in the codes of law. The doctrine is common to all these writings that the soul (purusa, or the self, atman) is eternal. It has always existed and it always will exist. In the case of man the soul, when united to the body, is brought to birth and endures the mission of an earthly life. Of the various modes of presenting the doctrine only examples can be given here. According to one representation, all organized existence, material and immaterial, develops out of a primal substance, prakṛti, in virtue of its own internal tendency. Or, when this view is set forth in such a way as to involve a materialistic monism, but in the Śaṅkhyā philosophy the basis is dualistic. According to the last theory, besides the prakṛti, there are individual souls existing eternally and indestructible, and it is to unite with these that the prakṛti energizes itself. There is no supreme soul, for all souls are equal; but the modifications of the prakṛti with which they unite produce differences in the earthly mind. Or, if the soul is in origination from matter, it can free itself from it and regain its liberty. There is another way of presenting the theory in the Upasnisadas and worked out in the Vedānta philosophy which is essentially idealistic and involves a pantheistic view of the universe. One principle of life animates man and nature. It is the atman, or self. It appears in nature as air or ether and in man as breath. The individual soul (jīvātman), which has its abode in the heart, is part of the supreme self (paramātman). The existence of a practical, experimental kind. The consciousness of separate existence is, however, illusion, ignorance of its real nature, and true knowledge consists in recognizing itself as identical with the supreme atman.

A doctrine of pre-existence cannot be said to find a place in Indian Buddhism (which denies the atman), but it appears in a distinct form in the closely related system—Jainism. The Jains believe that the world is eternal; all animates beings are composed of soul and body; the soul has always existed and always will exist, but during the earthly life or series of lives it is in bondage through its association with matter.

The doctrine of pre-existence is found in many of the Hindu sects of the Vedānta religion among the Hindus are Vaiṣṇavism and Saivism, although the sects which represent these have been subjected to almost endless subdivision. The materials for their creeds are derived chiefly from Brähmanism by paraphrase and by the addition of purely Hindu and aboriginal, that were independent of Brähmanism. Vaiṣṇavism has the greatest number of adherents, and among most of its sects the influence of the Vedāntic idealism, as expounded by Śaṅkara, is apparent, although as time went on the distinctive conception of the creed. Sometimes Kṛṣṇa, one of the incarnations of Vīṣṇu, is represented as being alone real, the absolute being in human form, and the consciousness of independent
existence in men is the product of his deceptive magic; but in the teaching of the Panchârâtras individual souls are emanations from the Supreme Being and, till they are absorbed in him again, enjoy a temporary existence, as a result of which is described in the Vedânta-sûtras, Sûtra l. 6. 1-2, the doctrine of Tâmânuja, who are numerous both in N. and in S. India, attribute a distinct but finite reality to individual souls; and the followers of Ananda-tirtha in the south regard individual souls as having been pre-existent in some preceding incarnation and from God. The Sûtras—in some respects diffeent—follow the Vedântic teaching on this subject.

In Saivism, which is more closely related to the doctrine of Sâkhâ philosophy, the distinction of the soul from God on the one hand and from matter on the other is made clear. While the soul is united to matter, it is subject to error and sin; it is separated from God, held back as by a chain which the faithful should earnestly seek to have broken. There is, however, a branch of the Saivite religion, represented chiefly by ascetics in Benares and in the Deccan, in which a pure idealism is adopted. God is regarded as the only substance, and objects, including the individual ego, as His ideal thoughts.

These notices are far from an exhaustive enumeration of the modifications of the doctrine to be found in the Indian religions; but from them we see that pre-existence has been part of the teaching of all the great religious systems of the Hindus except Buddhism; that it is still a definite part of the teaching of that Hinduism, whether the cult adopted be that of Vishnu or that of Siva, which is now the religion of more than 200,000,000 of the people of India, as well as of the smaller communities of the Sûtras and the Jains.

7. In other religions.—The belief in previous incarnations common to many primitive religions—among N. American Indians, Australian aborigines, African tribes, and elsewhere—is discussed under the title INCARNATION; here we are concerned with the origin of the soul previous to any incarnation. On the other hand, it is probable that pre-existence was believed in among some races whose religio-philosophical systems were similar to those of the Hindus, except Buddhism. From the Rigveda, one of the oldest secular writings of the Veda, we learn that the doctrine of pre-existence was held by certain authors so early as the second millennium B.C. The doctrine of pre-existence is also shown to have been held by such philosophers as Pythagoras, and by such poets as Homer and Virgil, and (as peccatum originarium) it is itself an intelligible act, cognizable only by reason, performed by the individual, not in the phenomenal world but in the supersensible sphere. He does not, however, represent this act as taking place in a pre-existent state. The act is timeless (Religion innerhalb der Grenzen der blossen Verknüpfung, ii. [Gesammelte Schriften, Berlin, 1900-13, vi.]).

The thought thus darkly suggested by Kant was given more definite form by subsequent philosophers. Schelling, postulating pre-existence, conceives of man as falling at the beginning of all things from absolute to self-dependent existence, in which state he remains till birth. Variations of a theory of pre-existence on a basis of idealism or of realism are to be found in Schleiermacher, Schopenhauer, I. H. Fichte, Herbart, and many others. Julius Müller presents the doctrine in a clearly-defined form. A threefold primitive condition is assigned to man—his origin, his final end, the eternal ideas, in the extra-temporal existence of which every person is a part of the temporal beginning of his earthly development. Believing in trichotomy, he regards the ψευδόνομος as being generated with the body, and the πρωτόνομον οίκον as the element that is pre-existent. The πρωτόνομον οίκον is thought of as the source of the providence of nature, because involved in a condition of primitive sinfulness in the extra-temporal stage of existence. Among recent philosophers J. M. E. McTaggart thinks that pre-existence can be proved in a directly metaphysical way. He believes in a plurality of lives both before and after the present life. Henri Bergson, developing his theory of creative evolution, speaks of souls as being continuously created, which, nevertheless, in a certain sense pre-existent. William James, in explaining his transmission theory of the function of the brain, thinks of our consciousness as being continuously derived from something mental (a mind or minds) that pre-existed—from a consciousness that existed before the earth or the world. The direction in which the minds of many writers are turned is shown by the frequent use of such terms as ‘oversoul,’ ‘soul-stuff,’ ‘mind-stuff,’ ‘subliminal self,’ and Fechner’s ‘psycho-physical threshold.’

Belief in pre-existence is expressed by several English poets and by other writers. Vaughan has it in The Retreat (1654), the leading thoughts of which are borrowed and amplified by Wordsworth in his Ode on the Intimations of Immortality. In the treatment in both cases there is an echo of
Plato's doctrine of reminiscence, with this difference that it is the child in its earliest days that has the clearest recollection of the heavenly world and the impression becomes dimmed as life progresses. In the Poem of the House of Usher, M. J. L. assumes pre-existence to account for his familiarity with a strange place, and for the bond that binds two lovers. Browning represents Cristina as feeling that 'ages past the soul existed' (cf. the Ueberweg, J. belief whilst two assumes the in the ian by present and ian, in D'Oultre (1856), whilst not advocating transmigration in the ordinary sense, speaks of birds as embryo souls, candidates for the life to which the human soul has attained. Edward Beecher is an advocate of existence in The Conflict of the A. B. O. Wilberforce, in The Hope That is in Me, 'I believe we have all been in being prenatally.' The evidence of a similar belief can often be seen in recent Russian literature. Among modern theosophists the belief is common that the conscious spirit is an eternal entity, a unit from eternity.

9. Summary.—By referring to the particulars given above it will be seen that belief in pre-existence prevailed very widely in ancient times, especially in the more developed ethnic religions. To what extent borrowing occurred has not been determined, but the probability is that in several cases the belief originated independently. It is held at present by most of the Hindus, by most Jews, and by many philosophers and other Christians in Christian countries. There seems to be a tendency to revert to it in philosophic arguments in favour of the immortality of the soul. The doctrine appears in at least three distinct forms, each of which has several variations. (1) In the pantheistic form the soul pre-existing only in the Deity, and in the present life it continues to be merely a manifestation of the Deity. The Vedantic philosophy, Spinoza, Hegel, and many others may be cited. It was shown to Leibnitz that to strict pantheism the same theory applied. (2) Another form is where the soul is thought of as having a distinct independent existence during the present life, and as having existed previously, but not as a soul. Manicheism and some of the Pantheistic of the 18th century, in which the pre-existing soul is a distinct individual entity. The degree of consciousness ascribed to it varies, but the present life is a continuation of that which went before. The soul is an emanation from or is created by the Deity, or is eternally existent. It is in one of the varieties of the last form that the doctrine generally appears. The conditions in which the pre-existent soul lives are seldom described with any attempt at exactness, but generally to be states of bliss or at least of freedom from distress exceeding anything known on earth. This is the doctrine of the Essenes, Plato, Philo, and the Saivites. In many cases pre-existence is simply postulated, but this may or may not be made a belief in it. It has been regarded as more easily credible than any other account of the soul's origin—than either creationism or transmigration; as accounting for the feeling of familiarity that one sometimes has for a place never visited before, and the affinity that man has for other men. The details of or at their first meeting (so in modern poets); as accounting for innate ideas (Plato), for original depravity (Müller), Origen derives it from the nature of the soul and regards it as the correlative of immortality; the idealists from the conception of existence. McTaggart hopes (1915) to justify his belief by a discussion of the fundamental of reality. None of the arguments advanced is convincing, and the phenomena observed can be better accounted for on other

R. Moore.

PREFERENTIAL DEALING.—'P referential dealing' has been defined (e.g., in the Christian Social Union paper on Proposals for the Social Order) as pertaining to dealings only from tradesmen who observe the standard regulations for each trade'; and 'standard regulations' are taken to mean 'the best that can be ascertained at a given time in a particular locality, whether the regulations be those of the local authority or of an arbiter by an arbitrator. In this sense the term preferential dealing was first applied by the C.S.U. in 1906. An attempt had been previously made in England to organize a movement on similar lines under the title of a 'Consumers' League,' but no definite results seem to have been obtained by this method. It should be noted, however, that in America the 'National Consumers' League' has accomplished a great deal. It has a wide scope of action, including the promotion of legislation by the various States in regard to the early closing of shops, the limitation of the hours of work for women and children in factories, etc. At an earlier date the principle of preferential dealing had been recognized in England by the 'Fair Wages Resolution' passed by the House of Commons in 1891, requiring the payment of 'standard' or 'current' wages under all Government contracts.

As interpreted by the C.S.U., this practice was described at first as 'exclusive dealing,' but this negative term was soon replaced by the positive term, 'preferential dealing.' It was found that the mere suggestion of an organized attempt to exclude tradesmen from public custom, for any
by more or less magical means, but in many instances this is in addition to actual cohabitation. Some writers have maintained that ignorance of the cause of conception must once have been widely spread, and possibly at one time in the history of mankind, has been universal. The reasons alleged for this ignorance are several: conception is found not to result from the wide-spread practice of cohabitation before puberty; why then should it follow it after puberty? Premature intercourse is always dangerous, and even at times disastrous. The proportion of births to acts of sexual union. And even where the cause is known, it is not regarded as invariable and indispensible.

In spite of all this, it may be doubted whether the belief in virgin-birth has ever been wide-spread. In most cases where conception is due to a god or spirit these are envisaged in very material and human aspects. Among the Sinupolo (British New Guinea) pregnancy is thought to result from frequent cohabitation. Conception begins in the breasts so that the woman becomes pregnant. Later the child drops to the abdomen. There is no idea of an intra-abdominal organ. Among the Yakuts the woman is thought to have a greater share in procreation than the man, who therefore takes no responsibility for monstrosities.

2. Averting barrenness and securing male children. As the possession of some children at least is considered a great invariable with savage peoples as well as at higher levels, many devices are made use of to avert barrenness.

The Eskimo woman of Behring Straits goes to a shaman, who gives her a kind of doll over which rites have been performed. She carries this doll under her pelt.4 This is a piece of imitative magic, and may be compared with a Japanese method in which the woman is packed in a form of delivery with a doll at the phallic festival.5 Various practices with a doll-like image occur elsewhere—among the Bataas, in Torres Straits Islands, in the Sandwich Islands, the Himalayas, the Basutos and other African tribes, etc.6 Among the Jahoma women are thought to be barren or fruitful at the will of the clan deity. They have a black doll which must be presented to the chief, and is supposed to be given by the wife to her husband's care during her pregnancy. In the Congo region heathen women are said to be cured by entering the ndeula secret society, when the entrant gets a new body.7 Among the Awauma barren women wear tiny horns in hope of bearing children, the reproach of barrenness being the worst local. In Central Africa the woman provides a black hen, which is tied to her back, and there fed as if it were a child.8 In Egypt barren women pass seven times under the stone on which the bodies of decapitated criminals have been washed, and then have their faces in the polluted water. Others step over the body of a decapitated man.9 Bathing in or drinking the waters of a sacred well or spring is often resorted to for the cure of barrenness. A young woman with a child in it, or who has become mothers after doing so. In modern Muhammadan districts favourite places of resort are the tombs of saints, where the writers say that flowers and plants spring from the heavenly grounds. Women visit the tombs of Christian saints. Contact with fixed rocks or boulders or relics of legal guilt is also recommended; the reformation then believed to be effectual for the removal of barrenness—the spirit of the stone or of the dead buried there perhaps being supposed to assist the rite or even to be reborn.

Sometimes special ceremonies occur to ensure that the expected child will be a boy. In Sabai, Torres Straits, the expectant mother nurses the image of a male child made by her husband's sister. On the other hand, a woman was not only male offspring. In Japan the expectant mother puts part on her husband's dress, and having gone round a well three times, looks at her face in the water. Without looking behind, she makes the Woman of the moon drink it. Then for three days she leaves the cover on the well, which is a

domestic god. In India a low-class mother of daughters only has been known to kill a neighbour's girl as a sacrifice in order to ensure the birth of sons.

3. Tabus during pregnancy. — The expectant mother and sometimes also the father are the subjects of various tabus, for the mother usually connected with food, for the father with that also, but more usually with his actions or pursuits. The validity of the tabus is generally realized in a tabu state, since her condition is associated with those sexual crimes which are so mysterious to and so much feared by savage man. Some of the tabus imposed on her or her husband may also be due to the belief that following the eating of some particular food; others are the result of mal-observation or superstition; others are purely arbitrary. Only a few typical examples need be given here.

Among the Australian tribes food restrictions are general for the woman, less so for the man, for fear of hurting the child or causing its death. 2 In Murray Island birthmarks are attributed to the mother's eating a certain fish, the juice of which touched the child. 3 With the Sinagulo of British New Guinea, the child shall be deformed, certain species of yam and fish are forbidden to a fish, lest the child's skin be toughened. 4 Among the western tribes of Torres Straits no woman may eat of a certain penguin till past child-bearing, 5 in Halmahera the woman shall not go near the remains of her husband's food, for that would cause difficult labour. 6 In Acean one of the tabus, or tabas, is that a woman must not eat many specified articles of food for fear of harm to the child. 7 With the Waawanga (E. Africa) the woman must not eat meat called roroko, if it is already dead the child will be deformed. 8 If she does, her child will be sickly, and, when it begins to crawl, its hair will fall out, and sores will occur on its scalp. 9 Among the Bagah, while there are no special tabus, precautions are taken against eating foods which might do the child harm. The husband must not take viands which are tender, rice, water-roof, lest a miscarriage occur. 10 The father is prohibited from eating certain foods among the Bangala, and many others of the tribes. 11 There is a prohibition among several Indian tribes against eating certain foods of the gynaec (medicine-man). The husband is said to be in a state of filo. Tabu is also placed on certain foods for the woman by the man, but not vice versa. 12 With the Baganda sickly or delicate children are kept away from the woman, who is forbidden to eat several kinds of food, lest the child be still-born or delicate. 12 Among S. African tribes there are several restrictions prescribed by custom, but no evil consequences are thought to follow departure from these. 13 In ancient Persia the woman was forbidden to eat dead matter under pain of death, and she could not be purified from this pollution. In some Indian tribes, women from the Indians of the Issa-Japura district, S. America; foods are much restricted—eg., a peace-offering is given away, but it has teeth like that of animals, etc. 14 A further tabu is seen in the very general avoidance of sexual connexion between husband and wife either during the whole period of pregnancy or during part of it, especially towards the end. Some of the precautions—tabus—is for the child to be deformed (Sinagulo, British New Guinea) 15 or lest the hunting and fishing of the father should be bad and the child sicken or die (Bangala). 17 Such avoidances are the result of the belief that any time of sexual crisis is dangerous. Examples are found in many parts of the world. 18

In British Central Africa a man will not commit adultery during the pregnancy of his wife because he would be accused of it if she died.

In connection with the object of certain Hindu rules are worthy of notice. The pregnant woman must be given food before the household and even before guests; 19 way must be made for her and she must be kept-free from hunger even if she is fined for committing a nuisance; 2 A Brahman must not eat in her house; 2 the crime of killing her is equal to that of killing a Brahman.

Other tabus are of a precautionary nature, though the link between them and the unborn child or the process of birth is of a magical kind. One of these is that no knots may be tied during pregnancy by the woman, otherwise the child would be deformed—this, the woman being thus herself apt to be tied up, or the child constricted. This is akin to the custom of unlocking all locks in the house at child-birth, lest the womb should be locked up, or to the German superstition that a pregnant woman should not creep through a hedge. 2 So, too, Aim men should not spin or twist ropes when their wives are pregnant, lest the child's intestines should be entangled, and Romans were praying to Lucina when they be to loosen their hair, so that she might loosen their wombs. 2 For similar reasons a pregnant woman should not sit with legs crossed, nor should her husband do so, nor any one sitting near her; nor should they sit with clasped hands. Lucina sat by the side of the house, and she was the house-ladder, the Lucina, the ladder to Heaven, the Lucina, the ladder to Hercules; hence his mother travelled with him seven days. 11 In Sumatra the woman must not stand at the door or on the threshold when the husband returns. 12 In other places among the Torajas standing or loitering on the ladder is forbidden to every one for the same reason. 11 In India an elder woman should not enter the bathroom, for that would cause harm. No work must be done—e.g., locking or unlocking a door—lest the child be deformed if you any accident in cutting, lest it have holes in its flesh or a hare-lip. 2 An ancient Parsi regulation was that no toothpick should have the bark left on it. This was dead as a toothpicker, or an ivory toothpick, in which case the child would come to harm. 14 In India no one should step over a fallen bress, lest he cause suffering to a pregnant woman. 2 The woman herself who went to the Weta, a large tree, a step could not arise, and in Hindustan stepping over a hare's form causes the child to suffer from hare-lip.

In some instances charms are worn to prevent any mishap which might happen to the woman or the child, or to give an easy delivery.

Among the Bagandas in the later weeks of pregnancy pigments are painted by a medicine-man on the woman's breast, abdomen, shoulders, etc., and she wears charms to cause easy delivery. 17 After her marriage a Nandi woman collects pieces of their dress from unmarriagable girls in the neighbourhood and wears them as a charm to ensure pregnancy taking its normal course. After birth they are returned and a feast takes place. 18 With the women of the Tung in India while pregnant women wear wooden beads with festoon-medicine inside to avert dangers of pregnancy and cause easy delivery. They are made by the medicine-man. 19 A New Guinea man, when his wife is pregnant, puts the sail of the canoe on the bed. He is procured from a priest, who blows upon it. 20 Among the Awar and among the Toda of the Nilgiris instances A. E. Crawley, The Mystic Rose, London, 1902, p. 9.

Pregnant women being in a state which renders them liable to the attacks of evil spirits, various precautions are taken against these. The charms so often worked probably form one of such precautions.

Among the Sinhalese the woman is protected from devils by mantras for charging each day's first food and drink. 1 Among the Papuans the woman is induced in its cause miscarriages. The woman is protected at night by an idol, which is connected with a second by a chain of palm-leaves, while before the latter a fire is kept burning. 2 Then the woman must run along the chain in fear and then leap on the tree, mistaking it for the woman. 3 With the ancient Parce fire was maintained in the house by the woman before the fire was protected Zoroster's mother when attacked by demons. 4 Among the Greek woman, her husband must throw an evil spirit on childbirth, the river-spirit and also the Python are worshipped to cause easy delivery. 4 Protection of the woman against jinn is credited to the Protection of the house from the seventh month onwards. After delivery it is let loose in the Jew's quarter, carrying the jinn with it. 5 Among some of the Java spirits, (spirits) is invoked, and a religious dance performed as soon as pregnancy is diagnosed. 3 Prayer is also offered for the child's health. For a Ravnakala goddess of pregnant women cf. E.B.B. 3046. 6

Sometimes the pregnancy rites are of a more elaborate nature than those which have just been described. 7 The seventh month husband and wife go to a river or well. Banana-leaves are fastened round the upper part of the woman's body. Through an opening in front of these the husband drops a weaver's shuttle, which an old woman catches, pretending that it is a child. An egg, emblem of the afterbirth, is then passed through, and a cut is made at the opening in the leaves, cutting the nest in two strands. The purpose of this ceremony is to facilitate delivery. 7

Most elaborate of all are the rites followed in India, of which, as practised by Hindus and Muhammadans, a detailed description has been given by H. A. Rose. 8 8 These rites vary from tribe to tribe, and consist of ceremonies in the 3rd, 5th or 7th month or in all three, or in the 8th or 9th month. There is an interchange of presents between the woman and her mother. Offerings are made to the spirits. The woman is bathed and dressed in new clothes—not worn before the performance of the rites. The kinfolk assemble, and gifts of food or fruit are placed in her lap. She and her husband adore the gods. The Muhammadan rites are analogous to these, but without the worship of the gods.

The Kathis, a Panchab tribe, perform funeral rites for the female with a sacrifice, while the parents hold a sacred thread for the birth. 9 This goes back to the belief found in the Laws of Manu that after conception by the woman, her husband becomes an embryo and is reborn from her. 10 He dies when his son is quickened; hence the funeral rites.

4. Power of the pregnant woman.—The condition of the pregnant woman is often thought to have magical power, especially for fruitfulness.

Corn grown by her is used to fertilize the growing crops among the Zulus. 11 She eats of the food at the feast held among the Shoshoneans and Navahos. In Indonesia when a rice crop is being ordered to increase the fruitfulness of the rice. 12 In the Nicobar Islands gardens are made more fertile by her presence in them or by her ashes being thrown on them. 13 Similar treatment is accorded to savages and survive in European folklore. Probably for similar reasons, but more water is sacrificed for the woman in the Kirdi, with offerings to the earth 'pregnant with the seed,' the unicorn calves burned, and their ashes used at the Parthia. 14

It is said that in Lancashire gypsy belief a pregnant woman protects a man from hurt by mortal hands. 15

On the other hand, pregnant women being more or less in a tabu state, 16 their influence on the crops may be dangerous, as examples from New Guinea and elsewhere show. 17

In British Guiana, again, if a pregnant woman eats of game caught by hunting dogs, it is thought that they will never hunt again. 18 In the Panjāb it is held that a snake becomes blind if the shadow of a pregnant woman falls on it. 19 Presbyteral priests say that a pregnant woman is effaced by two men, both must be cleansed by the bārebāshī rite. 20

5. Determination of sex, etc.—Many methods are adopted to discover whether a woman is with child, its sex, and the like.

If a Negro woman is in doubt as to her condition, she goes to the sorcerer. Allowing his eyes with a magic drug, looks into a calabash of water and tells what is to happen. 21 In Banke's 'Island of the Dead' a priestess is enchanted by the spirit of the river. If the water squirts out, a boy will be born; if not, a girl. 3 Sex is determined among the Veddas by the position of strips of basalt; they have distinct beds in which they have already referred to. If they fall over the face, a girl will be born; if on the occiput, a boy. 5 In Japan, if some one calls a pregnant woman 'good morning,' then at the end of three days she is asked whether the child is born. If it is born from the left, the child is a boy; if from the right, a girl. Another method of determining sex is to add together the years of the father's and mother's ages and divide by nine; if the remainder is odd, a girl will be born. 22 Among Muhammadans in the Panjāb it is thought that if the woman's milk before birth is thin, she will have a boy: if when put in a shell and fire is applied, it dries up, she will have a girl. 23 According to the Sūdārṣaṇa Pūjālīkā (vii. 34 t. [SBE.xxi. 24]), a preacher of the law (Buddhist) can discern if a woman is pregnant of a dead child or if she will have a healthy child. He discerns by the odour whether the child will be a boy or a girl.

PREMONITION.—See PRESENTIMENT.

PRESBYTER.—See MINISTRY.

PRESBYTERIANISM.—The name 'Presbyterian' may be applied in a general sense to that theory of the Church which aims at realizing its visible unity through government by presbyters, clerical and lay, such presbyters being set apart by their peers with popular consent, being all of equal status, and being organized for purposes of ecclesiastical administration into Church courts, which rise one above another in an ascending scale, from the congregational to the national. In a sense more particular 'Presbyterianism' is used to denote the concrete effort after the realization of that idea which, originating in the work of John Calvin, was elaborated by those who followed him into a definite form of Church organization, that begins with a definite form of ecclesiastical ritual, and which in one form or another counts perhaps 100,000,000 adherents to-day. Presbyterianism seeks to avoid, on the one hand, the absolute subjection of individual congregations to government from without and above, and, on the other, their absolute independence of all restraint. Of the three great types of Church government it is therefore the middle one, between Congregationalism and Episcopacy.

I. Emergence of the Calvinist Presbyterian System. — 1. The NT Basis.—Serious Presbyterian scholarship is long past the stage of the crude 'jure divino' defence of Presbyterianism, as if it were the only form of Church government expressly sanctioned by the Word of God and the institutions of the Bible. During the later sixteenth century, the famous controversy between Puritans and Anglicans the Puritans claimed divine sanction for their ecclesiastical system, or, at least, divine disapproval of that of their opponents, as against the Anglican argument from the experience of the episcopate; but in the later stages of the conflict the two sides reversed their roles. The controversy died down about A.D. 1700 after the battle over the Ignatian Epistles; and the whole question of the Presbyterians' claim to the Christian Church was only revived under the stimulus of modern historiography.

cal scholarship, with new methods, and under a
new form. It is now realized by impartial critics that no one form of Church government is to be
definitely associated with Ignatius or Calvin or
any other. While Calvin, therefore, and others of
his day believed themselves the restorers of primi-
tive Christianity, freed from the errors and corrup-
tions of Romanism, modern scholarship cannot
absolutely subscribe this opinion. Even if the
Reformation, however, had been successful in its
attempt to construct a clear picture of the NT
Church, they must have found it impossible to
reproduce with perfect faithfulness a primitive
creed and polity which later had been in success-
ively changed; and all the conditions of modern
worlds; conversely, such a reproduction of primi-
tive institutions would be a poor guarantee for
their success in modern times. A living organ-
is necessarily subject to change, and the attempt
to ignore a millennium of ecclesiastical history
could not but fail. So far, then, as the advocate
of Presbyterianism makes use of the NT to-day,
he must claim to reproduce the spirit and intention
of the primitive Church, and not its mechanism;
he must live in the Church to-day, and not
those of representative government; how it has
produced a unique and admirably worthy type of
character; and, if these and other possible con-
tentions savour to some extent of pragmatism, he
may reply to this criticism that Church govern-
ment can be, as an actual fact, traced only in
the NT age included— to motives of expediency,
and that one of the fatal errors which have helped
to render the Church has been the injudicious eleva-
tion of government into the region of dogmatists.

Although the conditions prevalent in the early
Church are inconsistent with the possible existence
of either Presbyterianism or Episcopacy as we
understand them, we find both presbyters and
bishops mentioned in the NT; and the problem of
their relationship, which has given rise to endless
controversy, cannot be passed over. Whether we
argue with Jerome that bishop and presbyter were
originally identical, and hold with Lightfoot that
the episcopate was developed from the presbyter-
ate, or with Luther and Harnack, that the offices were distinct from
the beginning; or whether, with Lindsay and Loofs,
we hold that πρεσβύτερος was the official name,
while εἰκεναύω described the function, the problem
remains the same, viz. How did the bishop come
to overshadow the presbyter, and finally reduce
him to a definitely inferior position? The most
feasible explanation yet suggested seems to be
that which is founded upon the bishop's connexion
with the Eucharist, a connexion indicated by
practically all his later antecedents.

2. Sub-apostolic development.—While the διάστη
cs still existed, the official in charge of the celebra-
tion would enjoy a distinctive place, not only in
the Church itself, but in the eyes of outsiders. As
the Church developed into a world-wide body, the
aspect of the Eucharist gained prominence, the
bishop's pre-emience would develop with it. The
cruc of the entire episcopal development seems to
lie here; and, once the bishop had definitely
asserted his supremacy, the episcopate and
the Church, circumstances favoured his steady
elevation. Roman imperialism and Jewish
nationalism were in deadly conflict about the close of
the 1st cent.; Jewish Christianity was rapidly dis-
appearing; and all the conditions were in favour
of the Gentile εἰκεναύω and his function being
recognized as against the Jewish πρεσβύτερος
and his function. The Didache is the most valu-
able document for this transition period; and in
it, as in the present threefold ministry, with the
supremacy of the bishop, the presbyter has the
divinely-appointed form of Church govern-
ment.1 It is difficult, at this time of day, to
accept Ignatius's own view that he received this
type by divine revelation; and the brief interval
of time between the time of his exhortations
and that his theory cannot have been extensively in
practice when he wrote; but his martyrdom
bared and fleged his teaching, and gave undue
weight to his ecclesiastical expediency. Moreover,
the Church was faced in final political or interna-
tional strife by heresy within and hostility without,
and the concentration of power in as few hands as
possible proved of great value. The forming of a
creed, and of a collection of Holy Scriptures upon
which to base it, was logically followed by the
need of an authoritative interpretation for both.
The bishop, already prominent, naturally if not
logically became the authoritative mouthpiece of
the Church in matters of the faith; and apostolic
succession in the Church definitely connects the theory of the apostolic
succession of the episcopate with the necessity
of maintaining sound doctrine; and the bishop thus
emerges from the comparative obscurity of earlier
times with a status in the Church which is
close to that which he had previously enjoyed in matters
of administration. Cyprian's position introduces
a new factor. By his time creed and canon had
attained a position of greater certainty, and the
sacerdotalism of the Church under OT and also
apocryg canons had been intensified; so that
apostolic succession is now a guarantee not so
much of sound doctrine as of the validity of the
priesthood. The evolution of territorial from con-
gregational episcopacy was completed by the
gradual assimilation of the ecclesiastical system to the
imperial. The fall of the Empire, the trans-
fusion of barbarian respect from it to the Church,
the conversion and absorption into the Church of
the northern peoples, all assisted in the process of
their organization and so by degrees growing
into the great mediæval hierarchy—the feudal system
being theoretically crowned by the twin summits of a
papacy supreme in spiritual affairs and an empire
superme in temporal.

1 This episcopacy was congregational, not diocesan.
tual scope; but the mastery of the system was never wholly undisputed, and the essential Christian truth of the worth of the individual before God never fell completely out of sight. Throughout the growth of ecclesiasticism we can discern a tendency to a group of revivals, but while it was manifesting itself primarily in the form of Montanism (q.v.), it was suppressed, but, in its essence, defined extinction. Athanasius was faced by Arius, Augustine by Pelagius, Bernard by Abelard, Augustus by Scotus; the slavery of obedience was always incomplete. But it is in monasticism (q.v.) that we can see most clearly the opposition of individualism to the tyranny of the institution. The impulse which, in the successive forms of Manichaeanism, Novatianism, and Donatism (q.v.), succumbed to the need for closer organization persisted in the form of monasticism, and established an unbreakable hold upon Western Christendom.

From the beginning of monastic history the conversion, the education, and the civilization of N.W. Europe were almost entirely the work of monks; and, while the episcopate succeeded in forcing the monks into the priesthood, monasticism conquered by forcing edibility on the Western clergy and in manifesting in the order a closer discipline and control. The opposition between the secular clergy and the monks runs throughout mediavalism; and the monastic side of the opposition represents the preparation for the Reformed Churches. Whereas the secular clergy obeyed a monarchic bishop, the monks obeyed a presbyter-abbot. Their vow of poverty gave expression to the truth that a man is of value apart from his property, their vow of celibacy destroyed the feudal leitish of family relationships. It was a vow of that of free-will obedience to a superior in whose election they had a voice, and in making this vow a man left a society in which he was a mere irresponsible cog accidentally placed in a machine for one into which he entered voluntarily. Thus, as A. V. G. Allen puts it, 'every direct specific purpose of the monk seemed in the long run to have been reversed, or to have proved a failure,' yet there was 'a deeper purpose which could not be defeated,—the accomplishment of an inner fulfillment of family relationships. It is in this sense, as we might call it, conception of Christian organization, that we discern the germ of the Reformation. Moreover, whereas the secular clergy and the episcopate had all along represented sacramentarianism, the final growth of the Reformation, the monastic system, on the whole, had stood for the homiletic aspect of worship and a form of organization at once more elastic and more representative of the popular voice. Of course, each side reacted upon the other. The monks were often the stoutest champions of orthodoxy, and their services were often most highly ritualistic; on the other hand, the Church was democratic enough to make it as possible for the most obscure Churchman to ascend to the papal throne as it is for any obscure citizen of the United States to become President; and the semblance, at least, of representative government was retained in the election of bishops by the cathedral chapters and the choice of the pope by the conclaves. But, in essence, the differences which afterwards between open in the Reformation between Catholic and Protestant subsists throughout the Middle Ages between the episcopate and monasticism; and it only required favourable circumstances to set on foot the process of differentiation.

4. Decline of papacy and the Reformation.—

The decisive factor in the final separation of the 16th cent. was the weakening of the papacy, which was the only power capable of holding together the opposed sides of ecclesiastical life. The fate of Boniface VIII. marked an era in the decline of the papal monarchy, which had ruined the Empire, and it is only by a more general look upon the growth of European nationalities; the by- lonish captivity of the Avignonese popes weakened the papal grip upon England and Germany. Early in the 14th cent. William of Ockam and Marsiglio of Padua, roused the pope in the interest of Louis of Bavaria. Marsiglio's doctrine of the democratic idea of Church and State is a sign of the times; the fact that the Fraticelli were deeply involved in the anti-papal revolt is another; and the whole incident has been well named the Minia
tura Reformation. The work of Wyclif in England is a manifestation of the same spirit, which, passing from England to Bohemia and John Hus, remained active there far into the 15th century. These various movements combined projects both of political and of ecclesiastical reform—they attacked the dogma as well as the organization and morals of the Church. To the growing distrust of the papal monarchy and the whole system with which it was bound up the Great Schism contributed in no small measure; and the conciliar movement, while it represents in essence the struggle between the aristocratic episcopal form of Church government and the autocratic papal form, helped to pave the way for democracy by asserting the rights which the popes had exercised. They affected to rule. With the close of the Council of Basel in 1447 the papacy secured an illusory victory over its foes, but not even the splendour of the Renaissance period could blind the eye to signs of decay in the moral and financial corruption of the Curia. The rise of European nationalities, the inventions of printing and of gunpowder, revolutionary discoveries both geographical and scientific, contributed to the general ferment. Moderate men might desire a reform of the Church on the existing basis, but others were driven by the monstrous indifference of the Curia towards its own corruption to consider the evil as inherent in the system itself, and to desire a more radical reformation. In particular, the New Learning, by exposing the hollowers of the papal pretensions, by weakening the belief in transsubstan
tiation and sacramentarianism generally, and by reviving the interest of Europe in the teaching and homiletic side of Church activity, helped to relax the hold of the Papal government. It was the duty to set free the monastic side of its life from the long alliance with the episcopal. Finally, in the hands of Luther, Zwingli, and Calvin, the crisis came—dissension matured into division—and monasticism achieved its independence in the Re
to. It is no accident, but the result of a profound historical necessity, that the lands which remained in the Roman obedience were precisely those which had been fully Christianized in pre-
monastic days, whereas the lands in which monarch missionism, especially of the type which had laboured went over to the Reformation side.

From one point of view, the Reformation repre
sent the revolutionary and the rending of Christendom in pieces; from another, in which the pieces correspond, with some definiteness, each to some previous tendency within mediavalism; and, from another standpoint, the Reformation is the substi
tution of spiritual unity under the headship of Christ for the secular lordship of the Church, and thus a fall of the papal monarchy. The democratic constitution proposed for the churches of Hesse, e.g., was the work of Lambert, a Franciscan monk, and recalls the Benedictine organization. Lutheranism re
minds us forcibly of the Augustinian order; and

---

2 Ibid., p. 175.
the Presbyterian type of constitution under Calvin and his followers calls to memory the organization of the great monastic orders of later mediaevalism, which many three centuries diluted into the groundwork of society. Point for point, this parallel between mediaeval tendencies and Reformation facts could be worked out in much detail. It will suffice, however, to note that Presbyterianism, like other ecclesiastical organizations, underwent a sudden and suddeny about 1550 on a career totally unprepared for, but was the emergence into freedom of a tendency many centuries old. Substitute Christ for the pope as the head of the Church, and spiritual for corporal unity, and you have at once the nature and form of Presbyterianism. By and by, it became a rare event to find them in unreflecting minds.

5. The question of government.—When we consider the great importance which by and by came to be attached to the question of Church government—so that the form of organization adopted by Presbyterianism became, in time, its chief differentia from the rest of Protestantism, and 'Jure Divino' arguments went hand in hand with argumentation on ecclesiastical rights—it is curious to reflect that, in the early days of Protestantism, the question of government was a secondary consideration. The Reformers, following the monastic lead, were more concerned with the passions of Christ and the moral minds, and provided they got rid of the papal headship and could secure the safety of great truths like that of justification by faith, they kept a reasonably open mind on the question of organization. The salvation of the soul was in their eyes the primary object; the question of Christ was the vital point; other matters were subsidiary. Being in revolt against over-organization and all the loss of individual Christian liberty which that implied, Luther, Calvin, and the rest could scarcely make a virtue of ecclesiasticism.

Ecclesiastical organization was perhaps the least important activity of Martin Luther and the Lutheran Church. In common with the Calvinists, this Church recognized the priesthood of all believers and the parity of ministers, but, unlike the Calvinists, and not subscribing to the idea of a fixed principle of organization in the Scandinavian countries, where kings and bishops co-operated in the work of reformation, the episcopate was retained, though in a modified form; in the German princely states, the episcopate was delegated to the civil power, which in turn delegated it to Consistories, and the persistence of civil government and patronage in the Church prevented Lutheranism from ever attaining to the firm representative organization which has become a feature of Presbyterianism.

The attitude of Melanchthon, who would have recognized either bishops or a pope if they could have been shown to be of real use, has remained typical; the small crop of Lutheran Free Churches has resulted mainly from doctrinal objections to the union of Lutheranism with the Church formed a century ago in Prussia and allied states, and at least one such body seceded on the question of whether government was an essential feature of the Church at all.

The Calvinist bodies were prevented by circumstances from any such indifference to the form of Church government; for, whether by accident or by necessity, they found themselves situated either in republics or in principalities and kingdoms where the question was one of symmetry with the civil government. The Lutheran plan impossible, and where the opposition of the bishops sooner or later demanded the repudiation of episcopacy. As has now been shown, the retention of episcopacy in some Reformation lands and its rejection in others was no accident, but a logical consequence of the attitude assumed by the bishops and the civil authorities towards the Reformation.

II. SUBSEQUENT DEVELOPMENT.—I. Doctrine.

(a) The first of these is the doctrine of the absolute sovereignty of God, which is the keynote of all the other Calvinist developments. This carried a decided pressure on the dogma of a pre-established destination (q.q.v.), which, in their rigid Supranasussian form, denied any man participation whatever in the work of saving himself, and, in their milder Infralapsarian form, left him only a very minor part to play in it. This dogma, however, may seem to the sensibilities of to-day, is not to be dismissed off-hand as if it were a mere negation of man's free will. The 'mere good pleasure' aspect of the doctrine is not the vital part of it. In the days when Calvin promulgated it the agony of a dying age and the birth-pangs of a new might well seem to renew the circumstances under which Augustine had set it forth, and to force upon men anew the conviction that God was all and man was nothing; to depend absolutely upon the sovereignty of God for salvation was better than to depend upon the arbitrary will of a corrupt deceiving papacy and an ignorant, evil-living priesthood; the folly of too much freedom was demonstrated by the excesses of Anabaptists and the little subtilities of the followers of hyper-Calvinism were harrowed from the least hesitated between universism and the predestined release of certain elected men from the consequences of a totally depraved and enslaved human will. Calvin's doctrine of election was not so much as a proof of the justice and the absolute freedom as the joyous proclamation that man lived in an ordered universe where the sovereignty of God removed from the region of doubt the salvation of the true believer. It is an attempt to recognize necessity and order in the world of God's creation—to see temporal things, in Spinoza's immortal phrase, 'sub specie aeternitatis.' This teaching runs throughout the Calvinist Confessions; and, though the settling down of modern civilization has induced in many quarters a revival of the softer Semi-Calvinism, it still permeates the official teaching of Presbyterianism.

(b) The other doctrinal differentia of Calvinism is found in connexion with the sacraments. It differs from Lutheranism in regard to baptismal union, and it is of some importance to note what it substitutes for the reformation of the sacrament of the Lord's Supper. The Roman Catholic doctrine of transubstantiation fell into disfavour as vitally connected with the idea of the priesthood, and organization against which Protestantism was an avowed revolt; and the Lutheranism idea of consubstantiation, with its insistence upon the corporeal presence of Christ in the sacrament, seemed to more radical Reformers to differ so little from the Catholic notion as to be an insufficient guarantee against the reintroduction of an essential part of the priest's function in the priesthood using unscrupulously a magical key by which they could open or close heaven to the rest of mankind. On the other hand, Zwingli and his following, by denying any real presence at all and reducing the service to a mere ceremony, seemed to go too far in the other direction. In actual fact the difference between Luther and Zwingli seriously divided the Reformers. Calvin's theory of the sacrament occupies a position between these extremes, it substitutes for the reformation of Christ a spiritual, though quite real, presence; for the magical opus operatum of Roman Catholicism it substitutes an operation of the Holy Spirit where-by the believing communicant feeds upon the Christ; it professes to find in the real presence a mystery too profound to be explained by
the simple mechanical theory of Catholics and Lutherans or to be explained away by the equally simple denial of Zwingli; and, while the mediating position of the Calvinist theory has brought it under the suspicion of being an elipsozoa cunningly devised in the interest of ecclesiastical and political monopoly—this was how a Presbyterian politician rather than a philosophical theologian—so far as is known, no scrap of evidence exists to show that Calvin had any such deliberate purpose. It fits in quite articulately with the result of all the logic that can be gathered from the evidence there is to the effect on the part of one who was not an extremist to devise a theory of the sacrament which would retain the real presence of Christ without degrading it into the mechanical production of a priest with a formula. If it has served to hold together a great mass of Protestant opinion upon a subject so vital, that is not so much the result of any definite political design as a tribute to its innate reasonable and moderation. It remains yet a feature of constitutional Presbyterianism.

II. POLITY.—The most characteristic aspect of Presbyterianism, however, is its evolution as an ecclesiastical polity. It is a natural inference from the doctrines of justification by faith and of the sovereignty of Christ over the church and a consequent right of the church to ordain and depose its own officials. The Calvinist theory of the sanctification of the regiment, and of the efficacy of preventive and corrective discipline, made ecclesiastical government and ecclesiastical polity inevitable. The Church is a voluntary association of believers, and the Church is the body of Christ. The articulation of the body is glued together by the office of the minister, and the of the clergy as a special caste wielding the powers of spiritual life and death was thereby destroyed. The ecclesiastical organization was looked at no longer from above but from below: the call of the people and the approval of his peers replaced episcopal consecration in the making of a minister; the laity received a share in the government of the Church, and the responsibility of officials to the general body became a recognized feature of ecclesiastical organization. All the marks of unholiness assumed by Reformed Church constitutions, an essentially democratic spirit is discerned. All was, at first, experimental; definite and rigid systems were evolved only by degrees. A 'pure human' episcopacy did not frighten Calvin; and Knox, the founder of national Scottish Presbyterianism, approved, before his death, the reintroduction of bishops for certain specified purposes and on a basis of responsibility. But the fundamental ideas of the Calvinist theory of the Church were the basis of the old type of episcopate, and, before long, the dangers involved in the preservation of even its outward form rendered a definitely Presbyterian theory and system inevitable. Circumstances forced upon Melville and others a greater rigidity of view and practice than had been found necessary by Calvin and Knox; and the conception of ministerial parity as an essential feature of the true Church was forced upon the Calvinist communion by ecclesiastical and political strife. The effusion of blood, as well as ink, in its defense caused the Presbyterians to set a great, perhaps an exaggerated, value upon their theories of Church government, for which they have suffered and fought, as other men for their faith.

The distinction between the nature and history of Presbyterian Church government is necessarily found in Calvin's Institutes and especially in bk. iv. of this work, which deals with the doctrine of the Church. According to Calvin, a Church and ministry are essential to the existence of a true believer, for whose edification the ministers at public worship expound God's Word. A careful distinction is drawn between the invisible Church—known only to God—and the visible Church which is about us here. We shall learn, in the course of this book, that God has spoken to his people in a variety of ways, but that the Word of God is the only rule and guide of life. The Church has to do with the word of God. The Church is the great instrument of the everlasting purposes of God, the means of bringing him glory. The Church is to be sought in the word of God and to be observed by the word of God.

It is not surprising that, in time, Catholicism came to regard Calvinism as the arch-enemy. The Calvinists, e.g., were excluded from the Peace of Augsburg (1575), and were only reconciled to the Peace of Westphalia (1648) on this condition: How far the teaching had become mutually may be gathered from the fact that, as late as 1647, the stately and balanced Westminister Confession cannot refrain from abuse of the pope (xxvi. 6).

1 In the Church God uses men for the useful and honourable office of the ministry, and in Holy Scripture, the touchstone of all his ideas, Calvin finds only two permanent orders of ministry—the pastor and the teacher—though temporary offices, such as those of apostle, prophet, and evangelist, existed in NT times for special purposes, and might profitably be temporarily renewed on sufficient occasion. Of the permanent officers the pastor roughly resembles the apostle, whose function he localizes. What the apostles did for the whole world, every pastor should do for the flock over which he is appointed (bk. iv. ch. ii. § 6). His office entitles him to preach, to administer the sacraments, to exercise discipline, and to exhort; and, while this is ordinarily to be done for a special church to which he should be restricted, Congregationalism is avoided by the qualification that the pastor should move by public permission or by ordination to public authority when the public good demands it. The idea of ministerial parity, which later became a rigidly defined principle of the Presbyterian system, comes out in the contention that, in Scripture, bishop, presbyter, pastor, and minister are interchangeable for the same purposes. Calvin's later correspondence serves to show that he had no objection to episcopacy in so far as bishops might be useful and expedient; but his doctrine of the Church leaves them no essential place in it. Historically he regards the ancient bishop as a mere chairman of presbyters; and, with him, Jerome's famous dictum as to the original equality of bishop and presbyter, which raised no controversy in Jerome's day, and yet was never forgotten, because the basis and character of Church and Calvin's eyes, is shown by the admission of the laity to a share in these. Elders assist in the government of the Church, and deacons are divided into two classes according as they care for the poor and sick or deal with almshouses. The permanent officials of the Church therefore are: pastors, teachers, elders, and deacons. The essential for the making of a minister are: the call of God, examination as to life and doctrine, the call of the parishioners, and the solemn ordination to the office. Calvin almost goes out of his way to defend the people's right of electing their minister, but recommends that, in the interest of peace and common sense, other ministers should preside over the elections in the absence of the people. And in the Church we have in essence many of the features of present-day Presbyterianism—e.g., the equality
of ministers, their election by the people, the share of the laity in Church government, and so on. But so far nothing unique is present, except perhaps the unusually vigorous defence of popular rights. The determinative feature of Calvin's system, however, appears on consideration of his theory concerning the relations between the civil and ecclesiastical orders. The Church, as he saw it, has a threefold power: (1) she can declare and interpret dogma, though she has no right to invent new dogmas not found in Scripture; (2) she can legislate for the Church, but she has no right to demand any obedience upon her members to the prejudice of their consciences; thus he frees men from the Roman type of bondage to tradition and custom, and reduces the spirit of Church government to the observance of mutual charity and self-sacrifice; (3)—and here the most distinctive feature of Calvinism is reached—he insists upon retaining for the Church a certain sphere of jurisdiction. Unlike Luther and Zwingli, who freely surrendered the administrative and disciplinary power of the Church to the civil authorities, whether princely or republican, Calvin attempted to mark off for the Church a sphere of spiritual jurisdiction distinct from the civil; and on the determination of his followers to define and preserve this sphere, irrespective of princes, his name stands out as the one that trouble that fell to the lot of Presbyterianism in later years. Spiritual government, in his view, was as necessary to the Church as civil government to the State; and the two jurisdictions, though mutually helpful to each other, were in fact quite distinct. The Church could not surrender, voluntarily or compulsorily, the power of the keys; she claimed no right to inflict civil punishment, but only to admonish and, if necessary, to excommunicate, for the purpose of producing repentance in offenders—a purpose in which the civil procedure frequently failed. This useful power of ecclesiastical discipline for spiritual evil-doers was to be in the hands of a Consistory of elders which is in the Church what a council in a city; and the basis of its judgments upon individuals was of course to be Christian doctrine. The error of the Roman Church lay not in the claiming of this power, but in the abuse of it for unworthy and unwarrantably evil ends, and Calvin's Church sought to interfere with or to minimize in any way the scope of the civil power. He calls the magistrates "ambassadors of God," "viceroys of God," and says that God considers their office an honourable one; and, while he indicates his personal preference for aristocratic government tempered by democratic consent, he holds that it is the duty of all Christian men to obey whatever lawful rulers have dominion over them. The only circumstances under which resistance, active or passive, is justifiable arise when the commands of rulers clash with the commands of God. Conversely, it is the duty of rulers to preserve public peace and happiness, and their first care must be for religion and morals. Their cooperation is due to the Church in this regard, provided this is done to preserve, not to disturb, the order of the Church, to establish, not to destroy, discipline. For, seeing the Church of God as a perfect spiritual corporation of the elect (I speak of spiritual coercion), it is the part of pious kings and princes to maintain religion by laws, edicts, and sentences, as they do, for instance, in France.

While thus fully recognizing the civil jurisdiction, Calvin holds that it should not interfere with the ecclesiastical, unless by direct invitation or necessity. In this effort to define the respective limits of Church and State, he perilously co-operation while keeping spiritual jurisdiction and liberty inviolate, he stands alone among the Reformers. The forms of procedure set forth in bk. iv., ch. x. are of only secondary importance. The point of his system, which is distinctly characteristic of Presbyterianism consists in his determination to keep ecclesiastical discipline in ecclesiastical hands. Such, in brief, are Calvin's ideas of Church government. The Church he wished to settle in Geneva. In that city there had long been an unstable equilibrium of three forces—the vicar-general from the Alessandri family, the Consistory, and Calvin, often a member of the same house, and the people; and, when Calvin arrived in the city in 1536, the people had just won their freedom, after a contest in which independence and the new faith had played an equal part. In a state of confusion that had supervened; and Farel the Reformer knew that no one in the city was capable of reducing the chaos to order. Accordingly, he persuaded Calvin to relinquish his project of further study for the work of organization. The system of Church government introduced was natural to Presbyterianism: not only did Calvin's own ideas run in that direction, but the attempt to continue episcopacy would have had scant hope of success in a city which had just shaken off the last vestiges of hierarchy. Calvin had hated the bishop less as a Roman Catholic, or a corrupt Churchman, or an official without NT warrant than as an interferer with their liberty, just as they afterwards hated Calvin and the rest for their interference. Trouble began almost at once. In a memorandum of 15 Jan. 1537 Calvin asked the Council for a body of incorruptible men to exercise Church discipline up to and including excommunication. But the civil authorities did not like Calvin's request that the Church might have a disciplinary authority which neither Luther nor Zwingli had asked for it, and many citizens feared for their personal freedom. In 1538 a majority of the new Council consisted of Calvin's opponents. Strife began, and grew so keen that the ministers were forbidden to preach politics. Disgusted by this, and angered by the attempt to force upon them the observance of the Bernese usages, the ministers finally revolted openly at the Council's command to exclude no one from communion. Calvin's refusal led to a crisis by refusing to dispense the sacrament. They were banished, and all mediation was rejected by the Council. This refusal to accept dictation from the civil power on a matter vital to the welfare and liberty of the Church, and the choice of banishment before surrender, are a new departure in Protestant history, and are determinative of Presbyterianism.

Calvin's first experience of Geneva, however, did not deter him from returning, though reluctantly, three years later; for no city in France was safe, and no city in Germany politically free, and in Geneva alone could he hope to find a sphere of operations. Within twenty-four hours of his return he was at work; and the Ordonnances were the final fruits of his labours. He wished to embody the distinction between civil and spiritual jurisdiction, to secure the independence of the Church within her own sphere, to obtain the acceptance of a creed based on Holy Scripture alone, and to establish a Reformed discipline. The difficulty was that he must gain the consent of the civil powers to his solution of a problem which had hitherto been solved very differently, and must induce them to relinquish all claims over their subjects. Agassiz, moreover, the enforcement of a NT standard of morals was distasteful to many citizens. Accordingly the Ordonnances,
while Calvin's sole work, do not represent his ideal. Four classes of official are recognized in the Church—pastor, teacher, elder, and deacon. The ministers were chosen by those already ordained after an examination as to life and doctrine; the civil power then approved of them; finally the people heard them, and they were ordained without laying on of hands. The democratic idea of this became aristocratic in practice; for, in actual fact, the people of the Church, or, at least, the prominent ministers. The ministers were to meet once a week in conference and once in three months for mutual criticism; in this 'venerable company,' which did not, except by censure and moral weight, interfere in the actual business of the Church and the State.

The clergy were indeed legally and practically the only literate people in the country. They were not only valued as religious leaders, but as an educated class. The standard of education varied in different districts; it was, as a rule, lower in the south of France, where the educational policy had been least successful, and higher in the cities of the north, especially in Geneva. The Church's literary life was in the hands of the presbyters, and was of the highest value to the country.
—still less the almost fantastic contention that they were intended in time to be superseded by fully-qualified bishops. In this connexion we may not unreasonably reconstruct the Scottish system of 1560 in the Canadian organization of to-day. There, similar needs have called forth similar expedients. The difficult problem of Church extension in the rapidly-filling West has called forth the creation of a system of church courts, and without any afterthought of episcopacy. Divinity students in full standing and lay missionaries who look forward to ordination after a special course correspond to the readers of 1560. Knox's doctor is represented by the professors of theology, his dedicated followers by his kinsmen, and the deacon by the manager. The parallel is strikingly complete.

In the Church of 1560 the germ of the later Presbyterianism is discerned in the weekly meeting of local ministers in the towns, the Synod is foreshadowed by the superintendent's Council, and the General Assembly, irregularly constituted as yet and with uncertain powers, met at frequent intervals. The fully articulated system of later times grew out of Knox's fellowship with his fellow workers took substantially the same view as Calvin regarding the relation of the civil and ecclesiastical powers; indeed, though his own views on the point were independently matured, Knox had conceptually all along and Calvin on it during his exile and the struggle of his Church. This was repeated on a national scale in Scotland. The return of Mary Queen of Scots from France in 1561 ushered in a period of strife. The Reformers mistrusted Mary's good intentions towards the new Church, and resented the withholding of recognition from certain of their standards; she, on her side, was piqued by ministerial interference in her private concerns, and saw in the Church a formidable obstacle to her scheme of Roman Catholic reaction. Politics and the greed of the nobles went hand in hand with ecclesiastical strife to make difficult the way of the new Church; and civil war at length broke out, as a result of which the unhappy queen was driven from Scotland (1568) and the Roman Catholic power in the country was finally broken. But the defeat of the Roman Catholic party and the establishment of the Protestant succession in the person of the infant James VI. did not bring peace to the Church. The threat was not necessarily impossible to secure their stipends in terms of the revenues due to them with the civil authorities; and, after some discussion, bishops were re-introduced into the Church by the Concordat of Leith (1572). To this expedient Knox consented before his death, recommending, however, that such bishops should be responsible to the General Assembly. The experiment proved a disastrous failure. Not only did the new episcopate escape ecclesiastical control, but they also rendered the clergy poorer than ever, by becoming the cats-paws of the nobles in their seizure of ecclesiastical revenues, instead of the pay-masters of the unhappy clergy. The contemptuous name of 'tulchans' applied to the bishops of 1572 shows the estimation in which they were held, and a good part which they played in the history of the time was a severe blow to the cause of Episcopacy in Scotland. In 1574 Andrew Melville returned to Scotland from Geneva, and proceeded to uphold the independence of his church and by no means to be tolerated in a pure Church.

Circumstances assured his success. By 1580 the 'tulchans' had disappeared; and in 1578 the second Book of Discipline was prepared, to be enforced by Assembly in 1581. The first Book had grown out of the circumstances of the time, and found its best sanction in con-
temporary needs; the second Book, on the other hand, aimed at the deduction of general principles from the NT. E.g., the offices of superintendent and reader were exalted as episcopal and unscriptural; and, whereas the first Book had set up any Church courts, the second supplied the omission, but, strangely enough, left out the most characteristic court of all—the Presbyterian. Presbyterians had, during the session of the Assembly, felt the need of some ecclesiastical organization of a higher order than any which had hitherto been current; and the Book of Discipline, with its determined attempt at a closer organization than that of 1560, never secured, in its entirety, the sanction of the civil power.

From the time of Melville's return to Scotland a determined struggle raged in the country for a century. On the one side we have Melville and those who followed him, holding the most rigid views concerning the purity of all ministers and the divine right of the General Assembly and the Kirk; on the other, the determined Episcopalianism of the Stuart kings. Parallel to this divergence of view, and vitally connected with it, ran the question of the relation between Church and State. The second Book became acute in every state where the Reformed Church functioned as the church authorities. Melville, on his side, believed in the double jurisdiction of Christ and the temporal king, and strenuously resisted any interference with the Church within her own inviolate sphere; James VI., on the other side, believing in the Divine Right of kings, saw in the Church's claim to spiritual independence as great a menace to the royal power as the papal jurisdiction had been. Moreover, as his succession to the English throne became more and more assured, the king was moved by a sense of the risks attendant upon the maintenance of two differing ecclesiastical polities within his dominions, and his consistent aim was to conform Scotland to Anglicism. By means of episcopacy he could best hope to maintain control over the Church. Throughout the long struggle absolutism by Divine Right, episcopacy in the Church, and royal supremacy over all causes were bandied together against limited monarchy, Presbyterian Church government, and ecclesiasti-
cal superintendence.

The details of the struggle need not be closely followed. The king, on his part, aimed at the complete subordination of Church and people to his views; the Church, on her part, resisted royal interference in spiritual matters. But the Church founded all her activities, beliefs, and claims on the Word of God; and, as the ministers alone had the right to interpret that, no practical limit could be set to the claims of the Church, except by effective intervention on the part of the civil power. The king, as it turned out, would concede nothing, and the ministers claimed too much; and there is some truth in the thesis that Scotland had to choose between the tyranny of a king and the tyranny of a ministry self-constituted as the interpreters of an infallible Bible. But, on the whole, the Church represented the popular will, and served the popular cause. The ministers were chosen by popular election, they educated the people, they created the ability and the docility to win their confidence; and there is no doubt that during the 17th cent. the General Assembly was a more representative body than the subservient Scottish parliament. Presbyterianism won a victory from the crown and from parliament what has been called its Magna Charta; but Episcopacy was re-introduced.
in 1610, and the next opportunity of the Presbyterians came in 1638, when the injudicious and obstinate interference of Charles I. and Laud with the liturgy caused a wave of feeling to inundate Scotland that made the National Covenant possible. The Glasgow Assembly, which though already by the substitution of Episcopacy; and the king, whose hands were tied by difficulties in England, was powerless to save the bishops. Four years later civil war broke out in England between king and parliament. Now at length the long oppression of the burghers and the appeal to arms, and by the Solemn League and Covenant the Scottish Church and the English parliament were united in the cause of representative government and religious freedom.

The movement of repression was well under way in 1561, by which time Acts of Supremacy and Uniformity and other measures were in operation against nonconformity. A second Act of Uniformity followed in 1563. About 1565 Parker described it as the greatest act of Supremacy that had most threatening foe—and certainly it was the most definite and concrete form of opposition to existing ecclesiastical arrangements. About 1570 Cartwright, a Cambridge Divinity professor (later desired for treason), brought Presbyterianism into prominence by his activity; and in 1572 the propaganda evolved into the 'Admonition to Parliament.' The 'Admonition' consisted of two manifestoes which never reached the stage of presentation to parliament. It is fanatically Presbyterian in tone, and aims at the substitution of presbytery for episcopacy in English Church government. In the same year the first English Presbytery was erected at Wansworth. Cartwright was forced to flee the country, but maintained from his exile a vigorous literary defence of Presbyterianism against Whitgift. Other writings in defence of presbytery, such as that of Travers in 1574, continued to appear; and in 1583 enough Presbyterians existed in England to draw up and declare an English Model of Church Government; but after that date the Presbyterian movement, having flourished for a decade, began to decline. Whitgift, though he did not, like Bancroft, insist on the divine right of episcopacy, was the great exponent of the Presbyterianism; and the means of an ecclesiastical commission, forced from all ministers the admission that episcopacy was at least not contrary to Scripture. In 1584 the Presbyterians failed to introduce into parliament a bill in favour of their discipline; the Marprolate Tracts of 1588-89 routed Whitgift to a fresh access of persecuting zeal; the incident of the Armada in 1588 helped to confound in men's minds the ideas of nonconformity and political disaffection. Thus, while there were strong Presbyterian ministers in England, the Act of 1593 ended meanwhile all effective opposition to the State Church. Presbyterianism found itself in especial difficulties when subjected to persecution, because the Presbyterians, unlike the Puritans, could not retire except by means of an elaborate organization, and so could not retire into hiding till the storm blew over, without relinquishing essential principles. Driven by the Act of 1593 to exile, or silence, or the assumption of the cloak of Puritanism, Presbyterianism languished for a time; and the hopes raised by the Hampton Court Conference (1604) proved illusory. But, as time went on, the ideas of James I. and Charles I. concerning Divine Right gradually drove into alliance the causes of civil and religious liberty, and the consistent harshness of Laud towards nonconformity helped to precipitate the great crisis of the Civil War. About the time when the Long Parliament met (1629) Presbyterianism had begun to raise its head. London was made the centre of Puritanism, and Presbyterianism was widely diffused throughout England. In 1630 appeared Alexander Leighton's Sion's Plea against the Prelacie, for which the author was severely punished. Other incidents of the same nature occurred; and, while the Long Parliament began, to begin with, merely desired to abate the overweening pretensions of the bishops, there were many who desired more, and their ideas gradually prevailed. Scottish commissioners were in London, and preaching frequently, writing, holding conferences. In 1641 appeared Sanctymynus, a plea for Presbyterianism which recalled the days of Cartwright. The Root and Branch petition of Dec. 1640 and the ministers' petition of Jan. 1641 were on the same lines. Parliamentary defeats in the early part of the Civil War rendered the Presbyterian alliance necessary, and the Solemn League and Covenant of 1643 ushered in the period of Presbyterian ascendancy, which lasted till 1648. Charles I. had now combined against himself all the elements of political disaffection. The religious elements were the English-speaking Puritans and Presbyterians; Presbyterianism was meanwhile the dominating religious factor in the combination. The decision of battle went against the royalists, who were decisively beaten at Naseby in 1645; and at the end of the same year the Solemn League and Covenant show how short Presbyterianism yet was of learning from its own sufferings the lesson of tolerance. One of the avowed aims of the treaty was to force all the British Isles into Presbyterian conformity; and, though the English Presbyterians were less narrow and fanatical than their covenanted Scottish brethren, and though the Independents, a growing body, were still more set on liberty of conscience, the Scots had the better political reasons. The Westminster Confession of 1647, still the official Confession of English-speaking Presbyterians, is a noble monument to its authors and to the age which gave it birth; in its stately and balanced style of expression it expresses the Calvinist theology. It sets forth the Calvinist theology, in its pointed avoidance of what is merely controversial, it is the model of a Confession for a great body of Christian believers who are conscious enough of.
their own worth in the world to refrain from speaking evil of others. The same Assembly of divines sent forth the Form of Church Government, the Directory for Public Worship, and the Larger and Shorter Catechisms; and of them many doubt whether he judge by its intrinsic excellence or its long and widely-diffused influence, the Shorter Catechism is undoubtedly the best. A new version of the Psalms also appeared in due course; and the Assembly that led to this deliberate revision of the Scottish Psalms consisted in the repudiation of Knox's Psalms for the new version, in the adoption of the King: James Bible in place of the Genevan, in the dropping of Knox's liturgy, the Book of Common prayer, the Largers, and the Confession of 1560.

3. Wane in England and Scotland.—In 1625, while the Presbyterians rejoiced in the creation of an imperial Presbyterianism and in the consent of parliament thereto, their power was on the wane. Independency was growing in the army, and men like Cromwell and Milton were aligning on the Independent side. Independency was gradually preparing to play the chief part in the religious situation; and 1646 may be taken as the high-water mark of Presbyterianism. After that date, except during the Commonwealth, the organization of the Presbyterian church organization ceased to exist in England; and, when Charles I. escaped to Carisbrooke, and made promises which turned the Presbyterians royalist, Presbyterianism fell with the falling cause. The Scots made a desperate effort to save the situation. Parliament, in defiance of the General Assembly, who thought Charles's concessions insufficient, entered into the 'Engagement,' and the Engagers' invaded England, to secure the Crown and Presbyterianism (1648). Cromwell was now master of the situation, and Pride's Purge and the execution of Charles I. rapidly followed. But the Scots were not yet crushed. After the disastrous failure of the 'Engagers' the Covenanters seized the reins of government, excluded all non-Covenanters from official positions by the Act of Classes, and offered Charles II. the crown only on the most rigid and humiliating terms. Nevertheless they did offer him the crown and prepared to fight for him, but stultified their efforts by first permitting the army of 80 unconverted officers and several thousand unconverted men. The defeat of Dunbar in 1650 brought them to their senses; but even then the excluded soldiers were re-admitted to the army only on condition of submitting to the Act of Classes. During the Commonwealth the Act of Classes rent Scotland with the strife of 'resolutioners' and 'protesters.' Cromwell's final victory at Worcester (1651) involved both in a common disaster; yet, though the General Assembly was dismissed in July 1653 after the manner of the English parliament, the minor Church courts continued to exist and the antagonism of resolutioner and preacher rent Scotland during the rule of Monk.

The Cromwellian régime of Cromwell was tolerant. The Rump Parliament having failed to touch the religious question, Cromwell had finally to take it upon himself; and, as the Presbyterians outnumbered their colleagues in the ministry, Presbyterianism still existed in a shadowy way. The minimum of ecclesiastical machinery that continued to exist was Presbyterian; but what was left was the ministry rather than the system. In 1660 Monk set up Presbyterianism once more, but not for long, for the flames before the storm let loose under Charles II.

(a) England.—To take England first: Charles would doubtless have tolerated Presbyterianism, if he could have secured for Roman Catholicism a share in the toleration; but the anti-Catholic and anti-Presbyterian sentiment of Commons and country was bound to prove too much for the easy-going king whose chief desire was to avoid further exile. The reluctance of the parties themselves foiled his efforts to secure a working agreement between Congregational and episcopacy. Bills introduced into parliament were of no avail; the Commons concluded a series of proceedings hostile to nonconformity generally by passing the Act of Uniformity, which became law on 17th May 1662, and six days later the Act of Disbandment. About that time the rise of a latitudinarian school in the English Church which included such men as Benjamin Whichcote, John Moore, John Tillotson, and Edward Stillingfleet, and which based episcopacy on no higher ground than that its holders might have held out hopes for Presbyterianism; and Charles himself made various attempts to gain for the Presbyterians by the use of his royal prerogative what parliament refused to grant. But parliament pursued its course by passing the First Convention Act (1664), the Five Mile Act (1666) and the Second Convention Act (1670), and when Charles, on his own initiative, declared an Indulgence in 1672, parliament forced him to withdraw it within a year. The Test Act supervised in 1673. Neither the Whig nor the Tory party had a personal generosity on the part of the king arrested the fall of Presbyterianism; and the efforts of James VII. and II. produced no better result. The Presbyterians distrusted Indulgences which showed Roman Catholicism an equal kindliness with themselves. On the accession of William III. they could not secure ascendency nor even a working compromise with Episcopacy, but only toleration. Between 1660 and 1670 Presbyterianism and Congregationalism were in the wilderness of persecution—a movement apparent in local working agreements and in a lowering of Presbyterian Calvinism. Socinianism became rife; and in 1727 the ministers of the 'Three Denominations' (Presbyterian, Congregationalist, and Baptist) formed an organization. The Presbyterians who remained steadfast were few except in the north. During the time of nonconformist revival about the middle of the century the Presbyterian were of more intellectual than spiritual import, as a cause of the great commercial, and eventually of the religious liberty about 1780. Before 1843 there were in England Presbyterians connected with the Established and with other Churches of Scotland—the first of these bodies being the Church of Scotland, and the others in 1787 united into the Presbyterian Church of England, which has 12 Presbyteries and nearly 400 congregations with missions in China.

(b) Scotland.—Turning now to Scotland, we find that the theocracy which had existed in 1839—a narrow theocracy with presbytery and the covenant in place of Christianity, hating alike prelacy and prelate, false faith and false believer, episcopacy and independency—had received a rude shattering at the hands of Cromwell. Worse was to follow under Charles II. The Restoration fell heavily upon Scottish Presbyterianism, as upon English. In 1661 the servile Scottish parliament enacted the royal supremacy in all causes, and in 1662 passed the Act Recusancy, which, by undoing the legislation of 1660, restored the twenty-seven outlawed ministers to a blast all the work of the Covenanting period. The Presbyterians discovered all too soon how easily Charles II. could sacrifice his promises to his inclination or interest. Episcopacy was re-established in the ministry, ministers being ousted and replaced by curates, whose characters, in many cases, as ill fitted them as their scholarship to take the places of those who had been deprived. The ousted ministers and their flocks took to holding conventicles; the system of dragging them into
PRESBYTERIANISM

Compliance began, and, as feeling on both sides was exasperated, the situation in Scotland grew steadily worse. Previous experience made the Presbyterians chary of attempted compromise, and such Acts of Indulgence as were passed did little to mollify the growing bitterness. On the one side, we have the continued abuses of justice, persecution of the most odious kind, the doings of a Claverhouse in the field and a Mackenzie in the forum, torture, imprisonment, proscription, death. It is little wonder if we find, on the other, such fanaticism and rebellion on the part of the Covenanters, and the fanatical societies came into existence with their Apologetic Declarations, their fondness for the OT as a guide to the treatment of enemies, and their desperate anticipation of what the English Revolution achieved to them. In the last few years of Charles’s reign the persecution grew so fierce that the name of ‘Killing Times’ has been applied to the period; but the triumph of the Presbyterians came not long after, when James VII. and II. was deposed in favour of William III. Even then the issue hung in the balance for some time; but the sensitiveness of William III. to public opinion, coupled with the influence of Carstares, decided the establishment of Episcopalism in this sphere. Since 1689 no Scottish Presbyterian has ever been called upon to suffer for the name. It would be easy to exaggerate the sufferings of the period from 1662 to 1690. Much of the country remained quiet; Kirk Sessions, Presbyteries, and Synods continued to function under the bishops; the old Covenanters were still according reverence; the bishops did not err on the side of worldly pomp; and a large proportion of the people had no objection to some features of Episcopacy. But where real antagonism existed, as in Galloway and in Fife, persecution steadily rendered it worse; incidents like the murder of Archbishop Sharp and the punishments which followed it could not be forgotten; the Covenanting and anti-Erastian element were in advance of the time, and with the bishops the sufferers under Charles II. have scored their mark deep upon the religious history of Scotland. To this day the suspicion with which the old Scottish Presbyterian looks upon anything that smacks of the Episcopal Church, and Episcopalianism remains a heritance from Covenanting times.

After the establishment of Presbyterianism the question of jurisdiction as between Church and State continued to be a source of strife, but the political sense of William III. rendered easier the smoothing over of difficulties. The last martyr to die the victim of opposed religious convictions was Aikenhead in 1697; the same year saw in force for the first time the educational ideas of the Scotch Reformers, the fruits of Episcopal enterprise under an Act of Parliament of 1635 having fallen into decay under Charles II. Presbyterianism by degrees justified its establishment in Scotland, its victory being largely helped by the contrast of its loyalty in the ‘Fifteen’ and the ‘Forty-five,’ with the unbridled superstitions of its Episcopal and Roman Catholic rivals. Moreover, a better feeling grew up between the opposing bodies, so that Archbishop Denison of Canterbury, in a debate in the English House of Commons, while protesting against Scottish Presbyterianism, could say that

1. He had no scruple against ratifying, approving, and confirming it within the bounds of Scotland; he thought the narrow notions of all Churches had been their ruin, and he believed the Church of Scotland to be as true a Protestant Church as the Church of England though he could not say it was so perfect.

The Toleration Act of 1712 lent the sanction of law to the new spirit of peacefulness; but the successful issue of the Toleration Act with Episcopacy did not, any more than the victory over Rome in 1688, end the troubles of the Scottish Church, for, in the same year, the Patronage Act introduced a new cause of discord which rent the Church in pieces. The first Book of Discipline had advocated the popular election of ministers and elders, but in 1713 the General Assembly as the final court of appeal in disputed cases, was decreed by parliament in 1667. Patronage was abolished in 1649, restored in 1660, abolished in 1690, and now restored in 1712—from which time onwards this ancient cause of strife assumes the position of chief disturber of the peace of the Church of Scotland. From time to time also the old question of civil and spiritual jurisdiction is raised. The result is to make the Church history of Scotland for the past two centuries a perfect kaleidoscope of separating and re-uniting sects. During all that period the Church remained singularly free from doctrinal troubles of any sort; the ‘Marrow’ case about 1720, the Simson and the Erskine case about 1735, and the Dissenting Act of 1740, which present all the heresy troubles of the Church until very recent times; but already in 1733 secession was at work. Troubles arose over the working of the Patronage Act—troubles encouraged by the indefiniteness of the constitution. The limits of law were broken, and the strife between patron and people tended always to be fought out on the higher ground of spiritual versus civil jurisdiction. The Erskines, after taking the definite step of constituting the ‘Associate Presbyteries,’ refused the concessions made to the Episcopalians in 1712, and would not re-enter the Church which thus sought to make amends for their ejection; their final ejection by the General Assembly of 1740 confirmed their secession. Previous to this their ‘Judicial Testimony’ of 1736 had recalled all the old Covenanting bitterness; and, after the Cambuslang ‘Wark’ and the visits of Whitefield in 1741 and 1742, they produced ‘The Declaration, Protestation and Testimony of the Suffering Presbyterians in Dumfrieshire.’ Their political and ecclesiastical separateness was thus made manifest. The Ulster Act of 1747, the ‘Prelatic, anti-Whitefieldian, anti-Erastian, anti-sectorian, true Presbyterian Church of Scotland,’ etc.—a document whose character is sufficiently indicated by its title. In 1746, when the ‘Forty-five’ had definitely failed, the Associate Synod itself split in two over the question of taking the Burgess Oath, and burgher and anti-burgher excommunicated each the other in 1747.

Meanwhile the question of patronage continued to agitate the Church of Scotland, which divided into the ‘moderate’ and ‘evangelical’ parties. Both objected to patronage; but the moderate believed in the enforcement of the existing law, while the evangelical party attached greater importance to the popular call. Disputed settlements resulted, often followed by parental solemnities, and, as a consequence of one such disputed election, Thomas Gillespie, who had been deposed for refusing to assist at the ordination of an unpopular presbyter to Inverkeithing, formed with Thomas Bruce, Bishop of Glasgow, and William Robertson, Bishop of Boston and halves of the Congregationalists and Burghers of Relief.’ Another sect was thus launched upon its career, but the kindly attitude of Gillespie towards the Establishment and his desire to get back to it contrast most favourably with the determined politicalism of Gillespie’s confreres, who had the best of the battle within the Church; but their ascendency was purchased at the cost of increased dissent; for, in 1764, there were 129 meeting-houses in Scotland, served by ministers
PRESBYTERIANISM

for whom the people had forsaken unpopular presentees and parish churches, and the rigid enforcement of the patronage law seemed of set purpose to curb the ministry of the Hesperian opposition. The
moderates certainly pacified the Church, and put
an end to the painful scenes only too common at unpopular settlements; by 1770 the people had learned either to submit quietly or to see it quietly, but there was little change in the Presbyterian communion of Ulster. William Robertson, who led the moderate party to victory, was one of a group of brilliant men who adorned the Church of Scotland at that time; among others may be named John Home, the author of the tragedy of Douglas; George Campbell, who answered Hume, and Thomas Reid, who answered Locke. One result of the labours of the moderates was an improvement in the literary quality of Scotch pulpit work.

Towards the end of the century the burghers split into two—the Old Lights and the New Lights—over the question of the Covenant and the powers of the civil magistrate; the anti-burghers also divided into two Synods over the question of the civil magistrate; and, as the Cameronians, in their movement towards the Covenant, remained aloof from the secession, forming the 'Reformed Presbyterian' in 1743 and renewing the Covenanters for the last time in 1745, the Church in Scotland was torn in pieces by the end of the 18th century.

The end of that century witnessed important changes—the slackening of the anti-popish spirit, the beginning of debates concerning creed-subscription, the shifting of population with the resultant need for new churches, the rise of a missionary spirit and of a sentiment of greater catholicity. Roman Catholic emancipation in 1829 and the Reform Bill of 1832 were symptoms of a wave of liberalism, which had its effect on the Church of Scotland. The Church's sore was still patronage, and from 1832 onwards overtures began to pour in from Presbyterians, asking for the restoration of the Call to its old place. The General Assembly of 1833 threw out the Veto Act, which conferred upon the majority of heads of families in any church the power to veto the appointment of any presentee on reasonable grounds—and this in spite of the powerful support of Thomas Chalmers. But this was the last victory of the moderates. They no longer prevented the passing of the Veto Act and the Chalmers Act the same year. Ten years of strife supervened. A number of causes célèbres brought the Assembly and the Court of Session into violent conflict, and the question was raised as to the competence of the Assembly to pass such Acts. The Claim of Right of 1842 took very high ground in regard to spiritual independence, and nothing less than total abolition of patronage, with complete independence of the civil power, became the claim of the Presbyterian party. The quarrel over patronage had developed into the old quarrel over jurisdiction, and in 1843 occurred the great secession known as the Disruption. Out of 1203 ministers, 451 left the Church. In 1847 patronage was abolished; but both the Old Light and the New Light Churches still continue their separate existence, though the signs of the times point to better things. Indeed, the tendency of nearly a century past has been, on the whole, towards the re-union of the broken fragments of the Church. As two examples, in 1820 the two bodies of Old and New Lights coalesced into the United Secession Church; and, by the union of that body with the Relief Synod in 1847, the United Presbyterian Church was formed. The Reformed Church became the pioneer of union; and in 1900 was consummated the wider union of United Presbyterian Church and Free Church into the United Free Church of Scotland. A remnant refused to enter the new Church, and this was declared on 25 June 1876 at the House of Lords. The House of Commons had declared it a legal Free Church. The latest statistics show that the Church of Scotland has 16 Synods, 84 Presbyteries, 1442 parish churches, 53 chapels with ordained ministers, 201 mission or preaching stations, 718,710 communicants, 4 synods of students, 201 teachers and 218,702 scholars, adult classes numbering 59,091 scholars, and a Christian literacy of 1,555,116, 166, 104. The United Free Church has 12 Synods, 64 Presbyteries, 1565 congregations of members, 9814 ministers, 512,005 ordained ministers; communicants number 1,046,049, Sunday Schoolss 2224 with 24,055 teachers and 223,559 scholars, adult classes 2018 with 77,666 pupils; and the annual income is £1,046,049, 8s. 4d. In addition the Church of Scotland has a Synod in England, a Presbyterian in British Guiana, and missions in Africa, India, and China, while the United Free Church has Presbyteries in the Italian and Iberian peninsulas and missions in India, Manchuria, Africa, Indo-China and Indo-Burma. Scotland has 4 Synods, 13 Presbyteries, and about 160 congregations (many of them vacant) with a mission in Africa. Of the smaller bodies, the Reform Presbyterian Church, which is in full communion with the Reformed Presbyterian Church of America and the Presbyterians, has 49 congregations, and the Synod of United Original Seeders has 4 Presbyteries, 26 congregations, and a mission in India.

4. Ireland.—Presbyterianism in Ireland took its rise among the colonists who were settled in Ulster after the abortive rebellion of the early 17th century. These settlers were mainly of Scottish birth; and, as Episcopacy was just then enjoying one of its brief triumphs in Scotland, Ireland received her fair share of exiled Scottish ministers. Thus the spread of Presbyterianism was rapid. The Anglican Churchmen, poorly supported from England, could not in any case have made effective opposition; as it was, following the lead of Archbishop Ussher, they welcomed the Scottish ministers, and for a time Presbyterian and Anglican worked amicably together. Under the new conditions the original evil repute of the Ulster colonists was gradually lived down; but the growing success of Presbyterianism brought the animus of the country, who, forsaking the spirit of Ussher for that of Laud, secured, for the time being, the suppression of Irish Presbyterianism. The process was complete by 1636. Five years later Scottish troops were sent into the country to aid in the suppression of a rebellion; and, as the completion of their task demanded a prolonged stay in Ireland, the chaplains of the force were able to re-introduce Presbyterianism. A Presbyterian was formed at Carrickfergus on 10th June 1642, and within twenty years the Church numbered 5 Presbyteries, 80 congregations, and 70 ministers. This brief period of rapid expansion was followed by a century of persecution, which was interrupted by a short space of toleration and liberty. The last Act of Toleration, the Act of Toleration and Relief of 1706, only to be resumed under Queen Anne by the Test Act of 1704. The results were made apparent in a steady stream of American emigration, which drained Ireland of vast numbers of her best citizens; but not until the Act of Union of 1801 was the Act of 1704 cancelled; and even since then Irish Presbyterianism has enjoyed freedom rather than privileges.

Two controversies have agitated the Church. The first arose with the Disruption and the New Light movement, which, beginning in 1709 as a revolt against creed-subscription, resulted in a wide-spread
laxity of doctrine. The movement was not decisively checked till about 1750, when the arrival from Scotland of a sufficient number of rigidly orthodox seceders turned the tide. The Arian controversy broke out in the early half of the 19th cent., and, after a ten years' battle, Henry Cooke, a famous figure on the orthodox side, forced matters to a decision in 1829. The secession of only 17 ministers was a sufficient proof of the triumph of orthodoxy. There followed in 1840 a union between the Secessory Synod and the Synod of Ireland. The result was especially the separation of the south and east in 1854, when there was only one Presbyterian Church in Ireland. From that time onwards progress has been rapid in every department of Church work. The Region Domum was discontinued in 1859; but the lesson has been more than balanced by the addition of a Sustentation Fund to the interest on the commutation of life-interests. The Irish Church has been of great influence, especially in Ulster, where powerful position has had to be formed, but also wherever Ulstermen have congregated abroad. It numbers at present 36 Presbyteries, 562 congregations, 653 ministers, and over 100,000 communicants.

5. Wales.—Alone among the Presbyterian Churches of Britain, the Welsh Presbyteries owe nothing to Scotland. Its formation resulted from an evangelical movement within the Anglican Church, which was begun by Howell Harris in 1735. As the movement grew and spread, societies were formed, and the treatment meted out to these societies by the Established Church at length drove them to separatist courses. The unwillingness of the episcopate finally forced the societies to seek ordination for their pastors elsewhere; and, after they had adopted the practice of ordination by provisional commission, they gradually developed into a strong Presbyterian Church which has nearly 200,000 members to-day. There is also a Welsh Presbyterian Church in the United States of America with over 13,000 communicants.

6. France.—Early in the 16th cent., a movement of reform had begun in France under the impulse of the New Learning. Francis I., an enthusiastic patron of the Renaissance, was keenly interested, and the movement was fostered by men of weight and influence, as, for instance, Guillaume Farel, and by women of position like Margaret of Navarre. The prospects of reform were bright enough, until the outbreak of Martin Luther alarmed the Church in France as elsewhere. Francis passed the sentence of the enemies of the reform, and from 1535 Protestantism was proscribed. Yet, during the persecutions under Francis I. and Henry II., Protestantism continued to make headway in France; and, as this was due mainly to the influence of the exiled Calvin, who, from Geneva, poured into his fatherland a steady stream of letters and messengers, it was the Calvinist form of Protestantism that gradually diffused itself throughout the country. In 1555 La Ferrière, a noble Frenchman, who desired but a little to see the Bible in French, was sent to Geneva for the purpose, succeeded with difficulty in persuading his immediate circle of friends to elect La Riviére, one of their number, as pastor, and thus form a congregation. So rapidly was this extended that by 1560 there were 2000 congregations were formed throughout France. Church and king had hitherto seen in Protestantism no more than religious nonconformity; they now began to discern in it a political menace as well, and the result of the discussion between the two parties, as the result of a discussion at Poitiers, the Reformed Church in Paris summoned delegates from all over France to a meeting in the capital; and 150 delegates, assembling in due course in a private house in the Faubourg St. Germain, constituted themselves the First National Synod of the Reformed Church in France (26th May 1559). They adopted a Calvinist Creed (the Confesse Gallican), and, with such changes as the different conditions of French religious and national life necessitated, the constitution the polity of Geneva. Each congregation had a pastor, elders, and deacons; but the Geneva practice was departed from by regarding the diaconate as a spiritual office, and establishing the deacons as a seat in the Consistory, which directed congregational affairs. The first set of these officials in each church was chosen by popular election, but subsequently such gaps as might occur were filled by the Consistory; and this "aristocratic" method of election was long maintained in the face of popular opposition. To bind the congregations together, provision was made for a gradation of Church courts. Provincial Synods, composed of all the pastors within the bounds, with one elder or deacon from each congregation were to meet twice a year, in order to decide upon appeals from congregations, to arrange and effect the translation of pastors, and generally to administer all competent affairs. General Synods, representing the whole Church, and composed of all the pastors, were to be held as need arose. As time revealed defects in the system, means were devised to remedy these. A Colloque—the analogue of the Presbytery—was inserted between the congregational Consistory and the Provincial Synod and, in addition, a department that delegates to the National Synod should be commissioned by the Provincial Synod instead of the Consistory, the Church was provided with a compact conciliar organization, which fitted it to play a part in the political sphere. The Church now was a national institution; its members came to be known by the name 'Huguenots' (q.v.), probably Eudynens, 'oath-companions'), and it found itself definitely linked with the party whose chiefs were Anthony, King of Navarre, Louis, Duke of Condé, and Adnaur Coligny, as against their political and religious opponents, headed by the Guises, Duke and Cardinal. Henry II. died in 1559, the year of the first National Synod; and Francis II., the husband of Mary, Queen of Scots and of Mary of Guise, the new faction, did not live long enough to do serious mischief. During the minority of his successor, Charles IX., the regency was in the hands of Catherine de Medici, who pursued the policy of playing off the two parties in the realm one against the other. The Colloque of Poissy (1561), at which Beza pleaded the cause of Protestantism with an eloquence that drew a reluctant tribute from his opponents, was a consequence of this policy; and the result of the conference was the tolerant Edict of St. Germain (1562). But in March of that year a massacre of Protestants, inaugurated at Vassy by the Duke of Guise, transferred the issue from the council-chamber to the camp, and in the course of the next thirty years France was torn by no fewer than twenty civil wars. Between the two parties, the one on the royalists' side, the other on the Protestant side, enjoyed almost invariably the military superiority, but the Huguenots were always formidable enough to extract good terms even from defeat and to renew the contest as need or opportunity arose. It will not be necessary about to lend them definite support, as, e.g., in 1571-72, when Coligny was all-powerful at court, and the English marriage project and the union actually arranged between Henry of Navarre and the English princesses from all the Consistories, to interfere with this delicate balance between Protestantism and the Crown. But the regent feared undue Protestant influence no less than the undue preponderance of the Guises; and the reaction from this brief period of friendli-
ness took the shape of the massacre of St. Bartholomew's Day in 1572. Exiled in Rome until in Madrid this horrid butchery excited universal disgust; and, as a result of it and of the renewed civil war which followed, a large moderate party began to form in France. Toleration, however, had not been extinguished in the Church, and, in the barons of the Catholic party, as persecution upon the Protestants, viz., an increase of zeal; and, war, conducted by leagues on the one side and on the other, each affiliated with sympathetic foreign powers, continued to distract the unhappy country. At length, in 1588, Henry, now reduced to the situation of the chief barriers of the peace and the chief menace to the royal power, took the desperate step of having the duke and the cardinal assassinated; and the support of the Crown might, as a consequence, have passed speedily and definitely to the Protestant side, but for the assassination of the king in his turn by a fanatical Jesuit emissary (1589). Henry of Navarre, leader of the Huguenots since the death of Coligny in the great massacre, was now king; but, while he could and did yield way in some field, he could not, so long as he remained Protest-ant, conquer so definitely as to pacify France. Accordingly, he turned Roman Catholic (20th July 1598) and, after the peace of Vervins had ended the contest, began to speak of the French nation for a common object, the Edict of Nantes (1598) was issued. The Protestants were given the right of public worship, except in Paris and a few other places; they still had to recognize the establish-ment of Roman Catholicism, but their own members had full civil and political rights; and they were given, besides an annual grant, full control of such towns and strongresses as had been in their possession the year before the Edict. In many ways the Reformed Church had suffered during the civil wars; the absence of many members in the field had woefully reduced the livings of the clergy, the number of congregations had shrunk from 21500 to 768; the influence of Henry of Navarre as leader was in sad and unspiritual contrast to that of Coligny. But the constitutional frame of work of the Church had been well looked to, and altogether 15 National Synods had been held during the wars. At one of these, held in La Rochelle (1671) under the moderativeness of Beza, the confidence of the king and the development and renewal, and Presbytery government formally adopted during the brief sunshine of royal favour. Thus, though the growth of the Reformed Church was checked, owing to many of the Huguenot nobility and gentlemen following the king's lead and turning Roman Catholic, a strong body remained staunch, and the growth of the Church's wealth was some compensation for its slower increase in numbers. The grant of 43,000 crowns per annum was devoted to the foundation and upkeep of theological colleges at Angers, Orléans, La Flèche, and Saumur, and the independence of the French Church was rendered complete. After Henry's death in 1610 his work as a statesman was taken up by Richelieu, but Richelieu's fear of the Huguenots, combined with his executive capacity, gave his religious policy a reactionary character. An expedition was sent against Béarn, which had been a Protestant stronghold for sixty years, and a massacre of Protestants resulted in the re-es-tablis-hment of Catholicism in the province. In any event, the king determined that a royal commissioner must be present at all meetings of the National Synod to ensure that none but strictly ecclesiastical matters should be discussed. The policy culminated in a demand for the suppression of the Reformed faith, which was refused; but the city was forced to capitulate after a year's resistance (1628), and, with the capture of the sadly-reduced stronghold, the polit-ical power of the Huguenots disappeared. Thereafter the Synod of 1618 was suppressed; and the consequent removal of all organization was also thrown heavily upon the individual congregations. The Huguenot nobles were tempted with offices and political preferment, the pastors were tempted with higher stipends; and many yielded to these temptations. But the Synod of 1626 was the final process was carried on : Colloques were suppressed in 1657, and in 1659 the Synod of Loudun was informed by the royal commissioner that Synods would be held in future only if the king considered them necessary. But the Edict of 1628 was dissolved; yet, up to the death of Mazarin in 1661, the Huguenots continued to be numerous; for their commercial honesty enjoyed no less repute than their commercial skill, and, realizing their economic value to the nation, Mazarin did not push them to extremity. But he had deprived them of their last shred of organization, and, after his death, the king fell under the influence of Roman Catholic bigots, who used the opportunity to destroy the Huguenots. Bribery again did its work, backed now by the exclusion from office of all Huguenots; converts to Protestantism were banished, while converts to Catholicism were held in honour, and their former pastors forbidden even to travel to France. Many were napped in great numbers by Catholic priests, to be rear in the Catholic faith, and their parents had no redress. About 1651 the practice began of con-verting Huguenots by quartering upon them troops of dragoons, whose iniquities and licence were communi Cat The desperate Protestants at length took to emigration as a relief from their troubles; but, about after 50,000 had got away, a royal edict stopped even that loophole of escape. Finally on 22nd Oct. 1668 the Edict of Nantes was formally revoked. All Protestant ministers were to leave France within fourteen days, all Protes- tant churches and schools were to be closed, and the children, after baptism by Roman Catholic priests, to be brought up in the Catholic faith. If any of the unhappy people were caught in the attempt to flee the country, the men were sent to the galleys and the women to prison, for life; seven months later the penalty was altered to death. Nevertheless, some 250,000 made good their escape; while the number of those who took the unenviable position of Catholic priests was reduced to 5000, of whom 1000 were driven from the country. This drastic act was largely due to the desire to make the Protestants, who had placed themselves under British protection, feel the power of the state, and to drive the Protestants out of the country. The first step had been made, and the next was to drive them out of the country. The first step had been made, and the next was to drive them out of the country. The first step had been made, and the next was to drive them out of the country. The first step had been made, and the next was to drive them out of the country. which supervised drove Catholic and Protestant alike into the wilderness. Robespierre's death, however, brought saner counsels, and Protestantism received in 1793 the full measure of liberty which it had enjoyed from the absolutist standpoint, greatly modified the Presbyteri-

an constitution of the Church in its enactment of 8th April 1802. Congregational Consistories and National Synods were abolished. Congrega-
tional Synods and presbyteries, consisting of 6,000 souls, and the Consistory for each was composed of all the pastors in the group, together with 6 to 12 elders, who were chosen from among the principal tax-payers. Five such con-
sistorial churches were grouped into a Synod circle, and these Synods were made up of one pastor and one elder from each congregation; they required State permission to meet, and a State functionary had to be present at their meetings. Indeed, so many were the restrictions that, during Napoleon's reign, none of those Synods met; and no Church court intervened between the consis-
torial church and the minister of culture. The Reformed Church, thus hampered, fulfilled government expectations by giving no trouble, but she suffered a great deal.

Yet Protestantism grew in the country, and amid the excitement of 1848 a great national gathering, with representatives present from 89 out of the 92 consistorial bodies, ventured to meet and make an effort at reorganization. They set up the old Presbyterian system once more with the complete machinery of Church Consistories, General Consistories, Provincial Synods, and General Synods, and would, no doubt, have secured State sanction for their proposals, had not the seces-
sion occurred among them. During the long period of disorganization differences had grown up unchecked; and friction immediately resulted from the effort at closer organization, becoming acute over the question of theological belief. The representatives of the old theology, under Monod of Montauban, seceded, sacrificing State connexion and State grant, and setting up on a voluntary basis the Union of Evangelical Churches. Their organization is a mixture of Congregationalism and State connexion, and, though their numbers remain small as compared with the parent body, they have increased to some extent and are notable for their evangelical zeal. The parent body obtained, within three years, all that they asked for except the National Synod; even that they obtained in 1872. But the concession was followed almost immediately by a dispute over the framing of a new Confession; and the government took away from the General Synod all legislative power. Nevertheless, the body continues to meet once every three years, and, if it does no more, it at least represents the unity of the Reformed Church, and crowns its organization. All along the Protestant Church in France has wielded an influence out of proportion to its numbers; and its divorce, in common with all the others, is a great calamity. State connexion should not impair its future usefulness. It has always, like other Reformed Churches, been on the side of civil as well as religious liberty, and it would be interesting to investigate how much such sympathies, exhibited by the Church in the French Revolution. Huguenot refugees have been the best of citizens in every land of their adoption, and the martyr Church of France is entitled to occupy a place of pride among its Reformed neighbours. Between the two typhoons, French Churches of France count about 80,000 members, of whom about 95 per cent are in the parent body.

7. The Netherlands.—The situation of the Netherlands on the borders of both Germany and

France, together with the comparatively advanced state of education and independence of character among the Netherlanders, favoured the spread of Reformed Church influences. Thus early as 13 July 1528 the martyrdom of Henry Voes, John Esch at Brussels testified to the progress of the movement, which, Lutheran at first, but later markedly Calvinist, found from the outset a determined opponent in Charles V. The excesses com-
mited by the Jesuits in 1540 and 1541 gave the authorities an excuse to intensify the perse-

cation; the Inquisition was introduced into the land, and in 1550 the anti-Protestant movement culminated in a barbarous Edict against the pos-
session of Protestant books, the reading or dis-

section of Scripture, and all connivance at such offences. If a man convicted of such offences re-

pented of them, he met death by the sword; a woman in similar case was buried alive; any one persisting in error was burned. In spite of this climax to the measures of persecuting zeal, and the death in all of 30,000 victims during the reign of Charles V., Protestantism grew to such an extent that the need of a Creed and constitution began to be seriously felt, especially in the south. In 1559 the Committee of Consuls and Nobles, of the south and England, drew up a Creed modelled on the French Confession of the same year. This Creed, revised by Francis Junius, developed into the Confes-
sio Belgica; in 1603 a Synod at Antwerp adopted a Presbyterian constitution, and later, when the southern provinces had relapsed into Romanism, this Creed and Confession were accepted in the northern provinces. Meanwhile Charles V. had abdicated (1555); but the accession of Philip II. brought one chief to the Protestants. Philip in-

creased the number of Roman Catholic bishoprics in the Netherlands from 4 to 14, made merciless use of the Inquisition, drafted troops into the country, and began to interfere with the civil liberties and privileges of the people. These aggravations of the 1550 Edict gradually identified in the popular consciousness the causes of civil and religious liberty, and Protestantism developed from a party into a national movement. A goodly number of the younger nobles formed a league, and approached the regent—the Duke of Parma, with the request that the Inquisition and the Edicts might be withdrawn. Pending the arrival of a despatch from Spain, the regent relaxed the severity of the laws; and a great wave of Protes-
tant entrenchment was raised. The number of the crowds, thousands in number, assembled to hear the Protestant ministers, and the resultant enthui-
siasm found vent in an outbreak of iconoclast fanaticism, which was responsible for the wrecking of some hundreds of churches, but fortunately avoided the approach of bloodshed. Philip res-
tilated by sending the Duke of Alva into the country with 10,000 fresh troops, and he employed the most barbarous means to end the revolt. His Council of Disturbances, by the severity of its sentences, frightened the loyals into a Union of the Council of Blood. In three months nearly 2000 executions took place, and the inquisitorial operation of the Protestant Church was broken up by the death or exile of the pastors. At this stage Prince William, a great admirer of the Reformed religion, and a loyal supporter of Philip, was moved to change his religion and his allegiance together, and then began in earnest that struggle for inde-

pendence which issued in one of the most ob

stable and bloody chapters in the history of the Netherlands. The Duke of Alva, at Philip's order, put himself in charge of the whole country, and, with brief intermissions, till 1609. In the course of the struggle the southern provinces were won over to Catholicism; but in 1579 the seven northern provinces, by the Treaty of Utrecht, banded themselves together, declared their inde-
PRESBYTERIANISM

pendence, and launched the Dutch Republic upon

career, electing William of Orange their first
State. The celebration of the Protestant
had been shattered at Alva's first onset, but a
number of the exiled pastors had met at Emden in
1571 and framed a set of Calvinist articles against

day of their return. They took up inter alia
the question of the relation of Church and State,
which they solved after the usual Calvinist fashion.
But, when the improved situation in Holland soon
after permitted their return, and they renewed their
Emden Articles at the Synod of Dordrecht (1574),
the Stadtholder and Council refused to recognize
these discussions in the Zwinglian elements had
played their part in the moulding of the Dutch
Reformation; and, while the Calvinist theology
was generally accepted, there were many William
of Orange among them, who were not prepared to
concede to the Church the measure of independence
demanded by Calvinism. William had set before
himself the ideal of toleration, and he believed
that this could best be secured if the State were
supreme. Accordingly, he submitted to the Church
the task of framing a Presbyterian constitution with State control.
But the Church rejected his proposals in their
turn, and counter-proposals from the Synods of
Dordrecht (1578) and Middelburg (1581) also
failed to secure agreement. The situation was further
complicated by the secularization of the Church
in the seven provinces and the consequent diversity
of views. Finally, the problem was solved by the
omission of a National Synod from among the
courts of the Church, which was organized under
seven independent Provincial Synods. These Synods
were made up of representatives from all the
'm Classes,’ the ‘Classis’ being a body which had
the characteristics partly of a Kirk-Session, partly
of a Presbytery. The civil power was dominant
over all.

Although war went on till 1609, this settlement
of the Dutch Church was followed by a marvellous
outburst of intellectual activity. Between 1575
and 1650 five universities were founded—at Leyden,
Franeker, Groningen, Utrecht, and Harderwyk—and
the Netherlands became the head of the
theological school of the Reformed Church. This
intellectual activity disclosed itself in two great
controversies—the Arminian and the Cocalian.
Arminius established the Calvinism of his day, as
Petry did the Gallican church, and sought in
theological innovation. In 1603 he set forth the theory
that Christ died, not for the elect only, but for all,
and that grace was not irresistible. This protest
against the harsh doctrine of unconditional election
was vigorously counter-attacked by Gomarus from
the Calvinist standpoint, and interest in the
controversy rapidly spread to all ranks of society.

Nor was the battle merely doctrinal, for the
Calvinists still held out for spiritual independ-
ence, while the Arminians were ready to accept
a large measure of State control. The political
situation added a third element to the complica-
tion. While the majority of the States favoured
Arminianism, Maurice of Orange, who was
suspected of aspirations to the supreme
power, took the opposite side. Even after the
death of Maurice in 1609 the troubles continued.
In 1610 the Arminians, chief among whom were Grotius the theologian and Barneveldt the statesman,
issued the Remonstrance; disquieting incidents occurred in various quarters; and the parties of
Dort was assembled to settle the matter.

At this Synod were present 23 foreign delegates—
from Germany, England, Scotland, etc. Early in
the discussions the Arminians were ruled out of
the house because they would not submit to the rules
of debate; thereafter their positions were con-
dened under five chief heads. A persecution
followed. Many of their pastors were exiled; Grot-
iius himself was exiled, but the party was not
less fortunate, was executed. After the death
of Maurice of Orange the exiles were permitted
to return, and were given complete liberty of
speech and action. They founded the dissenting
movement known as Remonstrants, which, although it has pro-
duced some eminent theologians, has remained so
weak in numbers as to confer a pragmatic sanction
upon its Calvinist opponents. Even to-day it has
not more than 5000 members.

The second great controversy—the Cocceian—
was so named from its originator Cocceius, a professor at Franeker, who sought to save the
Calvinist theology from traditionalism and scholas-
ticism. He contended for a Biblical theology, and
held that Scripture should be its own interpreter.
Working along these lines, he arrived at the
Federal Theology, with its doctrine of the OT
coherent of works, which had been superseded by
the NT covenant of grace. This Covenant The-
ology (q.v.) was vigorously opposed by Vœtius and
others; but the spirit of the movement was in
the hands of the Cocceians, whose type of doctrine was accepted by the
English Puritans, embodied in the Westminster
Confession, and speedily became dominant in the
Calvinist churches.

During the second half of the 17th century
Holland was a refuge for oppressed Presbyterians from other
lands, notably from Scotland. Many Scottish
ministers were trained in Dutch universities; Scottish congregations flourished in many Dutch
towns; and the influence of Dutch theology spread
to Scotland, and to all the colonial Churches
that own the Church of Scotland for their mother.
This was also the century of Dutch colonial ex-
pansion, and Presbyterianism flourished in all the
Dutch colonies.

Up to about 1800 the only interference with the
old Presbyterian system was in the direction of
more efficient ministerial supervision—an object
secured by the appointment of a visiting committee
in each Classis. But about 1800 the Netherlands
was attacked by the prevalent disease of constituti-
mond-mortgaging, and the Church shared in the
general disorganization for about two decades.

The return of the House of Orange to power in
1813 brought the trouble to an end; and the
Church constitution, as renewed in 1816, was
an example of thoroughgoing and broadly
organized churchmanship, over, being completed by the addition of a National
Synod. The State supremacy, however, remained,
and it was further strengthened by a decree of
1827 authorizing a permanent committee of the
National Synod. This committee was composed
of 7 members, chosen by the Crown, out of 14
nominated by the Synod. In 1852 the State adopted
the policy of the concurrent endowment of all
Churches, and, except for the endowments, all
connection between Church and State has since been
at an end. The Church has been in the last century
a marked feature in the Dutch Church. In 1816
the Synod sanctioned a change in creed-
subscriptio whereby the subscriber accepted any
doctrine, not quae, but quatenus it was contained
in Holy Scripture. There was a wide-spread relaxation of Calvinist rigidity; and the
fear of this laxity on the part of the more
orthodox Presbyterianists has given rise to two
important secessions (1837 and 1866). These
have been dissolved, but the parties have been in
a liberal development of numbers, so that in times comparatively recent
many of her pulpits were vacant; but a return
to greater orthodoxy, coupled with a gratifying
increase in the number of Divinity students, holds
out a brighter hope for the future. The Reformed
Protestant religion is professed by the Dutch
royal family and by about three-fourths of the Protestant population, and at the end of 1812 the reformed, Walloon, English Presbyterian, and other Continental Churches, in 18 provinces and 314 districts, 10 provincial districts, 44 Classes, 1362 parishes, and at least 700,000 communicants. Branches of the Reformed Church also exist in the E. and W. Indies.

Notable Continental Churches.—By their sanctum initial struggle for existence, and their widespread influence, the Churches in France and Holland have earned their title to pre-eminence among the Presbyterian Churches of the Continent. But other Presbyterian or partly Presbyterian Churches exist in Europe, which, by reason of persecution, politics, or geographical situation, have remained isolated until the recent creation of a General Presbyterian Alliance. Indeed, some are isolated still.

The National Evangelical Church of Germany combines Lutheran and Presbyterian elements. The Decree of Augsburg (1555), by its adoption of the principle 'Cujus regio, ejus religio,' introduced into Germany a fruitful cause of religious hardship and ecclesiastical discord. In 1559 Frederick III., an enemy of Calvinism, succeeded to the Palatinate, and, in terms of the treaty, began the endeavour to make Calvinism the religion of his dominions. His methods, which were not above suspicion, failed in the Upper Palatinate; but the succession to the Lower; and, where they did succeed, he prevented the introduction of Presbyterianism in its entirety by keeping in his own hands a large measure of ecclesiastical control. The Presbyterianism of the Palatinate has made for itself an enduring monument in the Helvetic Catechism, the work of Oliberian and Ursinus, which, intended originally for local use, speedily won semechnal significance as a Calvinist standard. The Catechism softens the rigidity of Calvinism with regard to predestination and some other points, and is remarkable for its general moderation of tone. Among the duchies of the Lower Rhine Presbyterianism was planted by refugees from Holland, France, and Britain; Alva's persecution drove Dutchmen over the border in thousands, and the influx gradually changed the prevalent type of church. It is noted for its Synod of Emden Articles. But the civic authorities have prevented Presbyterianism from ever fully realizing itself. When the map of Europe was readjusted after the fall of Napoleon in 1815, these Presbyterian provinces fell to Prussia; and 1817, the tercentenary of the Reformation, appealed to Frederick William II. as a favourable occasion for uniting the two Protestant Churches in his dominions. The united Church was called the National Evangelical Church of Prussia, and the Prussian lead was followed by most of the other German States. Each of the two uniting Churches retained its own standards and its own system of government, but modifications introduced from time to time have very largely lessened the differences of the two Church bodies. The Lutheran theology and ritual have made serious inroads on the Reformed Church, but the Presbyterian form of Church government has been equally successful in the invasion of the Lutheranism of the '.Sceptre' of Prussia. It retains its firm hold on the Church organization as a whole.

In Hungary a modified type of Presbyterianism existed long before John Calvin ruled in Geneva. The intestine wars of the Hussites (q.v.) about the middle of the 15th cent. led to the forming of the Unitas Fratrum, who, abhoring the idea of strife, repudiated both the warring sects, and contented themselves with the guidance of the Holy Scriptures and the Catechism, the latter being patterned after the Bible alone. A constitution essentially Presbyterian, embodying the eldership and the discontinue, was adopted in 1496, and testified to the presence in the Church of a strong lay element. But a distinctive feature was introduced into the government of the Church by placing the presidency of each Synod in the hands of a bishop elected by the pastors. In 1557 the Church was strong enough to assemble no fewer than 200 pastors in one of its Synods. It had indeed achieved the status of a national Church, and in Reformation times the most cordial relations were inaugurated and maintained between the Bohemian Church and John Calvin. At the beginning of the Thirty Years' War the abortive rebellion of the Protestant nobles and the crowning of Frederick V., the Elector Palatine by the rebels gave to the persecuting zeal of Ferdinand II. an excuse for increased severity, and his victory was followed by the ruthless suppression of Protestantism in the empire. Heidelberg's Edict of 1628 gave the persecuted Church the first opportunity of renewing its activity, and, after 314 a cent; and a half of repression, the submerged Protestantism of the country soon blossomed forth into vigorous life and development only to be crushed again by the measures of a reactionary successor. A better constitution was granted in 1681; but the State, by means of its ecclesiastical Council, still keeps a firm hold upon the organization of the Church, and rules over its Synods and superintendents to the detriment of a complete Presbyterianism. The Church in Bohemia and Moravia continues small in numbers; but its heroic past and its present zeal for Home Mission work and education hold out the hope that a more liberal policy on the part of the State may usher in a more prosperous time.

In Hungary, as in many other lands, Calvinism superseded in time the original Lutheran form of the Reformation, and, whereas a Synod at Erdély in 1845 adopted the Augsburg Confession, the Synod of Nitra (1852) identified itself with the Helvetic and Catechism and the Second Helvetic Confession the standards of the Church, which has since faithfully adhered to them. When Hungary fell into two separate political entities about the middle of the 16th cent., its Presbyterianism developed in the Reformed or tolerant provinces, and the Church grew unchecked till 1692, when Rudolf of Hungary conquered the principality, and began to persecute the Protestants. But the Treaty of Vienna (1660) restored Transylvanian independence and ushered in a period of seventy years' peace. The Church prospered till 1677, when Leopold I. of Hungary again subdued Transylvania, and persecution, marked by the imprisonment, exile, enslavement, and even death of Protestant pastors, plunged Protestantism into misery once more. The century of humiliation which followed ended only with the Toleration Edict of Joseph II. (1787), which conferred upon the Protestants a new lease of life. Presbyterianism in Hungary was closely identified with the political aspirations of Hungary, and has been greatly benefited by the comparative independence which Hungary enjoys within the Dual Monarchy. Congregations to the number of 2000 and a membership of over 500,000 testify to the strength and vitality of the Church. By 1881 the old territorial division of the Church was retained, but in that year the organization under five independent provinces was unified by the Synod of Debreczen. In her isolation this Church

footnote: 1 About 67,000 in 1912.
has developed distinctive features in her government. Each Tractus, or Church county, the body corresponding to our Presbytery, is presided over by a senior elected by the pastors, and a condutor or curator elected by the elders. S-favoured the province has a clerical superintendent and a lay curatur. This arrangement combines the benefits of Episcopal supervision with those of Presbyterian parity. The Church has been chiefly remarkable for its educational work; and its organization of parish schools, high schools, and colleges vividly recalls the ‘devote imagination’ of John Knox concerning Scottish education. In a land hemmed in by circumjacent Catholicism the work done by the Church in maintaining single-handed its army of some 5000 teachers with 300,000 pupils is of immeasurable importance for Protestantism.

The cantonal system of Swiss government has served to restrict the honour of Calvin in the land of Calvin’s adoption. All the cantons except three—Geneva, Vaud, and Neuchâtel—favoured the Zwinglian rather than the Calvinist form of Church government; and in the three cantons named the Church remained isolated and quiescent till the beginning of the 19th century. The period of religious transition which had been characterized by secessions and divisions, In Geneva, on the occasion of a visit paid by the Scottish preacher, Robert Haldane, in 1817, a revival of evangelical zeal began. C. B. A. Malan, J. F. M. d’Aubigné, and others founded the Evangelical school of theology, and were deposed in their turn. At the same time the State was engaged in an attempt to destroy the independence of the Church; and the agitation finally issued in the formation of the Free Evangelical Church (1849).

This Church is still weak in numbers, but it withdrew sufficient strength from the national Church to leave it at the mercy of the State, and since 1874 the national Church has really ceased to exist.

In Vaud the famous theologian, A. R. Vincent, advocated the policy of separation between Church and State; and, when the State, as in Geneva, attempted to subordinate the spiritual to the civil power, 100 ministers seceded in 1845, forming the Free Evangelical Church of Vaud, which has been recognized for its missionary zeal. The national Church is now controlled by the State, but not too rigidly.

In Neuchâtel a similar effort by the State to assume control of the Church resulted in a secession under F. Godet in 1873.

In Italy, Spain, Portugal, and Belgium 16th cent. Protestantism was strangled in its infancy; and only in the last century have more liberal ideas permitted the rise of a Reformed Church in those countries. The Italian Church, the descendant of the Waldensians, began its work in Piedmont in 1849, received an additional impetus when the unification in Italy under a constitutional government took place in 1861, and now exercises its semi-Presbyterian government over a membership of about 200,000. The Dutch Reformed Church, which had begun by Scotsmen in 1852. Persecution and exile followed in 1860, and the refugees, meeting at Gibraltar, took over the Westminster Confession, and adopted Presbyterian Church government. The consequent government, which had their work since centred mainly in Seville and Madrid. This Church owes a great debt to the support forthcoming from Scotland and Ireland.

Belgium has recently become possessed of two Reformed Churches, each about 7000 strong, one of which has laid claim to a historic succession by adopting the Confessio Belgica. Small Reformed bodies also exist in Denmark, Alsace-Lorraine, Austria, Greece, and Poland; and, if we are to judge from the justified enthusiasm of the leaders of future government, we may confidently assume the present to be only the day of small things, and anticipate a great future for this new democratically constituted variety of Church organization.

The total number of Presbyterian communicants in Europe is now well over 3,000,000—more than half of them in the British Isles.

iv. History Outside Europe.—When we come to consider Presbyterianism elsewhere than on the continent of Europe—e.g., in America—we reach a new phase of Presbyterian history, in which petty obstruction takes the place of sanguinary persecution, in which battles and martyrdoms are replaced by slow development and construction; and, whereas in the heroic days of early European Presbyterianism the leader often balked larger than the cause, in other continents Presbyterian progress was, on the whole, a triumph of principles rather than of individual men.

i. America.—To America Presbyterianism was introduced by the Scotch and Germans who had made their contribution, as is seen below; but the contribution of the Church of Scotland has been greatest of all. Episcopacy arrived in Virginia with the early colonists of 1604, and in 1620 the Pilgrim Fathers founded the old New England movement, and the Church showed its rescript by it, not by its weakness but its strength, of becoming Presbyterian. In the Free Church of Scotland, the Tradesmens, the Ancient and Modern, and the Free Church of England, 1684, the Free Church of Scotland was founded. The Presbyterian wing of English Puritanism was represented from the beginning, and its adherents were at first scattered to make organization possible or profitable, and only when the persecutions under Charles II. began to drive men from Scotland and Ulster to the colonies did numbers to be organized and minds to organize them make their appearance in the American colonies. Emigration from Scotland was encouraged during the persecution, and from 1660 to 1688 a steady stream poured out of the country—often in compact bands of several hundred men belted up with money from New Jersey and Pennsylvania, and the first church was built at Freehold, N. J., in 1692. By 1700 there were over 30 congregations—half of them in the two States above named; indeed, Presbyterianism soon became a feature in the life of the middle colonies. Francis Makemie, a licentiate of the Presbytery of Lagan in Ulster, had been sent out in 1683 in pastoral charge of a band of emigrants; and, combining in the land of his adoption the callings of itinerant trader and evangelist, he found in the country a sufficient number of Presbyterians to make organization worth while and enough Episcopalian opposition to make it expedient. In 1699 he was called to the charge of Snowhill in Maryland, and in 1706 seven ministers, with Makemie as leading spirit, founded the Presbytery of Philadelphia. Thereafter a rapid development took place. Appeals were made to Scotland, Ulster, Dublin, London, and considerable assistance was forthcoming, notably from the Synod and the General Assembly regarding deaconesses as the supply of ministers, the operation of Test Acts at home supplied the Church with a steady influx of emigrant members, and in 1716 she was strong enough to combine her four Presbyteries into the Synod of Pennsylvania, with herself presided over by a presbytery and a constitution soon made itself felt, but, when the Presbytery of Newcastle, alarmed at the lax doctrine of some of the incoming ministers, ordained in 1724 that all its future licentiates must subscribe the Westminster standards, and overturned...
the Synod to make this rule general, the discussion in the Synod revealed the existence of two parties in the Church. In New England elements of the Established Church were not only far removed from the birth New England clergy looked askance at the more rigid Presbyterianism of Scots and Ulstermen. The resultant controversy lasted some years, and it was mainly the tact of Jonathan Edwards that saved the ministry of the old Presbyterian standard from being split. A compromise was effected by the passing of the Adopting Act, whereby the Westminster standards were taken over as embodying in essence a sound system of doctrine and government, and their oligarchy of ministers preserved. But the principle that the circumstances might allow or Christian prudence direct. By this wise measure the Church was enabled to retain its historic connexions, to avoid Congregationalism, and to secure a degree of flexibility fitting it to deal with the conditions prevalent in a new and growing country. A fresh controversy soon arose over the question of ministerial education. The supply of ministers, both from the colony itself and from overseas, fell so short that it almost ended in its total absence. The standard was hard to avoid. William Tennent, a Dublin emigrant, attempted to meet the case by founding a seminary, later known as the Log College; but his students frequently possessed more zeal and piety than education or culture, and filled the older Presbyterian bodies. The visit of Whitefield in 1730 was followed by an outburst of revivalism, and at length the un-Presbyterian methods of the Tennent school moved the Synod to insist upon Presbyterian discipline and a standard of education for all its ministers. The disruption resulted in 1745, when the Church split into the Synod of Philadelphia, or old side, and the Synod of New York, or new side. But the new side were quite alive to the benefits of education, and the old side not alive to the blessings of evangelical zeal; and a sense of duty, combined with mutual esteem and a common interest, secured re-union in 1758. The cause of missions to the American Indians, which had been in operation since 1741, was warmly espoused by the ununited Church, which also interested itself deeply in the New Jersey College. When the Revolutionary war broke out in 1775, the Presbyterians of the middle colonies, who had not forgotten the history of their earlier secession, took almost to a man, and their devotion to the Revolutionary cause earned for the Church the lasting respect of the nation. John Witherspoon, who had come from Scotland in 1768, was the principal actor in the completion of the Church's organisation, when, in 1788, 13 Presbyteries, meeting by their representatives at Philadelphia, constituted themselves the first General Assembly of the Church. They organized the Church on Scottish lines, and adopted the Westminster standards, making determinative the principle that 'God alone is Lord of the conscience.' At this stage the Church numbered 4 Synods, 13 Presbyteries, 186 ministers, and 419 congregations. About the end of the 18th cent., unions and federations were the order of the day, for 1845 in the United States ten and Congregational Churches drew up the 'Plan of Union,' which was really an effort to secure external and operative unity by ignoring the differences between the Churches. As a result the number of ministers increased, and the number of congregations, but became thoroughly leavened with Congregationalism. Members poured in at the rate of 10,000 to 20,000 per annum; but the younger churches became lax in their adherence to Presbyterianism. A test case came at length in 1830, when Albert Barnes, a Congregational minister called to a Presbyterian charge in Philadelphia, was vetoed by the Presbytery on account of his known laxity of doctrine. The breach of the Church into old school and new school followed in 1838, and endured for thirty-two years. Plessing ran high in both schools and sects over the question of the doctrine and discipline. A half of the new school repudiated their brethren of the south, and in 1861 the southern portion of the old school seceded. This fresh dismemberment drew the two northern bodies together, and they united in the United Presbyterian Church. Many Churches had been vigorously engaged in Home Mission work, having sent out between them no fewer than 25,000 missionaries; and the united Church followed up the work with enthusiasm. Foreign Missions had been inaugurated in 1810 as the result of a denomination activity, but in 1838 the Church took over her own. Early in the period of separation the new school reverted to the original plan, but in 1854 she resumed control of her own work, the result of which has been the establishment of missions in Mexico, Brazil, Africa, Syria, Persia, India, and China. With over 9000 ministers, almost 1,500,000 members, 300 missionaries, and a dozen seminaries, including such famous schools as Princeton and Union, this Church is, in point of size, the greatest single Presbyterian organization in the world. Of the other Presbyterian bodies of British origin in the United States little need be said. The Presbyterian Church in the United States (South) was formed in 1861 by the union of the old and new schools in the southern States. It possesses missions in Mexico, Brazil, and India, but its principal mission work has naturally been among the emancipated negroes. This Church has upheld the conservative tradition of the South. Since the end of the Civil War it has become increasingly friendly with its northern neighbour, but re-union has not yet taken place. It has over 1700 ministers and nearly 300,000 communicants.

The Cumberland Presbyterian Church, which, with its Coloured Branch, numbers about 150,000 members, had its origin in the Kentucky revival at the end of the 18th cent., when doctrinal and ecclesiastical vagaries increased to such an extent that at length the General Assembly intervened, forbidding the Cumberland Presbyterians to ordain ministers who had no church fellowship. This secession gave birth to the Cumberland Presbyterian Church, which retains the Presbyterian polity, but has lowered the standard of ministerial education, and has relaxed some of the severer Calvinist doctrines. The United Presbyterian Church of N. America represents the main stream of 18th cent. dissent in Scotland, and its membership is over 100,000 strong. It remains very strict in its adherence to old standards, but is notable for its great evangelical and missionary zeal.

Among the Presbyterian Churches in the United States which trace their origin to continental Europe it will suffice to mention two. The Reformed Church in America (q.v.), which till 1807 was sustained at the expense of the Dutch Reformed Church, enjoys the distinction of being the oldest Presbyterian body in the United States. The first congregation, with Jonas Michaelius as pastor, was formed in 1628 in what was still the town of New Amsterdam; another was formed in 1662, and flourished under Dutch rule till 1664, when the colony passed into English hands and became New York. The English authorities confined the activities of the Church to the Dutch inhabitants and the Dutch Reformed Dispensations, which remained in force till about 1700, its expansion was checked. Thereafter the Church itself hampered
its own growth by the exclusive use of the Dutch language in its services and by retaining its affiliation to the Classis of Amsterdam. But in 1746 the use of English in the services was permitted, and in 1755 the Church declared its independence of the Amsterdam Classis as the Synod of the Dutch Reformed Church in America. Since then it has grown steadily, and now has a membership of about 300,000. The Dutch element and influence in it have naturally decreased, but the old doctrine, government, and ritual are still adhered to, and the doctrinal standard, the Heidelberg Catechism, is expounded weekly in every congregation, a period of four years. Foreign missions in India, Japan, and China constitute an important feature of the work of this Church; and the efforts of the Senderli family have made Arcot (S. India) a perfect model of what a mission ought to be.

The German Reformed Church was founded by emigrants, chiefly from the Rhine Palatinate, about the end of the 17th century. These settled mostly in Pennsylvania, and in 1746 M. Schlaeter and four other ministers formed the first Consistor or Synod under the Classis of Amsterdam. Schlaeter paid a visit to Europe in 1751, and secured substantial help from Holland, England, and Scotland. The Church declared its independence in 1773, and since then has continued to grow, and now numbers about 300,000 members. It is estimated that the German immigration to America during the last century two-thirds have found their way into the Lutheran Church, and the remainder, according to the Reformed Church. The German Church has retained its native language much more tenaciously than its Dutch neighbour. The Heidelberg Catechism remains the doctrinal standard, and German customs and ritual are strongly adhered to, particularly in connection with the great festivals of the Christian year. The six Churches already spoken of represent well over 95 per cent of American Presbyterianism.

Presbyterianism stands third in order of numbers among the Protestant Churches of America. There is no possible question concerning the comparative smallness of Presbyterian immigration and the restriction that the Church has placed upon her expansion by her insistence upon an educated ministry. Her membership is increasing over three times in the lifetime of the country; and in culture, influence, wealth, and catholicity of spirit she claims no American Church her superior. The huge sphere of labour presented by the United States prevents the overlapping caused by denominationalism in smaller countries, and this, together with the friendly rivalry that exists between the various bodies, is a happy augury for a prosperous union at some future date. The history of Presbyterianism in Canada presents two main features—enthusiasm for unity and tenacity in the face of opposition. The Huguenots first attempted to lay the foundations of Presbyterianism in Canada, and, while the tradition of Henry of Navarre persisted, they were not unsuccessful, but the revocation of the Edict of Nantes (1685) and the end of their work and turned Canada into a Jesuit preserve. The second impulse began from Britain in the latter half of the 19th cent., and, since then, Scottish characteristics have been well to the front. The increase of the Church had been a problem, and the problem was solved by seeking for outside help, and all the home Churches, as well as the American, did what they could. In this connexion the work of the Glasgow Colonial Society in Nova Scotia is especially worthy of mention. In the early part of the 19th cent. Episcopal opposition had to be faced in Canada as elsewhere. One-eleventh of the uncened lands in Upper and Lower Canada had been set apart for the maintenance of a Protestant clergy, and it cost the Presbyterian Church twenty years of struggle to wrest its share from the grip of the Episcopalians. The battle raged from 1817 to 1840, at the end of which time the Presbyterians obtained a third of the 3,000,000 acres of clergy lands provided by the act of 1791; but in the end of a twenty years' course, the college applied to the government to endow additional chairs in King's College, Toronto; but, Episcopal opposition proving too strong to be overcome, the Church herself founded Queen's University.

The Disruption of 1843 aroused echoes in Canada, and this, with the territorial divisions obtaining till 1867, kept the Canadian Church divided. In 1845 there were seven principal bodies of Canadian Presbyterianism, but internal growth was steadily developed, and in 1860 a succession of unions began. By 1875 only four separate Churches were left, and these united on 15th June of that year to form the Presbyterian Church in Canada. At present a scheme is afoot to bring about a wider union of Presbyterians, Methodists, and Congregationalists. The General Assembly approved the basis of union in June 1916, but a considerable minority left the house; and so far the matter is incomplete.

The Church does excellent work among the French and German races. In her history and its most productive activity has been along the line of Church extension in the West, where, especially since the opening of the Canadian Pacific Railway in 1885, a notable work has been done in what is practically a new nation.

The Church at present has 70 Presbyteries, 2336 congregations, 1769 ministers, and about 300,000 communicants.

2. Australia.—Four-fifths of Australian Presbyterianism is concentrated in New South Wales and Victoria. The Presbyterian Church of New South Wales came into existence as the original population was outnumbered and absorbed by the respectable immigration of later times. The first Independent minister in the colony was John Dunmora Lang, who went in 1823 and some years later was instrumental in founding the Presbyterian Church of New South Wales. In course of time certain ministers resented Lang's virtual dictatorship, and tried to end it by insisting upon punctuations of the 15th cent. Church, after the line of John Dunmora Lang and his following, who considered such rigidity injurious to the prospects of a new Church in a new land, seceded in 1838. Union was restored in 1840, only to be broken by a similar secession in 1842. The Scottish Disruption produced a further split in the colonial Church. She did her best to remain neutral, but her dependence upon Scotland for men to fill her pulpits produced the inevitable division in 1846. At length, however, her growing independence minister in the colony was John Dunmora Lang, who was called upon to face, paved the way for union; and since 1865 all sections have been united.

In Victoria the gold rush, and the situation created by the rapid influx of a certain type of population, brought about a union in 1855. By 1870 all the remnants had come in. Since 1859 there has been a federal union of the original six Australian Churches, with an annual Federal Assembly. Its 44 Presbyteries, over 600 congregations, and about 60,000 members, is in proportion to the area and population of Australia.

3. New Zealand.—The first Presbyterian Church of what became in time the Presbyterian Church of New Zealand, occupying the north island and half of the south, was founded at Auckland in 1856. The personnel was largely drawn from the Church of Scotland, but comprised Irish and other elements. Since its early days this Church has done splendid
PRESBYTERIANISM

Home Mission work, and has grown with the growth of the colony. The Presbyterian Church of Otago and Southland resulted from a resolution of the New Zealand Church in the early 1840's in support of the suggestion of the Free Church of Scotland in the settlement of the new colony. The Free Church accepted the proposal, and the experiment of founding a model colony was tried at Otago. The first batch of emigrants arrived in 1848, with a nephew of Robert Burns as their minister, and in 1854 the first Presbytery was founded. The gold rush of 1861 presented the Church with a problem which has been very satisfactorily solved. The united strength of the Churches in New Zealand now totals 17 Presbyteries, 230 congregations, and 40,000 members.

4. S. Africa.—There was a Dutch Reformed Church in Cape Colony from 1652; but, in spite of the steady stream of Dutch migration and an influx of Huguenots about the end of the 17th cent., the Church had practically no history for the first century of its existence. After British rule began in 1806, better days dawned for the Church; and a Synod was organized in 1846. A Dutch Reformed Church was given the equal status of a diocesan prelacy, but had left the supreme ecclesiastical power in the hands of the State. Ministers of a later date found State control irksome, and agitated to such purpose that the obnoxious feature was abolished in 1861. The Church was then split into a number of territorial fragments. The various Dutch Reformed Churches have a communion-roll of about 200,000, and the British Church numbers over 11,000 communicants.

Leaving out of account the spiritual, ethical, intellectual, political, and economic influence of its splendid history, and regarding it from the point of view of mere statistics, we may allow the following figures, reported to the last General Council, to vouch for the progress of Presbyterianism and to bear testimony to the fact that the seed planted in Geneva has become a great tree overshadowing the world.

Total: 6,415,014

As the total for 1858 was only 3,721,680, it will be seen that the communion-roll of Presbyterianism has nearly doubled itself within the last thirty years—a happy earnest of further increase.

III. NATURE AND WORKING OF PRESBYTERIAN SYSTEM.—All forms of Church government are ultimately reducible to three—Prelatic, Congregational, and Presbyterian. The Prelatic type of government, exemplified in the Roman Catholic and Anglican Churches, is characterized by the gradation of ministership into a hierarchy or pyramid, the gradation of the diocesan episcopate, and by the emphasis laid on the distinction between clergy and laity. The Congregational type recognizes neither gradation of ministerial rank nor gradation of Church courts beyond that of the congregation and makes of every congregation an independent judicature. It is the boast of Presbyterianism that it avoids the dangers of both its rivals; on the other hand, it has sometimes been charged with combining the evils of both without any admixture of their advantages. As opposed to presbytery, the Presbyterian type of government rests upon the equality of ministerial status, and seeks to give ecclesiastical power to the members of the Church in the form of the presbytery. In opposition to Congregationalism, it seeks to realize the unity of the Church, by entrusting to a carefully devised system of graded Church courts legislative, executive, and judicial, not merely advisory, powers. In the Presbyterian type of Church government, there are three chief types of government which combine features drawn from more than one of the three chief types mentioned above. It will be noted that in such cases the operation of some factor external to the Church, such as the civil power, has generally to be taken into account. Indeed, in the last resort, any given form of Church polity must logically be based upon some definite doctrine of the Church, and any such doctrine of the Church is bound, in its turn, to influence the form of polity which is used. Thus we find that, on the whole and in spite of exceptions, Calvinistic doctrine, Presbyterian Church government, and a simple type of service which lays great stress upon the homiletic aspect of worship go together; and, in most cases, these or other forms of influence will be seen working against the free self-development of the Church. Presbyterianism is characterized by the attempt to combine in its organization the following three features: (a) parity of the clergy; (b) government of the Church by its membership; (c) unity of the Church, so far as the conditions of nationality, language, space, and numbers will permit of organization. It will thus be seen that we have here the attempt to steer a middle course between Presbytery, which has made much of the doctrine of office in the Church, and Congregationalism, which is given over to individualism.

In support of the theory and practice of Presbyterian Church government the jus divinum argument has been largely made use of. At the height of the controversy between Presbyterianism and Predestination which divided Britain in the 16th and 17th centuries the argument was pushed to the extreme of identifying Presbyterianism with the ecclesiastical polity of the NT—a position untenable under the conditions of modern historical research, which would prefer to find the justification of any ecclesiastical system in considerations of expediency or of development. Yet the Presbyterian still cling to the jus divinum in a modified form. He holds that the NT, which sets forth the basis of the Christian faith, must necessarily supply the basic ideas concerning the institution which has sought to embody Christianity and to mediate it to the world; and he contends that in the fundamental ideas and principles of Presbyterianism the spirit and ideas of the NT are more faithfully reproduced than in any other polity. He would no more lay claim to a divine succession of presbyters than to apostles or external individuals or councils; the laying on of hands by presbyters has for him no more significance than episcopal consecration as a kind of mechanical device for the transmission of ministerial grace; he would find the true apostolic succession in the succession of the apostolic spirit by generations of faithful Christian pastors. His idea is of the jus divinum as belonging to an institution which is spiritually the successor of the NT Church, seeking on the whole to retain its office and its general type of organization while modifying them to meet new requirements in a different age.
The Presbyterian form of polity in modern times is based on the Calvinist doctrine of the Church. According to this view, the Church is a fellowship of believers which alone as such is the follower of Christ, and of all with Christ. Such an essentially spiritual idea of the Church renders it impossible for the Calvinist Presbyterian to unchurch any professed believer or body of believers on merely external grounds. The Church is, in fact, an invisible, hidden body, and the mechanical exclusion of any man from salvation by reference to some fixed ecclesiastical theory is a presumption. In fact, evangelical Protestantism must place first the true preaching of the Word and the proper administration of the sacraments, and all Church government is justified only as a means to that end. Up to this point Presbyterianism and Congregationalism are agreed; they differ only as to the means by which the Church can best serve those ends and express her mind to the world. Presbyterianism recognizes more fully than Independency that, in order to secure the three general ends of true preaching, true administration of the sacraments, and true discipline, an orderly and united body of believers, a certain amount of organization is unavoidable, even if of secondary importance, and the founders of Presbyterianism went to the NT for their models. In so far as they attempted or claimed to establish an exact and mechanical reproduction of the NT Church, they were mistaken, but they may at least claim to have worked out a system as nearly like it as anything that can hope to adapt itself to modern times.

1. Ecclesiastical offices and officials.—In order to grasp the significance of ecclesiastical office it is no less important to see the connexion of ‘gift’ and ‘office’ than to distinguish between them. At first the ministry of gifts that prevailed in the primitive Church rendered office unnecessary and even impossible, but it was not long before the failure or the capriciousness of gifts rendered office inevitable in the growing community, and offices and officials were undoubtedly existent in NT times. Gifts, on the other hand, were the basis of office, the holding of which originally signified the recognition on the part of the Church that the official possessed eminent gifts. As the Church grew in numbers, and had to face heresy within and persecution without, officialism naturally asserted itself as an ever-growing importance. Montanism, e.g., was, from one point of view, a protest against the growth of officialism in the Church, and the reaction against Montanism fostered the very growth against which it protested in vain. Ordination—at first simply the setting apart to a special task of a man with special gifts for it—became a more formal thing; the ritualism of the act came to surpass in importance the prayer which was originally its essence; and gradually the right to confer ordination, from being, the holding of which originally signified that a person became a distinction between superior and inferior orders of clergy. The whole tendency of mediavalism was in the direction of this growing sacerdotism, the original freedom and spontaneity of the Church was crushed rather than observed as the machinery of it became perfected, and the Reformers aimed at getting behind this perfection of lifeless mechanism to the simpler ideas and organization of primitive times, the earlier among them being to discontinue from such hallowed symbolism as the laying on of hands in ordination. The Calvinist and Presbyterian wing of the Reformation distinguished in the NT certain offices which were intended to be ordinary and permanent from certain others which were of an extraordinary and temporary character. These permanent offices were (a) the ministry of the Word, (b) ruling and discipline, (c) the care of goods, their distribution in needful cases, and the care of the poor and sick. Discipline, discipline, and distribution were the distinguishing marks of the Churches of the New Testament. It is true, of course, that the elders were and are used to discharge all these offices in the Church, but the essential peculiarity of the Calvinist and Presbyterian Church was that certain offices were established which were not mere incidentals in the service of the Church but were brought within the connection of the Church as a divine institution. That these offices were of the highest importance is evident from the fact that teaching power and business gifts form a sufficiently rare combination in the individual. Finally there comes about a clear distinction between the office of preacher and teacher and that of ruling elder; we find in Cyprian, e.g., a clear recognition of the distinction between teaching and ruling presbyters. The modern Presbyterian Church has always made a point of this distinction, which is very clearly brought out in the theory and practice of ordination. If ordination, as some have contended, were merely to ordain a man, a special new ordination would be required to transform an elder into a minister. But the Presbyterian system regards ordination as admitting, not to order, but to office, and the requirement of a special ordination for a minister is a recognition of the different offices of teacher and ruler. Yet there has always been a certain confusion in the mind of Presbyterianism with regard to the exact relationship between the minister and the elder, the teaching and the ruling presbytery. Some, like John Calvin, followed by Gillespie, interpret 1 Ti 5:17 as if preaching and ruling presbyters had held distinct offices from the very beginning; others, like Campbell, have considered the ruling elder simply as a lay elder and councillor of the minister, his spiritual work being only that which might be done by any other pious member of the kirk; a third and more sensible group of thinkers hold that the distinction of office has arisen naturally out of a distinction of gifts in a Church faced by the problems of growth and maturing age. It is, in fact, better to consider the office of presbyter from the practical than from the theoretic and Scriptural point of view. The ruling elder, at the least, discharges the useful function of meeting the spiritual and temporal needs of his people, of keeping the minister in touch with the general life of the Church; and his tenure of an office which renders him of equal status with the minister as a member of any Church court is of immense importance. If the ruling elders of the Church declined in the Middle Ages, that of the ruling elder vanishing altogether. But at the Reformation the removal of the crushing burden of sacerdotism caused both to revive. The minister as pastor, preacher, and teacher rose into new importance; and the Presbyterian Church among the rest, he has ever since retained the highest place in the esteem of the membership. The office is ministerial, not sacerdotal, and, whatever ‘preacher’ may be metaphorically, it is certain something quite different in practical
content from 'old priest writ large.' Regarding episcopacy and the episcopal office as a late development, unscriptural and unjustifiable, the Presbyterian reformers have always insisted upon the superiority of the clergy, and Calvin has always seen in preachers, the administration of the sacraments, and the exercise of discipline; and the sacerdotal side of the office has always been carefully kept in the background, lest the minister, in the guise of a priest, should ever become an ecclesiastical monarch. The ruling elder disappeared, as has been said, in the Middle Ages; the attempt to trace him back to the Waldensian movement has not been successful; nor did he reappear in the Lutheran Church. From the beginning the need of a body of men to exercise Church discipline was recognized by the Reformers, who felt that, while the *jus episcopate* ought to be transferred, it must not be allowed to lapse. But the question at once arose as to whether these men should be chosen by the Church or by the civil authorities, and the first to see quite clearly that the Church ought to choose them was John Calvin. In this he differs from both Luther and Zwingli, who left the exercise of Church discipline to the civil power, and, along among the Reformed churches, made it the function of the people, founded upon the NT, and possessed of spiritual office for the discharge of a spiritual function. With this is bound up the theory of the relation between Church and State. It may be noted that the very alliance between Church and State in Geneva which realized one side of his ideal baulked him in the realization of its other half, viz. the maintenance of a distinct and separate sphere for both. In France, however, the hostility of the State reversed the case; alliance was impossible, but the Church was therefore free to develop along her own lines. And the same state of affairs obtained in Scotland. In these two countries, therefore, the Presbyterian eldership came to its full development, and the office is distinctive of Presbyterianism. The elders are chosen by the general body of the membership, and specially ordained to their office. At first they held office only for a limited period, and then reelected, but the present precedent of other representatives of the popular voice; but in later times the office has come to be held 'ad vitam aetculam,' and Presbyterian Church government is by representation rather than by direct reference to the whole body of the people. The eldership is a spiritual functionary; and, while he is debarred from the ministry of the Word and sacraments, he has the right to assist in the administration of discipline and in the government of the Church, in whose courts his vote is of equal value with that of the minister. The work of the deaconate, since the decline of that office, has largely fallen to the eldership; and the assistance of a competent body of elders is invaluable to the minister.

In the early history of the Church it was found advisable to take the work of assisting off the shoulders of men otherwise too busy to attend to it, and thus originated the office of deacon. It is an open question whether the 'Seven' of the Acts of the Apostles were the first of those to be chosen at all, whether we have reason to believe their work being formally recognized by the Church as the work of ecclesiastical officials, or whether these seven were then chosen in the Gentile interest, because those already in office did not consider Greek and Gentile, but the Presbyterian deacon, so far as the office still exists, is a more faithful copy of his prototype than the deacon either of Roman Catholicism or of Anglicanism. The office was never generally regarded as a spiritual one, implying any spiritual function, though the French Church originally took that view; all that is implied in it is the application of spiritual principles to certain secular affairs. The originally unscriptural nature of the office is again evident in the fact that, in spite of the disabilities of women for public speaking and the like, deaconesses were very early at work in the Church. Yet the deacon is more than a mere member of a managing board. He holds an ecclesiastical office, and is called to hold in which office we may describe the deacon of Reforming times as a secular Church official. The office has largely fallen into abeyance, especially where State connection has eased the financial affairs of the Church, and the passing of the diaconal functions in such cases into the hands of the elder has done much to secularize the eldership.

Minister, elder, and deacon are the three ordinary and permanent officials recognized by Presbyterianism, but Calvin and the rest held that NT precedent would authorize the temporary use of extraordinary offices to meet special circumstances. The internal needs of the Church herself or the pressure of outside factors determined the nature of such special offices; and of the earliest days of the Reformed Church, e.g., there existed the office of teacher, as distinct from that of minister, an office which has quite naturally disappeared; for, with a growing knowledge of Reformed doctrine on the part of the people, and after the issue of Catechisms for the instruction of the young and comparatively ignorant, the special work of the teacher became unnecessary. Similarly, in John Knox's day the difficulty produced in Scotland by the inadequate supply of ministers to meet the national need gave rise to the two special offices of superintendent and reader, both of which disappeared as ecclesiastical situation became settled. The chairmen of General Assembly committees and the Divinity students who spend their spare time in mission work represent the nearest survival of these two offices today; but it is noteworthy that, in Canada, a problem similar to John Knox's is responsible for the existence of superintendents at the present time, and for the use made of special-counsel men, who are better trained than the ordinary minister. We have seen also that special offices exist in the Bohemian and Hungarian Churches, and, though a strict Presbyterian might, on the ground of these special offices, call in question the purely Presbyterian nature of the Church, it is equally possible to acknowledge the place of the diaconate in the dispensation of the Church, even in this case, raising no qualms in the breast of John Calvin. Undue State interference has in many cases caused modifications in the Presbyterian theory and practice with regard to office; but the offices of minister, elder, and deacon are alone recognized or required as permanent in a thoroughlygoing Presbyterian system, and even the deacon tends to disappear when the Church is prospering.

2. Church courts.—By the organization of her officials into a carefully graded system of Church courts Presbyterianism seeks to give expression to the unity of the Church. These courts exercise a threefold function: (a) legislative: they frame laws for the purpose of securing order and for the promotion of the spiritual growth of the Church; (b) executive: they give effect to these laws; (c) judicial: they inflict and remove ecclesiastical censures; and the higher courts review the proceedings of the lower. On the basis of the constitution of the Church, but the claim is made that both the constitution and the activities of the Church are ultimately based upon Holy Writ. In the Presbyterian Church the holding of a spiritual office is a necessary qualification for a seat in any of the
Church courts. Thus only teaching and ruling elders are eligible for membership, and the members of any court must be compilers of both. Congregational Church government is probably more directly popular in its nature, but Presbyterianism is also vigorously democratic; for both ministers and elders are popularly elected, and represent, in the last resort, the will of the people; not subject to the control and form of narrower government than the NT. It is responsible, too, for admission to ordination. The work of the minister is also looked after by the Session, which, if it sees fit, may bring before the Presbytery any matter connected therewith. In certain cases the Synod also sees to the proper distribution of ecclesiastical goods.

Where a Deacons' Court exists, the last-named function naturally falls to it. The functions of the Deacons' Court are not of a spiritual nature; it is responsible directly to the Presbytery.

(b) Presbytery. — The Presbytery — otherwise known under the various names of Classis, Colloque, Tractus, etc. — is the unit of the Presbyterian system and the means of realizing Church unity. It is the ordinary or sectional or intermediate Church tribunal, and the characteristic and distinctive feature of Presbyterianism. The extent of its bounds and the number of individual congregations within its jurisdiction are matters of convenience. On the Presbytery are represented all the ruling elders within the bounds, the representation consisting of all the ministers, together with one elder for each Session. Thus, as the moderator, who is always a minister, has no deliberative, but only a casting vote, it may quite well happen that, if there are no collegiate charges within the bounds, the lay element will control a steady majority. Formerly a doctrinal discussion or the study of a portion of Scripture might form part of the proceedings of a Presbytery, but such study or discussion would take place now only under very special circumstances, and, for the most part, the court confines itself to purely business matters. This court has the power to grant licence and ordination, and also to take them away — subject, of course, to the laws of the Church and the revision of the higher courts. It has also the power of oversight and the refilling of vacant charges. The superintendence and review of the proceedings of lesser courts also belong to it — e.g., in Scotland since 1630 it has been the practice of the Presbytery annually to examine the books and records of lesser courts and to examine into any lapses or proceedings from Scripture. In such cases the Presbytery acts as a court of appeal, and appeals from these courts. The Synod as a body, individual elders, or ordinary members of a congregation may petition the Presbytery concerning a moderator of Session. In the ordinary way the proceedings of Presbytery are regularly submitted to the Synod of the province. But it is in the power of any Presbytery to submit a suggestion direct to the General Assembly by means of what is called in Scotland an ‘overture’; and the converse of this appears in the Barrier Act of 1697, which forbids any General Assembly to pass an act affecting the constitution of the Church until it has submitted the proposal to all the Presbyteries, and their opinions on it have been received by a later Assembly. In the act of ordination only the minister or the ruling elders of the Presbytery sign. As the court intermediate between the Presbytery and the supreme court of the Church, the Synod has a comparatively narrow range of functions. It reviews the proceedings of Presby-

1. *Moderator* is the name applied to the president of any ecclesiastical court.
PRESBYTERIANISM

PRESBYTERIANISM and previous in Scotland was supreme by the highest system of the whole Church; but, while Kirk-Sessions are represented in the Presbyterian and Synod, Presbyteries are represented in the General Assembly. The proportion of elders to ministers varies in the various Churches. In the Church of Scotland the scheme is as follows:

By an Act of Assembly, a.p. 1694,
(a) from Presbyteries of 12 or fewer parishes, 2 ministers, 1 elder;
(b) from Presbyteries of 12 to 13 parishes, 3 ministers, 1 elder;
(c) from Presbyteries of 13 to 24 parishes, 4 ministers, 2 elders;
(d) from Presbyteries of 24 or more parishes, 5 ministers, 2 elders.

By an additional Act of a.p. 1719,
(a) from Presbyteries of 30 or more parishes, 6 ministers, 3 elders;
(b) by a rule of Assembly enacted in 1699 every Presbyterian session to elect, for every four ministers on roll of Presbytery and for a part of four, and one elder for every minister and for a part of four.
(c) 67 town council elders from royal burghs, and two from the city of Edinburgh.

(a) representative from each university.

The Free Church simply took one-third of each Presbytery (ministers and elders alike); and every Church has its own scheme of representation. The personnel of General Assemblies necessarily varies much more than that of inferior courts from one meeting to another; and, as a consequence, any given Assembly may differ widely in its opinions from its predecessor. But the judicial findings of one Assembly cannot be reversed by another; e.g., if the Assembly of 1699 may think its predecessor wrong, but can alter the decision of 1859 only by finding that the suspension has already been long enough to satisfy justice, or express its disapproval by coming to an opposite conclusion on a similar case. As recent legislation, legally and in fact, is separate from previous Assembly — any act, indeed, which is not a judicial decision — can, subject to the usual limitations, be reversed, although, up to the time of its reversal, it is binding upon the Church. If the constitution of the Church is affected by any proposal, the Barrier Act prevents hasty action. It will be seen from the above that in the lowest court, the Kirk-Session, the lay element must predominate; that in the next lowest, the Presbytery, it may; and that in the Synod the same state of affairs will prevail as in the sum of the Presbyteries. Not until we come to the highest court of all can a clerical majority ever be theoretically certain, though, as a matter of fact and practice, the ministers are usually preponderate in every court higher than the Session. Still, when we consider that all ministers and elders eligible for a seat in any court of the Presbyterian Church are originally elected by the people, and must therefore, in the main, reflect popular opinion, and whether the ministers in the Synod and the Session stand in the way of hasty and irresponsible decisions even on the part of the highest court of all, we cannot deny the right of Presbyterianism to be called a thoroughly democratic form of government.

The Presbyterian system did not spring suddenly into being full-grown, but is the result of long development, patient study, and long resistance to opposition. In all countries of the English race, the general Presbyterianism is in Great Britain, the colonies, and N. America; but differences occur in various Continental Churches, due either to their smallness or to undue interference by the civil power.

Difficulties of the system do not gratuitously evolve of the Presbyterian Church is, on the whole, an advantage; but it has its disadvantages as well. When English Presbyterianism was subjected to persecution which it was unable to withstand, it could not, like Independ- entism, either as a sect, or as a party, make any headway. It had either to remain organized, in which case it became obvious and was crushed by force, or to sacrifice its organization and so cease to be Presbyterianism. On the other hand, when the successors of Richelieu set themselves to crush French Presbyterianism, they began by suppressing its organization, and the result justified their scheme. This is merely to say that close organization is an advantage in times of strength, but an inconvenience and weakness of times of weakness.

From the beginning the political influence of the Reformed Churches has been on the side of popular government, as has been noted in the case of France, Scotland, and Holland, where the Church found itself in conflict with the established ecclesiastical policy of the civil power in the necessity of fighting for its existence. The action of the existent authorities in each case contributed to identify in the general mind the causes of civil and religious liberty; and modern democracy owes heavy debt to the religious impulse of the Reformation. It is noteworthy, e.g., that the American War of Independence found the Presbyterians practically solid for the colonial cause—a circumstance due as much to their settled belief in representative government as to their memory of past wrongs on the other side of the Atlantic. In the case of Geneva the people had already won their civil liberty, and were prepared to recognize the Church, so that events took another turn; and in certain Continental states the civil power, while recognizing the Church, has felt itself under the necessity of putting pressure upon Presbyterianism in the interests of its own supreme authority. Indeed, in every land where Presbyterianism has made good its footing the question of the Church and State has arisen in a more or less acute form. Calvin's ideal was that the State and the Church ought to be in alliance, but that there should be no confusion between them. Each should have its own separate, clearly defined sphere of action: the State should not interfere with spiritual affairs, nor the Church with secular matters. But a Church member, who enjoys in that sphere a great measure of religious liberty and a share of ecclesiastical government, will not long be content with less in his civil capacity, and a king who believes in Divine Right, or an aristocracy clinging desperately to its privileges, cannot but look askance at a democratic Church. John Knox and Mary Stuart, John Calvin and Philip II., must sooner or later find peace impossible; no theory of the independent spheres of Church and State could discount the truth, from his own point of view, of James I.'s shrewd saying, "No bishop, no king." But, even under the conditions as they now exist, and the position of the Church secured, the difficulty remains of defining the respective limits of civil and ecclesiastical jurisdiction, a difficulty increased by the very fact that friendly relations exist between Church and State. For alliance without mutual interference is hard to secure; the members of the Church are in...
PRESBYTERIANISM
another aspect the members of the civil community,
and it is constantly hard to mark off a definite
boundary between the secular and the spiritual.
The same problem as vexed niedifevalism on a

enced this diflSculty of keeping alliance free from
a confusion and conflict of interests ; and in
Scotland, where a fairly successful solution of the
problem has at length been arrived at, this has been
accomplished only at the coat of prolonged conflict
and wide-spread secession. In spite of Calvin's
desire for the alliance of Church and State, the
modem tendency of Presbyterianism has rather
been towards separation in the interests of peace

and concord.

the Presbyterian form of Church government and
the Calvinist form of doctrine is quite distinctive.
It might be logically expected tnat a profound
belief in the sovereignty of God, in election and
irresistible grace, would fill the individual with a
deep sense not merely of his insignificance but also
of his helplessnesB, and would conduce to a fatalism
;

;

Reformers

general and the Calvinists in particular were from
the first deeply impressed with the need for popular education
for a democracy must educate its
citizens in the interest of sane self-government.
Moreover, the Keformers believed themselves to
be possessed of a system of doctrine so near to the
absolute truth that it could challenge comparison
with any other, and had only to be fully known in
order to be accepted by intelligent and educated
men. They therefore believed that an educated
public was the best guarantee of a successful propaganda. Their doctrine and polity were new,
and even among their own adherents many req^uired
some detailed and definite instruction in addition to
the general considerations that had induced them
to adhere.
From the beginning, too, an educated
ministry was one of the deepest desires of the
Reformed leaders. To them the chief thing of all
was that the Word of God should be properly
expounded and properly understood.
In this
exposition and understanding, which called alike
for an educated ministry and an educated people,
lay the best hope, not only for the expansion of their
Church, but also for the saving of souls. For all
these reasons the Reformed Churchmen were ardent
educationists. The school of Geneva, under Calvin's
care, soon became famous throughout Europe
the
first use that the French Church made of Henry IV. 's
annual giant was to found and endow colleges ; the
settlement of the Dutch Church was followed by
an amazing outburst of intellectual activity and
the destruction of John Knox's splendid scheme
for Scottish education was a blow from which his
country took long to recover. Knox advocated a
scheme whereby every parish should have its
school, and every considerable town its grammar
school, and the scheme was to be completed by
the maintenance of universities in certain important cities. The passing of likely pupils from the
lower institutions to the higher should be in the
public care, and, if need be, at the public expense.
Knox shrewdly advocated compulsory education
for the children of the very rich and the very poor ;
he seems to have trusted to the common sense
of the middle class.
One-third of the confiscated
funds of the old Church was to be applied for
purposes of education, but the greed of the nobles
ruined the project, which became in sad fact a
' devote imagination
;
and only in recent times,
with her system of primary schools, secondary
schools,

269

with free and compulsory

education as far as possible, and bursaries to help
the needy scholar, has Scotland reached a stage of
educational development resembling that devised
by her great Reformer three-and-a-half centuries
ago.
It must not be forgotten that the educational schemes of the Reformers were devised in
the religious interest. Knox, in his enthusiasm,
even recommended that likely men should, if need
be, be forced into the ministry.
But, as time

destructive of all energy and activity. But in
Calvinism we find the same paradox as in earlv
Islam, viz. that a creed apparently inimical to all
human activity has animated men to the most
prodigious efforts. Calvin and Knox, and others of
the same faith, when they considered themselves
merely as men, were the humblest of creatures,
giving God the glory for all that they did and
were but, when they considered themselves as
instruments in the hands of God, they were filled
with a sense of their usefulness in the world that
;

made them marvels

of energy and even of ivrroLike Paul, they valued themselves little,
but they magnified their office. This combination
of personal modesty with diligence and fiery energy
has always been characteristic of the best Calvinist morality.
The Calvinist morality has
generally been a little hard and unsympathetic,
tending rather to the concealment and repression
than to the consideration of personal feelings, and
sometimes the Church's sense of official duty

gance.

has driven her into tyrannical and inquisitorial
interference with the private affairs of men but a
certain probity, a sturdy independence, a reluctance to act except from real conviction, a stiffnecked insistence upon just dealing, and the
energetic will to make the best of any given
situation have characterized Presbyterian morals
throughout, and have made of the Presbyterian a
sound and trustworthy business man, an excellent colonist, a soldier to be feared indeed, a
man to be reckoned with in any walk of life.
Considering his creed, which makes the almost
arbitrary will of God everything and man nothing,
the Calvinist's fervency in prayer is as paradoxical
as his energy and activity, but is equally a fact.

before the Reformation which this crisis only brought to light, and, to a great extent, what occurred was really the substitution of spiritual unity under the headship of Christ for mechanical unity under the headship of the papacy. More than this, Presbyterianism, when it came into national Churches was an inevitable result of the growth of nationalism in Europe; and, while Calvin and those who followed him were deeply impressed with the truth of the union of the Church and the Kingdom of God, yet this viewpoint of the Church’s mission did not prevent its realization in the meantime on any wider scale than the national. Yet, even when this is said, it must be admitted that the overscrupulous conscience of Presbyterianism has led to factions which are less justifiable, and not in the same degree necessary. The history of Scotland since 1700 affords abundant illustration of the truth of that statement. It must, however, be noted that, for the last century at least, the general tendency has been towards union and reconciliation, as the truth has been increasingly realized that the things which are common to the Churches are more important than the things which divide them. Apart altogether from the schemes which have been put forward to unite Presbyterianism with other denominations, in Scotland, America, and elsewhere, the different Presbyterian bodies have been uniting and are pursuing the policy of union on a wider scale than ever before. American Churchmen have been doing this when for the first time the effort was made to hold an Ecumenical Council of Presbyterianism. Since that time ten such Councils have met in various centres, and one by one all the representatives of Presbyterianism in the world have been present. The American Church has no authoritative control over the various independent Churches, but at least it serves to provide Presbyterians throughout civilization with a sense of the unity of the great Church to which they belong. The statistics collected become more and more full and accurate as time goes on, and it may be that the increasing influence of this pan-Presbyterian movement, and the increasing encouragement afforded by the results of its work, will one day lead to something greater than the formation of a bond between all Presbyterians the world over.

PRESENTSCIENCE.—See PREDESTINATION.

PRESENTIMENT. — By ‘presentiment’ is meant a more or less vague anticipation or apprehension of an event, which befalls the individual himself or some one in whom he is interested; as a rule also it is implied that there are insufficient, if any, grounds in his conscious mind for the anticipation; and it is usually implied that the event is an evil, a misfortune. A vague apprehension is one in which the details, the particular mode of the event, are not consciously thought of; e.g., a presentiment of death implies that the manner of the death is not foretold; it may be a feeling of depression, which suggests the idea, or more or less definitely, of some unfortunate happening.

The Society for Psychical Research and corresponding bodies in other countries have investigated a large number of cases in which an individual, either in normal waking or sleeping state or in a hypnotic trance—either without apparatus or by means of a mirror, a crystal globe, a pool of light, etc.—has reported, after an event has occurred, an event about to happen to himself or to a relative, a friend, or even a stranger, which, after the report was recorded, took place as it had been described. The correspondence between two or more reports and the representation in the former merely of the emotional element of the latter, ‘something terrible about to happen,’ or of its central fact, ‘A is going to die on the voyage,’ up to the complete representation of time, place, and circumstances has been shewn.

One of the most famous examples of this class is Williams’ dream of the murder of the Prime Minister, Perceval, in 1812, who dreamed that ‘something terrible’ was about to happen before it happened, which he represented in his last picture; a third, Countess Tschirschky’s dream of her father announcing to her the death of his wife at Borodino (Masterlinc, The Unknown Guest, pp. 112, 158: Memoirs of the Life and Labours of Stephen Grellet, London, 1890, i. 434), three months before it occurred, that place being unknown both to her husband and to herself at the time. A case of simple presentiment is that of the Countess of Seville, 1892, who dreamed that ‘something terrible’ was going to happen to a friend, with various circumstances in the dream which were afterwards verified, along with the fact, not having been checked before, that the daughter of the person in question became insane.

It does not belong to this article to discuss the many problems that arise in connexion with this branch of phenomena. Evidence is all-important, and it may be said that in none of the cases is the evidence such as would satisfy the rigorous requirements of natural science; obviously the prevision, presentiment, or premonition must be fully recorded, before the event to which it refers occurs; the event must be such that it could not have been anticipated or inferred as probable, at least in its details, by the seer; even then we should have to exclude mere coincidence (e.g., dreaming of a person’s death, and the death occurring within, say, a week afterwards), which would not be a premonition to a person who frequently had such dreams, but not, except in this one case, followed by the death of the person in question. Again, we must exclude cases in which there is a possibility that the premonition was related to its own fulfilment—where, e.g., nervousness caused by the presentiment of failure in a difficult or dangerous undertaking is itself a cause of such failure; in more extreme cases the death of the individual may be brought about by a delirium tremens, etc. It is also possible that some kind of premonition may be taking place on a given date at a given hour (e.g., the death of C. Brooks, Proc. S.P.R. v. 291.

Supposing, however, that all chances of error are excluded, and that either one perfect and unassailable case or a multitude of imperfect cases compel
us to assume the possibility of pre vision, different explanations will still be available: (1) spiritualism: it is suggested that spirits, whether of the dead or of higher beings, have a communication and deeper intelligence than the living man, and therefore can anticipate more accurately what is to occur, and that they may transmit this knowledge by vision or otherwise to human beings in whom they and may cause man to go so far as to be meaningless to another, as when A dreams of an event happening or to about to happen to B, the conditions leading to this event being present in B's mind and transmitted to A's without the intervention of the ordinary means of communication. This view can be extended, the facts of which B is only latently aware (whatever that may mean) may be transmitted to A and enter his consciousness as a dream or vision; (3) if there occur cases in which a future event, of which the conditions are not and most of any living mind, it is yet, foresee, we must assume a power, perhaps in our subconsciousness, in the subliminal self, of reading the future in the present. The future, in this interpretation, exists in the present, as the present in the past; time, like space, is only an illusion of the perfect identity of God, which perhaps our higher unconscious self may have partial glimpses, past, present, and future, are seen in one glance. It is obvious that this mystical interpretation explains nothing; neither spiritualism, telepathy, the subconscious, nor the supposed powers of the unconscious self, nor the possibility of seeing the future by any other means than the imperfect ones of inference and analogy can be admitted without evidence far more thorough than we have. It is also possible that the future may be dramatized into an actual vision of the conclusion realized; or (3) the conclusion may have been reached unconsciously, by a sort of summary intuition, by putting together a number of apparently disconnected facts; it may have been forgotten, and yet, again in abstraction from the self, may influence the latter as a presentiment or as a premonition, in any of the possible forms.

J. L. McINTYRE.

Presbyter John.—The story of Presbyter John is woven of the fact and fancy of the Middle Ages, the fact warped by the varying aspects of European policy, the fancy coloured by Oriental imagination and tradition.

Until the 14th cent., the evidence points to Asia and the house of Presbyter John. In the 15th cent., after the conquest of Timur and the overthrow of Christianity in Central Asia, the African claim took hold of the popular imagination. But the true claim of Asia has never lacked support in the writings of explorers and scholars.

Presbyter John is no mythical personage, though myth and legend have gathered round his name. The simple uncoloured report of Friar Johannes de Monte Corvino in 1305 is historically evidence of the 13th century. The first actual attempt by the Christian churches to come to the knowledge of the Christian nations of the 12th and 13th centuries. This evidence supports the conclusion reached by J. B. Burty in his Note to Gibbon (ch. lxiv.):

Sir H. Howorth has shown very clearly (Hist. of the Mongols, i. p. 566 note) that the second year of the Mongol Chinese territory was the Upper Orchen, between the rivers Yen and Sung, and that in 1142 they were defeated by Genghis. Tugruli received the title of Wang ("king") from the (Manchu) Emperor of Northern China for his services in 1183 against the Tatar. In fact, the name of the great Mongol hero, Chinghis also took part in this war, and his services were recognised by the title of Dai Ming, "High Brightness." For an account of Presbyter John—the name by which the Kadjis known were in the west—and the legends attached to him, see Howorth, i. cap. x. p. 594 sqq. (Gibbon, Decline and Fall, ed. Bury, 18, ii, n. 8).

1. Asia.—1. Otto of Freisingen (1145).—In 1145 Presbyter John first appears as an Eastern priest-king who had established a wide dominion in Central Asia. This rests on the Chronicle of Otto of Freisingen (v. 33, sub anno 1145 [MGH xx.]). The bishop of Gabala (Jibul in Syria) visited the papal court in 1145, and stated that not many years before a certain John, king and priest, who dwelt beyond Persia and Armenia, a Christian but a Nestorian, had made an expedition against the Turks of Asia Minor and Persia, the Samirgi and brothers, and had captured Ecbatana, the seat of their kingdom. He had then marched to the relief of the Church of Jerusalem, but was stopped at the Tigris. He was said to be the one of the ancients of the Magi, and had a sceptre of solid emerald.

2. The letter of Presbyter John (1165).—The letter was presented by the ambassadors of Presbyter John to the Greek emperor Manuel I. and the Western emperor Federik Barbarose (Albericus, in Chron. 1168).

In it Presbyter John, 'by the power and virtue of God and the Lord Jesus Christ King of Kings,' claims to be the greatest monarch under heaven. He desires to visit the Holy Sepulchre, and to fight against the enemies of the Cross. Seventy-two kings were under his rule. His empire extended over the three Indian, including Parthia India, where lay the body of St. Thomas. In his dominions were the unclean nations whom Alexander the Great had subdued, and far more overhanging the central land as they bear as to the outcome of the situation that they represent; the conclusion may be drawn unconsciously—i.e., in dissociation from our conscious personality, which it then affects either as a mere feeling or as an idea, it may be dramatized into an actual vision of the conclusion realized; or (3) the conclusion may have been reached unconsciously, by a sort of summary intuition, by putting together a number of apparently disconnected facts; it may have been forgotten, and yet, again in dissociation from the self, may influence the latter as a presentiment or as a premonition, in any of the possible forms.

2. The letter of Presbyter John (1165).—The letter was presented by the ambassadors of Presbyter John to the Greek emperor Manuel I. and the Western emperor Federik Barbarose (Albericus, in Chron. 1168).
The letter to the Nestorian bishop of Tarsus speaks of the visit of the Prester John to Alexander the Great.

The Nestorian bishop of Tarsus, who was commissioned to return to the East and deliver it to Prester John.

The letter of Philip to Gregory IX. (1237) to the king of Trebizond, who wrote to him:

The report was sent to Gregory IX. by Philip, provincial of the Dominicans in the Holy Land, and was forwarded by Godfrey, the papal penitentary, to the Dominicans throughout England and France. William of Montferrat with two others had studied the languages of Central Asia, and had received a promise from the archbishops of the East to submit their reports to the Catholic Church. It is important to note, in view of the African claim, that Friar Philip had also sent also to the patriarch of the Jacobites of Egypt, who had made the like promise. Matthew Paris adds:

Hisic suffulta est minor India, Aethiopia et Libya cum Egypto. Sed Aethiopum et Libyam non sunt subjecti Saracenis.

The letter of Philip to Prester John is not therefore in Ethiopia, but in the Far East.

The report of Johannes e Plano Carpio (1246).—The annals of Matthew Paris between 1238 and 1245 record the ravages of the Tartar hosts under Batu and the terror which they inspired in the West.

They were stayed at Neustadt in Austria by the valour of Emperor Henry VII. In the winter of 1242 they withdrew to the cast. This was in part due to the death of the Great Khan Ogotal in 1241. He was succeeded by his son Batu.

Meanwhile the letter of Philip had stirred up the interest in the West, and the missions to the Nestorians opened the way for missions to the court of the Great Khan. This may also have been favoured by the policy of the Venetians, who were anxious to establish a line of communication with the Crimea (Bury's note to Gibbon, vii. 15, n. 42).

Johannes e Plano Carpio was present at the enthronement of the new khan, and states that he was well-acquainted to Christianity and had many Christians in his service. There was a Christian chapel before his tent (Raynaldus, Ann. Eccles., sub anno 1245, xiii. 505).

The mission of Friar Ascelinus (1247).—The hostility of the other leaders is illustrated by the mission of Friar Ascelinus to establish a Christian embassy in the Tangut Empire. He had an audience with the Khan Bajonthe in the Tangut camp. After suffering much ignominy, he returned with letters to Bajonthe to the pope, Innocent IV. (ib. xiii. 642).

The Christian embassy to Louis IX. (1249).—The Christian embassy to Louis IX. at Corinth throws much light on the position of the Great Khan and his relations to Prester John and the Christians of Central Asia. The embassy was sent by a Persian khan named Ercalthe, who had been for many years a Christian, but was not of the royal blood. David, the chief ambassador, had been baptized the year before. The Great Khan of Tartary had been baptized with his eighteen sons and many of his magnates three years before (c. 1245).

The king asked many questions of the ambassadors. He was told that Ercalthe was anxious to join hands with the Christians against the enemies of the Cross, and that Bacho, the khan who had insulted the ambassadors of Innocent IV. in Persia, was now dead and had Saracen councillors. The king also reported that Quiothay, the mother of the present khan, was a daughter of Prester John (G. de Nagaeo, Gestas S. Ludovici, op. A. Duchesne, Hist. Francorum Scriptores, Paris, 1636–49, vol. ii. pp. 311–12).

The mission of Rubruquis (1253).—In the narrative of Rubruquis the title of 'King John' is assigned to Koshuluk, the son of the Naimans, who had married the daughter of the last lineal descendant of the Gur Khans. Koshuluk was son of a powerful king of the Naimans, whose name, Ta-Yang-Khan, is precisely 'Great King John' in Chinese. It is evident that Rubruquis supposed this king of the Naimans to be the original of this widely spread legend (Yule, E. 3ii. xxi. 396).

Bury says that a new edition of Rubruquis is wanted. Gibbon (vii. 6) refers to the first volume of Hakluyt. Yule gives, among the chief points in the narrative of Rubruquis, the relation between the rulers of the Naimans and the Kerite khans, and the statement that the former were more exasperated common among the Nestorian writers.

The journey of Marco Polo (c. 1270).—The travels of Marco Polo brought him from Yarkand past Cherchen and Lob Nor to Tenuct. This is also described by De Sylva, 5, where it is said that the north-east portion of the great bend of the Huangho. To the north and north-west lay the country of the Keritehs with their old capital of Karakorum on the north edge of the desert of Gobi, on the bank of the upper reach of the Oronch river. It is here that he speaks of Prester John, whose kingdom, though still ruled by a...
member of the same family, is tributary to the 
Great Khan of Tartary (Travels, 1. 64, ap. Pagi, 
iv. 49.)
10. The mission of Johannes e Monte Corvino 
(1202-1305).—Kujjuk, the son of Ogotai, died in 
1248. He was succeeded by his cousins Mangu and 
Khubilai, the grandsons of Jenghiz Khan. On the 
death of Mangu in 1257 Kubilieeg became the 
Khan of the Great Empire. The Christian church 
removed the royal residence from Karakorum to 
Peking (Cambaluc). It was there that Marco Polo 
met him, and it was at his court that the Minorite 
Friar Johannes e Monte Corvino established his 
misionary work. He wrote to Clement v. in 1305 is 
valuable testimony to the successors of Prester John 
and to the realm which was still ruled by them as 
tributary to the Great Khan (Raynaldus, sub anno 1305, 
v. no. 19 f.).
12. The evidence from 1145 to 1305.—The 
evidence for Prester John from Asiatic sources is 
continuous for 160 years, and the report of the last 
writer points to the old capital of Karakorum as 
being the seat in the early 14th. cent. of the 
tributary 
imperial 
11. The 
organization of the 
Church among the 
Tatars, with a 
commentary on the 
K根源ians for 
the Mongol 
Empire (ib. sub anno 1307, no. 29).
11. The Tatar mission from 1308 to 1370.— 
(1) The work of Friar Johannes was 
recognized by the 
Council of 
1307 by 
the 
consecration of 
the archiepiscopal see of Cambaluc (Raynaldus, sub 
anno 1307, no. 29).
(2) In 1318 John XXII took a further step in 
the organization of the Church among the 
Tatars by the founding of the 
archepiscopate in 
the Ilkhanate of Persia. Sultania was 
situated south-west of Reash on the 
Caspian Sea, and north-west of Kazvin. Friar 
Francus of Perugia, a Dominican, 
was appointed to the see with six suffragans. 
His jurisdiction was to extend over 
Chagdo and India and Ethiopia (ib. sub anno 1318, 
no. 4). The 
Juxtaposition of 
Ethiopia and 
India under the authority of the 
archbishop of Sultania is of importance in the 
development of the story of Prester John. It is to 
the work of this mission-centre that the transposition 
of the story from India to Ethiopia may be 
traceable.
13. Raynaldus states that it was the policy of the 
West to favour the frequent exchange of letters 
and news between their 
Khan and 
the 
Kshahans of Persia (sub anno 1322, 
no. 41).
(4) In 1326 Andrea de Perugia sends a report 
of his work in the 
Far East to the 
Father 
Guardian of 
the 
missionaries. He was in 
Vaffue, a 
dangerous place, by land and by sea, he reached Cambaluc in 1330, 
and consecrated John as 
archbishop. He stayed 
there for five years. Gerard was appointed bishop 
of Zaitun in Fukuin. He was succeeded by 
Peregrinus. John, who died in 1330, became 
bishop of Zaitun. Four of the brothers were 
martyred in India by the Saracens.

(5) Yule gives a further reference to Prester 
John about the same year (1230):
"Friar Jordanus, who visited this country still ruled by 
the prince whom he calls Prester John; "but," he says, "as 
regards him, not one-hundredth part is true that is told of him." (Eyri, vii. 290.)"

(6) Johannes e Monte Corvino died in 1333.
John XX. appointed as his successor another 
Minorite friar, Nicolaus. He wrote letters not 
only to the Great Khan but also to Seculos Chigita, 
king of Corum, who may be a descendant of 
the Georgius referred to in 1305 (Raynaldus, sub anno 1333, no. 35).

(7) The last mission was in 1370. Urban v. in 
this year appointed the Minorite friar Guillenmus to 
the archiepiscopal see of Cambaluc. There are 
letters to the Great Khan and the people of 
Tartary (ib. sub anno 1370, no. 91).

The curtain then falls. The great conqueror 
Timur ascended the throne of Mogul, and was 
crowned at Balkh in April 1369 (Gibbon viii. 46). 
Bury adds in a note to Gibbon :
"As the Mongol power in China was overthrown about 
the same time (1334), the Mongol conqueror of Asia (ib. vii. 68, n. 74)."

The conquests of Timur meant the overthrow of 
Christianity and the triumph of Islam in Central Asia.

II. AFRICA.—In the 15th. cent. after the 
overthrow of the Christian missions in Asia by the 
conquest of Timur and the consequent difficulties of the 
land-routes to India, it seems as if the 
Indian influence of Prester John filtered 
through Europe and the African coast of the 
Red Sea. India, in the popular imagination, 
lay behind and beyond Egypt and Ethiopia. But there 
is evidence also in the 14th. cent. that the same 
Indo-Christian grouping in the place pointed to by 
many historians (ib. 13 (92)), through the grouping of India 
and Ethiopia under the jurisdiction of the 
archbishop of Sultania.

1. The 14th. cent. evidence.—Yule definitely 
states that the assertion of Ludolf in his History of 
the Ethiopians, that the ascription of the title 
Prester John to the Christian kings of Abyssinia 
was an invention of the Portuguese, is a mistake. 
He brings the following evidence to support his 
statement:

(1) The earliest witness that Yule gives is Friar 
Jordanus.
"Friar Jordanus "Catalani," who returned from the 
East before 1330, writes to the pope in his letter 
(Jan. 1330) that a Christian conference had 
been held at Cambaluc, that the bishop of 
Ethiopia, who was a Lat. nobleman, 
represents himself as 
the 
Dominican (ib. sub anno 1331, nos. 51, 57).

(2) Yule gives two witnesses c. 1350.
John Marignoli, apostolic legate in Asia, speaks of Ethiopia 
where the negroes are, and which is called the land of Prester 
John. And a Spanish work of the same date by an 
amononymous Franciscan states that the emperor 
Abdeselis, which means 

"Servant of God," is the 
patron of Ethiopia and Ethiopia, and is lord of many great 
lands, and many cities of Christians" (Libro del conocimiento de 
India, 1350, p. 297).

(4) A fourth witness is Simone Sigoli. 
He visited Cairo in 1384, and in his Viaggio al Monte 
Sinai and al Monte Gelo describes him as a 
master of the dwelling upon Egypt (Eyri, vii. 290).
(5) It is on this evidence that Yule states that 
the title "Prester John" had been used long before the 
name had ceased to be attached to the descendants
of the kings of the Keraites. The juxtaposition of India and Ethiopia under the archbishop of Rome is an interesting blend of Asiatic tradition through Aden at the close of the 14th cent. appear an adequate explanation of the difficulty.

2. The Ethiopian embassies of 1441.—Eugenius IV. in the previous year had sent the Minoriote Friar Albert on a mission to reconcile the rival claims of the Christians of Ethiopia. In 1441 Andrew, abbot of St. Antony, and Peter the Daco were sent to Italy as ambassadors to the pope on behalf of Constantine, king of the Ethiopians. They were received at the Council of Florence, and a ‘form of union’ was agreed upon. They then went to Rome with a letter of introduction to the canons and chapter of St. Peter’s to allow them to see the Veronica. In this letter the title of Prester John is given to the emperor (Raynaldus, sub anno 1441, no. 2). In the same year another embassy from the Ethiopians was conveyed to Italy by Angelus Maurocenus. On their return Eugenius IV. gave to them a letter of commendation in which he again used the title (ib.).

On the occasion of these missions an oration was made before the council by the abbot Nicodemus, who presided over the Ethiopians residing in Jerusalem. In his address he alludes to the remoteness of the subject, and the utmost belief that the Ethiopians, and distinctly asserts that their separation from Rome is due not only to this, but to the negligence of the popes for 800 years (ib. no. 3).

3. The map of Fra Mauro (1459).—Yale states: ‘From the 11th century onwards Prester John had found his seat in Abyssinia. It is there that Fra Mauro’s great map (1459) presents a fine city with the rubric, “Qui est Prester Janni, is residentia principal” (‘ED’ ii. 306).’

4. The Roman diary of Jacobus Volterranus (sub anno 1488).—Raynaldus refers to a mission to the Roman court under Sixtus IV. in 1481, on the authority of the journal of Volterranus. He speaks of it as a mission from Ethiopia, but says that the writer gives to Prester John the title of ‘King of India’ (Raynaldus, xix., sub anno 1481, no. 401.). Muratori publishes the Diarium from a MS in the library of Ferrara. There is nothing in the MS to indicate the country represented by the mission, no mention either of India or of Ethiopia. There is, however, a lacuna in the MS which may have been filled in by the scribe. The best record shows the interest aroused in Rome by the strange character of the mission (Jacobus Volterranus Diarium Romanae, sub anno 1481, ap. L. A. Muratori, Rev. Ital. Script., Milan, 1723-51, xxiii. 166).

5. The quest of Prester John (1486).—John II. of Portugal made many attempts to get into communication with the Roman court under Sixtus IV. in 1481, on the last reached Aden. There they heard of a Christian king in Ethiopia, but had doubts as to his identity, because they had been instructed that Prester John was a Christian king of India. It is certain that this doubt had induced the tradition of Prester John still maintained its hold among the more educated circles in the West. To solve this doubt they thought it best to separate. Petreus sailed to India and left Paima to await him in Ethiopia. After Petreus was successful, and found among the Nestorians of India the tradition of the Prester John whose power had been once again from the Mongol conquests. But the 15th cent. in Spain and Portugal was an age of romance, and the fabulous of popular imagination triumphed over the facts discovered by the travellers of 1486. In Portuguese writings of the last years of the 15th cent. and the opening years of the 16th cent. the history of Ethiopia and Abyssinia is the story of Prester John. He is synonymous with the emperor of Ethiopia in the 16th cent.

6. Prester John of Ethiopia (c. 1500).—The quest of 1486 proves that in 1486 positive and negative evidence alike pointed to Prester John of Asia. The two travellers asserted that the king of Ethiopia did not correspond with the Prester John of history in dominion, name, or in priestly office, and Petreus in India found the tradition of the Prester John whose power had ended with the Mongol conquests. But the 15th cent. in Spain and Portugal was an age of romance, and the fabulous of popular imagination triumphed over the facts discovered by the travellers of 1486. In Portuguese writings of the last years of the 15th cent. and the opening years of the 16th cent. the history of Ethiopia and Abyssinia is the story of Prester John. He is synonymous with the emperor of Ethiopia in the 16th cent.

7. Christopher Marlowe (1587).—In the earliest English drama when Prester John takes his place in English literature he is Prester John of Africa, not of Asia. In the second part of Marlowe’s Tamburlaine the Great, the character of Prester John, relating his conquests to Tamburlaine, says: ‘And I have marched along the river Nile To Mahdia, where the mighty Christian priest, Called John the Great, sits in a mile-wide robe, Whose triple mitre I did take by force. And made him swear obedience to my crown’ (Tamburlaine, ed. in act i. sc. 3).

The drier facts of history have to stoop at times to the romantic claim of literature. Marlowe has given his authority to the African story, and the Prester John of literature still lives as an African priest-king in John Buchan’s romance of Prester John (London, 1910).

THOMAS BARNES.

PRIDE.—As a self-regarding passion or sentiment of self-love, pride is associated in popular speech with several related qualities of the selfish disposition and pride in the world. Pride is a habit of self-isolation or conscious independence, a quiescence in the self, a character, a self-righteousness of will which is indifferent to the opinions and favours of others. It repudiates all idea of obligation. Cf. the hero of Scott’s Bride of Lammermoor as a typical example.

Pride, unlike vanity, does not involve belief in one’s own superiority, but expresses a momentary assertion of pride may be connected merely with the conception of independence or equality and may be manifested mainly by a refusal to accept favours or to be under an obligation (see DPAP ii. 339, s. v. ‘Pride’).

The distinction between arrogance and pride may be illustrated by the phrases ‘touquet arrognant, jamais fier,’ which has been applied to the demeanour of the Prussian officers in defeat (see Times Literary Supplement, no. 740 [23rd March, 1916], p. 135, quoting G. Lendrè, Prussiens d’Hier et de D’Aujourd’hui, Paris, 1819).

Again, pride as a self-regarding sentiment is to be differentiated (cf. W. McDougall, Introd. to Social Psychology, p. 191 f.) from ‘self-respect’.
by the fact that the latter is susceptible to the pressure of outside opinion or authority. Pride, on the other hand, is without this negative self-feeling, and, as a law unto itself, lives on the deference and admiration of others, while at the same time it is indifferent to moral praise or blame. One of its worst features is indifference to the suffering of others (cf. J. S. Mill, Essay on Liberty, London, 1859, ch. v., who speaks of 'the pride which derives satisfaction from the abasement of others'). It is self-love opposed to due respect for humanity and based on a fixed sentiment of satisfaction in self-esteem, ambitions, views, position, social status, and reputation. It is capable of elation when the verdict of others coincides with its own preconception and of resentment when this is otherwise. But it is of the essence of pride to be moved by scorn or ridicule rather than by moral censure.

1 Pride desires from others an honour it refuses to them and shows, therefore, a spirit which is really abject and mean' (Carlyle, The Critical Philosophy of Kant, ii. 491).

There is a pride of race, a pride of birth, a pride of position; a pride of goodness, a pride of evil; a pride of ignorance, a pride of learning; a pride of eccentricity, a pride of conformity; and so on. The forms of self-satisfaction are innumerable. On the one hand, we have Sir Percivale in Tennyson's Idylls of the King (see The Holy Grail) exhibiting the pride of monastic repression and self-satisfaction which the highest vision is denied; and at the other extreme in R. L. Stevenson's Master of Ballantrae, the hero personifying the pride of wickedness as a man who 'entirely loved all the parts and properties of himself: a sort of imbecility which almost necessarily attends on wickedness' (ch. ix.).

It may be useful to classify chronologically the treatment of pride and to discuss its place in ethical thought.

1. In pre-Christian ethics.—In Aristotle's famous characterization of the high-minded man (μεγαλοπρεπός) in the Nic. Ethics (iv. 3, ed. Grant) we have a species of pride described as inseparable from this type of excellence. The high-minded man is not only worthy of great things, but holds himself to be worthy of them, and his own merits is independent of the verdict of others. If he holds himself to be worthy of great things when actually unworthy of them, he is vain (αμετέχων), while he who underestimates his own worth is full of himself. Hence pride is a mean between vanity and want of spirit. It is, in fact, a lofty type of pride which is its own star. It is without the sense of duty or moral obligation. Its motive is honour (πατρίδε) and it owes nothing to the instinctive sense of right. External honour is the best thing that the world can give to the high-minded man. He is glad to confer a benefit, but ashamed to receive one. If he does receive a benefit, he will wipe it out by doing a greater; he will remember those whom he has benefited, but not those by whom he has been benefited; he will be in want of no one; he will serve any readily; he will be proud (μετέχων) to the great and prosperous, and lenient towards the lowly. He will not aim at the common objects of ambition; only for great honour or deeds will he strive; he will be open in friendship and hatred, disdainfully concealing, contempluously straightforward, really truthful, but reserved and ironical. He estimates the common people. Indifferent to the praise and censure of others, he will bear no malice and be no gossip. On the whole, vanity is better than mean-spiritedness, which is to be condemned for its lack of energy. Aristotle men-
the valuation of earthly possessions which disregards their transience and insufficiency. Jesus is no respecter of persons, condemns the Jewish self-righteousness (cf. the parable of the Pharisee and the Publican) and exclusiveness, has no sympathy with the national pride against Samaritans, and in His conception of the brotherhood of mankind invests the claims and rights of one's neighbour with a new dignity. The soul of the individual has an intrinsic and eternal worth. He pronounces on the laws of mercy and forgiveness, which are the foundation of His ethical teaching. His invocation of utreca, or a gentle reasonableness, His enulogy of 'the poor in spirit' and of the voluntary surrender of power, His proclamations of self-redemption as the condition of moral greatness, His warnings against self-assertion and self-advertisement. Pride is obviously a contradiction of the Christian ideal of unselfishness and stands condemned by the general spirit of the Christian mind as well as by its positive precepts.

So deeply had these aspects of the teaching of Christ and His followers sunk into the consciousness of Christendom that Dante gives pride the first place in his seven sins. Earlier than Dante, Augustine had linked the mortal sin with a state of mind consisting of 'a desperate and inopious obstinacy in sin, with a proud refusal to humble oneself before God' (Epistola ad Romanos Incohta Exposito, § 23, quoted in W. Montgomery, The Early Church, p. 192). Moreover, he had linked superbia with voluptas and curiositas in his analysis of the causes of sin (Conf. x. 36). But Dante derived his 'moral topography' from the Summa Theologiae of Thomas Aquinas (see Summa, II. ii. qu. 162, art. 3-5), who regarded pride as a mortal sin and, further, as the first and most serious of all the sins. It is the first sin because every kind of sin springs from it, and the most serious because it involves non-subjection to God. It is most difficult to avoid because it takes occasion from our very virtues, so that some people are proud of their very humility. In art. 7 he asserts: 'Averso a Deo quae reformulir complet rationem peccavi, perinde et superbia per se, ad alma autem peccavit ex consequent.'

Dante classes pride with envy and anger as sins of the latter and again follows the master in tracing it to that disordered love from which all moral evil flows. In the first terrace (Purg. x.-xii.) Dante meets with those who represent respectively the pride of birth, the pride of intellect, and the pride of dominion. They are depicted as being pressed down by terrible weights and resenting a paraphrase of the Lord's Prayer for themselves and those whom they have left behind on earth. Others follow, drawn from mythology and history, sacred and secular. The poet describes them as sick in mind and body, and in a series of backward steps, and, in spite of their sorrowing thoughts, but insects and worms. Celestial voices chant, 'Beati pauperae spiritu,' the sin of pride is expiated, and Dante passes on his upward way.

3. In modern ethics.—Pride in its many phases is naturally a theme for moral reflexion, and it finds a place in the discourses of the essayists from Montaigne onwards. Montaigne himself (see Essays, tr. J. Florio, London, 1603, bk. ii. ch. 7) has discussed superbia; so has Montaigne's predecessor, Francis Bacon, who had divided the affections into the 'calm' (or extensive) and the 'turbulent' (or narrow). The Scottish school of pride was presented by the Essayes of Thomas Brown continued the study. The latter, in his Lectures on the Philosophy of the Human Mind, arranged the emotions under the heads of immediate, retrospective, and prospective. The first he subdivided into those passions which do

(Microtomographie, do. 1628, *1633), with the exception of the last-named, are not wholly successful as analysts of human nature.

Overyber, e.g., 'In his chapter on A Proud Man has confused the characteristics of Hawksness and Vanity which could hardly exist in such a union as he depicts' (see preface to Theophrastus,.Chareacterisitic, translated as Descriptive Proportion of Sundry Persons, do. 1614), and John Earle

1See Aquinas, loc. cit. art. 5; 'Superbia semper quidem contraria dilectio creditiva'; and cf. Dante, Purg, xvii. 125-126.

2The English ethos of 'Aversio' was rejected by Shaftesbury, who sought to establish a harmony of interests and affections conducive alike to private and social good. In his Inquiry concerning Virtue or Merit he states: "If there be found in any creature a more than ordinary self-conceit or regard to private good, which is incompatible with the interest of the species or public, this must in every respect be esteemed an ill and vicious appetite, and this is what we commonly call self-love; and sickness and pride are the maladies to which every creature happen to discover it (Characteristics, 2. vol. 2, p. 252). According to Stewart and Pride would naturally fall into his class of 'self-affections' or 'self-passions' which, while aiming at private good, become harmful to society at the point where they are harmful to the individual.

Butler follows Shaftesbury in recognizing the general good as the aim of conduct, but clearly regards 'reasonable self-love and conscience' as the chief regulative principles of human nature. Where self-love and conscience are in conflict, the obligation of duty has to supersede that of self-interest. And the indirect form of self-love, which is a deliberate form of self-love, falls under the condemnation of conscience as being opposed to the happiness of society. But there is no detailed analysis of pride in these writers comparable with the study of it in David Hume's Treatise of Human Nature (ed. be A. Selby-Bigge, Oxford, 1896); see bk. ii., chapter 3, 'Of the Passions,' p. 177 f.). He calls pride an 'indirect' passion—i.e., it proceeds from the same principles as the direct passions (such as desire, imagination, curiosity, fear, etc.) as the direct passion is but another product of other qualities. The indirect passions have the same object, namely self, which is not their cause. For the cause we have to distinguish between quality and subject, the latter being something related to us; e.g., in a beautiful house belongs to the quality and house the subject which must be our property or contrivance. In such passions as pride in country, in friends, in family, in riches, etc., the relations of contiguity and causation are required to be of a pleasing sort, consequently it is derived from the double relation of impressions and ideas. Hume further suggests that the transition from pride to love is not so easy as that from love to pride. He finds in contempt or scorn (see art. Contempt) so strong a mixture of pride that hardly any trace of envy is discernible; whereas in esteem or respect love and humility are the prominent ingredients. Finally, he asserts that nothing invigorates and exalts the mind equally with pride and vanity. It is to be noted that the whole of the Psychological observations had also engaged the attention of Hume's predecessor, Francis Hutcheson, who had divided the affections into the 'calm' (or extensive) and the 'turbulent' (or narrow). The Scottish school of pride was presented by the Essayes of Thomas Brown continued the study. The latter, in his Lectures on the Philosophy of the Human Mind, arranged the emotions under the heads of immediate, retrospective, and prospective. The first he subdivided into those passions which do
not involve moral affections, such as wonder, melancholy, etc., and those which are distinctive of virtue and vice, such as love and hate, pride and humility. It is clear from a study of the history of ethical thought that the individual traits and so called affections are collected by the philosopher's ethical standpoint, whether utilitarian or intentional. The hedonistic ethic of Hume, e.g., is in violent contrast with the Kantian theory that the ends at which duty has to aim exclude all consideration of personal happiness—a theory which has powerfully influenced all subsequent schools of thought, Hegelian, neo-Hegelian, and Pragmatist alike. Kant places all inclinations and desires under the single term 'self-regard,' distinguishing between philautia, excessive fondness for oneself, and arroqanta, satisfaction with oneself (see DPPA, s.v. 'Pride'). It remains to add that in most of the great modern dramas of the soul pride has a prominent place as a passion destructive of the moral order. Both the Satan of Milton's 'Paradise Lost' and the Mephistopheles of Goethe's 'Faust' are incarnations under different phases of the pride of evil will, the former taking the form of an abysmic hostility to good which will not brook defeat, the latter the attitude of simple pride in evil suggestion which is utterly scornful of the weakness of its instruments. If we pass from dramatic creation to actual history, we shall be reminded of the popular estimate of the character of Napoleon as one who was the embodiment of moral excellence in modern times of Dante's pride of dominion. Nor can it be denied that, as the result of scientific progress and our increasing control of the forces of nature, a pride of efficiency has developed in the civilized nations. Pre-eminent is this the case with Germany, whose consciousness of power, fostered by the philosophies of Nietzsche and Treitschke of the intellectual side and on the material side by an era of unexampled prosperity, is at the root of the militarism which plunged Europe into war in 1914. Scientific efficiency need not be divorced from ethics; but the progress of the war has shown that civilization is no safeguard against a recrudescence of barbarism when pride of power dominates the ideals of a nation. To sum up, pride, whether in an individual or in a nation, is an anti-social passion which disregards the rights of humanity.

arising from the anger of the gods or from witchcraft (instances from the Kaliris, some American Indians, Esikimos).

The principal duty of the priests is to administer, or give advice as to, the worship of the gods. As all gods do not stand in the same relation to men, the assistance of the priests must often be called in to point out the special deities to whom the people should offer their sacrifices. Very generally the gods are believed to bear ill-will to men, and therefore it is also the duty of the priests to give directions as to the proper offerings. It is all the more necessary to know how to please the gods, as they are among certain peoples held to be very particular about the form of prayer and sacrifice (tribes in E. Russia and Siberia, Lapps, natives of Nias).

In short, the need of priests appears in the most various respects: they are required to influence the wind and rain, to cause good growth, to ensure success in hunting and fishing, to cure illness, to foretell the future, to work harm upon enemies, etc.

2. The first types of priests.—The worship of deified men is confined, as a rule, to the kindred group, and is the first place to the separate families. Owing to the exclusive character of ancestral gods in this respect, a regular priesthood, in the sense of universally acknowledged mediators with the gods, hardly occurs on the basis of mere family-worship. The authority of that member of the family who conducts the worship for his nearest relatives does not extend beyond the group worshipping the god to whom he is related, viz. the family itself.

Definition of ancestors, however, is not confined to families. Whole tribes also frequently worship the spirits of departed men, but in such cases the ancestral gods tend, in a way, to amalgamate with other classes of generally worshipped deities.

Whilst ancestor-worship originally tended to centralize the cult within families, or kindred groups, no such tendency is manifested by worship of gods in nature. Depending on the more or less general occurrence of the phenomena which give rise to the belief in gods of nature, such gods are likely to be preferred within certain divisions of mankind, with little or no precedence given to certain kindred groups. Therefore the origin of the priesthood connected with the gods of nature is not influenced by any regard to family ties. These two forms of religion, however, are intermingled to a very great extent among most peoples.

In the earliest history of cult no proper priesthood existed. Although various kinds of priestly practitioners belong to a very early period of religious evolution, all conclusions point to the rule that originally everybody invoked the gods each for himself. Cult therefore existed in some form or other before there were any professional men entrusted with the duty of conducting the different religious observances. Among some peoples every individual still performs his religious or magical rites for himself without the assistance of professional priests (certain Papuans, Melanesians, Australians, and many more).

All the nations who, in the early ages, attempted to interpret the wishes of the gods and practise magical art the more expert who managed to gain the confidence of their fellow-travellers seem, in the course of evolution, to have attained a considerable position. Sooner or later some one or more cunning in their predictions, acquired a local celebrity in the art; such men would soon be consulted by their neighbours, pupils or apprentices would be attached to them, and thus would be gradually formed a special class, which would assume the functions of intermediaries between the people and the gods.

Within the separate families, in which, as has been pointed out, ancestral gods are particularly worshipped, miracles are generally invested with the duty of sacrificing for the whole family. As a rule, the priestly functions are put into the hands of the paterfamilias, and the reason seems to be that he is the oldest and most experienced male member of the family, who is generally believed to stand in closer communication with the ancestors than the other members (tribes in India, Africa, and Polynesia). Sometimes the oldest female member of the family may also officiate as priest (Serers in W. Africa). Among the Barais in India the deities are worshipped only by that member of the family who is under the influence of the special divinity—a fact shown by his getting into a state of ecstasy and uttering oracles. Among some lower Dravidian tribes the family-worship is conducted either by the head of the household or by the son-in-law or the brother-in-law. In the Tarawa and Apanama islands, of the Kingsmill group, every family that has a tutelary divinity has also a priest whose office may be filled by any young man of free birth capable to recite prayers.

As regards the first appearance of priests, we can distinguish among some peoples certain classes of men who, owing to their unmistakable priestly affinities, seem to be forerunners of a regular priesthood.

(1) One group of persons who occasionally exercise priestly functions without being priests are those who, when in a state of ecstasy, are believed to be inspired by the gods. During their possession, these persons are interrogated by the people as to the will of the gods, future events, etc., and the gods are believed to speak through them. These ecstatic individuals thus act as mediators with the supreme powers (peoples in India and Polynesia). From the idea of occasional inspiration it is an easy step to the conviction that certain persons are able to put themselves into communication with the gods whenever they like. On the whole, facts show that in the early ages of priesthood men often retained the office for a specified time or with intermissions. Among some rude tribes, we are told, the priests take up their office and leave it, as they like (Todas, Khotas, Bodos and Dhimsals, Dophlras, Munda Kole).

(2) Another beginning of priesthood may be seen in the observance of ‘sacred places’ or other kinds of sanctuaries which, for some reason or other, are held in high veneration by the peoples in the neighbourhood. As a rule, they are thought to be the abodes of a god, and the men charged with guarding the sacred rooms naturally tend to become mediators between the people and these gods (Gonds in India, natives in Madagascar and Yap, certain Arabs, certain priests in ancient Greece).

(3) We have further to regard as a kind of forerunners to a regular priesthood the ‘holy men’ who, without being real priests, exercise a certain religious authority among some peoples. This class of men make themselves renowned by occasional miracles, in order to acquire the religious veneration of the people by their eccentric habits (Muhammadan peoples).

In early stages of cult the rites are naturally very simple, and consequently almost any one is able to officiate in the sacred observances of the priestly functions. In general a simple cult and a superficially-instructed, mutable priesthood seem to go together. And it is clear that, where every one is qualified to assume the priestly office, priesthood as such is not likely to be held in great generation.
Of many peoples we are told that the priests do not form any distinct class, and that almost any man may become a priest (Maoris, tribes in India and Madagascar, Galla, some American Indians).

As ritual observances and magical practices gradually became too complicated for the average man to master, a professional priesthood became necessary. When the people were uncertain about the proper ceremonies, they applied to the more experienced practitioners, asking them to perform the ceremonies on their behalf. Some of these learned men were called "priests." Kindred customs seem to be one reason for the old men officiating as priests and sorcerers among several tribes (Kisangans in Luzon, tribes in India, Africa, and Australia). Certain facts show how, especially on important occasions, the task of performing religious or magical ceremonies seems to have been put into the hands of priests, or of those possessing most experience in the tribe; at the same time every one was supposed to know how to sacrifice for ordinary private purposes (Kashirs, Ostyaks, Lapps, ancient Teutons, and Finns).

The authority of the first semi-priests and semi-sorcerers evidently varied to a great extent. While some exercised only a local influence, the more fortunate and cunningly gifted gradually extended their fame over wide districts. In this way a class of priests and sorcerers common to whole tribes originated (tribes in Africa and Siberia, certain Eskimos and American Indians). It is known as a mysterious process, especially in the case of the sorcerers of neighbouring races are held in greater awe than those of their own tribe. Whole tribes are in certain regions known as powerful wizards, whose services are frequently sought after by their neighbours.

It is also true that even those who are not priests or sorcerers, but have a suspicion of the magical art, cannot shut their eyes to the fact that it more essentially belongs to races less civilized than themselves. This theory, interesting as it is, does not explain the cases where, e.g., certain tribes attribute to each other reciprocally a superior power of magic.

The superstitious fear in which peoples in many parts of the world hold other tribes seems also to be connected with a universal belief that the secret powers of the fingers are greater than those of well-known people.

3. King-priests.—A remarkable feature in the history of priesthood is the combination of priestly functions with royal authority. Instances of this are known to have appeared through Polynesia, and Melanesia, in India and other Asiatic countries, among many Negro and American Indian tribes, and in ancient Europe. J. G. Frazer² thinks that the priestly king has developed out of the public magician, the latter being a personage of such influence that under favourable circumstances he may easily attain to the rank of chief or king. When once a special class of sorcerers has been segregated from the community and entrusted by it with the discharge of duties, such as establishing and maintaining physical and religious welfare, and belief are required, these men gradually rise to wealth and power, till their leaders blossom out into sacred kings. We may add that ancestor-worship also tends to invest the king or chief with sacerdotal authority. Similarly, as various relatives of the family were put in the priesthood on behalf of the family, so patriarchs of villages and provinces are the persons likely to perform the sacred offices on behalf of their respective clans or tribes. In the opinion of their fellow-men they are the guardians connected with the gods with more than any other individuals, being their nearest living relatives, and therefore all the more naturally can mediate between the gods and men.

Besides the union of a royal title and priestly offices there are instances of kings being worshipped as gods, which indicates the highest potentiality of the sacerdotal character of rulers. Frazer has noted a number of cases in which the divine king or priest is put to death by his worshippers, which he explains in the following way.¹ Primitive people sometimes believe that their own safety and even that of the world is bound up with the performance of these human incarnations of the divinity. They therefore take the utmost care of his life. But no amount of precaution will prevent the divine king from growing old and feeble and at last dying. And, in order to avert the catastrophe which may be expected from the enfeeblement of his powers and their final extinction in death, they kill him as soon as he shows symptoms of weakness, and his soul is transferred to a vigorous successor before it has been seriously impaired by the threatened decay. But some peoples are reported to have preferred to kill the divine king while he is still in the full vigour of life. Accordingly, they have fixed a term beyond which he may not reign, and at the close of which he must die, the term fixed upon being short enough to exclude the possibility of his deterioration in the interval. E. Westermarck² has a somewhat different explanation, according to which the new king is supposed to inherit, not the predecessor's soul, but his divinity or holiness, which is looked upon as a mysterious entity separately seated in the ruling sovereign, but separable from him and transferable to another individual. See, further, art. KING (Introductory).

4. Qualifications for priesthood.—Priesthood is, in general, hereditary; but the rules of inheritance can rarely be strictly followed (Polynesians, Melanesians, Australians, peoples in the Malay Archipelago, India, Siberia, Africa, and America). Among certain peoples who have a hereditary priesthood the sacerdotal dignity is not assumed by the son of a priest; one generation is passed over, and the grandchild are selected (Kafirs, tribes in W. Africa). Of other peoples we learn that priesthood is hereditary, but that the aspirant must in addition be qualified by certain mysterious endowments separately seated in the interval to 'see the spirits' and converse with them in some cases a further condition (Tlingits, Sioux); and the like power is often required of the priests where priesthood is a strictly hereditary institution but not the real king. As the principal duty of the priests is to mediate between mankind and the higher powers, so the chief qualification requisite for entering the priesthood is the faculty of communicating with the gods. This faculty, however, may be proved in different ways. Thus, when certain wonderful things happen to a person—especially when he falls into a state of ecstasy—the people may think that he is under the influence of some spirit; and such a man is competent to assume a priest (Kafirs). Among other peoples the supposed connexion between the priests and the spirit-world appears more particularly in the belief that the priests have one or more tutelary deities of their own, who always give them assistance when required, and to whom special and superstitious observances are offered. This is called the "necessary qualification for priests to have such gods at their disposal" (Eskimos, Algonquian Indians).

As the faculty of conversing with the gods is so very generally confined to the priests (other people being excluded from communication with the spirit-world), it is an easy step to the conclusion that the gods themselves have selected their repre-
sentatives among mankind. In conformity with notions of this kind, many peoples believe that the gods confer divine powers upon certain men and women, and endow them with the faculty in which a person can become a priest is by being chosen by the gods (Eskimos, American Indians, Kafirs, tribes in Siberia, India, Borneo, Australis). Generally the gods communicate the necessary qualifications to the priests in dreams (Australians, Sea Dayaks, Tunguses), but there are various other means by which the gods are believed to choose their favourites for the priestly vocation. Sometimes they intimate their wishes in a more or less peculiar way.

The Moso in Brazil think it necessary that the aspirants to the priestly office should have been attacked and wounded by a jaguar in order to perform their sacrifices by such means as watching a frightened bull which stops before a certain house, or to perform an additional priest, such as the Gold Coast, general meeting of the inhabitants is held, and a number of young men and women are selected to make offerings in the course of a long and arduous service. This is neither new nor peculiar, for such and similar free and spontaneous gifts are given in India by the rich to their favourite of the imaginary gods and spirits. It is true that the gods have chosen the person or persons so affected for his service.

Among the endowments requisite for aspirants to priesthood a very important one is the faculty of becoming invisible. We are told in fact of many peoples that the would-be priests are expected to perform miracles, and that the candidate has to manifest his powers in that respect before he is admitted to the sacerdotal order. A person ambitious to become a priest will, e.g., profess to have been told of future events by some spirit; should any of his predictions relating to something which greatly interests the people happen to come true, he is regarded as a duly inspired priest (Fijians, natives of Pinet, Maiers in Bengal, Siberian tribes, Greenlanders).

Some peoples judge from mere outward signs that certain persons possess mysterious powers and are able to act as sorcerers or priests.

Among the Aborigines in South America there is a reputation for witchcraft without making any pretensions to the art, merely because they are deformed and ill-looking; all esteemed with the most intense respect, is said to be a very wicked, of a ragged appearance and forbidding countenance. The Congo natives are said to number dwarfs and abimo among the priests.

Outward peculiarities in children are in certain cases believed to denote that they are bound to become priests—e.g., being born with the eyes open (Australians), or bleeding at the nose or mouth (Tunguses in Siberia).

The mental disposition which is supposed to qualify a person for the priestly office reveals a very important feature of early priesthood. Among a great number of peoples the priests must display that individuals of special intellectual development; consequently certain qualifications of a pathological and psychological nature generally characterize the priests and sorcerers of uncivilized races. From several parts of the world we are informed that individuals of an extraordinary disposition are considered to be specially apt for the sacerdotal vocation.

The Siberian shamans are recruited from a class of men distinguished by their extraordinary gifts in the way of psychic insight into the mysteries as well as their ardent imagination, and their qualifications for shamanhood are further thought to appear in a certain fixed aspect of the body (knife-holding, arrows sticking, indication of the evil spirit which compels a person to become a shaman makes his body giddy, standing on one leg and turning round, etc.). The inopinet shaman begins to see visions, endures the knife-insertion into the body, and with the aid of knives to hurt himself, after which he declares that the spirits have ordered him to become a shaman. See art. Possession (Introspective, Predictive, Exstatic, Sympathetic).

Instances of similar ideas are furnished by the Polynesian, American Indian, and African tribes.

Among certain peoples the mere faculty of falling into convulsions or into a state of unconsciousness sufficiently long is almost all that is required for becoming a priest.

It is stated, e.g., of the Fijian priests that the power of receiving inspiration and of announcing the will of the deity during a fit, or even of causing a convulsion, is a requisite qualification for the priestly office. Before a Fijian is acknowledged as a priest, he has to undergo a trial and is required to show publicly that the spirit is entering into him. The proof of this is supposed to lie in silveryings, which appear to be involuntary, and in the performance of which none but an expert juggler could succeed.

Statements to the same effect refer to native tribes in Australia, Africa, S. America, India, N. Asia, etc.

The great importance attached to ecstasy as a symptom of divine visitation also appears in the numerous cases when priests before or at their initiation are considered in the state of possession. The act of being inflicted with narcotics to a state of delirium or trance, which is supposed to indicate their sacred calling.

Would-be priests among the Esquimaux, several American Indian tribes, among the Asics, and the Kafirs, withdraw for a longer or shorter period to a solitary place, where they abstain without food until they fall into futurity. Of particular fury drugs Siberian shamans use the 'fly-hane' (Amanta muscaria), while the medicine-men of certain Indian tribes plunge their heads into burning tobacco, and the sorcerers of the Guarani Indians during their period of preparatory retirement live on pepper and roasted maize only.

It is natural to the savage mind to ascribe ecstasy to spiritual agency. The convulsive gestures and incoherent utterances of the inspired seem to show that his own will is absent, and that some strange being has taken possession of his body. A spirit or god is therefore supposed to speak through him, and command his actions. This faculty of falling into an ecstatic condition is all the more necessary for would-be priests, as among savage peoples manifestations of a prophetic or divine delirium do almost universally form the basis of religious ceremonies.

The observation that an ecstatic disposition is universally associated with priesthood draws attention to the fact that in many cases insane persons are looked upon with superstitions awe. The main distinction between insanity and ecstasy seems to be that the former is generally ascribed to a per- manent, the latter to a more casual, possession by a spirit. Some people believe the insane to be under the influence of demons, while others assume that they are inspired by gods and spirits. In conformity with the latter idea, great veneration is paid to the insane, who are also sometimes thought to possess the spirit of prophecy (Arabs, natives of Celebes, Polynesians, Melanesians, certain American Indian and Siberian tribes).

In a great many cases, the rule candidates for the profession of priest or sorcerer have to undergo a preparatory instruction which is imparted by an expert practitioner (African, Siberian, Polynesian, American Indian, and Eskimo tribes). No special education seems to be required, and it seems that those who have been inspired by the gods are less in want of information than those who are self-chosen. Among some tribes people assume the office of fetish-man after swallowing poison, but the priestly order is only in addition to be augmented by persons who can prove that the spirits have suddenly seized upon them (certain tribes in Africa, India, Siberia, Australia, and N. America).1

---

The preparation of the novices in many cases begins at an early age. Among the Eskimos and similar peoples the priests are brought up to an almost religious life from infancy. The Ojibwa Indians encourage their youth from the age of ten to manhood to fast, for the diet of their race is altogether of the forest. But here it is destined to be a place among the Panama Indians are taken at the age of ten or twelve to be instructed in the office.

Similar examples come from the Apsarua Indians, and among the Central Breton Indians. It seems to be the rule that, where the priests are subjected to a regular course of instruction, the preparatory period commences early in life, whereas the more impulsive assumption of priesthood, with little or no previous training, is liable to take place at any age.

As a rule we can draw a distinction among most peoples between two different phases of the priestly education. (1) During one period the novice is generally under the care of his predecessor, who imparts to him the necessary religious instruction and initiates him into the practices of the profession. (2) Another phase of the preparation includes a course of self-training, during which the aspirant places himself in proper correspondence with gods.

(1) As regards the knowledge imparted to the candidates, mere theoretical learning is little thought of; according to our scanty reports, most importance is attached to practical knowledge which is of use in the magical and religious performances.

In Greenland the teacher seeks, in the first place, to make the pupil entirely fearless and to direct his mind towards the spirit-world, to the horrors of which he must be rendered insensible. In the Mosquito tribe of Central America the sorcerers, during their preparation for the office, learn various tricks from their predecessors, such as allowing poisonous snakes to bite them, and running fire. The priests of the Indian tribe of the Indians of British Guiana is taught the traditions of the tribe, the medical qualities of plants, and to find where game is to be had. During his training the medicine-man of the Bororos in Brazil has to learn certain ritual songs and the languages of birds, beasts, and trees. The priests of the Kikis in India first of all seem to have been taught the secret language which they have among themselves, while the rest of their knowledge is probably picked up during their practice. The instruction of the priests among some African tribes is said to comprehend a good deal of empirical knowledge and other secrets of the craft.

(2) The self-training of a candidate for the priestly office evidently has for its object the preparation of his mind for intercourse with the gods. During this period he generally lives for a longer or shorter time in solitude, while cases of rigorous asceticism is also prescribed, such as fasting or subsisting on a scanty diet. In certain tribes the novices are required strictly to refrain from connexion with the opposite sex.

With the Eskimos this phase of the priestly education consisted in strict fasting and invocation of the deity while dwelling alone in solitary places, until the soul became independent of the body and of the external world: thus the god appeared and provided the novice with a helping or guardian spirit.

Of a similar description is the self-preparation of the priests among certain American Indians as well as tribes in Africa, Australia, Siberia, and India. In some cases the neophytes use narcotics or stimulants in order to work themselves into a passion of excitement, during which they are supposed to hold converse with the spirits. To this end the novice is subjected to the sacerdotal order through a special initiatory ceremony (Negroes, Warraus Indians, Siberian tribes, Lapplanders). It is also stated that in certain cases the consecration of a priest takes place in a certain part of the ceremony at the point in which he rises from lower to higher degrees of the order (Buriats in Siberia, Moxo Indians).

6. The social position of the priest.—One circumstance which has powerfully tended to distinguish the priest from the other members of the tribe is the large has been the fact that the priests and sorcerers are, as a rule, recruited from the most intelligent elements of their peoples. The scantly learning of savage races is almost exclusively confined to the priests, who generally hold the only written records that they alone possess of the knowledge of certain useful arts, and the whole character of their functions tends to develop their intellectual powers and to give them a superiority over their fellow-tribesmen.

It is frequently represented that the priests distinguish themselves from the rest of the people by a more or less considerable knowledge of certain natural phenomena, by means of which they secure the popular confidence in their powers. They have been studied the methods of witchcraft, the properties of herbs and other plants, the changes of weather, and the habits of animals; and this knowledge materially assists them in the maintenance of their authority (Negroes, Irottentots, Dayaks, Tahitians, Aruanaains, Eskimos).

In order to preserve the faith of the people in their prophetic powers the priests often collect all kinds of information, and whatever they learn in this way they ostentatiously foretell as future events the things that they see in collusion with each other, in keeping the people under their influence (tribes in W. Africa, American Indians, etc.). When the priests exercise the precarious art of prophecy, great significance is attributed to their utterances. It is said that they have a power to persuade certain that their predictions shall prove true, they make them sufficiently ambiguous or uncertain to admit of a variety of interpretations (tribes in Africa, some American Indians). If, in spite of all precautions, they fail to produce the effects promised by them, they generally have recourse to various excuses. The non-success is attributed, e.g., to some defect in the medicine, or the applicant is labouring under the displeasure of the gods, who refuse to be appeased unless renewed and richer offerings are made (certain American Indians, Negroes, Hawaiians). A very general excuse is the counteracting influence of some demon (Dayaks, Oceanians, natives of Victoria, Irottentots). No less frequently priests and sorcerers who fail in performing miracles save their reputation by accusing other persons of having, by secret necromancies, frustrated their endeavours (tribes in N. W. Africa, India, N. America).

The residue of which the priests and sorcerers enjoy is increased by the mystery in which they generally envelop their proceedings. They do their best to inspire the people with fear, if they think such a course necessary for the strengthening of their power. Thus they may threaten to send the spirits or some magic substance into those who disbelieve them (Tiligets, natives of Victoria), or in some other way use the spirits averse even the slightest neglect or disobedience (Tabitians, Fijians). The bizarre external appearance of most priests among savage races also serves to a great extent to impress the popular imagination. By painting their bodies in all colours and dressing themselves in the most fantastical manner they inspire their tribesmen with feelings of mystery and awe. The pretended or pretended possession is expressly sought (Indians of Virginia, Siberian tribes). It is likewise beyond dispute that a strong impression of fear is produced upon the people by the ecstatic orgies which so often form an essential part of the ceremonies of savage priesthood. The gestures and other morbid manifestations of the priests, vivid descriptions of which are given by numerous eye-witnesses, necessarily strike the bystanders with awe and terror. It is in this connexion that the priest bears the responsibility of the spirit of savages very generally take place in the dark, and in some cases darkness is even a pre-re
presented as a necessary condition for success. The Siberian shamans perform their ceremonies in some gloomy corner and generally at night, in order to appear more mysterious and terrible in the darkness; and the same is said regarding the sorcerers of the Eskimos, Warans Indians, Congo natives, etc. Among certain peoples the priests strengthen their authority by attaching themselves to the kings and noble classes in a community, while at the same time they are said in return to support the ruling system (Polyneians, Khonds in India, Kasirs, certain American Indians).

The most important method by which the priests increase their influence is by convincing the people of their supernatural endowments through various miracles. There are reports from many peoples that confidence in the priests and sorcerers depends upon their supposed faculty of performing miracles—one successful instance often causes all previous failures to be forgotten. Priests and sorcerers strengthen their reputation through delusive demonstrations of their invulnerability—e.g., by stabbing themselves with knives in different parts of the body (Ostbyaks), by throwing themselves into the fire or seizing live coals with their hands (certain Tatar tribes), by allowing poisonous snakes to bite them, etc. (Mosquito Indians). How essentially the influence of the priesthood depends on the presumed power of wonder-working is shown by the fact that among several tribes priests who fail in their efforts, or otherwise lose the confidence of their people, at the same time forfeit their office and sometimes are subjected to punishment and are driven from the land (Europe, tropical Africa, Andamanese). They are even liable to be killed by the enraged people; this may be due to the idea that worthless priests are of no use and therefore cannot hold the sacerdotal office, but, as they possess dangerous powers, they must be made away with. There are also grounds for connecting the killing of priests with the killing of the divine king.

The methods by which the priests and sorcerers of savage races acquire confidence and reputation among their countrymen is also the same whether in the western or in the eastern world, where to look upon them as a class of impostors or not. The opinion predominant in theoretical literature is that we cannot suppose that the priests and sorcerers of the uncivilized races are, generally speaking, impostors (Lord Avebury, Frazer, A. Bertrand, de la Grasserie, Julius Lippert). The opinions of travellers, again, are divided, but many of them have considered the question from different points of view. There is no reason to condemn the priests and sorcerers as deceivers because their proceedings seem meaningless to European observers, or because some travellers have ascertained, by experiments, that the savage mystery-men are not endowed with those miraculous powers which they claim to possess. The principal point is the question whether they believe in their own powers or not; this they very generally seem to do, although, on the other hand, impostors are undoubtedly met with among the priests at all stages of early beliefs. Cf. art. Possession (Introductory).

7. Observances, etc., distinguishing priesthood.

Numerous practices and observances are among many peoples obligatory upon the priests and tend to separate them from the rest of the community, as they cannot in general be combined with the circumstances of any man's life.

(1) There are certain ascetic regulations which apply to sexual life. The fact that persons devoted to religion are often obliged to live a single life has been ascribed to the notion that there is something impure and sinful in marriage, as in sexual relations generally. Among many peoples the members of the priesthood are forbidden to marry, and must keep themselves pure (certain American Indian tribes, Kalmucks, Todas, etc.). Shaking and killing, however, by no means universally required of the priests; on the contrary, they seem in some cases to be distinguished from the people as a whole by extraordinary liberties in sexual respects. The inus primus notion accorded to the priests among certain peoples exemplifies the sexual privileges which are sometimes enjoyed by the sacerdotal order. Among certain peoples the priestesses must not marry, for the reason that, belonging to the gods, they cannot become the progenitors of human beings. But this prohibition extends to marriage only, and a priestess is not debarred from sexual commerce (tribes in W. Africa).

(2) Other ascetic regulations concern fasting and prohibited articles of food. Fasting generally seems to be observed when a person wishes to put himself in correspondence with the spirits performing some religious rites (Santals, Siberian tribes, some Melanesians and American Indians), and sometimes for the same purpose the priests themselves are excluded by arbitrary means to a state of mind which is supposed to indicate their close communion with the supernatural world. Food restrictions of various kinds are imposed upon the priests.

(3) Among many peoples the priests are distinguished by a special costume and also by the colour of their dress.

The priests of the Sinhalese and in Siam are clothed in yellow; and in the Malay Peninsula the priestly robe is blue or green and the sash which with the black feather of the birds of paradise on the breast, the yellow, and the blue and red feathers of the eagle, is attached to the garment. The priestesses of the Moluccas and the East Indies are dressed in white; whether they wear the golden costume of the Melanesians (Malay women) is uncertain; that of the Tongans is composed of red and blue. In ancient Mexico a class of priestesses called 'maids of penance' ordinarily wore a habit all white.

(4) It is rather a general custom for priests to distinguish themselves by the length of their hair (certain tribes in N. America, India, and Africa). Frazer explains the custom of sacred persons leaving their hair long by referring to the dangers which, in the primitive view, beset the cutting of the head. Although a few persons have more to fear from them than ordinary people; the simplest way of evading peril is not to cut the hair at all.

(5) A remarkable fact is that the priests almost universally distinguish themselves from the community at large by means of a separate language which they use in the divine service or in intercourse with each other. The angakoks, or priests, of the Greenlanders have a peculiar language, altogether different from the ordinary tongue of the country, and words of the general language they use in an opposite or metaphorical sense. This particular idiom they make use of only at their practices of witchcrafts and when they are consulted by the people.

Similar reports are given of the priests among several tribes in N. and S. America, Africa, India, the Malay Archipelago, and Oceania.

8. Classification of priests.—Of the two classes of supernaturalistic practitioners the priests are those who represent the religion of a people; they exercise the duties incumbent on them by invoking the aid of the supernatural beings, and their power consists in influencing the will of the latter. Magicians, on the other hand, act independently of the supreme rulers, with whom they have no communication in the sense in which the priests act, but they are enabled to bring about the desired results, and the same means of coercion may be applied by them even to the gods.

But, although theoretically separated, the types of priest and sorcerer among uncivilized and semi-
PRIEST, PRIESTHOOD (Babylonian)

civilized peoples almost inextricably blend into one another. Communication with supernatural beings is in no wise Examined to the 'priests,' nor do the 'sorcerers' monopolize the practice of magic. Very frequently it happens that practitioners in whom the priestly type preponderates have recourse to magic also, and that representatives of the type of sorcerer maintain a religious communication with spirits.

Certain writers associate the difference between priests and sorcerers with the occurrence of a benevolent and a malevolent class of priests among many peoples, the one group of functionaries helping the people, the other exercising a pernicious influence (Eskimos, certain American Indians, Kafirs, Burials). There is on the whole a tendency to identify priests with protectors of the people, whereas magicians or sorcerers are represented as evil-doers who endeavour to inflict distress upon others. Facts go to prove, however, that the distinction between well- and ill-disposed classes of priests is often very arbitrary; sometimes 'priests,' e.g., forfeit their sacerdotal dignity and are transferred to the class of 'sorcerers,' merely because they have lost the popular confidence in their goodwill (American Indians, Eskimos, tribes in Central Africa).

In a few cases distribution of function makes the ordinary priest and sorcerer distinct from each other. Thus weather-doctors, fortune-tellers, exorcists, and physicians, who form special professions of their own among certain peoples, also supply, in some cases, instances of the typical magician. Instances of such cases are best arranged solely by magical means are, however, extremely rare—which can also be said of the occurrence of the unadulterated priestly type.

To a certain extent the numerous functions are peculiarly associated with priesthood. Although the regular priests almost universally also practise divination, yet among many peoples the diviners form a distinct profession within the priesthood, and in a great number of such cases the performance is stated to take place through other means than consulting the gods.

In the Kaffir tribes the amnata, who practise augury by burning certain roots, are distinct from other classes of the priestly order (a fact which is also found in the bushmen). In toto, they are foretold the future from the entrails of fowls, constitute a separate class of diviners. Among the Mahajagas there is a class of men called sanmansa, 'animals', who are diviners and doctors of diseases, and foretell the destiny of their patients. The natives about the Alligator river in the Central African islands, besides the weather-makers, have four separate classes of augers distinguished from each other by different names and different methods of augury.

Instances of a similar kind are given by the Kirghizes and several American Indian tribes.

The priests and physicians are very generally the same men, but cases of priests forming a profession of their own in association with the priesthood are not rare among un civilized races (Polynesians, Melanesians, tribes in India, Negroes, American Indians).

Weather-making is among the lower races unusually associated with priesthood, though it is sometimes difficult to ascertain when this function refers to the regular priests and to what a special class of individuals. Among certain peoples, however, the weather-doctors are clearly identified with the scribes (Greenlanders, some American Indians, Negroes, and Siberians). In other cases the profession of a weather-maker is kept distinct from ordinary priesthood.

Among the natives of the Altai district there is a special class of weathermen who manage the large iron or magic stone. The Kirghizes have a class who not only foretell the weather but also have the power to cause or avert rain, which is known from the fact that among the Yaks, the Tunguses, or rain-makers, form an inferior class under the gangs, or felsh-men. The Okanda Negroes have priests to whom the people apply for producing rain when a bad year is impending, and these have a special name. The rain-doctors of the Maoris of New Zealand are pronounced distinct from other classes of the priesthood. Among the Apache and certain other Indian tribes, weather-making and other priestly functions are distributed among priestly classes; in other cases, few peoples even make a distinction between different branches of weather-making as represented by different groups of priests (Maoris).

To the offices associated with the priesthood belongs the judicial authority with which its members are often invested. As a rule the rights of the priesthood are respected and are closely connected with their religious duties, their supernatural endowments being called into requisition for the administration of justice in the various communities. From the Congo, Loango, and other African countries, such cases. From such occasions the priests are the chief officials at ordeals. Similarly, when a person is accused of practising witchcraft, the priests are the most competent to conduct the case (Greenlanders, E. African and Congo tribes). Thieves and other evil-doers are often detected by the assistance of the well-informed priests (Apache, Tingits, E. African tribes). In a few cases the priests are entrusted with a regular judicatory dignity, as, e.g., in Hawaii, where some appearance of judicial forms was preserved among the last remnants of native courts.

Among the Badagry in Guinea (the fetish-priests are the only judges of the people, and the statutes of their country are recorded in the books of the priests. We are told that the people are said never to murmur against their decisions.

From almost all parts of the world where uncivilized peoples live come reports that women also officiate as priests and sorcerers; in general no very great distinction seems to be made between the sexes as regards their qualification for priesthood. Often, however, men take precedence in the sacerdotal profession. Female priests or sorcerers are, at any rate, among the Greenlanders, American Indians, Negroes, some Siberian tribes, Fijians, Dayaks, etc. From some peoples we learn that all the great ceremonies must be conducted by men, or that the women are not admitted to the priesthood at all (certain Siberian tribes, Chipewas Indians, Andamanese, Australians).

The priestly offices to which women seem practically to devote themselves are foretelling the future (certain American Indians, Kamehamehas) and healing diseases among Negroes (New Guinea, Papuas). It is a widely-spread notion that women are endowed with mysterious powers in a much higher degree than men (Arabs, Negroes, tribes in India, Australians). Such ideas of the spiritual powers of women are doubtless due to the inclination displayed by many peoples to attribute witchcraft particularly to the female sex (Eskimos, certain American Indians, Hotentots, Siberian tribes, Arabs). In a few instances some peoples who have both male and female priests confine special classes of priestly functions to one or other of the two sexes exclusively.

GUNNAR LANDTMAN.

PRIEST, PRIESTHOOD (Babylonian).—In view of the great antiquity of their religion, going back, as it does, to over 4000 years before Christ, there is no doubt that the priesthood of the Babylonians, in most if not all of its numerous orders, was very ancient. It is impossible, however, to

E. Landi, Records of Captain Clapperton's Last Expedition to Africa, London, 1830, i. 261.
estimate the dates of the institution of these orders, the more especially as they must have grown up rather than come into such sudden existence as may be accounted for by any prevision on the part of the people would imply. There seems to be no doubt that the remote antiquity of the Babylonian priesthood had brought to its members great influence and wealth, as well as the veneration of the people.

The number and the nature of the priestly offices and orders in Babylonia were determined by the requirements of their religion. Theology, mythology, legends of the gods and heroes illustrated faith, and temporal history was probably taught by the scribes (tashkarrum), or by such of them as had been educated at, and received orders through the temple schools. But the superstitions contained in their creed necessitated not only a full staff of sacrificial priests, conductors of special ceremonies, etc., but also numerous conjurers, soothsayers, magicians, etc., each with his special domain, which, however, in case of need, overlapped the others. The sacrificer, therefore, might perform incantations, and the spell-maker might interpret a dream.

1. Priests in general.—In all probability the most usual term for 'priest' in Babylonia was sangū, possibly a nasalized form of the Sumerian (vernacular) šanul. The second plural sangū, though the plural for professions of men, sangatū, was probably not excluded. The last would coincide in form with the abstract sangitū, 'priesthood' in general—i.e. a man's priestly character, as in the case of a Babylonian or an Assyrian king, or a priestly body to which a man might belong. The Sem. form, sangā, seems to have been borrowed by the Sumerians, who attached it to the character men, 'hero,' 'man of worth.' It is this root that is found in the Sem. rendering of the Sum. gis-ta, namely, ishakkū, from the Sum. ig-sag, 'he who is at the head,' a word often rendered by 'priest-king.' Though probably often a priest, the ishakkū was generally a kind of viceroy, under a royal ruler (lugal-barru, 'king'), and took his title from the place which he governed, as Gudea patess Lagaš, 'Gudea, viceroy of Lagaš.'

2. The high-priest.—Several words which may be thus rendered are known. A sangū râdû (so L. 192 LUGAL-BA RIMA) 'great priest, or priest on a cylinder-seal published in his 'Cylindres orientaux' (AMO xxxiii. [1909]. This object, which is a talisman rather than a seal, shows Assur-nimel, the personage in question, standing before Istar. His costume is that of an Assyrian of the higher class, and he wears wig and beard.

In what way the sangū râdû differed from the sangū damma, 'mighty priest,' and from the sangū-makhû, 'supreme priest,' is uncertain. In the Sumeru-series of inscriptions 1 (v. vi. 173) the last-named is spoken of as kindling the fire and the brazier, and throwing therein the means of loosing the spell. He is also spoken of as the holy libation-priest (ranmu ēlu) of Ea, and the messenger of Merodach. As a result of this; and similar acts, the slain on whose behalf the ceremony was performed would be saved and freed from his sin that very day. Evidently these high-priests had not the power of releasing a man from the effects of his sin, and uttering words of pardon, without the king's permission.

During the period of the Sumerian dynasty of Ur the high-priest, or a similar temple magistrate, was called eni, 'the lord,' and was seemingly appointed by the oracle and invested by the king. Thus in the 11th century B.C. State oracles authorized the proclamation of the lord true prince (en nis-zu) of Anu and the lord (en) of Nannar (the moon-god). These two temple officials were invested two years later (The Amherst Tablets, London, 1918, vol. i. p. xiv). Other examples of similar investitures are Dungi's 31st and 46th dates, as calculated by H. Radau, and Bûr-Sîn's 4th, 5th, 8th, and 11th, etc. En was apparently Semiticized as ēnu, fem. ēntu, written in Sum. nin-dingir, 'lady of the god.'

3. The subordinate orders.—Unfortunately no trustworthy list of these exists, so that their rank and consequently their order of precedence are difficult to determine. Certain priests were attached to the palace of the Assyrian king, but, as their order does not coincide with what is given elsewhere, this list is of doubtful authority. We find in it seers, incantation-priests, magians (?), and, apparently, 'inquiners.' Another short list in English Babyloniaca (B. S. i. 55) mentions the āba, probably 'temple scribe,' and then 'secretary' in general; the seers; the incantation-priests; the āši, or 'physicians'; and the dagil isquēr, or 'bird-prognosticators.' Here the order of their importance seems to be reversed.

4. The priests' clothing, and the perfection of their persons.—Though the priests shown in the early cylinder-seals wear dresses practically identical—a fringed cloak reaching to the feet, leaving the right arm uncovered and therefore free, with bare feet and (generally) shaven head—there seems to be no doubt that distinctive clothing was worn. Thus the British Museum letter K. 626 (R. F. Harper, Assyrian and Babylonian Letters, Chicago, 1910, no. 24) describes the muškudu as wearing a red robe and a mitre of the same colour (Behrens, Assyrische-babylonische Briefe kultischer Inhalte). Details as to priestly clothing are meagre, but apparently the right garments had to be used, or the ceremony would be a failure. A list (WA T v. 28) given on a clay tablet (chief priest, Sem. for en, above, šubat nišitu, 'dress of the sacrifice,' etc.

To appropriateness of dress was added, at least in the case of the higher orders, the highest perfection, as is shown on some of the cylinders which were found on the office of seer (bātu) and who was of the everlasting seed of Enweduranki (Euedeshus, EKE vi. 642), 'the king with the woolen garment of Samas,' should be the offspring of a parent whose forbear was holy, and he himself should likewise be perfect in form and feature. Such a one only might approach the presence of Samas and Adad (the sun-god and the wind-god), the place of the vision and the oracle. One not being thus holy and perfect, defaced as to eyes (? square-eyed), wanting teeth, mutilated of finger, with earth-grey flesh, filled with leprosy, etc., could not be keeper of the decrees of Samas and Adad, approach the place of Ea, Samas, Merodach, or Nin-ādinna, or join the brethren at the decision of the seers. They sungu 'rātādû was one who stood before the oracle, and he could not hold in his hand 'the cedar blessed of the great gods.'

5. Consecration and tonsure.—There are many references to priestly consecration, but nothing is known of the distinctive mark of the religious order. The seal-impressions show that they were often clean shaven, and it seems certain that this was part of the rite of consecration, which was performed by the priestly tonsure-cutter, šum-Siru, or goellū (Som.). His work was probably performed before the statue of the deity to whom the

1 Priest also seems to be expressed by the simple word dišu, 'man'; cf. Assurbanipal's Cylinder A (col. vi. 45), where Nabû-šaš-šāni is called dišu sin, 'man (priest) of the moon-god.' Avel-Nisînaš (Ešî-Merodach) and many similar names may express the same idea.

PRIEST, PRIESTHOOD (Babylonian)

neophyte was to be dedicated (PSBA, 1893, pp. 417–420). The importance of the ceremony is indicated by the fact that even the king might perform the

1 At the beginning of the tonsuring,1 according to what was their command, (as for) the priest of the house of the junior family who had been tonsured him (ugdaddî-bî-sîy) (Letter K. 125, Harper, no. 43).

This was apparently followed by the giving of the priestly tiara. In another inscription Assûr-bani-apil, after referring to the appointment of his elder brother Assûr-mukhn-palê (Saoduchiris), to the kingdom of Babylon, states that his younger brother, Assûr-mukhn-palê, was consecrated to be uru-gallu before Assûr, and his third brother, Assûr-šûl-šûr-šûl-bâšî-sî, to the same office before the god Sin. The word used is ugûdûlu, ‘I (or he) tonsured.

6. The priesthood and the king.—All the higher priests were naturally in close communication with the court, as many documents, especially the Babylonian and Assyrian letters, show. As has been foreshadowed in § 1, the king himself was (perhaps always) the great high-priest. His position as head of the State, however, must have prevented him from fulfilling many of his priestly functions, except those which had to do with his royal capacity as the intermediary between the higher orders of priests had naturally to instruct him with regard to the things which he could not go into thoroughly—lucky and unlucky days, celestial and terrestrial omens, the tablets to be used at the various ceremonies, and the time required for the performance of the rites, which sometimes extended over many days. The tall tiara which the king wore, and the cord behind, which, arising from its highest point, descended, in the case of the Babylonian rulers, to the hem of his robe, was also, probably, priestly signs or necessary portions of their dress. The cord probably has some analogy to that worn by the Parsis under their clothing.

7. The priesthood and the people.—Not less important was the connection of the priesthood with the people, who were not only its justification, but also its main support. As intermediaries between the gods and the people, in sacrifice, propitiation, penitence, prayer, and oracle, they were the interpreters of all the religious texts, expositions of the sacred books, and interpreters of events on lucky and unlucky days and seasons. It is uncertain whether the judges were of priestly rank or not, but the priesthood had also much to do not only with the interpretation of moral and religious law, but also with many of the civil enactments.

That laymen, and even slaves, could take part in the temple services is shown by Harper’s Letter no. 368, where we read that Ninqaya, the handmaid of the king’s mother, is not suitable for the service (worship):

1 She shall not enter (therein). As the mother of the king, my lord says, let her open the (money) chest, let her perform the service.

In other words, she had money, and could make a gift; let her do so, and then take part in the worship. Another letter asks the king whether certain women might enter the temple and take part in the worship, and, if so, would the king’s instructions apply to a slave-woman who was with them. It seems probable that the ordinary citizen was merely a tithe-payer, and that the very poor and the landless gave labour. It is not impossible that certain of the more intelligent of the huts were initiated into the mysteries which the tablets show to have been common in the higher orders of the priesthood.

Besides offering sacrifices, the priests conducted

1 Gilûma; but perhaps this word here means the whole ceremony, in which case the rendering would be ‘consecration.’

the services, and arranged the lectisternia, or tables of offerings to the gods. It also had the duty of some of them to receive the tithes, and to certify that they had been paid (the tablets referring to these are very numerous during the early period). Some of them looked after the temple itself, while others arranged for the services and the processions.

What proportion of the offerings the priesthood took for itself is uncertain, but, as the temples became enormously rich, there is no doubt that the priests who served them lived on the fat of the land, and even grew very wealthy. In their position, however, the possession of private means must have been an indication of importance. The most avocarous, but many passed on what they could not use themselves to their family, relatives, or friends (cf. Bel and the Dragon, 196).

8. The mâšu and mâšmâšu.—That these two classes of priests were closely allied is proved by the fact that the Sum. mâšu and mâšmâšu were both reproduced by the Sem. simple form mâšî.

The mâšmâšu was the priest who had especially to do with ceremonies and ritual. He anointed the king’s head, consecrated his country, projected the evil spirit out of his house in the royal abode. After this ceremony a procession was formed, in which torches and a lamb for sacrifice were carried, and it was the custom on these occasions to offer likewise many natural products. After the ceremony the priest was received into the highest palace. It was also the duty of the mâšmâšu to pronounce numerous incantations on these ceremonial occasions. The order seems to have been classed with that of the bârê, ‘seers,’ and the ášê, physicians.

In Letter no. 23 of Harper a mâšmâšu is referred to as not having taken the tablets of the series ‘the unpropitious days, the day not good; hand-raising;’ i.e. acṣ(τ)s of prayer. These were apparently documents which he should have used in certain ceremonies. In Letter no. 118 mâšmâšu seem to be spoken of in connexion with the instruction of certain persons in the ceremonies. The writer, Arad-Gula, may have been a member of this order.

9. The ášipu.—Like the mâšu and the mâšmâšu, the ášipu was also one of the most important priests of the Babylonian hierarchy. The duty of the order was to make incantations, either for imposing spells or for releasing those from them. The latter is referred to in the book of the Babylonian Job, ‘Lilul the Sage,’ and from the same work it seems that he was able to diagnose in cases of illness (Jastrow, Die Rel. Babylon. and Assyriken, ii. 129, §)—an indication that he belonged to the physician class. Another form of his name, apparently, is išippu, from the Sum. isib, and under that title the tablets refer to the išippu šu asšâmar, ‘grain- (or wheat-) magician.’

The incantation-series Surpu seems to indicate that there were priestesses of this class (and tāmû = ášipu, viii. 55). The lists indicate that the ášipu was also a pašû, ‘anointer,’ as well as a bârê, ‘seer.’ Äšipu is represented in Heb. by râs, ašûph, from the same root (Du 11, 20). See HID ii. 230.

10. The uru-gallu.—As this word translates the Sum. mûšmûš, which is also rendered mâšu, the priest indicated seems to have been one of the same class. The meaning of the word is ‘great protector,’ and seems to indicate several groups. A portion of his duties (those connected with the New Year festivities) had to be performed during the night:

In Nisîrī, day 2d, on an hour (double hours of the night), the uru-gallu shall rise up, and shall pour out the water from the river (the Euphrates). He shall enter before Bel (Merodach). He shall let down the curtain (gudâlu)—he shall utter this prayer before Bel.

1 In Nisîrī, day 2d, for an hour (double hours of the night), the uru-gallu shall rise up, and shall pour out the water from the river (the Euphrates). He shall enter before Bel (Merodach). He shall let down the curtain (gudâlu)—he shall utter this prayer before Bel.
14. The *sukkal*—Semiticized as *kisal*-*talḫu*, this may be classed among the minor orders. The etymology of the word is *kisal*, ‘oil-place,’ and the above-mentioned *talḫu*, ‘to cleanse.’ His duties must therefore have been similar to those of the *pašku* and the *sukkal*, and he may have assisted the king on the occasion of his official building-consecrations.

15. The *sura*—Priests bearing this title apparently belonged to one of the most important of the Babylonian sacerdotal classes, and might even aspire to the high-priesthood, as is indicated by the fact that the *sura*-class is once referred to in Bab. as *sangamahhu*, ‘high-priest’ (see §2). The lists give also the word *surugt* (Sum.), ‘great suru’ (WAl ii. 21, 41, 46, 47c). The *surr* probably belonged to the highest class of the musician priests, as represented by the *kotā* (see §16). Though read *sangamahhū*, it is really the *suramahu* who is spoken of as kindling the fire and the brazier (§2). In the list of priests, WAl i. 32, 9, either as *suramahu* or as *sangamahu*, he is mentioned between the ‘libatorian’ (*ramku*) and the *nadiru* (see §3).

16. The *kali*—A Semiticized form of the Sum. *gal*, dialectic *mahlu*, this, like *surr*, stood for a variety of offices. From the inscriptions and the texts, it appears that the *kali*, like the *surr*, a singer, a worker (‘of ceremonies, *ga-ga*, dialectic *maha*-), an utterer of lamentation (ur.), Anu’s (or god’s) fortress (bad *ana* or bad *dingir*), and the invoker of the oracle (*zanaz-patam* *piri*). Kotachi *explains* that this office was a separate group and that the term *sura* and *suru*, ‘great suru’ (see §15).

Besides being the temple singer, the *kali* wrote astrological reports, with, probably, the forecasts derived therefrom; and the ceremony of making offerings was also part of his duty. In connexion with his musical duties, it is noteworthy that the god Ea, as patron of their order, bore the name of *Lamḫu*, the ideogram expressing which is regarded as a wedge-formed picture of a musical instrument, the lyre.

17. The *nāru*—This was apparently the musician-priest par excellence. The god Ea is said to have had a special *nāru* of his own named *Ḫuṣu-ḫu*, ‘the wise one,’ and as the god of the *nāru* he bore the name of Dunga. They seem to have had their own inscriptions, and thus were classed with the mourners.

For representations of priests of this class (they were shaven), see E. Currid, *Catalogue of Babyloniun*, London, 1906, p. 132, and L. de Clercq, *Catalogue*, Paris, 1887 ff., p. 101. The *nāru* and *māru* of the historical inscriptions, like those sent to Samuqerhu by Hekzekiah, were evidently not connected with the temple services. See Music (babylonian).

18. The *gallū*—For the work of this priest see §5, from which it would appear that the rite performed by him, which formed an essential part of priestly consecration, was sometimes, either wholly or in part, undertaken by the king. The *gallū* and the *dā* carried the implements of priestly consecration in cases of skin or leather (WAI v. 1. 2 ff.).

19. The *bārtu*—This was the most important or one of the most important of the orders of seers. Their duties are indicated shortly by *Lil'di the Sage.*

The *bārtu* forecast not the future by soothsaying. The *bārtu* has taken my forecasts away*. (Jastrow, f. 125, 160, 311). The God Ea of *Uruk* and *Akkabu*. The *bārtu* was a *sages* and *prophets*. They largely composed and explained both religious and secular music, and were as experts in soothsaying as in the art of inspiring and amulets. They were frequently referred to in the list of the groups and as ‘fortunetellers,’ ‘diviners,’ ‘healers,’ ‘wise men,’ ‘astrologers,’ and ‘sages.’ They were classed with the *kali* and the *surumah*, and were *esteemed* as *wise men* and *seers*.

The *gallū* and the *dā* carried the implements of priestly consecration in cases of skin or leather (WAI v. 1. 2 ff.).

The *bārtu* forecast not the future by soothsaying. The *bārtu* has taken my forecasts away*. (Jastrow, f. 125, 160, 311). The God Ea of *Uruk* and *Akkabu*. The *bārtu* was a *sages* and *prophets*. They largely composed and explained both religious and secular music, and were as experts in soothsaying as in the art of inspiring and amulets. They were frequently referred to in the list of the groups and as ‘fortunetellers,’ ‘diviners,’ ‘healers,’ ‘wise men,’ ‘astrologers,’ and ‘sages.’ They were classed with the *kali* and the *surumah*, and were *esteemed* as *wise men* and *seers.*
PRIEST, PRIESTHOOD (Buddhist)

mean's he who explains an oracle (or vision). As indicated by Lidul, his duty was to direct men by visions—bārī inc bārī ul nūtū-ī-du, the seer had not directed him (the troubled one) by a vision (WAI iv. 22, 42b). To all appearance the bārī corresponds with the ‘seer’ of the Hebrews (hozeh, roch).

The above descriptions of his duties corresponded with those of the cērī, hartšeminī, of the OT (Gn 41, etc.), but he had other duties of greater importance and dignity. Thus Martin's Textes religieux pictures him to us in the assembly of the other members of the order, while raising a branch, he intoned the incantation beginning 2Samash and Adad, arise. In my supplication, the raising of my hands, whatever I do, let the invocation which I offer be the truth.

When the presages were not satisfactory, and the god did not answer, he had to perform the ceremony of washing the mouth, pronouncing afterwards the following prayer:

"Samash, lord of judgment, Adad, lord of the oracle, I bring you, I offer you, a pure face, the young of the gazelle, whose eyes are bright, face perfect, boots without defect." (Here follows a list of the various good things that he has already enjoyed.) 1 He does not yet know the stag's desire, and I offer him to you.

Samash, Adad, arise, and in my supplication, the raising of my hands, whatever I do, let the invocation which I offer be the truth.

Priestly supplication was generally accompanied by the lifting of the hands. They seem not to have been raised on high, but simply to the level of the face, with the finger-tips approaching. The rites accompanying the duties of the bārī were very numerous, as might be expected from priests of such ancient origin and important functions.

20. The abarakku. — Closely connected with the functions of the bārī were those of the abarakku, of whom, however, very little can be said. The word is written with the same character as is used for ītu, 'sign,' onem, and the like, and was pronounced in Sum. isikim. A mutilated explanation impleads also that it was rendered by bārī, 'seer.'

Abarakku is probably the 3778, abrek, of Gn 413, and, if so, the proclamation made by the Egyptian Pharaoh was to him 'bow, the great (seer), or the like. The existence of the word in Hebrew is due to Babylonian influence. It is doubtful whether the similar word abriquu, from the Sum. abrig, has anything to do with this, but it may be noted that the last is expressed by the characters mun-ne-du, 'prince (divine), command bringing,' or the like.

21. The āsā. — There may be some doubt as to this being a priestly order, but the leech in ancient times was so important that the Babylonian priesthood can hardly have failed to include the professors of the healing art among them. Nevertheless, in Hammurabi's Code, they came under the severest clauses of the lex talionis—a fact which may have come to have such that priests in general were not a privileged class before the law.

The etymology of āsā is interesting, as it comes from the Sum. āsu, meaning, probably, 'water-knowing,' either from the idea of being able to use or know of the springs that he was supposed to have of the fluids of the body. Other Semitic words translated by āsū were nizzu or sənzā, 'oil-knowing,' and mezu or isikim, 'voice-knowing' or 'incantation-knowing' (see § 29). As āsu also stands for bārī, 'seer' (§ 19), it is clear that he was attached to the sanctuary of temple-officials.

The sects of the lex talionis compound which they practised proves that a knowledge of surgery was expected of them (see ERE iv. 259 ff.). Herodotus (i. 197) says that the Babylonians made no use of physicians, as the people trusted to the advice of those who knew the lex talionis. In fact, we are told of the disorder which afflicted them. The inhabitants of the capital at least therefore seem to have had unsatisfactory experience of their healing powers.

The Assyrians, however, had not come to this conclusion, as many tablets (some of them letters) show. Aššur had thus turned into Heb.-Aramaic as wēs, ādu, with derivatives.

It is possible that the nuugu was also a physician (Harper, no. 168, rev. 3). The rab-mugi is probably the rab-mag of Jer 39 (Gr. 46).

22. Other priestly classes. — Whether the aba, which is similar to a form of asū = āsū, was a priestly class or not is uncertain. It might be translated 'water- [i.e. medicine-] giver.' As a rule, he was a scribe or secretary (in Harper's 53rd Letter, the abarakku is a short list of priests). It is probably on account of his apparently secretarial duties that he has been regarded as one of the classes of scribes, tuyārurru, the tispar of Jer 5132 and Nah 33. Notwithstanding their various secular occupations, the scribes were often priests. Considerations of space prevent notice of various other priestly titles, but it is necessary to add to the list the temple-officials designated by the Sum. tu-ši, 'temple visitor,' or the like (as, 'to enter + house or temple'). They had apparently considerable power, but it is not known in what their great influence originated. One of these, Nabū-sum-kin, attached to the great temple of Nebo at Borsippa, married Gītītu, daughter of Neriglissar (see KP ii. iv. (1650) i. 8 f.).

23. The Babylonian hierarchy. — Though the priestly titles of the gods of the Babylonian pantheon were imitated from those of their earthly priesthood, it is probable that the Babylonians regarded the reverse as being the case. Thus Engur, mother of Ea, was the true abrakkatu (§ 20) of the heavenly (and the earthly) ē-kuru, or temple; Nin-šāh was the supreme messenger or minister (subkall-mah) of Anu, the god of the heavens; Enīmā-ni-zi was the sukklekku of En-Urtu ('Nīnī'), one of the gods of healing; Asallu-īn was the suwra (§ 15) of Enilu, etc. All, or nearly all, of the great deities had their sukkalē, and Samas, the sun-god, had several—he of the right, he of the left, the one who was supreme (mah), and two sukkal sa-ku-īn, 'heart-resting.' He had also a gallābu (§ 18), one who shore him (of his raya), either when he set or when he was eclipsed. The name of this deity was Engnā, 'lord of reserve,' or the like.

The greater number of the various orders of priests seems to have been Ea, who was patron of the kalē, 'chanters,' naš, 'musicians,' āşāpi, 'incantation-makers,' bārī, 'seers,' tuyārurru, 'scribes,' āsū, 'priests, physicians, and gallābu, priestly tinsmiths.

The abode of Eres-ki-gal or Allatū, goddess of the underworld, was regarded as similarly organized. Namtar, or 'Fate,' was the goddess's sukkalē, and she had, as well, a divine (i.e. priestly) food-distributor (nu or nū-ki-tūnum). The lists of gods also give certain divine titles, which may be priestly, but are not represented on earth.

LITERATURE.—Morris Jensen, Die Religionen der Babylonier und Assyrier, Giessen, 1906-12; E. Behrens, Assyrisch-babylonische Phänotypen, Leipzig, 1895; and the special lexicon articles in F. Delitzsch, Assyrisches Handwörterbuch, Leipzig, 1890; and W. Mass-Arnold, Concise Diet. of the Bible, vol. vi. (an English exposition of the Semitic names), which is a very extensive one, notes on priestly titles are scattered throughout recent Assyriological literature; the most noteworthy being F. Martin, Textes religieux assyro-babyloniens, 1st ser., Paris, 1893.

T. G. PINCHES.
PRIEST, PRIESTHOOD (Buddhist) 289

history is familiar, Buddhism knows nothing. The monk or priest, in so far as he has obligations and duties, is but the agent of the law of cause and effect, and his edification and conversion. His relation to them is that of a minister to their religious necessities, and a confidant and guide on all the critical occasions of life, as they on their side serve his temporal needs and provide him with the requisites for a minimum of food and clothing. In neither of the great schools of the North and the South is there any suggestion of the thought that through a human intermediary man may or must approach unto God. Buddhism has no order of rituals or of sacrifice to require the services of an officiating priest with expert knowledge of the modes and significance of the rites. Whether, as in the Hinayana, in theory at least a man must rely solely upon his own endeavours and virtues to achieve salvation, or, as in the Mahayana, upon the merits and assistance of powerful bodhisattvas to sustain his faltering and wayward steps and to bring him to his goal, in neither case is deliverance through or by a human priest.

This was the view consistently adopted and enforced by Gautama Buddha himself, if the Pali books rightly interpret the tenor of his directions and teaching. After his death the Law which he had given to his disciples was interpreted by his own words and by his precept. Each monk might gain a knowledge of the truth by his own insight and exertions, as the Buddha himself had done; and there was no other road to emancipation and rest. If, however, the Mahayanaist teachers are right in maintaining the fundamentally mystical and easterly character of his later instructions, he himself made provision for effectual external aid to be at the disposal of all who sought deliverance from suffering and wrong; but that deliverance was from a superior divinity to which men were to be mediately devoted.

The offices, therefore, which the Buddhist priests undertake for the laity are chiefly those of reading and exposition of the Scriptures. In most of the monasteries also, especially in Burma, instruction is given by the higher monks or those appointed for the purpose in the elements of secular learning and the simpler doctrines of the faith together with narrative of the life or lives of the Buddha. In this service the Buddhist priests have been for many centuries the bearers of the Gospel; and in most Buddhist countries, except as undertaken and forwarded by European Government authority or missionary enterprise, no other teaching has been available. On all important occasions, moreover, in the private life of the people, at marriages and births and especially in cases of sickness, the priest is summoned to perform ceremonies and propylactic rites, to pronounce incantations, and by recitation of sacred texts to expel and keep at a distance evil influences. In some instances simple remedies may be applied. Recitation is found only in Vassa that formal exorcisms or orations are made. The practice varies, however, in the different lands in which Buddhism prevails. Usually also the sermons or discourses are delivered in the form of short, intelligible, often well-read and interested in the history and doctrines of their sect, and punctiliously observant of the duties that are incumbent upon them. In some sects they address to their other services that of an active missionary propaganda on definite and urgent missions. Between the Shinto and Buddhist priests there is no interchange of ministry or office place at the present time, and the demarcation in manners and appearance, as in duty and ceremonial, is complete. The relations of the two religions and sects between the laity and the clergy is intelligent, friendly, and Buddhism has taken over from the national faith functions which would seem to be entirely incompatible with its principles and creed. At funerals especially Buddhist priests are summoned to be in his memory and might, on the occasion of the marriage or marriage, the monks and dress of the monks is similar to that found in China, and the same practice of branding at initiation into the order prevails. Whereas,
However, in China the branding is upon the shaven head, in Japan the mark is made upon the arm of the candidate.

It is in Korea that the priesthood holds a position of least prominence, having maintained little authority or dignity. It was otherwise in the earlier centuries of the history of the country, when Buddhist priests took a leading part in all the political as well as in the religious control of the people. More recently their influence diminished, and for a long time they had little interest or concern in the national life. Their numbers do not differ greatly apart from the people, and are little honoured or consulted.

The service of the priest or monk therefore in Buddhism has been closely determined by the origin and early history of the faith, and, except where other conditions have been imposed by its environment, has not travelled beyond those limits.

The absence of a doctrine of sacrifice, or of any recognized belief in a future life beyond this world, has necessarily placed a hindrance in the way of the development of a priestly office, and has retarded or altogether checked the growth of any felt need for the ministry of the priest. Withstanding, the Buddhist priest, although to a less extent than in Christianity or Hinduism or some other religions, had a real place among his people, and his office carries with it a prerogative or religious influence that are of much importance. It is true that the honour paid to his office has not always, any more than in other countries, been transferred to his person; and the order is sometimes recruited, as in China, from the literate classes of the population. There can be little doubt, however, that the ascendency of the priest or monk has been a real and perhaps decisive factor in the history and development of the Buddhist religion.

A. S. Genen.

PRIEST, PRIESTHOOD (Chinese).—The statement, which is so commonly made, that there are three religions in China is apt to convey a very misleading idea of the religious state of that country. Setting aside the members of the various Christian churches, and the adherents of Judaism and Islam, and perhaps the Buddhist monks and nuns, it would be hard to describe the average Chinaman as being an exclusive adherent of any of the three systems which are usually called the three religions of China—Confucianism, Buddhism, and Taoism. It would scarcely be too much to say that the basis of his religion is practically the same as that of his ancestors in the days before any of the three teachers from whom these systems professedly derive their origins had been born. As a clearly defined physical type of man has been in occupation of Eastern Asia since pre-historic times, so certain elements in the religious stratification of that are area appear to have remained unchanged for an immense period. These elements are those of naturalism, animism, and ancestor worship (secret: Communion with the Dead [Chinese]).

When we first meet with the Chinese, we find them practising shamanistic rites and paying honour to their ancestors, though in addition there appears to be a sort of veneration in a supernatural being. Under the Chou dynasty (1122-249 B.C.) and later, beginning to touch firmer ground, there appeared two remarkable ethical teachers, Confucius (551-478 B.C.) and Lao-tse, his elder contemporary, and a somewhat more shadowy personality, whose teaching exercised a great influence on the subsequent development of Chinese religion, which can be separated into two currents: Confucianism, which is more correctly described as a moral than as a religious system, becomes the basis of the state cultus (for the sacerdotal functions performed by the emperor and the nobles), and the older form of Buddhism (in 1912 see art. Confucian Religion); and Taoism, the more popular current, becomes to a large extent identified with the shamanistic substratum of Chinese religion, which de Groot terms 'universal.' 1 The prevailing cultus of the Shang, or the worship of the sky, departments and spirits animating the various parts of the universe. In the 1st cent. of the Christian era Chinese religion became profoundly modified by the advent of Buddhism, which now became influential in its northern form, the Mahayana, or 'Great Vehicle,' during the reign of the emperor Ming-ti (A.D. 58-76), though the first missionaries of the Indian faith may have reached China as early as 217 B.C. From Buddhism the national religion of Taoism borrowed the conception of monasticism, which now became acclimatized on Chinese soil by the votaries of the two faiths. 2

1. Primitive shamanistic priesthood.—From the earliest times there appear to have existed in China persons of both sexes credited with the possession of or control over the spirit. 3-551-478 (Chinese), of a kind found all over the world, which enabled them to wield extraordinary powers in the spirit-world. These shamans are for the most part to be identified with the sv, exorcists, mentioned in very early literary records. From the Shu King, or 'Canon of History,' it appears that they were entirely possessed by spirits of yang material, which represents the principle of light and warmth, according to the primitive dualist philosophy of the Chinese (see art. Cosmology and Cosmology [Chinese]). Their functions appear to have been threefold: (a) invocation of the spirits of the dead for the purpose of inducing them to partake of offerings; (b) prophecy by means of knowledge obtained from the possessing spirits; (c) exorcism of all evil; this they accomplished in virtue of the yang power which resided in them and enabled them to neutralize the yin element, or element of darkness. In this capacity they were very potent factors in the government, a house of death. Chii. xii. leaf 46, of the Li li, or 'Treatises on Ceremonial Usages,' says: 'When a ruler pays a visit of condolence, the invoker for the funeral rites marches in front of him, in company of the serpents, and they exhume the place on the same occasion walks ahead of him with the invoker.'

In the time of the Shang dynasty (1766-1122 B.C.) these are to appear to have been a kind of order of singing and dancing divines. They danced at sacrifices.

1 At the altars raised to pray and sacrifice for rain, says de Groot, 'the priestesses, representing the Yin or female part of the Universe, were accompanied by toiner, holding a procession of peachwood and reeds.' (The peach-tree was believed to be a source of terror to ghosts, and the bundle of reeds has a magical significance, being employed for the purpose of sweeping away evil.)

The Chav li, or 'Book of Institutions of the Cheu Dynasty,' ch. xiv. 30 and 39, says: 'When the sovereign pays a visit of condolence, the invoker for the funeral rites marches in front of him, in company of the serpents;' and the two on the same occasion walks ahead of him with the invoker.'

1 The Religious System of China, vi. 1188. 2 v. 1190.
exorcizing spectres. Some ancient texts refer to the male *wu as hih*. They also mention a class of professional exorcists. It is possible, however, that the exorcists of the texts of the Han dynasty (c. 200 B.C.-A.D. 200) the expression *wu-chih* occurs, thus indicating that the functions of the two classes had become assimilated. The *wu* were frequently employed by the Taoists to drive away demons. Their etiquette was popularly ascribed to demoniacal possession, the *wu*, being exorcists, were much sought after as physicians. In this capacity they were employed in the 4th cent. A.D. to chase away foxes and lizards which were believed to bring disease. What gave the *wu* their greatest influence, however, appears to have been the fact that in their mediumistic capacity they claimed to reveal to their clients the wishes of their departed ancestors. The southern provinces have always been the great stronghold of *wu-ism*. Its influence with women was enormous, and probably in early times there were more female than male *wu*. Any woman, married or unmarried, who felt herself capable of becoming a medium could do so. A state of ecstasy was induced by dancing, and perpetuated by monotonous music and the beating of drums. At certain periods *wu-ism* constituted a grave political danger, and, under the influence of its representatives, mandarins were induced to plot against the dynasty. The social influence was, moreover, so great that it led to the complete transgression of the canons of Confucian morality, by which women were forbidden to appear in public in the presence of men. Repressive edicts against *wu-ism* were therefore always infrequent. The *wu* were often employed as exorcists by the Tatar dynasty of Liao, but under the Ming dynasty which succeeded it (1368-1443) vigorous measures were adopted against them. Texts of the Ming period make it clear that the *wu* attended temples and used images of their own gods, to whom they offered sacrifice. They were no doubt the same as the thousands of village-temples existing in China at the present day. In all ages the *wu* appear to have been paid for their services in employing spells, and also for the crime of *'life-plucking, '* i.e. dismembering a living body for the purpose of sorcery. At the present time their functions fall into three classes: (i) exorcism and soothsaying, on which they are very proficient; (2) the performance of spells and incantations, and (3) the employment of amulets. They are believed to possess *shen*. They usually acquire it of a ritual ceremony in a temple, or by which they suddenly begin to leap and dance, making strange gestures. When a youth behaves in this way, the bystanders realize that he has become *possessed*. The case is investigated by a *si-tong*, and the possession may be of such severity that it is necessary to employ him as a medium. The *ki-tong* are employed as exorcists. When an epidemic prevails, they are organized into processions, in which, stripped to the waist, and covered with blood flowing from self-inflicted wounds, they indulge in frantic dancing. They have even been seen carrying heavy pewter lamps, fastened to hooks thrust through their arms. Female *wu* are frequently mentioned in Chinese texts subsequent to the Han dynasty. De Groot, the knowns of no female *wu* in the Amoy district. Women, however, participate in other kinds of *wu*-ist work.

2. The priesthood in the State religion.—We learn from the *Cheu Li* that at the time of its composition the *wu* were not the only priesthood in China; there was also a body of officials charged with the performance of rites and ceremonies, among which those connected with the State religion were the most important.

Under the direction of a Minister, entitled Ta-tung poh or Superintendent of the Sacrifices, the officers had to direct the erection and conservation of the temples and altars of the State and the sacrifices and tombs of the reigning House; furthermore, the celebration of sacrifices with music and dances, victims and implements, besides the funeral rites in the royal family. Those engaged in these offices were divided into three sections, of which the latter two were more important: the first section was composed of the Priest of the Household, the second of Priest of the Ancestors, the third of Priest of the Temple. The last of these was undeniably a priesthood of Universal Animism, the gods whose worship they had to maintain. Among the many sects and their constituents, in the 1st century the Heaven and Earth and their constituent parts and phenomena, as also the spirits of the dead.

---

\[1\] Vol. 1254.
\[2\] De Groot, vi. 1185.
This priesthood was in its inception an official creation, not a spontaneous development of the animistic shrines and Chinese religion. It was probably the prototype of the li-pu, 'board of rites,' which in later ages supervised the ceremonial aspects of the State religion. The board of rites was the fifth in order of precedence among the eighteen boards to which the administration of the empire was entrusted prior to the Revolution of 1191, when it was suppressed, its functions being absorbed into those of the ministry of the interior. The Chen li (xvii.-xviii.) gives a list of the officials who served under the ministry of rites, with a description of their functions. They include the superior of the sacred ceremonies and his assistant, a master of the sacrifices, an officer in charge of the vessels containing the libations and of the preparation of the sweet-smelling wine, an officer charged with providing the sacrificial coals, an official who sets in their places the cups containing the libations at sacrifices, one to set in order the mats, a keeper of the ancestral hall of the imperial family, a keeper of the seals, a keeper of the imperial wardrobe, annalists and imperial secretaries, musicians, a grand anguier, invoeret, and sorcerers. The last were the we, who were already at that period incorporated into the State religion. The board of rites cannot, however, be regarded as a permanent office, but retained only for the suppression of the State sacrifices merely, and was not a body charged with the task of mediating between God and man.

3. The Buddhist priesthood. - There is not in Buddhist China a clearly defined distinction between the priest and the monk as in Catholic Christianity. In the latter religion the priest is one whose duty it is to officiate at the holy mysteries, while the monk is one who seeks to sanctify his soul by a life of retirement from the world, it being unusual during the earlier period of Christian monasticism for monks to be priests. In Buddhism, however, there is only one type of religious official whom we may call priests or monks, some of whom live in communities and some of whom do not. In the earliest form of Buddhism, which was agnostic, the idea of mediation was of necessity completely absent. In the first two and a half centuries after the introduction of Buddhism into China Buddhist monks were all foreigners, as it was not till the third century of our era that Chinese were permitted to adopt the monastic life. At the present time Buddhist monasteries in China are usually situated outside the cities in the open country, the ideal situation being a wooded height. Their inmates are for the most part recruited from the ranks of children, who are frequently sold to them by a necessitous mother after the father's death. Hackmann mentions a case in which twenty-five Mexican dollars (40s.) were paid for a child. Only a few monasteries receive any appreciable number of adult novices. When in their seventh year, these children begin to be initiated into their religious duties. Their heads are completely shaved, and a special teacher is appointed to each. When the final consecration takes place, the novice is branded on the head as a sign of his willingness to endure hardship. Sometimes this branding is voluntarily repeated in later life. Nine vows are usually taken—to abstain from taking life, stealing, lying, slander, sexual immorality, lying, and feelings of jealousy, hatred, or folly. Sometimes others are added. Devotional exercises, which consist of invocations, praises, and the reading of extracts from the scriptures, usually take place three times a day. They are frequently accompanied by the recitation of mantras and by the chanting of the mantra; and usually consists of about thirty to forty members. There is a well-organized domestic economy. All owe obedience to the abbot (fong-chang). The community is divided into an eastern and a western half. The eastern half is mostly occupied by Chinese, and the western half by Barmars. It includes a book-keeper, guest-master, commissioner of stores, superintendent of field labour, superintendent of water-supply, overseer of the kitchen, manager of the clothing department, another to supervise the gardens, one for the repairs, and others. The western division deals with the religious side of life, and includes sacristans, chanters, lectors, and monks, who expound the sacred science to laymen. Chinese monks wear trousers, stockings, and shoes, besides an undergarment extending from the waist to the knees, and a garment covering the whole body. A wide garment is worn over this for full equipment. Poverty has ceased to be enforced, and monks freely accept gifts. The average monk has no real knowledge of the Buddha's teaching. Penalties are imposed on those monks who commit ritual offences, but moral offences often go unpunished. Punishment is generally administered by logging on the naked back by lay-brothers. This is the only discipline for the monastic order in the stage of intellectual culture, though a thousand years ago, when Europe was in the Dark Ages, the monasteries of China were filled with philosophers and scholars. A person of good family rarely enters a monastic order. When he does so, however, he speedily attains to abbatial rank. Immorality is wide-spread, and this led to the suppression of all the monasteries in Fuchow in the years 1830-40. It is, however, unwise to generalize on this point, as the reputations of individual monasteries vary very greatly; that of the celebrated monasteries of Chi-hua and Puto stands high. The use of opium is also prevalent among the monks. Individual monks of ascetic life are found, and even in recent times a monk has sometimes been voluntarily burnt alive on a funeral pyre. Monks are usually cremated at death. Besides the monastic communities, Buddhist hermits are found in China. They dwell in poor huts or in holes in the mountains, and are usually known as lamas or lay-brothers. They lead a semihospitalitary life. The hermits do not shave their heads, but wear their hair long. Some who are more ascetic than their fellows live in small mountain caves, into which the sunlight never penetrates. When such a one dies, his body is embalmed in a special manner, and, after being painted and gilded, is set up in a temple as an object of veneration. There is no supreme authority over all the monks in China, each monastery being self-contained. The government has, however, bestowed an official status on some of the abbots, who act as intermediaries between it and the monasteries. These abbots are responsible to the government for the conduct of the monks. Any ordained monk may move at will from one monastery to another, on showing a pass issued by his abbot, or he may adopt an itinerant mode of life. Buddhist monks are usually known as bonzes, a Japanese term introduced into China by Roman Catholic missionaries.

4. The Taoist priesthood. - The indigenous religion of Taoism, which, though it professes to be founded on the ethical teaching of Lao-tse, nevertheless in some of its manifestations appears to have merged imperceptibly into the main Chinese cult, is kept up on a small scale under the influence of Buddhism to evolve an organized priesthood and ritual soon after the opening of the Christian era. At
PRIEST, PRIESTHOOD (Egyptian)

present there are two orders of Taoist priests, one male and one female, the latter, however, being composed of priests married before ordination. They reside in their own dwellings and wear the ordinary dress of the country. The Taoist priests do not shave the head like the Buddhist order, but bind the hair on the top of the head. Many lead an itinerant life and derive a livelihood from the sale of charms. They are for the most part ignorant of the teaching of Lao-tse as are the Buddhists of the teaching of Sakyamuni. They study instead the pseudo-sciences of astrology and the like. Candidates for the Taoist priesthood study for five years. Before initiation they fast for three days, and bathe in water scented with orange-leaves; then, going into the presence of an image of Lao-tse, they seek his blessing. A licence then has to be obtained from a mandarin. The abbots of Taoist monasteries are called sce-sce. At the head of the Taoist Church is a patriarch who lives in the temple known as Shang-ching-kung, on the Dragon and Tiger mountains in Kiang-si. He is descended from Chang-ling, a noted healer, who flourished in the province of Sze-ch’iwen under the Han dynasty. His cures obtained for him a great reputation, and he healed a number of sick persons by inducing them to write down a confession of their sins on pure consecrated paper and then burned the papers. When this had been done, he threw the confessions into the water. Chang-ling’s cures attracted a great number of followers to him, and he instituted a semi-clerical caste, which appears to have derived some of its rules and regulations from the Taoist priesthood. His work was continued by his son Heng and his grandson Lu. It is said that the patriarch is chosen in the following manner. When one dies, all the male members of the clan assemble, and the names of each are engraved on pieces of lead, which are deposited in an earthenware vessel full of water. Priests then invoke the deities of the Taoist triad, to cause the piece on which the name of him whom the gods have chosen is inscribed to float to the top. The services of the Taoist and Buddhist clergy are for the most part made use of quite indiscriminately by the population. The late empress-dowager once employed Buddhist priests to pray for rain at one altar and Taoist priests at another. At the funeral of Li Hung Chang priests of both religious offices were present. However, to the elaborate eschatology evolved by Buddhist theologians, the priests of this religion rather than the Taoists are generally employed for the purpose of offering sacrifices to alleviate the sufferings of the departed.

5. The clergy and the State.—The monastic ideal was naturally alien to the Chinese temperament, with its deep inbred respect for the ties of family life, and this antipathy showed itself in the hostility of official Confucianism towards Buddhism on its arrival in the country. In A.D. 714 a fierce persecution broke out, during which 12,000 religious of both sexes were compelled to return to the secular state, while in a still more bitter persecution in the following century 4600 religious houses were closed and 20,000 monks and nuns were secularized. Buddhism, however, survived these persecutions and was very powerful in the 10th and 12th centuries. The Taoist church also fell into disrepute and the State began being enforced upon its clergy by the first emperor of the Sung dynasty. The legislation affecting the convents and clergy is embodied in the Ta Ting luh li, 1 Fundamental and Supplementary Laws of the present reign, 2 a codification of the laws contained in this work are also found in the Ming code. It provided that, if any Buddhist or Taoist priest is suspected of being disloyal, he shall receive eighty stripes with a long stick. No one may administer the rite of ordination without governmental permission. Since this has been frequently refused, there has grown up a large body of unordained clergy, who wear clerical dress. A Buddhist or Taoist priest, is permitted to adopt one pupil on attaining the age of forty.

Hung-Wu, the founder of the Ming dynasty, who ascended the throne in 1368, ordained that all the clergy demanding State recognition should pass a competitive examination in the foundation of the Ming dynasty. This thus creating an intellectual link between them and the national culture. Various edicts were issued by the Manchu emperors, restricting the growth of the clergy, though their services were often made use of during the rule of that dynasty. In the southern provinces Buddhist priests have frequently been employed by mandarins in rain-making ceremonies and in exorcising swarms of locusts. Of late years, however, monasticism has declined rapidly, and the clerical profession is universally despised. A census taken by the Peking police in 1908 revealed the fact that there were in the capital only 1553 Buddhist and 133 Taoist priests. It seems most probable that one of the causes of the decline of the monastic order in China is the growth of a powerful sacerdotal caste in China has been the system of making admission to public offices dependent on the results of competitive examinations.

current beliefs about the divine nature of the king, factored his assumption of all the high-priesthoods. He was not merely looked upon as the earthly representative of the god Horus, who, originally the local god of Buto, was early identified with the sun-god Re of Heliopolis, but he was actually regarded as the very son of the sun-god and the god himself. The king was therefore a god, and indeed was commonly spoken of as the 'good god.'

Moreover, by the time of the Vth dynasty the king was believed to be the physical son of the sun-god, the State god of Egypt. This has been natural and even is spoken of between the gods and mankind—he was in fact the high-priest par excellence. In this capacity he built the temples; and in the beliefs which adorn their walls he alone is depicted as worshippers the gods and making offerings to them. But it was impossible for the Egyptian king, who was the responsible head of a highly complex system of government, to exercise his high-priestly functions except on rare occasions; he accordingly was obliged to depute them to his the local priesthoods 14, who were conceived of as the Pharaoh's representatives, or else to special emis-

aries. 15

(5) The foregoing statement explains why a priest of Harabel or of the god Heraclopolis was called a king's representative. In this case the god and the king were the same person. One of the formulas used in the daily service in the temple distinctly states that the officiating priest represents the king: I am a prophet (psar-ot), the king has sent me to behold the god. 16

(6) The king always appears to have retained the right to appoint the high-priest of the temple, who was in his special capacity (see § 124). 17

2. The king as son of the divinity.—The king, as we have seen, was Horus, and also the son of Re, the State god. Many of the local gods, in order to enhance their prestige, were identified with Re. 18 Hence the king would not only be the high-priest of these local gods but also be regarded as their son. This idea of the sonship of the king would soon affect the relationship of the king with all divinities, male or female. 19 The king, according to the characteristic theological conception of him, was Horus. But Horus was son of Osiris (= the dead king). Under the influence of the Osiris myth the relationship of the king with and in Osiris was very close. The king was connected with Horus with Osiris; accordingly every divinity was an Osiris for cult purposes. 20 The high-priests, or leading members of the local priesthoods, were, as we have seen, the king's deputies, and as such impersonated the king in the temple services. Occasionally, therefore, as will be seen in the two following sections, the priest appeared in the role of the son of the god whom he served, or he displayed some of the characteristics of sonship. 21

III. THE PRIEST AS SON OF HIS GOD.—1. The 'son whom he loves.'—A priest with the title

PRIEST, PRIESTHOOD (Egyptian) 295

account for the titles of the high-priest (a) of Ptah of Memphis, (b) of Re-Atum of Heliopolis.

1. The high-priest of Ptah.—Ptah was the craftsman of the gods and the patron of craftsmen. His high-priest was entitled 'he who is oldest among the craftsmen,' *wr hry mwkt;* one of his duties was to supervise the work of the royal craftsmen, who were closely associated with the Ptah temple.

2. The high-priest of Re.—The chief title of the high-priest of Re was 'he who is great at seeing,' *wr mj.* He was also described as being 'over the mysteries of heaven,' or as 'he who sees the mysteries of heaven.' A. H. Gardiner has suggested to the writer that the sun-god's high-priest bore these titles not because he was permitted to gaze upon the god, but because the god's function of unrestricted vision was transmitted to him as deputy of the king, to whom, as 'son of Re,' this and other functions and qualities of Re were freely assigned.

V. HONORIFIC PRIESTHOODS.—A somewhat similar conception to that discussed in § IV. lies, perhaps, at the back of the honorific priesthoods of the Old Kingdom, the holders of these prestige titles are not found in their true character of the deity whom they served. Thus the 'prophet of the great morning-god,' *hm-ntr diw-wr,* seems to have been the king's barber, as he is in question being the royal beard personified. The 'prophet of M't, the god of righteousness, on a judge's bench,' the 'prophet of Hie,' magic personified, a magician; the 'prophet of Hathor,' the goddess of music and dancing, a dancer.

VI. IMPERSONATION OF DIVINITIES BY PRIESTS AND PRIESTESSES.—Egyptian priests and priestesses not merely exercised the functions of divinities; they sometimes actually impersonated them.

The classic example of this is of course the Pharaoh himself. The primitive kings of Buto and Omot were originally so high-priests of their respective local gods, Horus and Seth. The historic Pharaoh actually used Horus and Seth (see above, § I.), and his queen is called 'she who sees Horus and Seth.' Similarly the king is the 'son of Ptah, the Son of Allah, Keb, and of the snake-goddess of Buto, and as such is called nbty, 'the two mistresses.'

1. Lun-mutef, 'pillar of his mother,' as is clearly shown by a number of inscriptions, is the name for the living god Hor. Most of the representations of Lun-mutef, however, depict not the god, but a priest impersonating him, Lun-mutef is 1 E.g., Naville, Das ägypt. Todtenbuch, Berlin, 1885, i. ch. chxliv. line 32; Stolk, p. 13.

PRIEST, PRIESTHOOD (Egyptian)

(b) Atum and Month, or Re-Harakhte and Amun, may have been similarly impersonated by priests at the purification of the infant heir to the throne.

5. Two probably also was the god Yash, who officiated at the coronation.4

4. The priestesses of Hathor, who danced in her honour, consciously impersonated her. They partook in consequence of the nature of the godesses were able to impart her qualities to her devotees.5

5. Two female mourners, called the 'great kie' and the 'little kie', impersonated Isis and Nepthys in the funerary ceremonies.6

In two passages in the Pyramid Texts Isis and Nephtys are spoken of as birds—the form which they assumed when they set out to seek for the missing corpse of the murdered Osiris.

VII. FURTHER RELATIONSHIPS OF PRIESTS AND PRIESTHOODS WITH DIVINITIES.—1. Father of the god.7—The relationship of the priest with the god could be other than that of son. A very common priestly title in the New Kingdom and subsequently is father of the god.8; the holders of this title, in the enumerations of priests of those periods, come between the prophets and wct priests.9

The appellation 'father of the god' primarily belonged to the king, the last to be followed by the father of the god.5 It probably meant that the holder had one or more daughters in the god's horion.6

2. The god's concubines.—Human concubines were assigned to certain gods—e.g., Amun of Thebes,10 Ouiris,11 Iun-mutef; the possibly to Asyut and Khnum of Hermopolis.12

These concubines are in a special degree a feature of the cult of Amun, probably owing to his markedly sexual character; they are frequently referred to in the texts of the New Kingdom and subsequent periods.

It should be noted that the name of the great temple at Luxor is 'southern harim of Amun',13 and that the inscription on the statue of Re14 mentions Amun's harion of concubines (Pct n Enurct).15

At the head of Amun's concubines was the wife of his high-priest, her title being 'chief concubine of Amun.'16 The concubines were doubtless the female musicians (Isawet')17 who were attached to him, and, with the daughter of the god's temple (see below, § 6), and VIII. § 5 (d)).18 The view that the female musicians of Amun formed his harion is further supported by the fact that in one instance the wife of a high-priest of Amun, instead of the regular title 'chief concubine,' bears that of 'singer (bnt) of Amun.'19

3. The god's wife.—(a) From the Vth dynasty onwards the king was regarded as the physical offspring of the god (et Re, 'son of the body').20 According to the scenes and inscriptions in the XVIIth dynasty temples of Deir el Bahri and Luxor,4 Amun, then identified with the sun-god, assumed the form of the reigning Pharaoh and intercourses with the queen, and so begot the heir to the throne. The queen was therefore called 'the god's wife,' with the additional title of 'votaress of the god.'21

Possibly the union of Amun and the queen was supposed to take place in Luxor temple, 'the southern harion of Amun' (see above, a);22 that would explain the presence in this temple of the scenes depicting the birth of Amunris s., by whom the queen gave birth.23 In performing this service she would be accompanied by the concubines,24 over whom she presided in her capacity of Amun's legitimate consort.25

The concubines, as we have seen, were probably the female musicians of Amun (Bnt n Lon), who are specifically stated to have been attached to the house of 'the god's votaress.'

Perhaps the statement in Herodotus, i. 182, about the woman who 'lies in the temple of Theban Zeus,' refers to 'the god's wife' or to the chief concubine of Amun.26

(c) The god's wife' is first mentioned in inscriptions of the early XVIIIth dynasty.27

After the battle of Amal protected the New Kingdom the god's wife was the high-priestess of Amun, Amun of the kingdom, and the female dancers were governed, not by the high-priest of Amun, but by a succession of five 'god's wives.'28 'The god's wife' was no longer the queen, but a daughter of the ruling house, and she had to adopt a daughter to succeed her.29

(d) While Thebes was governed by these sacerdotal princes, the high-priest of Amun was merely a religious figure-head, all power being vested in the hands of individuals of minor sacerdotal importance, such as Menhemthet,30 who was only one of the concubines of the high-priestess, and who by her adoption by 'the god's wife' Nitokris II., the first prophetess (high-priestess) of Amun was bestowed upon Psamitik III.'s daughter, 'Enkhe-neferibre.'31

20. Gardiner, ZA, xiv. 469; see Gardiner, ZA xvi. 127, note 2.
4. 'The god's hand.'—Below 'the god's wife' in rank, but above the chief concubine, was the priestess called 'the god's hand,' *dir nfr.*

The fact that 'the god's hand' was also called 'the daughter of the god' to whom he could consecrate his love, 2 suggests that this title was perhaps originally assigned to a daughter of the queen. 2 Both titles were borne by *Enkinesisoterh,* 'a god's wife' in the lower class of the 'hand of the god.' We find the latter title, 3 it was possibly the title which she bore as the adopted daughter of Ni-otrikhor-2, i.e. before she became 'god's wife' and not the daughter of a god. 3
